Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, managers on each side of the aisle may yield time to Senators, and the subject matter does not have to be germane to the conference report.

Mr. HEINZ. I understand that, but I would like to settle this now, if I may.

Mr. RIBICOFF. The other side has 1 hour. I have a half hour. However, if the Republican side of the aisle will not yield 5 minutes, I will yield 5 minutes out of my half hour.

Mr. HEINZ. I appreciate the Senator from Connecticut's doing that. I do not think the Republican manager of the bill is here right now.

Mr. RIBICOFF. I will yield 5 minutes.

Mr. HEINZ. I appreciate that, and I thank the Senator and I apologize for interrupting his presentation.

Mr. RIBICOFF. I will yield the Senator 5 minutes.

I ask unanimous consent that I be allowed to proceed and that the statement of the Senator from Pennsylvania will be printed in the RECORD following the statement of the Senator from Iowa.

Mr. HEINZ. I thank the Senator for that.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HEINZ. Mr. President, I hope the Senator from Iowa (Mr. CLARK) will return from the gallery.

Mr. JAVITS. Mr. President, I yield 5 minutes.

Mr. HEINZ. I thank the Senator from New York.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 5 minutes.

Mr. HEINZ. Mr. President, I hope the Senator from Iowa (Mr. CLARK) will return to the Senate floor because I want him to be a part of this discussion. I would very much appreciate the courtesy of his indulgence in that request.

I did not hear everything the Senator from Iowa (Mr. CLARK) had to say. My understanding is that he indicated that there were a number of Senators of my party, the Republican Party, who were cosponsors of the bill, as indeed I am, who for partisan reasons threw a monkeywrench into the consideration of the election reform bill, S. 926.

I want to make it very clear that this Senator—and I think there are many other Republicans for whom I speak—continues to endorse the basic principle that title I represented. I regret that the public financing title was stricken and I showed so with my vote on the Allen amendment. If there were any partisan considerations involved in striking that title, I think they were on the part of the Democrats. That amendment was offered by our distinguished colleague, Senator ALLEN. He is a Democrat. It was supported by the Democratic leadership.

There have been many partisan considerations which I think are evident by the course this bill has taken. The Democratic majority was unwilling to include public financing of primaries because that threatened Democrats, particularly in the eight Southern States. There was a lot of legitimate concern expressed in the press and elsewhere as to whether this bill worked against independents and minority party candidates. The way the bill was reported by the Rules Committee that concern was justified. There was concern that because the spending limits were too low it was an incumbents' bill, and it was. But these problems should not have prevented people of goodwill from sitting down together and solving them. I know I was willing to do so. I know many other Republicans who were also willing to work these problems out.

So when the Senator from Iowa, Senator CLARK, says that we Republicans are to blame, the Senator from Iowa should know that simply is not the case.

There was absolutely no consultation on the decision to throw the towel in on the part of the Senator from Iowa, or anybody else speaking for him, with me or with Senator JAVITS, for example, as far as I know. Several sympathetic Republicans had a meeting just before the cloture vote and there was no sign, no information whatsoever, that the leadership or that Senator CLARK was going to support the Allen amendment.

It was a rabbit out of the hat. It was a trick. It was gimmickry. The public is the loser, and that is why I regret to see the Democratic majority voting to gut this bill.

I fear that the conclusion the country can and should draw is that the majority wished us to choose between an incumbent's bill or no public financing. They wanted to restrict our choice to a partisan bill favoring Democrats while discriminating against independents or minorities or Republicans—and sometimes Republicans are minorities—or no bill at all.

Now, in effect, the Allen amendment does guarantee us no bill at all. I very much regret that because that means people of enormous talent, ability, dedication, and commitment but who do not happen to be a part of a one-party machine in some State or who do not happen to be part of the majority party, the overwhelming majority party in another State, or who are independently minded people and who do not go along to get along, all these people and many more are going to be shut out of the political process, just the way the Republicans were shut out of the process of consultation on this bill. And I say to my colleagues that it is a mistake that my good friends on the Democratic side of the aisle have made and that they have not played fair either with the minority or with the American people.

I think it is the American people who will suffer.

I wish Senator CLARK were here because he knows very well that he never tried to contact me, although I was trying to sit down and talk to him. So it is wrong for Senator CLARK to say, as he did say, that there were five Republicans who were cosponsors of the bill who did not seek to help. I think he is in error, he has made a mistake, and I wish he were here to straighten the record out because the record he has made today is wrong and inaccurate.

Mr. President, I hope that the Senate will not take the affront that has been

made to it today lying down. I hope we will not let genuine public financing die.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HEINZ. I ask unanimous consent for 1 additional minute.

Mr. ROBERT C. BYRD. Mr. President, the Senator has control of the time.

Mr. JAVITS. I yield 1 additional minute.

The PRESIDING OFFICER. The Senator from New York yields additional time.

The Senator from Pennsylvania.

Mr. HEINZ. The very integrity and openness of our political process is at stake, and for us to have closed the door with a behind-the-scenes, closed-door deal of some kind that was made only moments before the vote, smacks to me of the worse kind of politics that this country could ever want to see perpetuated. I hope the leadership, both the Republicans and Democrats, will try to work to right this wrong.

Thank you, Mr. President.

Mr. JAVITS. Mr. President, I yield 3 minutes to the Senator from Oregon with the same stipulation.

Mr. ALLEN. I wonder if the Senator will yield to me at this time inasmuch as the distinguished Senator from Pennsylvania referred to the Senator from Alabama.

Mr. JAVITS. Certainly. Is that all right with Senator PACKWOOD?

Mr. PACKWOOD. That is all right. I will wait for the Senator from Alabama.

The PRESIDING OFFICER. The Senator from Alabama is recognized for 5 minutes.

Mr. ALLEN. Mr. President, I was somewhat amused and also perplexed by the nature of the argument of the distinguished Senator from Pennsylvania (Mr. HEINZ). He spoke of an amendment which the Senator from Alabama offered as being gimmickry.

The amendment has been on all Senators' desks for all of this week signifying that the Senator from Alabama at the appropriate time planned to offer the amendment.

I am somewhat perplexed, also, by the distinguished Senator from Pennsylvania bemoaning the death of public financing when by his votes, as I recall, and I just checked at the desk, he has been voting against cloture. So it is rather strange that this distinguished Senator, such a champion of public financing, would have been voting against the debate on the bill being brought to a close. The position of the Senator from Alabama, on the other hand, was well known at all times.

I was opposed to public financing. I voted against cloture each and every time. I offered amendments at the desk, and they were printed and on every Senator's desk. The Senator from Alabama has been entirely straightforward in his attitude of opposition.

But I am still perplexed by the actions of the distinguished Senator from Pennsylvania, as contrasted with the words of the distinguished Senator from Pennsylvania as he now advocates the bill which he has been, by his votes, seeking to kill all of these days that we have had votes. I am somewhat perplexed by his action; but I am delighted that the Senate has seen fit to knock out the public financing provision. I would think that would be something that the distinguished Senator from Pennsylvania would approve of, inasmuch as he has been voting against cloture, that is, against the bill coming to a final vote.

The position of the Senator from Alabama has been known at all times, but it seems that the true position of the distinguished Senator from Pennsylvania has not been known up until right now, as compared with his votes against cloture. I am delighted that he did vote against cloture, but if he has been so strong for the bill, why did he not vote for cloture?

I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. MATSUNAGA). Who yields time?

Mr. JAVITS. I yield 3 minutes to the Senator from Oregon.

The PRESIDING OFFICER. The Senator from Oregon is recognized for 3 minutes.

Mr. PACKWOOD. Mr. President, I, too, was offended by the remarks of the Senator from Iowa. I was one of those he met with, in attempting to reach a compromise. The Senator from California (Mr. CRANSTON) and Senator CLARK came to my office last Friday afternoon, and I tried in good faith to work out a compromise with them. I talked with the Republican leadership and a number of Republicans. We tried to find out if there was a way that minority parties could be accommodated, or any way that the unconstitutional spending ceiling could be altered. The upshot of it was that the negotiations fell through.

They were not entered into in bad faith on this side, but time after time, in the Rules Committee, we had seen Republicans offer amendments to this bill, trying to make it a good campaign spending bill, because the Republican Party is not unanimous in its opposition to public financing of campaigns. But in every vote in the Rules Committee of any consequence, the Republicans were defeated.

The problem with the bill we had before us was that it never was designed to achieve its purpose. It did not stop special interest spending. It could not stop special interest spending; it would be unconstitutional to stop it. The bill could not do that.

Gradually, as this debate went on, that point sunk into the news media in this country, and we began to see editorials against the bill.

In short, Mr. President, this bill is a miserable piece of drafting. It is a miserable piece of work, and does not accomplish anything its proponents say it would accomplish. For the sponsors now to come on the floor and accuse the Republicans of bad faith and double talk, to my mind, simply does not do justice to the legislative process. What we saw in the last 10 days was the legislative process at its best. The flaws in this bill, the foibles in this bill, the weaknesses in this bill were shown for what they are. This bill was proved to be ineffective, wrong, unconstitutional, and immoral. To accuse some of those who at one time said, "I am for public financing," if they did not support this piece of trash and say they have double-crossed their commitment and their promises, their pledges to public financing, is the kind of comment that deserves an apology.

The PRESIDING OFFICER. Who yields time?

Mr. JAVITS. Mr. President, I yield 1 minute to the Senator from Pennsylvania.

Mr. HEINZ. Mr. President, I thank the Senator from New York for yielding. I just wish to agree with one thing my good friend from Alabama has said. Yes, I have voted on 3 successive legislative days against cloture.

I voted against cloture because I do not want to see this bill rushed through and simply have the tyranny of the majority be the rule of the Senate. The Senator from Alabama and I apparently agree that this bill is imperfect. I may not totally agree with my good friend and colleague from Oregon that it is as bad as he says, but, yes, I voted against cloture because I wanted to see the bill improved.

Where the Senator from Alabama and I parted company was on the vote on the Allen amendment, which I assume the Democratic leadership supported and I voted against. I voted against it because I did not think we should give up the effort of working and trying to compromise our differences.

I am proud that I voted against cloture three times, because when we go in at 2 or 3 o'clock in the afternoon and come out of here by 5, that is not my idea of a lengthy legislative day, and I am trying——

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield at that point?

Mr. HEINZ. I do not have much time.

Mr. JAVITS. I yield the Senator another minute.

Mr. ROBERT C. BYRD. I merely wanted to point out that the reason we went out, the point the Senator raises, was that there were no Senators who wanted to speak further. Had there been such, we would have stayed in longer.

Mr. HEINZ. Mr. President, I do not want to get into a lengthy, scheduling discussion, but we did not go in, as well, until fairly late today and yesterday.

Mr. ROBERT C. BYRD. Yes.

Mr. HEINZ. We have had concern raised about why we go in so late and stick around until very odd hours in the evening. I would say to my friend the distinguished majority leader that there are some of us who have family responsibilities once in a while, and I think if we would go in earlier and debate and vote during the day, rather than at night, and have nothing going on during the day, despite the fact that I do understand the problems of the committees, and how the majority leader is trying to rationalize the situation around here, I personally think we would be better off.

I am not in any way being critical of the majority leader. All I am trying to point out is that we have had very little in the way of amendments, and in particular it has been very difficult to get agreements from the managers of this

bill to take up the Packwood amendment or the Chafee amendment; and until we could get agreements, I was going to be very reluctant to vote for cloture.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. JAVITS. I yield the Senator 1 additional minute.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 1 additional minute.

Mr. HEINZ. I do not think that will be necessary, but I thank the Senator from New York for yielding.

Mr. ROBERT C. BYRD. Mr. President, will the Senator from Connecticut yield me 1 minute?

Mr. RIBICOFF. I yield 1 minute to the majority leader.

Mr. ROBERT C. BYRD. Mr. President, I do not take any umbrage at the Senator's reference to the Senate coming in at 3 o'clock and going out at 5, but the reason we came in at 3 o'clock yesterday and today was for the purposes of negotiations I thought were going forward. I was trying to provide some time for those negotiations in respect to the public financing bill to be completed.

The reason why we went out is demonstrated by the following colloquy which occurred yesterday at the close of the day:

Mr. ROBERT C. BYRD. Mr. President, I inquire whether or not there are any Senators who wish to speak further today on the pending matter.

Does the distinguished acting minority leader know of anybody on his side?

Mr. TOWER. I know of nobody on our side.

(This concludes proceedings which occurred subsequently and which were printed earlier in the RECORD, by unanimous consent.)

TIME LIMITATION AGREEMENT—CONFERENCE REPORT ON S. 826

Mr. ROBERT C. BYRD. Mr. Prseident, if I may have the floor further at the moment, without prejudice to Mr. CANNON, I wonder whether we could obtain a time agreement now on the Department of Energy conference report, which we will call up because it is a privileged matter.

Mr. BAKER. Mr. President, will the Senator yield, briefly?

Mr. ROBERT C. BYRD. Yes.

I ask unanimous consent that the time now not be charged against either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I advise the distinguished majority leader that an inventory of requirements on this side in respect to the Department of Energy conference report indicates that an hour on this side would be adequate and that we have a request on this side for a rollcall vote.

I can give the distinguished majority leader those times, and the allocation of them will total about an hour.

Mr. ROBERT C. BYRD. If it is agreeable with the distinguished Senator from Connecticut, we could allot 1 hour to the manager of the bill on that side of the aisle.

Mr. BAKER. That is satisfactory.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent—I have cleared this with the distinguished Senator from Connecticut; we discussed it earlier—that there be a time limitation on the Department of Energy conference report of not to exceed 2 hours; that the time be equally divided between Mr. JAVITS and Mr. RIBICOFF.

Mr. RIBICOFF. I could do with less, so far as I am concerned. I will not take an hour.

Mr. ROBERT C. BYRD. I thank the Senator.

So that Senators might have a better idea as to when a rollcall vote will occur, I ask unanimous consent that the time allotted to Mr. RIBICOFF be limited to 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate then proceed to the consideration of the conference report, with the understanding that there will be no further consideration of S. 926 today.

The PRESIDING OFFICER. Is there objection?

Mr. CANNON. Mr. President, reserving the right to object, I understand that we will now have 5 minutes on S. 926—I propose to yield from my time on my pending amendment 5 minutes to the Senator from Iowa; that we would then proceed to the energy bill; and that no further action would take place today on S. 926.

Mr. ROBERT C. BYRD. No further action—no further votes, no further motions or amendments of any kind.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield to me for a minute, without the time being charged against either side?

Mr. CANNON. The time can be charged against my side on the pending amendment.

Mr. ROBERT C. BYRD. Mr. President, I will let the Senator proceed, for the moment.

Mr. CANNON. Mr. President, I yield, pursuant to the previous request, 5 minutes to the distinguished Senator from Iowa, the time to be charged to my pending amendment on S. 926.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. ROBERT C. BYRD. Mr. President, I ask that the cloakrooms inform our colleagues on both sides of the aisle that there will be a rollcall vote on the adoption of the conference report on the Department of Energy bill today, because the distinguished minority leader, I believe, indicated that someone on his side of the aisle would ask for the yeas and nays.

Am I correct?

Mr. BAKER. Mr. President, the majority leader is correct. There will be a request for the yeas and nays on agreeing to the conference report.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order at this time to order the yeas and nays on the adoption of the conference report.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. BAKER. Mr. President, I ask for the yeas and nays on the adoption of the conference report.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

DEPARTMENT OF ENERGY—CONFERENCE REPORT

Mr. RIBICOFF. Mr. President, I submit a report to the committee of conference on S. 826 and ask for its immediate consideration.

Mr. PACKWOOD. Mr. President, was there any time——

The PRESIDING OFFICER. The report will be stated.

Under the previous unanimous consent request, the Senator from Iowa was yielded 5 minutes by the Senator from Nevada which, under the request, the Senate was then to proceed to the consideration of the conference report which is now at the desk.

Mr. PACKWOOD. Mr. President, point of information.

The PRESIDING OFFICER. The clerk will report the conference report.

Mr. PACKWOOD addressed the chair.

(Proceedings which occurred at this point on S. 926 are printed earlier in today's RECORD.)

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 826) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 26, 1977.)

Mr. RIBICOFF. Mr. President, I am pleased, as chairman of the Senate conference on S. 826, the Department of Energy Organization Act, to present the conference report to the Senate. The conferees worked long and hard in resolving the differences in the House and Senate versions of this bill. We have a conference report which preserves the best of both bills.

The conference report preserves the Senate's decision that an independent board within the Department should play the major role in energy pricing matters.

Major pricing decisions in the oil area, as well as the natural gas and electricity areas, will be the responsibility of a five-member Federal Energy Regulatory Commission created within the Department. As the Senate bill also provided, however, the act preserves an important

role for the Secretary in these pricing decisions.

The provisions in the bill passed by the House for a legislative veto over all rules proposed by the Department have been deleted so as not to unduly hinder the ability of the Secretary and the Department to do the job that needs to be done. A House provision that would have terminated the existence of the Department at the end of 5 years unless both Houses of Congress passed new legislation has also been eliminated.

A large number of other differences of lesser importance have also been reconciled in a manner that I believe is entirely consistent with the general thinking of the Senate when it passed S. 826.

I ask unanimous consent that a summary of the major provisions of the act as agreed upon by the conferees be inserted at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. RIBICOFF. Mr. President, the conference report was unanimously agreed to by the Senate conferees.

Mr. President, the reorganization of our Federal energy bureaucracy which this bill accomplishes is long overdue. Probably in no other area of Federal Government responsibility, has development and implementation of policy been so hampered by organizational problems resulting from fragmentation of responsibilities. The Federal Government has been severely weakened by the duplication, the overlapping jurisdictions, and the fragmentation of responsibility which have been the hallmark of our Government's structure for energy programs. As a result, development and implementation of a coordinated and coherent national energy policy have been impossible.

This act meets these problems by transferring to a single department energy functions now exercised by eight different agencies or departments.

These are some of the problems which this act can and must solve if we are going to begin to solve our energy problem:

There have been 100 energy data programs in the 4 agencies which are being folded in the Department. The Department of Energy will assure—through the Energy Information Administration—the centralization of these responsibilities, the availability of energy information to the public, the reliability of such information, and the independent collection of energy information.

Five Federal agencies and departments now share responsibility for energy conservation. The Department of Energy will assure, by the consolidation of these programs, a lead agency with a scope of authority broad enough to initiate and follow through on conservation programs—programs critical to reducing our dependence on foreign oil supplies.

Too often energy research and development goals and allocation of resources among research and development programs were undertaken independent of national energy priorities. The Department of Energy will insure, by the merger of these programs with other programs of national energy policy, that this Nation's research and development efforts will be more closely tied to our overall policy.

Currently there are spread among almost all of the Government's energy agencies activities relating to the development and supply of known domestic resources, including coal, oil, natural gas, uranium, geothermal, and solar. The Department will assure, by consolidation of these programs, the establishment of priorities, more efficient management of domestically owned resources, and more efficient commercialization processes.

The creation of this Department will have wide-ranging benefits for both the executive branch and the American people by insuring a more stabilized energy policy framework, by providing a comprehensive overview of and national perspective on energy matters, and by providing a clear focus within the executive branch for energy policy and programs.

The creation of the Department of Energy does not provide all the answers to this Nation's energy problems. But it represents the first essential step.

Finally, Mr. President, I want to pay special thanks to Ellen Miller, Paul Hoff, and Claude Barfield of the staff of Governmental Affairs for their work on this legislation. These staff members played a major role in shaping and refining this legislation, and they deserve great praise for their outstanding work. I also wish to express my gratitude to staff of other Senators who worked with us on the Department of Energy. My thanks to Dan Dreyfus, Deborah Merrick, John Childers, Chris Palmer, Gary Klein, Leonard Bickwit, Winfield Turner, Curtis Moore, Charles Trehandt, and David Johnson.

I urge the Senate to approve the conference report.

I yield.

EXHIBIT 1

SUMMARY OF THE LEGISLATION

MAJOR COMPONENTS OF THE DEPARTMENT

The Conference Substitute proposes the creation of a Department of Energy my merging the following major components:

The Federal Energy Administration;

The Energy Research and Development Administration;

The Federal Power Commission;

Certain programs from the Department of Interior: The four Regional Power Marketing Administrations (Bonneville, Alaska, Southwest, and Southeast); and the power marketing functions of the Bureau of Reclamation including the construction, operation, and maintenance of transmission lines and attendant facilities;

Certain responsibilities relating to leasing of energy minerals onshore and offshore;

Statutory authority for the development and promulgation of new building energy conservation standards and authority to undertake a national energy conservation demonstration program now vested in the Secretary of HUD;

Commerce Department programs to promote voluntary industrial energy conservation;

Jurisdiction over the administration of the three naval petroleum reserves in California and Wyoming, and three naval oil shale reserves in Colorado and Utah, currently administered by the Defense Department; and,

Authority currently vested in the ICC to regulate oil pipelines, including functions of valuation and ratemaking.

INTERNAL STRUCTURE OF THE DEPARTMENT

The Conference Substitute establishes the following as Presidentially appointed officers, subject to the advice and consent of the Senate: a Secretary, a Deputy Secretary, an Under Secretary, eight Assistant Secretaries. As in the Senate bill, the Secretary is left considerable leeway in deciding how to divide responsibility for the Department's work, among these eight Assistant Secretaries. The bill creates an Economic Regulatory Administration, an Energy Information Administration, and a Federal Energy Regulatory Commission, all headed by Presidential appointees subject to Senate advice and consent.

REGULATORY FUNCTIONS

The Conference Report creates a five-member Federal Energy Regulatory Commission, with members appointed by the President for four year staggered terms, subject to Senate confirmation and removable only for cause.

The Federal Energy Regulatory Commission will be primarily responsible for actions which establish rates and charges under the Natural Gas Act and the Federal Power Act, including the wellhead pricing for natural gas rates and charges for the transmission or sale of electrical energy and pipeline transmission charges.

It will also be responsible for the issuance of certificates of public convenience and necessity of natural gas pipelines, the establishment of related accounting rules, (including construction work in progress), for certain matters relating to curtailments, for certain matters relating to securities and mergers, and for certain matters relating to electrical interconnections.

In addition to the functions transferred to the Commission under the Federal Power Act and the Natural Gas Act, the Commission will be responsible for the functions transferred from the Interstate Commerce Commission relating to rates and charges for the transportation of oil by pipeline and valuation of any such pipeline; for responsibilities (shared with the Secretary) under the Emergency Petroleum Allocation Act of 1973 for major energy pricing and allocation decisions known as energy actions; for any matters which involve any agency determination required by law to be made on the record after an opportunity for an agency hearing; and any matters which the Secretary determines shall be made on the record after an opportunity for an agency hearing.

In addition, the Act gives the Commission the right to consider and make initial divisions on rules proposed by the Secretary where the rule significantly affects functions transferred to the Commission from the FPC, FEA, or ICC, even if they do not involve matters which are exclusively within the Commission's jurisdiction. In this area of shared jurisdiction, the Secretary must approve the Commission's action before it may become effective.

The bill gives the Secretary a major role in Commission matters in other ways as well. The Secretary may propose a rule or regulation either of general or specific applicability, as well as statements of policy of general applicability even though they involve matters for which the Commission has exclusive responsibility to make the final decision. (Section 403). When the Secretary proposes such a rule, the Commission must take final agency action on the rule in an expeditious manner. In the area of Commission jurisdiction over pricing actions under the Emergency Petroleum Allocation Act, the Commission's decisions will not be effective unless the Secretary approves them.

Conference substitute also creates an Economic Regulatory Administration which will be responsible for policy analysis, for

the assessment of the economic impact of energy regulation, and for the administration of most regulatory responsibilities not residing in the Commission.

PUBLIC LANDS LEASING

An arrangement between the Department of Energy and the Department of the Interior is established in the Conference substitute to facilitate the extraction of energy from public lands, while assuring protection of the environment and of multiple use concepts. Under this arrangement, the actual leasing of resources will remain in the Interior Department, but control over economic terms and conditions of leasing will reside in the Energy Department.

DATA-GATHERING AUTHORITIES

The Conference substitute strengthens existing data-gathering authorities and insulates the data-gathering and analysis activities within the Department. The Conference substitlte requires an annual financial profile of the energy industry which will include cost, revenues, and investments related to energy-related matters.

CONFLICT OF INTEREST PROVISIONS

The Conference substitute contains a number of measures to ensure public accountability. These include: requirement of strict divestiture of any energy-related holdings for all supervisory employees of the Department; disclosure of energy assets to the Secretary; a report on prior and post employment; and certain post employment prohibitions, including a prohibition on contacts by former Department officials for one year after leaving the Department.

CONSERVATION OFFICERS

The Conference substitute contains a requirement that other cabinet level departments designate a high-level official to become the principal energy conservation officer in that Department.

NATIONAL ENERGY POLICY PLAN

The Conference substitute contains a provision which requires the biannual preparation by the President of a proposed national energy policy plan.

Mr. JACKSON. Mr. President, the creation of a cabinet-level Department of Energy will at long last give life to a concept which I have supported for many years. The consolidation of the functions of two energy agencies, one regulatory commission, and several programs from other agencies and departments, is a significant achievement in Government reorganization and will, I believe, substantially improve the Federal capability to tackle the energy crisis.

The compromise bill worked out between the House and Senate conferees is, on the whole, fair and workable. The conference report sets out guidelines for the internal organization of the new department by listing 11 key functions which must be assigned to 1 of 8 assistant secretaries by the Secretary of Energy. In addition, the bill establishes several organizational units within the Department, including an Energy Information Administration. The Federal Government can no longer afford to be dependent upon industry data for its energy planning, Mr. President, and I am pleased that this department will have a technically and professionally qualified Information Administrator with politically independent responsibilities and a strong congressional charge to carry out a comprehensive energy data and information program.

Mr. President, there has been a great deal of public discussion about the size of this new Department and the powers of its Secretary. But I submit we have not created an empire for an energy czar. In fact, it is my personal view that the Secretary of Energy should have been given sole jurisdiction over oil pricing, as the Administrator of FEA now has, and more responsibility for the policy-making aspects of gas pricing. Undue fragmentation of these important energy policy decisions has hindered the Nation's response to past and present energy problems. However, I agree with my colleagues that a reorganization cannot be accomplished with one sweeping gesture. The merger of the independent Federal Power Commission into an executive branch department is legally and technically complex and the due process rights of affected parties must be protected during the transitional stages. I am therefore generally satisfied with the balance struck by the conferees between the powers of the Secretary and new Federal Energy Regulatory Commission regarding the functions transferred from the Federal Power Commission.

I am also pleased that the bill establishes a formal policy relationship between the Secretary of the Interior and the Secretary of Energy, aided by a statutory Leasing Liaison Committee, regarding the development of federally-owned energy resources. As you know, Mr. President, in the past I have promoted and still prefer, a combined Department of Energy and Natural Resources. The issues surrounding energy and the environment are not easily severed and they will have to be considered together as Congress and the executive branch face the challenges ahead. However, the Department of Energy bill certainly takes a step in the right direction in its treatment of Federal leasing functions.

The distinguished chairman of the conference, JACK BROOKS of the House Government Operations Committee, and my esteemed colleague chairman of the Senate Governmental Affairs Committee, ABE RIBICOFF, deserve high marks for their diligent efforts and fine leadership throughout the conference on S. 826. I commend their work to the Senate and urge the adoption of this conference report.

Mr. PERCY. Mr. President, it is a privilege for me today to urge the Senate to accept the conference report on the Department of Energy Organization Act, S. 826. This is landmark legislation and I congratulate Senator RIBICOFF on the outstanding leadership role he has played over the past several months in getting the bill this far.

Comprehensive energy reorganization proposals go back as far as 1971, when former President Nixon proposed the creation of a Department of Natural Resources. The energy crisis of 1973 gave birth to the Federal Energy Administration, and precipitated the reorganization of energy research and development. But not until 1977 have the administration and Congress addressed energy organization as comprehensively as we have in the bill before us today.

The deteriorating energy situation establishes an urgent need for this new Cabinet-level Department, which is designed to oversee and coordinate the Nation's energy programs and implement its policies.

Mr. President, the distinguished Senator from Connecticut has described in detail this legislation. It combines ERDA, FEA, and FPC, as well as absorbing certain functions of seven departments and commissions. Let me discuss very briefly just a few of the key issues which the conference committee resolved.

Reduction of energy waste must be the prime focus of our national energy policy. This conference report insures that conservation will receive top priority in DOE. It establishes an Under Secretary who will have primary responsibility for energy conservation. In addition, the Departments of Defense, HUD, Commerce, Transportation, Agriculture and Interior, plus the Postal Service and the GSA, will each have an Assistant Secretary or Assistant Administrator responsible for conservation.

Authority for setting oil and gas prices was, perhaps, the most controversial issue which was resolved in conference. Many were worried by the administration proposal to place all pricing authority in the hands of the Secretary of Energy. At the same time it was necessary that pricing issues be resolved expeditiously and with some input from the Secretary so that pricing policy is consistent with other energy policies.

This legislation accomplishes both ends. It establishes an independent 5-member Federal Energy Regulatory Commission to oversee all pricing decisions. It also allows the Secretary of Energy, a political appointee, to initiate pricing actions and to participate in Commission proceedings where appropriate.

Finally, Mr. President, today's glut of overlapping energy jurisdictions provides evidence of what happens when agencies are created for indefinite periods of time. The Department of Energy bill requires a Presidential review of all functions of this Department within 5 years. The Congress will thus have guidance in reorganizing and terminating sections of this Department before fiscal year 1983.

Mr. President, the Department of Energy will give cohesion and coherence to today's tangle of energy-related agencies. I urge the Senate to accept this conference report.

Mr. HANSEN. Mr. President, I would like to engage the distinguished chairman of the committee, majority floor manager of this bill, Senator RIBICOFF, in a colloquy regarding the transfer to the new Department of Energy from the Interstate Commerce Commission of the authorities and functions related to the regulation of the transportation of oil by pipeline. In doing so, I want to state my sincere appreciation to the chairman for his strong support and assistance in attempting to clarify the procedures for this important transfer, and thereby to insure that the regulation of oil pipelines proceeds in the new Department with maximum consistency and continuity, and with minimum disruption and dislocation for all concerned parties.

Mr. RIBICOFF. I thank the Senator and I would be pleased to discuss this

subject with the distinguished Senator from Wyoming, Senator HANSEN, who was the ranking Republican conferee from the Committee on Energy and Natural Resources in the conference on S. 826. And, I want to commend the Senator for his diligent efforts throughout the conference to perfect the procedures for the oil pipeline transfer, as well as other provisions of particular concern to the Energy and Natural Resources Committee.

Mr. HANSEN. I thank the Senator for his kind words and, turning to the conference report, invite the Senator's attention to section 402(b) of the statutory language, at page 23 of the report—House Report No .95–529—I think it is important legislative history that the original version of this language for this subsection 402(b), proposed as a compromise by the House conferees, included the phrase, "where the regulatory function 'directly' establishes rates or charges for the transportation of oil by pipeline or 'directly' establishes the valuation of any such pipeline." The conferees, at the suggestion of the distinguished majority floor manager, struck the word "directly" in the phrase. Would the Senator agree that our action was intended to make it clear that the new Federal Energy Regulatory Commission, and not the Secretary, shall have direct and sole jurisdiction under subsection 402(b) for all such functions and authorities which regulate the rates and charges for oil pipeline transportation and which regulate the valuation of oil pipelines, or which relate to such regulation of rates and charges and valuations?

Mr. RIBICOFF. The Senator is correct. Our clear intention was to insure that the Commission would have the sole jurisdiction under that subsection for all functions and authorities which relate to the regulation of such rates and charges or such valuations. We clearly intend that the broad mandates for such regulation under the Interstate Commerce Act, including the "just and reasonable" standards for such rates and charges and such valuations, will continue to be vested in the collegial Commission, and not in the Secretary.

Mr. HANSEN. Subsection 402(b) uses the phrases "establishes rates or charges" and "establish the valuation." I understand our intent is that the use of the verb "establishes" and "establish" is intended to be broadly construed as covering any regulatory action or determination of any rate or charge of any valuation, and certainly is not intended to suggest only the narrow instance when the Commission might set or "establish" a first rate, charge, or valuation. For example, we clearly intend that 402(b) would vest in the Commission the current ICC practices of reviewing tariffs filed by pipelines and setting valuations of pipelines, as well as any future procedures where the Commission sets initial general rates and charges or valuations. Is that an accurate restatement of our intent?

Mr. RIBICOFF. The Senator has accurately restated our intent.

Mr. HANSEN. In that regard, the statement of the managers, at pages 69 and 70 of the report, in discussing section 306, the general transfer provision for these ICC functions, lists 10 current ICC oil pipeline functions under the Interstate Commerce Act, which are to be transferred to the Department. First, it is my understanding that this discussion is not intended in any way to suggest that these 10 functions are vested in the Secretary, and not the Commission, but rather that this is the scope of functions transferred to the entire Department, including both those vested in the Secretary and those vested in the Commission.

Mr. RIBICOFF. The Senator is exactly correct. The list of 10 functions, as is stated in the text on page 69, "transferred to the Department," clearly covers the functions of the ICC we identified, with the help of the Senator from Wyoming, which will be transferred to the Department, which, of course, includes the Commission and not just the Secretary.

Mr. HANSEN. Second, would the Senator agree that, of the 10 listed functions on pages 69 and 70, at least numbers (1) through (5), the authority to prescribe rates of depreciation as described in number (8), and number (10) should be considered as functions which under section 402(b) we intend to vest in the Commission, since each of those functions relates to the regulation of rates and charges and valuations of pipelines? Also, any related investigative function and authority required to carry out those numbered functions should be directly available to the Commission, such as the authority to prescribe a uniform system of accounts, or to issue rules establishing procedures for Commission proceedings. Of course, other numbered functions may similarly relate to rates and charges or valuations and would also be in the Commission.

Mr. RIBICOFF. I would agree that at least the numbered functions and the related authorities stated by the Senator should vest in the Commission. The Secretary will have responsibility for other important transferred functions now administered by the ICC, including any authorities under the functions listed above which are not related to such rates, charges or valuations

Mr. HANSEN. Continuing in that regard, would the Senator agree, for example, that the pending ICC proceedings, ex parte No. 308 "Valuation of Common Carrier Pipelines," and ex parte No. 308 (Sub-No. 1), "Investigation of Common Carrier Pipelines," both of which will establish procedural rules for valuation proceedings, and thus relate to present and future rates and charges and valuations, will vest in the Commission under subsection 402(b)?

Mr. RIBICOFF. My own understanding is that these proceedings would be a matter within the exclusive jurisdiction of the Commission under section 402(b).

Mr. HANSEN. Turning to section 401 (F) in the statutory language, at page 21 of the report, I understand that this provision clearly intends that, among others, the current ICC practices and procedures administering its authorities under the Interstate Commerce Act, and related laws, for regulating oil pipelines will continue in effect until changed. Would the Senator agree, therefore, that the current practice, among many others, of the ICC in having pipelines file a tariff, and then reviewing it and either allowing it to continue or suspending it and setting a "just and reasonable" rate, under the authority of section 6 and 15 of the Interstate Commerce Act, would continue in effect, until changed by the Commission pursuant to subsection 401(F)?

Mr. RIBICOFF. The Senator is correct that such practices, among others, would continue in effect until changed. In fact, the statement of the managers on subsection 401(F), in the second paragraph on page 74 of the report, clearly sets out the requirement for continuation, until changed, of such ICC procedures.

Mr. HANSEN. Section 404 establishes procedures for the Commission to review certain rules proposed by the Secretary that may significantly affect the Commission's functions. The second sentence in the section incorporates the new Commission's oil pipeline regulation functions, by reference to subsection 402(b), as part of the functions for which the Commission shall have the right to review any Secretary-proposed rules which could have a significant impact. Would the Senator agree that the clear intent of subsection 404(a) is that the Secretary would give the Commission notice of any proposed rules, regulation, and statement of policy of general applicability which the Secretary proposed under his separate jurisdiction under section 306? And, am I right that the Commission can exercise its right of review under subsection 404(a), if such rule may have a significant impact on the Commission's functions under section 402(b)?

Mr. RIBICOFF. The Senator's interpretation is correct. We do intend that the Secretary notify the Commission of any such proposed rule, regulation, and statement, so the Commission can exercise its right to consider the proposal.

Mr. HANSEN. Finally Mr. Chairman, I am greatly concerned that we are placing responsibilities and authorities in this Commission for which there will not be initially a full capability to discharge them, because much of the expertise, background analyses, and understanding of this oil pipeline regulation will necessarily remain at the ICC. Would the Senator agree that the ICC and its staff should provide the assistance that the Commission may require and request, on a reimbursable basis and pursuant to such agreement as the two Commissions may enter into, as necessary to insure that during the transition period the new Commission has available all of the requisite expertise, background files and analyses, investigatory capability, legal support and other assistance from the ICC that the new Commission needs to assure continuity and consistency in the administration of the transferred function?

Mr. RIBICOFF. I agree with the Senator completely. Certainly, it is our clear intention that the transferred ICC regulatory functions, as well as all others, will be fully and competently exercised by the new Commission with a maximum degree of continuity and consistency.

Mr. HANSEN. I sincerely thank the distinguished Senator for his remarks and I want to express my great pleasure in having this opportunity to work closely with the Senator from Connecticut in fashioning this legislative history on this issue. I would hope that this colloquy will provide clear guidance for the establishment of the Department and the new Commission, and for any reviewing court, regarding the intent of this report for the future regulation of the transportation of oil by pipeline. I also would like to acknowledge the excellent work on this bill and this issue by the thoroughly able, competent, and professional staff of the Governmental Affairs Committee. I am very proud and grateful that this body has the support of such abilities, competence, and professionalism. We would be in dire straits without it. Thank you, Mr. President.

Mr. JAVITS. Mr. President, in the rush of events to bring this conference report to the floor in time to permit President Carter to sign it into law before the start of the August recess, I believe the conferees have unintentionally adopted a provision included in the House amendment and not in the Senate bill. The conferees believed this provision was purely technical in nature, but in fact it may have important substantive effects. It would repeal a provision enacted just last year in the Energy Conservation and Production Act—the FEA Extension Act—which, I believe, we in the Senate had no intention of repealing.

The provision that has been repealed limited the FEA's authority to retroactively impose rules changes on petroleum product marketers in its enforcement program. The provision, which was incorporated as section 7(k) of the Federal Energy Administration Act, states:

(k) The Administrator or his delegate may not exercise discretion to maintain a civil action (other than an action for injunctive relief) or issue a remedial order against any person whose sole petroleum industry operation relates to the marketing of petroleum products, for any violation of any rule or regulation if—

(1) such civil action or order is based upon a retroactive application of such rule or regulation or is based upon a retroactive interpretation of such rule or regulation; and

(2) such person relied in good faith upon rules, regulations, or rulings interpreting such rules or regulations, in effect on the date of the violation."

Mr. President, this provision was passed by both the Senate and the House in 1976, and was included in the Conference Report on ECPA in this form. The Statement of Managers to that Conference Report explained the provision as follows:

It is the intent of this provision to provide relief to businesses which have been subjected to seemingly endless changes in rules and regulations by the FEA and to penalties arising from those changes made after the original effective date of such rules and regulations. Many firms, especially smaller marketers, have attempted in good faith to rely on FEA rules and regulations, but have been confronted by subsequent amendments to those rules applied retroactively. This has presented a difficult situation and has frequently subjected small marketers to severe hardships. By adopting this language the conferees intend to relieve small marketers from an unnecessary burden. They do not intend to restrict the FEA from perfecting its rules and regulations, indeed, the conferees encourage this. However, they do not believe that such a periodic updating should cause unjust penalties to small businessmen.

The conferees do not mean for this subsection to provide marketers with the means to challenge all enforcement actions based upon arguably ambiguous rules, regulations or rulings or upon clarifying amendments thereto. It is intended to apply where the agency has officially taken one position then changes its mind and takes another. Further the conferees do not intend for this provision to limit argument or defense by any other person who may similarly be negatively affected with respect to a retroactive ruling or interpretation by the agency. The conferees do not intend for this provision to encourage the retroactive applications of rules and regulations to every other class or person not similarly protected.

Mr. Chairman, I would like to ask whether it was the intent of the conferees to repeal this important provision of ECPA, and what action can be taken to minimize the adverse effects resulting from a repeal if, in fact, the repeal was not intended?

Mr. RIBICOFF. The Senator from New York raises an important question and I thank him for bringing it to the attention of the Senate.

The provision you mention was a substantive change to the FEA enforcement program which was enacted last year as an amendment to the Federal Energy Administration Act of 1974. In conforming the Federal Energy Administration Act to the new organizational scheme established by this act, the conferees deleted most provisions of section 7 of the 1974 act since it largely contains administrative provisions which are superseded by provisions in this act. The repeal of subsection (k) of section 7 was included in the House amendment to S. 826, but was not a part of the Senate-passed bill. No intent to change substantive law should be attached to the fact that this act's technical amendments affected section 7(k) of the FEA act.

Section 7(k) expresses an important due process principle which the new Department as a matter of basic fairness must be expected to follow in any event.

Dr. Schlesinger also believes that this is an important substantive provision and, even though formally repealed by the Department of Energy legislation, it will continue to be a part of the Department's enforcement program as if it were still in force and had not been repealed. That is, the repeal will not cause the Department to impose such retroactive rules changes on petroleum marketers, or impose retroactive interpretations of rules on such marketers. In a letter received today from Dr. Schlesinger, he indicates that the Department will continue to honor the purpose and spirit of this provision. This assurance will protect the petroleum marketer from retroactive modifications and clarifications that have been imposed on them in the past by FEA which this provision was intended to eliminate. I ask unanimous consent that the letter Dr. Schlesinger has written expressing his views on this matter be included in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, August 2, 1977.

Hon. ABRAHAM RIBICOFF,
Chairman, Committee on Governmental Affairs, 3306 Dirksen Senate office Building, U.S. Senate, Washington, D.C.

DEAR CHAIRMAN RIBICOFF: it has come to my attention that a provision of the Department of Energy Organization Act repeals section 7(k) of the Federal Energy Administration Act. This subsection limits enforcement actions against independent marketers based on changes in rules or regulations, or interpretations thereof, applied retroactively.

It is the full intention of the Administration and of the Department of Energy to carry out its regulatory responsibilities as they relate to the subject matter of section 7(k) of the Federal Energy Administration Act as if that subsection were still in force and had not been repealed. In this regard, it is our intent to assure procedural fairness to independent marketers by carrying out a Department of Energy enforcement program consistent with section 7(k) of the FEA Act.

Thank you for bringing this matter to my attention.

Sincerely,

JAMES R. SCHLESINGER,
Assistant to the President.

Mr. HANSEN. Mr. President, I rise in support of the conference report on S. 826, the Department of Energy Organization Act. It is interesting to reflect back for a moment, Mr. President, to the Senate's consideration of this bill on May 18, 1977. On that date, in a single day, the Senate considered the bill, S. 826, as reported by our Committee on Government Affairs. I voted against S. 826 on that day, and spoke against it for several reasons. I was very concerned that the bill placed an inordinate amount of power over the pricing of all energy in one agency. I also was concerned about the consolidation of all energy information and assessment in a single agency. The planning process contained in the bill worried me a great deal, because of my concerns that it was to be a first step toward an entirely federally planned economy. I also was seriously disturbed by the energy industry profile mandated by this bill and its potential misuse for divestiture of the energy industries. Finally, I was worried that the Presidential veto over energy pricing contained in this bill and the new arrangements for Federal leasing between the Energy Department and Interior Department, respectively, would effectively void our current statutory authorities for these two critical areas.

I was quite pleased that after Senate consideration of this bill the House, by its actions, demonstrated grave concern with regard to some of the very same items that I had mentioned in my statement on May 18. Amendments passed by the House significantly altered the reported bill so as to materially increase the procedural safeguards associated with the authorities transferred into this Department from the Federal Power Commission. It is particularly noteworthy that many of the transferred authorities, which originally were enacted with the establishment of a collegial body, incorporated broad mandates and standards for the regulation of underlying economic and energy activities. They include, for instance, the standard of "just and rea-

sonable" for rates, charges, and prices, and the standard of "public convenience and necessity" for any licensing required by the act. Amendments passed by the House also made other substantive changes in the assignment of responsibility between the Secretary and the collegial body established by the bill to better insure that the Secretary's power is closely controlled, whenever the regulation of energy prices is involved.

Since final passage by the Senate and House, this bill has been the subject of lengthy conference negotiations resulting in the report before us today. I was privileged, along with Senators HATFIELD and CHURCH, to represent the Committee on Energy and Natural Resources in that conference in the areas of substantive jurisdiction of the committee. The areas on which the Energy Committee conferees focused their greatest attention were Federal leasing, energy regulation, and energy information. We also participated meaningfully in some of the organizational and programmatic deliberations of the conference, where we felt that substantive decisions of significance were being considered.

The conference results, which are a meaningful middle ground between the House and Senate bills, are generally satisfactory in almost every area of difference. I am particularly pleased with our success, with the help of Senator RIBICOFF and the Governmental Affairs conferees, in perfecting the transfer of Interstate Commerce Commission jurisdiction over the regulation of the transportation of oil by pipeline. Neither the House nor the Senate bill adequately addressed the ICC transfer issue. It was only after great diligence that the conference finally focused on this issue and was able to resolve it in a way which generally protects all parties interested in the regulation of oil pipelines. My separate colloquy with Senator RIBICOFF during this debate addresses the ICC issue in detail.

On balance, as in the ICC issue, I believe that the conferees have fashioned a Department of Energy in which we can have a fair degree of confidence that the rights of all individuals will be protected. I also believe that we have struck a reasonable balance in terms of the power and authorities of the Secretary and the powers and authorities of the Commission. The United States must be better organized to deal with the continuing energy difficulties and problems which we will face in the future, but at the same time our organization cannot and must not be at the expense of individual rights. The conference bill, I believe, protects those rights.

As in any conference there are going to be items on which any Conferee may disagree. That is the case with the report before us. I disagree with several of the conference decisions and, while I support the bill on balance, I believe there are areas which ultimately we will find must be reviewed and readdressed in subsequent amending legislation.

Briefly, I will outline these items as a checklist for our future action.

I would have gone all the way in putting all ICC regulatory functions for oil pipelines in the Federal Energy Regulatory Commission. I proposed this in the conference, but unfortunately the House conferees stood by the recommendation of the administration to preserve some authorities in the Secretary. I believe that the basic test for the new Department's organization should be the collegial aspect of the underlying statutory authorities. Application of that test in this case would have resulted in the placement of all ICC functions directly in the Commission. I hope that the report before us, as discussed in the colloquy with Senator RIBICOFF, will be interpreted to achieve as closely as possible that result. I state now my intention, in subsequent legislation, to deal immediately with any deviation from this stated intent of the conferees.

I am greatly troubled by the energy industry profile, which originally was passed by the Senate, and was retained in this bill. I hope that I am dead wrong in my conviction that this is the first step, the necessary information gathering step, towards an ultimate horizontal or vertical divestiture of our energy industry. I can find no responsible reason or support for the lengthy and extremely detailed financial and commercial information requirements which are contained within this provision of the bill, other than the potential goal of the drafters to achieve an eventual divestiture. I also strongly believe that this new information requirement is a direct and conscious violation of the jurisdiction of the Energy Committee over the substantive matters in the energy policy and program under the Senate rules. I would hope that the Committee on Energy and Natural Resources in fashioning a national energy plan and policy will be most attentive to my concerns in this regard.

The Senate-passed energy planning title, which was the subject of some controversy and amendment on this floor on May 18, was cut back even further in the conference. The mandatory congressional review, amendment and approval procedures for a national energy plan were removed at the insistence of the House conferees. I still believe that there is the potential, and probably the latent intent of the drafters, for eventual movement to a "Humphrey-Hawkins" type of national energy planning, and ultimately national economic planning, with the Federal Government as the true "economic big brother." Provisions struck on the Senate floor left little doubt that that was the intent of the drafters. I would hope that the administration in carrying out this authority will be most careful not to assist in any way in the movement in that direction.

In the Federal leasing area, this bill gives the Interior Department the statutory authority to act as a lead agency for virtually any major Federal action in the leasing of Federal lands, for purposes of the National Environmental Policy Act. I opposed the granting of that statutory authority to the Department of Interior. I am greatly concerned that this authority will be misused, because, as we all know, the environmental impact statements—EIS's—for our Federal leasing programs are the so-called pacing or critical path items. As we have already seen, there have been instances in this administration where the power over an environmental impact statement and the related, required analyses, has been used or misused by the Interior Department to delay or frustrate our desperate need to proceed with all deliberate speed in the Federal leasing of our national energy resources, such as our Outer Continental Shelf oil and gas resources. I would hope that this is another area where the Congress will pay close attention to the implementation under this act and will insure that any movement in that direction under the auspices of the Interior Department with this new authority will be quickly nullified. I encourage the eventual Secretary of Energy, apparently Dr. Schlesinger, to insure that he pays close attention to any movement by the Interior Department in that direction and alerts Congress to such movement. If the environmental impact statement process becomes a tool for continued delay and frustration of our stated goals for the Federal leasing of our energy resource land, Congress must and will act to directly alter the authorities of the Secretary of the Interior under this act.

Generally, though, I feel that the bill before us is as good a balance as could be expected in this Congress for establishing a Department of Energy. It is inevitable that this Congress will establish such a department, and therefore, realistically we must proceed to do so. Given that eventuality, I believe we have done as responsible a job, on balance, as could be expected from any conference committee. On behalf of those of us from the Committee on Energy and Natural Resources, I wish to thank the distinguished chairman of the Government Affairs Committee and his thoroughly professional staff for their assistance and support during this conference. Mr. President, I urge the support of the Members of this body for this legislation.

Mr. President, I understand that the distinguished floor managers for this conference report, Senator RIBICOFF and Senator JAVITS, are addressing the issue of the repeal of section 7(k) of the Federal Energy Administration Act by the conference report. I would like to engage the distinguished chairman of the Energy and Natural Resources Committee in a brief colloquy to discuss the repeal of that section. Would the Senator agree that the section provides a desirable protection against retroactive application and interpretation of regulations under the authorities of the Act.

Mr. JACKSON. The Senator is exactly correct. In fact, it was our understanding that this conference report only made technical and conforming amendments to that act, by including the House-passed provisions. We were surprised to find that the protections of section 7(k) had been repealed. Certainly, we had no intent in the conference to alter or repeal the policy contained in that section.

Mr. HANSEN. Would the Senator further agree that it is the intent of the conferees, and of this body, that the new Department shall continue to administer its regulations in a manner which conforms to the intent and procedures of section 7(k), despite the inadvertent repeal in the conference report.

Mr. JACKSON. Again, I agree with the Senator. I am pleased that Dr. Schlesinger, on behalf of the administration, has indicated that the administration similarly intends that the new Department proceed in that manner, and has pledged himself to insure that result.

Mr. HANSEN. Would the distinguished chairman agree that our Energy and Natural Resources Committee should consider the necessity of reenacting the provisions of section 7(k) as an amendment to our pending National Energy Act?

Mr. JACKSON. I agree that we should further review this situation, taking into account the administration's statements and the new Department's regulations, and, if we find it necessary, reenact the provisions of section 7(k). Certainly, our intent is for the new Department to proceed administratively as if it was still in law, and, if necessary, we will act to put it back in law.

Mr. HANSEN. I thank our distinguished chairman for his agreement and his assurances in this important matter. Thank you, Mr. President.

Mr. JAVITS. Mr. President, I yield myself 5 minutes.

Mr. President, we are back on the conference report now; may the RECORD show accordingly.

Mr. President, the conference report on which we are about to vote I commend to the Senate. I was one of the conferees who signed the report, and I believe it deserves the approval of the Senate.

Mr. President, we have an enormous problem with our national energy program, and obviously we are taking the first step in this report. Before any national energy plan can be put into effect, we need a functional mechanism or an institutional mechanism, in order to run it. We have all decided that we need a new Government department for that purpose, and the size and consequence of the problem at stake certainly deserves it.

Therefore, Mr. President, first and foremost, we know we have to enact a bill of this kind. I am very pleased that we are able to bring this conference report to the floor well enough in advance of the major substantive energy proposals which are now going through the first legislative test in the other body, and yet at the same time to have thoroughly considered, in the light of our present circumstances and of the future energy plan which we want, the attributes of this Department.

Therefore, we will have a functional agency, ready to serve, as soon as any new energy regulatory programs are enacted, and we will have consolidated in that Department of Energy the functions of other departments, groups, and agencies which can be so consolidated for the purpose of the greatest efficiency and the greatest effectiveness.

Mr. President, this Department will be with us probably for much longer than the crisis of energy in which we are engaged now. Therefore, it should be judged as a neutral and flexible structure which could be adapted not only to the present crisis but to the energy needs of our country perhaps for generations to come.

The Department will start with a strong Secretary, and that is very good. It is generally thought that Mr. Schlesinger will be its first Secretary. He will have the resources and authorities of the Federal Energy Administration and the Energy Research and Development Administration, major portions of the authority of the Federal Power Commission, and some of the functions of the Interior Department.

The Department of Energy will also have great influence on the Department of Transportation's fuel economy program, the Housing and Urban Development's national building conservation standards program, and the Interstate Commerce Commission's oil pipeline licensing jurisdiction.

Mr. President, the key point is not where the central power lies; the key point is how well will the public be served. The conferees have placed great authority in a five-member politically balanced and independent commission, the Federal Energy Regulatory Commission. When decisions regarding the fair and reasonable price to be charged consumers is in issue, these decisions will be made without regard to political pressures. These decisions will be made as a result of public hearings with all parties represented.

This balance is essential to insure that the functions of the Department, other than its regulatory functions, will not interfere with the quasi-judicial, regulatory function. We have, in that respect, I believe, tread successfully the fine line between the interests of producers and the needs of consumers.

A further point I wish to add relates to a provision of the bill with which I was much concerned in partnership, with the Senator from Ohio (Mr. GLENN). That is energy planning, title VIII of the bill and of the conference report.

We have provided that the President will thoroughly review our energy needs and objectives every 2 years, with a view toward insured that we are prepared in both 5- and 10-year timeframes to meet our energy needs. This requirement for a continuing assessment will, I believe, Mr. President, significantly help us to avoid, one, the great mistakes we have made in the past—we have had notice of a coming energy crisis for well over 20 years—and, two, will enable us to avoid the thorough dependence upon foreign sources which may prove to be insecure, or upon foreign prices which may prove to be dictatorial.

A revised national energy policy plan will be submitted to the Congress biennially, beginning in 1979, for congressional consideration.

Mr. President, I close as follows:

Although we have only required this periodic assessment of the President, I hope very much the Congress will not let this concept of national energy planning escape its actions or be underestimated in its importance, but that the Congress will fully perform its responsibility so that the legislative actions may meet the people's needs in respect to this particular situation.

We cannot control, obviously, future Congresses, but I believe that in title VIII of the conference report, the energy planning title, we have provided future Congresses with a means to shape our energy policies in accordance with our near and longer term needs, and to avoid the grave peril in which our Nation has been placed by the fact that despite considerable notice for 20 years we neglected to do what we are beginning to do now in respect of the National Energy Department and the national energy planning function.

Mr. President, I urge the Senate to approve the conference report.

Mr. President, I now yield such time as he may desire to the distinguished Senator from Alaska (Mr. STEVENS).

The PRESIDING OFFICER. The Senator from Alaska is recognized for how many minutes?

Mr. JAVITS. Such time as he may desire. I hope the Chair will advise me when he has used 15 minutes.

Mr. STEVENS. I thank the Senator from New York. I understand the time frame consequences.

Mr. President, let me first thank the distinguished Senator from Connecticut, the chairman of our committee, for his indulgence in permitting me to appear before the conference committee and present my views on several different portions of this bill.

I am deeply concerned about this bill. I voted for it when it passed the Senate, because of provisions which were in the bill that I felt adequately protected the functions of the Bureau of Mines, the Federal Power Commission, and the ICC.

There have been substantial changes made in the conference in those provisions.

I did, with the assistance of the Senator from Connecticut and because of his kindness, present the viewpoints of my State with regard to these provisions. They were viewpoints which I felt should have been more adequately supported by the conference committee because of the role my State must play in the future development of the oil and gas resources of this country.

We, the State of Alaska, will, in a very short period of time, be in a position to supply 10 percent of our Nation's daily consumption of oil. By 1985 I would estimate we will be producing a good 40 percent of the Nation's domestic oil production. Most of our oil will be transported at least a portion of the way by pipeline.

We have great reliance in Alaska on the Bureau of Mines. As one who has spent a great deal of time, over 4 years, in the Department of the Interior, I feel I know that agency as well as any Senator, and I have great respect for it.

In our committee, before the bill was reported to the floor, I first tried to prevent any transfer of any of the functions of the Bureau of Mines to the Department of Energy. A compromise was worked out by which the fuel supply and demand analysis and the data gathering related thereto from the Bureau of Mines would be transferred to the new Department of Energy. There was also a specific provision concerning the Federal Nonnuclear Energy Research and Development Act of 1974.

Our Senate version kept the Bureau of Mines research stations intact under the Department of the Interior. Unfortunately, the conference version splits the

research stations. This means the hard rock research will remain with the Department of Interior and the solid fuels minerals research will go to the Department of Energy. Those research stations will actually be under the control of two separate departments.

I do not support the provisions of the conference report which deal with the Bureau of Mines.

With regard to the ICC, the Senate version transferred ICC authorities related to the transportation of oil by pipeline to the Secretary of Energy, but, again in the compromise provision which came out of our committee, required the Secretary of Energy to promulgate the rules and regulations which would affect the rate of transfer and set forth procedures governing proceedings under the ICC Act as it would relate to the transportation of oil by pipeline prior to the actual transfer of ICC to the Department of Energy.

The conference version transfers these authorities to the Secretary of Energy. However, it does not provide for congressional review as provided for in the House and Senate passed versions.

Although both the House version and the Senate version provided for one house veto of these regulations, the conference version does not do so, and the conference version does not specify how the transfer will be effectuated.

It is my understanding that the Senator from Connecticut and the Senator from Wyoming have entered into a colloquy which will create some legislative history on this matter. I express my gratitude to the Senator from Connecticut and the Senator from Wyoming for this effort. I hope that the administration, if they get involved, will give great weight to the words of the Senator from Connecticut.

Mr. RIBICOFF. If the Senator will yield, a colloquy has been entered into and is duly part of the record. I assume, without question, that the legislative history is contained in that colloquy and the administration of the act will be undertaken accordingly.

Mr. STEVENS. I thank the Senator from Connecticut. Again, I say he has been very patient with me. I sometimes wonder if Alaskans are not overly sensitive about our position in terms of the oil and gas industry, trying to develop an industry at the time of the most intensive possible regulation, as compared to our counterparts in Louisiana, Texas, Oklahoma, and other States, that developed theirs prior to any regulation. It is a very difficult period.

One of the things we fear most is the potential for litigation that may arise from the transfers that are taking place, during the period of evaluation of the Alaskan pipeline. That is right during the period of the determination of the tariffs applied to the pipeline, and just before the construction of our new natural gas pipeline.

With regard to the FPC jurisdiction, the Senate version gave the Commission, created by this new bill, authority over natural gas and wholesale electric pricing and licensing, including routing of gaslines and abandonment. It also gave the Commission authority for pricing and allocation regulations and required congressional review

This Senate version gave the Commission the ICC authority relating to transportation of oil by pipeline. The conference version now specifies the FPC functions and authorities that are transferred to the Commission, but everything not mentioned goes to the Secretary.

The conference adopted a more detailed approach with regard to the FPC than is contained in the Senate bill, specifically listing those functions transferred to the Commission. It also significantly broadened the list of the Commission's functions from those specified in the Senate bill in order to give the Commission additional jurisdiction.

These include the issuance of hydroelectric licenses, the determination of construction work in progress, the regulation of mergers and securities acquisition, curtailments—other than the establishment of review of priorities—and electrical connections.

I believe that what we have done or what we are about to do is to create a Pentagon of the Energy. I am hopeful that the people who are on the Senate floor 20 or 30 years from now will believe that we have done a better job than we did when we created the military Pentagon.

Mr. President, I ask unanimous consent that my staff members working on this matter—Tim McKeever, Steve Perles, Steven Silver, and Chip Wagoner—may have the privilege of the floor during my comments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. The impact of what I am saying, and I hope that it does not disturb my good friend from Connecticut, is that at a time when the country is worried—at least at a time when I am worried—about the impact of over 20 years of regulation of the wellhead price of gas, that this bill sets the stage by empowering a commission within a new department to act both in the natural gas and oil areas, together with the authorities given to the Secretary of Energy, in a fashion that will have total control—not only wellhead price control, but transportation control, and destined-market price control—over both oil and gas.

I have great fear that the combination of all of these authorities in one place, as I said, is going to lead to excessive litigation and that, unfortunately, my State will be embroiled in that litigation endlessly.

We are already involved in litigation involving the valuation of the oil pipeline, and in litigation involving the tariffs with regard to the pipelines. I see the complications coming from this bill as being horrendous as far as litigation and delaying the final establishment of pricing, the final establishment of tariffs, and the final establishment of valuations, as regard our pipeline.

Mr. President, it is unfortunate, in my opinion, that we cannot establish an energy department which deals with policy and recognize that Congress still needs the independent, quasi-judicial agencies such as the ICC and the FPC to deal with the specific issues which have been within their competence for some years. Also, I think it is unfortunate that, at this time, we are fractionating one of the greatest agencies of the Federal Government, the Bureau of Mines, which will now lose a substantial portion of its research capacity that is related to energy. It still remains, as far as the public is concerned, the Bureau related to mineral activity in the United States. I am hopeful that the new Secretary of Energy will recognize the problems that are created by this bill, and I think we are creating problems. We are solving some but we are creating some.

I commend the President for having indicated that Mr. Schlesinger will be the first Secretary of Energy. If there is anyone who has the confidence of the people in Congress, so far as I am concerned, in this field, it is Jim Schlesinger. We know that he is cautious in terms of the exercise of power, but the power that he will have will be tremendous. He will have the power, Mr. President, to control the market price of oil and gas, to control the transportation costs of oil and gas, to control the wellhead price of oil and gas; in effect, he will have the power to determine whether or not all future frontier activity in my State is strangled or whether there is some incentive to be given to it to start in and develop, as the industry should develop, the great resources of Alaska. I feel we should have developed the energy policy first and then implemented the Government reorganization second. Unfortunately, we have determined to have the Government reorganization from a structure point of view first and the policy will come later. That we shall debate in September, and I am sure there will be differences here on the floor.

I want the record to show that, as far as this Senator is concerned, the organizational structure that relates to the Bureau of Mines, the ICC, and the FPC is contrary to what I think is in the best interest of the country. I have done my best to articulate our reasons for opposing what is done by the conference committee version, and I hope that the Senator from Connecticut will accept, again, my thanks for his having gone as far as he has to meet some of the problems that we have attempted to articulate in the course of the consideration of this bill.

Mr. RIBICOFF. Will the Senator yield?

Mr. STEVENS. I do.

Mr. RIBICOFF. I should say that no State could have a more ardent spokesman than the State of Alaska has in the Senator from Alaska. Throughout the hearings on this bill, the markup, and the conference, he was always concerned to insure that Alaska's interest would be taken into account and consideration. We have tried our best to have a bill that is fair to the entire Nation and to Alaska. There is much in this bill that has the thumbprints of the Senator from Alaska. I am sure the people of Alaska appreciate him.

Mr. STEVENS. I thank the Senator for his comments.

The PRESIDING OFFICER. The Senator has consumed 15 minutes.

Mr. JAVITS. Mr. President, how much more time do we have on this side?

The PRESIDING OFFICER. The Senator has 23 minutes left.

Mr. JAVITS. I yield 3 additional minutes to the Senator from Alaska.

Mr. STEVENS. Mr. President, I seek no additional time. I thank the Senator from New York and the Senator from Connecticut.

Mr. JAVITS. Mr. President, I know of no additional speakers. None has applied to me.

Mr. RIBICOFF. I am willing to yield back the remainder of my time.

Mr. JAVITS. Mr. President, does the Senator from Idaho want any time?

Mr. McCLURE. Will the Senator yield me 5 minutes?

Mr. JAVITS. I yield 5 minutes to the Senator.

The PRESIDING OFFICER. The Senator from Idaho is recognized for 5 minutes.

Mr. McCLURE. Mr. President, I do not want to speak at this time particularly in regard to the merits of the bill, but to raise two or three issues that deal primarily with procedural matters in the consideration of the legislation.

The Senate bill had a one-House veto on one portion of the regulation. The House measure had a veto on all the regulations issued in one area.

The items were not identical. They dealt with slightly differing matters and the conference in its wisdom has removed both of the veto provisions. Because the items were not identical, they were properly before the conference for change.

Looking at that question of whether or not the conference had gone outside the balance, the conference ran across the limitations, which are more familiar to Members of this body who have been here longer than I, on the limitation of the right to raise a point of order against a conference report which changes very dramatically the format of the legislation in ways which were not before either of the Houses of the Congress.

I find that, as a matter of fact, under the precedents of this body, points of order are very severely strained if, as a matter of fact, all after the enacting clause was stricken and a new bill was written, and the conference, under those circumstances, is given almost carte blanche to write a new bill.

It seems to me that the point of order, the requirement that the bill be within the bounds of the legislation in one body or the other, or lying between them, is a legitimate consideration founded on the principle that the Members of the body must have the opportunity to debate the questions that are in the bill, and they will have notice and opportunity to debate it, opportunity to amend those provisions, and have the full range of options for each of the respective bodies of the Congress to work their will on those provisions.

When, however, it is beyond a point of order and, in effect, the conference can write a new piece of legislation not subject to a point of order, then the Members of both bodies are denied the opportunities of individual Members to look at that new piece of legislation as they would a piece of legislation emerging from committee, or to offer amendments in any meaningful manner to affect that new piece of legislation that comes before the body.

In looking at this piece, I am satisfied, as the staff is satisfied, that this legislation is not subject to a point of order within the rules of the Senate. But it seems to me that maybe we should look at the rules of the Senate with respect to the proceedings on a conference report where, as a matter of fact, the conference report is new legislation, rather than simply a compromising of the views between two bills, one in this body and one in the other.

I am not going to attempt anything at this time other than to raise the issue that there may need to be a protection for the Members of this body by changes in the procedural rules of the Senate guaranteeing the full and open discussion, including the right to amend original legislation that emerges from the conference without attempting to change the proceedings and the rules where the legislation, by way of conference reports, is not original legislation.

I recognize that is a difficult and sometimes imponderable decision to try to make. The question of the one-house veto is obviously one of some concern to people within this body and also to various people within the administration.

It is a matter that has been debated at length, both as a matter of philosophy, as a matter of practical procedural problem, as a matter of the constitutional prerogatives of the different branches of Government.

It seems to me that when we have felt it necessary in both Houses to have had at least some portion of the one-House veto over some portion of the activities of the Department of Energy, that some part of that one-House veto would have survived the conference.

I think that in this instance, as in many others, the conferees worked their will on a piece of legislation in a way which was somewhat different from that will expressed first by the House in one regard and by the Senate in another regard.

So, Mr. President, I am not going to attempt raising that point of order. I know it would not lie. But I am raising the issue of the question and hope that perhaps sometime in the future we can take a look at our procedural rules in a way that will guarantee to the Members of this body the opportunity to look at a conference report with the opportunity to amend which is denied to us in this instance.

I think if, as a matter of fact, this conference report were subjected to that kind of a procedure and that kind of a scrutiny, there would be a number of amendments offered.

I know the Senator from Alaska has very strong feelings concerning some provisions of this bill. But, as a practical matter, there is no way in which we can offer any kind of amendment. There is no practical opportunity to change the results of the conferees once the conference has ended, sitting on a conference as can give the opportunity to free legislation that never would have passed in either body under any other circumstance. This may be one such instance.

Mr. President, I yield back the remainder of my time.

Mr. ROBERT C. BYRD. Mr. President, I would like to clarify one issue as regards the functional statements of the Assistant Secretaries contained in title II, section 203(a). As Senators are aware, the current ERDA fossil energy program, including the five Energy Research Centers, is funded by my Appropriations Subcommittee. During the past 3 years, I have worked with ERDA so that today the fossil energy research program is a well-defined, integrated program that has eliminated redundant efforts. A critical part of the fossil energy program is the research and development work performed in the five Energy Research Centers, one of which is located at Morgantown, W. Va.

I am concerned that in creating the Department of Energy we do not destroy the integrated fossil energy program and set back coal research. Therefore, it is your understanding that the fossil energy program, including the five Energy Research Centers, would be transferred as an integrated unit to the Assistant Secretary who has the research and development functions outlined in title II, section 203(a)(2)?

Mr. RIBICOFF. The Senator from West Virginia is absolutely correct.

The PRESIDING OFFICER. Who yields time?

Mr. RIBICOFF. I have no request for time.

Mr. JAVITS. Mr. President, I yield myself 30 seconds.

Mr. President, I expect another speaker, the Senator from Oklahoma (Mr. BARTLETT).

In view of that, is it agreeable to have a quorum without charging the time?

Mr. RIBICOFF. Yes.

Mr. JAVITS. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum without the time being charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 20 minutes remaining.

Mr. JAVITS. I yield 15 minutes to the Senator from Oklahoma.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 15 minutes.

Mr. BARTLETT. Mr. President, may I amend that to 10 minutes?

The PRESIDING OFFICER. The Senator is recognized for 10 minutes.

Mr. BARTLETT. I thank the distinguished Senator from New York.

Mr. President, today I speak against the conference report on S. 826, a bill to create a Cabinet Department of Energy.

I agree with the advocates of this measure that our national energy emergency desperately demands a compre-

hensive and workable energy policy. However, I am not convinced that this legislation represents a step toward such a policy.

S. 826 suggests that we respond to America's energy emergency not only by concentrating the energy-related functions of the Federal Government in one agency but also by sharply expanding Federal involvement in the energy industry.

Under this legislation, a new Department of Energy would have the authority to pursue economic planning activities designed to influence major sectors of the private economy in order to achieve its energy objectives.

The private energy industry would likely be subject to further Federal intervention in a variety of forms, including continued control over pricing and mandatory disclosure of private information by energy companies—actions which can only discourage competition within the industry.

Hasty consideration of this measure by Congress has also left unresolved serious questions regarding other areas of the new Department's authority. For example, the propriety of having regulatory authority vested in a policymaking agency, and the feasibility of dividing leasing authority between the new Department and the Department of Interior remain in question.

I believe the creation of a single Department of Energy should involve a streamlining of Federal energy activities with increased reliance on the ability of free market forces to solve our energy emergency. Instead, S. 826 constructs a huge new bureaucracy, intent on expanding Federal manipulation of the energy industry.

DEPARTMENT OF ENERGY (DOE)

The argument can be made for concentrating the many Government agencies into one Department. Some imply this will ipso facto, presto-changeo solve the energy crisis. That is a lot of hogwash.

The majority of Congress know that the free market is the basic solution to the energy shortage—one that does not require any modifications.

The acronym DOE for the Department of Energy is most appropriate—DOE will cost approximately $10.6 billion, and emplov 20,000 people. $10.6 billion for controlling 10,600 producing companies in the United States, that is $1 million per company per year. For what purpose?

To increase production? No.

To reduce imports? No.

To decrease costs to the consumer? No.

This is so notwithstanding the fact that the administration supports price controls which are normally designed for the purpose of reducing costs. Despite the recommendation for the extension of price controls to the intrastate market, the costs will still go up for both gas and oil.

To strengthen the economy? No.

To increase jobs in the private sector? No.

To increase jobs in the public sector? Yes; 20,000 jobs—that means two Federal employees to watch each private oil company and to see that it obeys increasingly restrictive Federal regulations.

The sum of $10.6 billion is a lot of money; $3 billion is the amount Saudi Arabia the largest oil producing nation in the world—spent last year on oil and gas; $3.5 billion is the amount the entire Canadian oil and gas industry will spend in 1977.

In 1977 all companies will spend only $10.2 billion on all drilling and exploration in the United States.

That is $400 million less than the $10.6 billion for DOE, Department of Energy.

The total estimated capital and exploration expenditure in the United States by the entire industry this year is $28.45 billion. DOE's budget is 37 percent of the industry's total outlay.

The capital outlay of $28.45 billion needed to find, drill for, produce, transport, and process oil and gas will cost the consumer about $4.50 per barrel of oil equivalent.

The Congress today will be voting for an additional charge of $1.65 per barrel that the consumer will pay in dough for the DOE (the Department of Energy).

Just think, if the $10.2 billion that is spent by oil companies on drilling and exploration were supplemented by DOE's $10.6 billion, how much more oil and gas would be found in this country and how much further down the road would we be toward self-sufficiency? Instead we are spending it to restrict an industry, making it impossible to have a free market system, where the market can determine what the price will be and what the inflow of capital would be for the energy industry.

The President called new natural gas deregulation a ripoff of the American consumer. This false claim has been repudiated by reliable sources which show deregulation to be cheaper than continuation of controls.

Mr. President, $10.6 billion is a lot of dough. It is also a lot of DOE, Department of Energy. I wonder what kind of ripoff to the consumer the President calls DOE?

Mr. President, I urge my colleagues to vote against the conference report. I yield the floor.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. BARTLETT. Yes.

Mr. CURTIS. I want to commend the distinguished Senator on his statement, which is clear and to the point. It emphasizes the fact that our problem is that we need more production, and we will not get more production by more restriction.

I commend the Senator and I thank him for his good statement.

Mr. BARTLETT. I thank the distinguished Senator from Nebraska and for his comments.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. The yeas and nays have already been ordered.

Mr. BARTLETT. I thank the Chair.

Mr. JAVITS. Mr. President, I yield 4 minutes to the Senator from Texas (Mr. TOWER).

The PRESIDING OFFICER. The Senator from Texas is recognized for 4 minutes.

Mr. TOWER. Mr. President, Government reorganization is usually justified as a means of reducing wasteful Government spending. This proposal, however, to establish a Department of Energy, has been justified primarily on the basis of improved energy policy coordination. Unfortunately, in our debate on the creation of this new Department, the Senate has been noticeably silent about its costs to the taxpayer. In doing so, I believe we are doing a great disservice to the American people.

The public should know what this new Agency is going to cost them and what they are likely to get in return for their investment. Although improved coordination of national energy policy is a laudable goal, I suspect that the American people will be astonished when they learn of the burden being imposed on them by the action of this Congress and the administration in creating the Department of Energy. Since President Carter has emphasized his concern for the growing bureaucracy and its burden on the taxpayers, let us put in some perspective the cost of this newest addition to the expanding Federal bureaucracy.

I, perhaps, am repeating some figures here that have already been articulated by my good friend from Oklahoma, but I think they bear repetition.

The Department of Energy is expected to cost taxpayers $10.6 billion during its first year of operation. If experience with our other Federal agencies is any guide, this will certainly increase to staggering levels in future years. Considering the likely return for the money to be expended, I think the cost is excessive.

Let us make some comparisons. In 1975, the petroleum industry spent over $6.6 billion in the drilling and equipping of all the crude oil, natural gas, and dry wells in the United States. That represents $4 billion less than the cost of this new Department during its first year of operation.

The Trans-Alaska pipeline, which has been characterized as the largest private undertaking in the history of the Republic, cost $7.5 billion. That is a little over $3 billion less than 1 year of this new Agency.

Some of the more enthusiastic proponents of this new Government giant have been known on occasion to jump at the opportunity to condemn oil company profits, but the 1976 net profits of the five largest U.S. oil companies, from all of their operations all over the world, amounted to only $6.6 billion. That is exactly $4 billion less than the first year of this new Government department.

Many in the administration and in Congress, in their emotional appeal to continue Government price controls on the oil industry while blaming that industry for oil and gas shortages, make the outrageous claim that an energy policy of price deregulation would result in a massive rip-off of consumers. This "rip-off" would result, they say, because deregulation would cause a massive shift of resources from energy consumers to energy producers, while resulting in only marginal or insignificant increases in petroleum supplies.

I submit that the real consumer "ripoff" is in the continuation of these counterproductive Government regulations and in the establishment and continua-

tion of a massive Federal bureaucracy. Much as I sympathize with energy agency reorganization, I see in this new Department of Energy and in the Government regulations on which it will feed, the exemplification of this kind of "ripoff" by Government. Almost $11 billion for 1 year of one Government department—this is truly a massive shift of resources, not to private industry, but into the hands of the nonproductive bureaucracy of the Federal Government.

What will the taxpaying public gain in return for its $10 billion investment? Do any of us believe that this expenditure will facilitate the exploration and development of additional, needed supplies of oil and natural gas? I predict that it will have the opposite result.

Mr. President, an energy policy that begins by taking billions of dollars from the public in order to institutionalize the regulation and control of private energy producing companies is an energy policy which is going in the wrong direction. The quickest, most efficient way for us to solve our energy supply problems is to adopt sensible, far-sighted Government policies which place primary reliance, not on Government decisionmaking, but on the operation of the competitive marketplace.

If we adopt such policies and work toward the removal of the excessive regulatory burden imposed on energy production, then much of this new Department will be unnecessary. One big step in that direction would be to remove Federal price controls on oil and gas. That would be the best way to solve our energy problems, and if it were done gradually, as decontrol proponents suggest, it would also be the least painful of all solutions. Thus, Mr. President, I suggest that, now that we have created this new Agency, we must begin immediately to dismantle it by removing its reason for existence.

Mr. JAVITS. Mr. President, how much more time do I have?

The PRESIDING OFFICER. The Senator from New York has 6 minutes remaining.

Mr. JAVITS. I yield 3 minutes to the Senator from Idaho (Mr. McCLURE).

Mr. McCLURE. Mr. President, I ask unanimous consent that we have a quorum call without the time being charged to either side.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. Mr. President, I want the Senator to withhold his request just briefly.

Mr. McCLURE. Surely.

Mr. ROBERT C. BYRD. I ask unanimous consent that I may proceed for 3 minutes without the time being charged to either side on the conference report.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE AUGUST ADJOURNMENT RESOLUTION—HOUSE CONCURRENT RESOLUTION 317

Mr. ROBERT C. BYRD. Mr. President, on last Friday the Senate adopted a resolution providing for adjournment through the month of August. It is very important that action be taken with respect to the clean air measure which is now tied up in conference. The conferees on both sides have been working early and late on that conference.

I have discussed the matter a number of times with Senator MUSKIE and Senator RANDOLPH, and I know that the Senate conferees are acting with the utmost diligence and dedication in an effort to resolve the problems that are involved in that matter.

I am very concerned lest Congress go out before the matter is resolved in such a way that it will not create a serious unemployment problem in the country. In that event the President would, of course, be constrained to call Congress back in session. I do not want to see that happen. If we have not completed the work in such a way as the problem will be resolved to avoid work slowdown, closedown of the factories, and throwing of people out of work temporarily, I think we should face up to that situation here and make the decision ourselves to stay in session.

On Friday we agreed to that resolution. Today is the second day following adoption of that resolution. It is the only day in which a motion to reconsider the vote on that resolution can be entered under the rules.

Therefore, I enter a motion to reconsider the vote by which House Concurrent Resolution 317 was agreed to.

I move that the Secretary of the Senate be directed to request the House of Representatives to return to the Senate House Concurrent Resolution 317.

Mr. BAKER addressed the Chair.

The PRESIDING OFFICER. The motion is not debatable.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the distinguished minority leader may proceed for 1 minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Tennessee.

Mr. BAKER. I thank the majority leader.

We discussed this matter earlier, and the completion of the conference report on clean air is a matter of vital importance.

It is my understanding that the conferees are going to meet tonight. It is my hope and I would even speculate that they may be able to work something out tonight. But as I understand the steps now taken by the majority leader, he has entered a motion to reconsider and he has moved that the House of Representatives be requested to return our resolution. Is that a correct statement?

Mr. ROBERT C. BYRD. That is correct.

Mr. BAKER. Mr. President, would it be the intention of the majority leader to ask for a vote on the motion but not on the motion to reconsider?

Mr. ROBERT C. BYRD. Not on the motion to reconsider. But we would first have to adopt the motion to ask the House of Representatives to return the measure. The motion to reconsider will come later, but we first need to get the papers back.

Mr. BAKER. Mr. President, the motion to reconsider need not be voted on today.

Mr. ROBERT C. BYRD. No.

Mr. BAKER. Mr. President, I have no objection to the motion to request that the House of Representatives return our resolution. I hope that we do not vote on the motion to reconsider until the conference has time to meet tonight and we see the result of that conference.

Mr. ROBERT C. BYRD. I ask unanimous consent that I may proceed for another 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. May I say it is not the intention to move to reconsider today but under the rule I have, of course, the right to enter the motion to reconsider. I voted with the prevailing side and, in view of the fact that the papers have gone out of the possession of the Senate, it is necessary under the rule that a motion be immediately voted on, and it is not debatable, asking the House of Representatives to return the papers.

If at some later point those papers are returned and I move to reconsider, that motion is not debatable either. But we are not at this point.

Mr. BAKER. Mr. President, I do not object to that. I think the majority leader is acting wisely, and I support that motion.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

DEPARTMENT OF ENERGY—CONFERENCE REPORT

The Senate continued with the consideration of the conference report on S. 826.

The PRESIDING OFFICER. Who yields time?

Mr. JAVITS. Mr. President, I ask unanimous consent that we may have a quorum call just for a minute without the time being charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CHILES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHILES. Mr. President, how much time is remaining?

The PRESIDING OFFICER. The Senator from Connecticut has 24 minutes and the Senator from New York has 6.

Mr. CHILES. I thank the Chair.

Mr. JAVITS. Mr. President, I ask unanimous consent that we may have a quorum call without its being charged to either side.

Mr. CHILES. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. CHILES. The Senator has plenty of time.

Mr. JAVITS. I called it off and I allowed the Senator to do it.

Mr. CHILES. I did not object when the Senator put it in.

Mr. JAVITS. The Senator was not here.

Mr. CHILES. I was here.

Mr. JAVITS. We are trying to work something out with the Parliamentarian.

Mr. CHILES. The Senator has 24 minutes plus so much other time. Why can it not be done on that time?

I withdraw my objection.

Mr. JAVITS. I thank the Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislature clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. STONE). Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I yield 3 minutes to the Senator from Idaho.

Mr. McCLURE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. McCLURE. Mr. President, the House bill treated the question of the limitation on supergrade employees under this bill in one fashion, and the Senate bill treated the limitation on supergrades in another fashion. The conference report came back with the subject treated in yet a third manner, in which the ceiling on numbers of supergrades as provided in the United States Code, under the conference report, exceeds the ceiling under either the House bill or the Senate bill.

My parliamentary inquiry is whether or not numercial limitations in legislation that are exceeded by the conference action, so that the number limitations are outside the numbers used by either the House or the Senate, would subject the report to a point of order under the rules of the Senate.

The PRESIDING OFFICER. If the figures that the conferees reported were outside the figures in the bill of either House, then the Chair would be inclined to agree with the Senator. In this case, however, the figures are based on a series of rather complex formulas, so the Chair would rather not indulge the decision as to whether or not those figures are, in effect, outside.

Mr. McCLURE. I thank the Chair. I think the opinion of the Chair that if it were clearly outside the numbers involved it would perhaps be subject to a point of order is perhaps a correct ruling. I also agree with the Chair that in view of the complexity between the House and the Senate and in the conference, that that might be a point of order on this legislation. I thank the Chair and I thank the Senator from New York for yielding. I will not raise the point of order.

Mr. JAVITS. I thank the Senator from Idaho. Mr. President, I have no further requests and I am ready to yield back the remainder of my time.

Mr. RIBICOFF. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the conference report. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. McCLELLAN), the Senator from South Dakota (Mr. ABOUREZK), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from Kentucky (Mr. HUDDLESTON) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Rhode Island (Mr. CHAFEE), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Nevada (Mr. LAXALT), the Senator from Illinois (Mr. PERCY), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

The result was announced—yeas 76, nays 14, as follows:

[Rollcall Vote No. 323 Leg.]

YEAS—76

Allen	Ford	Moynihan
Anderson	Glenn	Muskie
Baker	Gravel	Nelson
Bayh	Hansen	Nunn
Bellmon	Hart	Packwood
Bentsen	Haskell	Pearson
Biden	Hatfield	Pell
Brooke	Hathaway	Proxmire
Bumpers	Heinz	Randolph
Burdick	Hollings	Ribicoff
Byrd, Harry F., Jr.	Humphrey	Riegle
	Inouye	Roth
Byrd, Robert C.	Jackson	Sarbanes
Cannon	Javits	Sasser
Case	Johnston	Schweiker
Chiles	Leahy	Sparkman
Church	Long	Stafford
Clark	Magnuson	Stennis
Cranston	Mathias	Stevenson
Culver	Matsunaga	Stone
Danforth	McGovern	Talmadge
DeConcini	McIntyre	Thurmond
Dole	Melcher	Weicker
Domenici	Metcalf	Williams
Eagleton	Metzenbaum	Zorinsky
Eastland	Morgan	

NAYS—14

Bartlett	Hayakawa	Scott
Curtis	Helms	Stevens
Durkin	Lugar	Tower
Garn	McClure	Wallop
Hatch	Schmitt	

NOT VOTING—10

Abourezk	Huddleston	Percy
Chafee	Kennedy	Young
Goldwater	Laxalt	
Griffin	McClellan	

So the conference report was agreed to.

Mr. RIBICOFF. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I want to thank the conferees on the Department of Energy measure and to commend them for the fine work they have done in bringing this measure now to its final enactment in the Senate.

Mr. RIBICOFF is to be highly commended. Mr. PERCY and Mr. JAVITS, and others on both sides of the aisle who participated in the conference, are to be thanked. I am extremely grateful for their good work. This will now pave the way for the President to send a nomination to the Senate and, hopefully, that nomination can be confirmed before the August recess.

CORRECTIONS IN ENROLLMENT OF S. 826

Mr. RIBICOFF. Mr. President, there is a House Concurrent Resolution No. 320 at the desk making technical and clerical changes in the conference report to S. 826.

Mr. President, I ask the Chair to lay before the Senate a message from the House Concurrent Resolution No. 320 and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. STONE) laid before the Senate House Concurrent Resolution 320, directing the Secretary of the Senate to make certain corrections in the enrollment of the bill S. 826.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being on objection, the concurrent resolution was considered and agreed to.

REFERRAL OF S. 897

Mr. RIBICOFF. Mr. President, I ask unanimous consent to amend the referral of S. 897 to provide that the bill be jointly referred to the Committee on Governmental Affairs, the Committee on Foreign Relations, and the Committee on Energy and Natural Resources, with the proviso that the Energy and Natural Resources Committee shall be limited in its consideration to sections 102, 103, 104, 105, 202, 501, 502, and 503 of the bill as amended by the Committee on Governmental Affairs, and that the Committee on Energy and Natural Resources shall report its recommendations on such sections to the Senate not later than September 20, 1977, and further that the Committee on Governmental Affairs and the Committee on Foreign Relations shall report the legislation not later than September 23, 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TO VITIATE CLOTURE MOTION ENTERED ON S. 926

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the motion to invoke cloture which I entered on yesterday on S. 926 be vitiated so that there will not be a vote tomorrow on that motion.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, has there been any morning business today?

The PRESIDING OFFICER. There has not been morning business.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages

from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

THE PROBLEM OF DRUG ABUSE IN AMERICA—PM 103

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States.

To the Congress of the United States:

Drug abuse continues to be a serious social problem in America. The lives of hundreds of thousands of people are blighted by their dependence on drugs. Many communities remain unsafe because of drug-related street crime, and the immense profits made in the illicit drug traffic help support the power and influence of organized crime. Among young American men aged 18–24 years, drugs are the fourth most common cause of death: only automobile accidents, homicides, and suicides rank higher. The estimated cost of drug abuse in America exceeds 15 billion dollars each year. Among some minority groups, the incidence of addiction and the harm it inflicts are disproportionate.

Drug addiction, which in recent years was viewed as a problem peculiar to America, now affects people throughout the world. We can no longer concern ourselves merely with keeping illicit drugs out of the United States, but we must join with other nations to deal with this global problem by combating drug traffickers and sharing our knowledge and resources to help treat addiction wherever it occurs. We must set realistic objectives, giving our foremost attention domestically to those drugs that pose the greatest threat to health, and to our ability to reduce crime. Since heroin, barbiturates and other sedative/hypnotic drugs account for 90 percent of the deaths from drug abuse, they should receive our principal emphasis.

My goals are to discourage all drug abuse in America—and also discourage the excessive use of alcohol and tobacco—and to reduce to a minimum the harm drug abuse causes when it does occur. To achieve these goals with the resources available, effective management and direction are essential. Because the Federal effort is currently divided among more than 20 different, and often competing, agencies, I have directed my staff to coordinate Federal action and to formulate a comprehensive national policy. This will end the long-standing fragmentation among our international programs, drug law enforcement, treatment and rehabilitation, prevention, and regulatory activities. I will also seek the counsel and active involvement of members of the Cabinet and heads of major independent agencies on all drug abuse policy questions, through a revitalized Strategy Council on Drug Abuse. My staff will examine the functions of the various agencies involved in this field and will recommend to me whatever organizational changes are appropriate.

INTERNATIONAL COOPERATION

For certain drugs originally derived from plant sources outside the United States, especially heroin and cocaine, diplomatic agreements against cultivation and trafficking are indispensible. Turkey—once virtually the sole source of heroin supply in this country—is now gone from the illicit market as the result of such an agreement. The enormous profits generated by the illicit drug traffic distort the economies of many smaller countries, aggravating inflation and draining tax revenues; they also engender corruption and corrode political stability. We must work closely with other governments to assist them in their efforts to eradicate the cultivation of drugs, and to develop legitimate alternative sources of income for the impoverished farmers who have for generations raised and sold crops such as opium.

We have made significant progress in the last few months. In February, I discussed with President Lopez-Portillo of Mexico my deep concern about the illegal cultivation of opium in his country. Under his strong leadership, the eradication program has been intensified and is producing dramatic results, significantly reducing the availability of heroin in many American cities. In addition, President Ne Win of Burma and Prime Minister Thanin of Thailand have shown a resolute determination to control drug cultivation and trafficking in their countries. Most recently I have received strong assurances from President Lopez-Michelsen of Colombia that he plans to give the problem of drug trafficking his highest priority. We are establishing a commission made up of government officials from our two countries to coordinate a stepped up effort to deal with the major international trafficking of cocaine and marihuana between our two countries, and the devastating economic impact of that traffic.

As a result of these efforts and those of the Drug Enforcement Administration, the purity of heroin in our country has dropped in the last 6 months to 4.9 percent, the lowest level in 4 years.

There is, however, more that we can do:

(1) I am directing the Secretary of State to give greater emphasis to the international narcotics control program and to reiterate to foreign governments our strong desire to curtail production of, and traffic in, illicit drugs.

(2) To this end, I am directing the Administrator of the Agency for International Development to include such measures as crop and income substitution in its development programs for those countries where drugs are grown illicitly. I expect the Secretary of State to continue to call on other agencies and departments, such as the Drug Enforcement Administration, the U.S. Customs Service, the U.S. Department of Agriculture, and the National Institute on Drug Abuse, to assist in the international narcotics control program according to the special expertise of each.

(3) I am directing the intelligence community to emphasize the collection and analysis of information relating to international drug trafficking.

(4) I strongly support the work of the United Nations Fund for Drug Abuse Control (UNFDAC), the United Nations Commission on Narcotic Drugs, the International Narcotics Control Board, the World Health Organization, and other organizations working within the framework of the United Nations in their efforts to help drug-producing countries find alternate crops, improve drug control measures, and make treatment resources available.

(5) I am instructing the United States representatives to the loan committee of the Regional Development Banks and other international financial institutions to use their votes and influence to encourage well designed rural development and income substitution projects in countries which now produce dangerous drugs, and to ensure that assistance is not used to foster the growth of crops like opium and coca.

(6) Because of the need to improve international controls over dangerous drugs which have legitimate medical uses, like barbiturates and amphetamines, I urge the Congress to adopt legislation implementing the Convention on Psychotropic Substances, and I urge the Senate to ratify this treaty promptly.

(7) In my communications with foreign leaders, I will emphasize international cooperation among drug law enforcement agencies, so that intelligence and technical expertise can be shared. I will encourage them to send law enforcement officials to work with us to stop the flow of drugs through other countries. This kind of cooperation has already begun in Bangkok among French, German, British, Dutch, American and Thai officials.

I will, in addition, promote the international sharing of knowledge and expertise in the treatment of drug abuse. We will make a special effort to share our experience, especially with those nations which have serious drug problems and which are working with us in the effort to control drug sources and prevent drug abuse. Our program will encompass training, research and technical assistance projects, including providing American experts as consultants.

LAW ENFORCEMENT

We must vigorously enforce our laws against those who traffic in drugs, so that the attraction of large profits is outweighed by the risk of detection and the likelihood of conviction. The Federal Government's job is to deter, and where possible prevent entirely, illegal importation and major trafficking of controlled substances. Often large-scale financiers of the illegal drug trade never come into direct contact with drugs. Through the cooperative efforts of the various agencies involved, we will attack the financial resources of these traffickers who provide the capital needed to support the smuggling of drugs into the country. Drug traffickers must understand that they face swift, certain, and severe punishment; and our law enforcement and judicial systems must have the resources to make this prospect a very real threat. We must allocate our resources intelligently, revise our penalty structure where necessary to concen-

trate on the actions (and the drugs) that are most dangerous, and improve the administration of justice.

Therefore:

I am directing the Attorney General to intensify investigations of the link between organized crime and the drug traffic, and to recommend appropriate measures to be taken against these organizations.

I am directing the Department of Justice in conjunction with the Departments of State and Treasury to study arrangements with other countries, consistent with Constitutional principles, to revoke the passports of known major traffickers, and to freeze assets accumulated in the illegal drug traffic.

To ease the burden on the United States District Courts, which must hear major drug cases, I support legislation widening the jurisdiction of U.S. Magistrates under certain circumstances to include misdemeanor offenses which carry sentences of up to one year.

In 18 United States Attorneys' Offices, special units devoted to the prosecution of major drug traffickers exist. The Department of Justice is now expanding this program to include additional units.

I support legislation raising from $2,500 to $10,000 the value of property which can be seized and forfeited from drug violators by administrative action, including cash within the definition of seizable property. Amounts above this figure will continue to require court proceedings.

I am directing my staff to recommend to me the appropriate Federal drug law enforcement role in the light of currently available resources—state, local and Federal. For nearly a decade, Federal support of state and local enforcement activity has steadily expanded. The time is ripe to evaluate the result of this effort, to determine whether Federal participation should be altered, and to determine the proper division of responsibility between Federal and local officials. The Office of Drug Abuse Policy has already begun the first phase of this review, which includes consideration of border security and drug trafficking intelligence.

I am directing the Attorney General to study the necessity for and constitutionality of proposals which would deny pretrial release to certain persons charged with trafficking in drugs posing the greatest threat to health. and to give me his recommendations within 90 days. At the present time, some persons charged with major drug offenses can use their immense wealth to post bail and escape justice. If enactment of such proposals appears to be necessary and constitutional, their application should be tightly restricted and they should include a provision granting the accused an expedited trial.

I am directing the Attorney General to review the adequacy of the penalties for major trafficking offenses and to give me his recommendations within 90 days.

I also have considered requesting changes in the Tax Reform Act of 1976. Some of its provisions—such as those for disclosure and summonsing—were designed to protect the privacy of citizens but may also impede unnecessarily the investigation of narcotics trafficking cases. I am asking the appropriate Federal agencies to determine the difficulties these provisions present to effective law enforcement. If it appears they can be amended to improve law enforcement without infringing upon legitimate privacy interests, I will submit legislation to the Congress.

MARIHUANA

Marihuana continues to be an emotional and controversial issue. After four decades, efforts to discourage its use with stringent laws have still not been successful. More than 45 million Americans have tried marihuana and an estimated 11 million are regular users.

Penalties against possession of a drug should not be more damaging to an individual than the use of the drug itself; and where they are, they should be changed. Nowhere is this more clear than in the laws against possession of marihuana in private for personal use. We can, and should, continue to discourage the use of marihuana, but this can be done without defining the smoker as a criminal. States which have already removed criminal penalties for marihuana use, like Oregon and California, have not noted any significant increase in marihuana smoking. The National Commission on Marihuana and Drug Abuse concluded 5 years ago that marihuana use should be decriminalized, and I believe it is time to implement those basic recommendations.

Therefore, I support legislation amending Federal law to eliminate all Federal criminal penalties for the possession of up to 1 ounce of marihuana. This decriminalization is not legalization. It means only that the Federal penalty for possession would be reduced and a person would receive a fine rather than a criminal penalty. Federal penalties for trafficking would remain in force and the States would remain free to adopt whatever laws they wish concerning the marihuana smoker.

I am especially concerned about the increasing levels of marihuana use, which may be particularly destructive to our youth. While there is certain evidence to date showing that the medical damage from marihuana use may be limited, we should be concerned that chronic intoxication with marihuana or any other drug may deplete productivity, causing people to lose interest in their social environment, their future, and other more constructive ways of filling their free time. In addition, driving while under the influence of marihuana can be very hazardous. I am, therefore, directing the Department of Transportation to expedite its study of the effects of marihuana use on the coordination and reflexes needed for safe driving.

DRUG TREATMENT

My immediate objective will be to widen the scope and improve the effectiveness of Federal drug treatment programs. In conception and in practice, they have been too narrow. Drug addiction can be cured; but we must not only treat the immediate effects of the drugs, we must also provide adequate rehabilitation, including job training, to help the addict regain a productive role in society. In the past, Federal programs have given disproportionate attention to the heroin addict while neglecting those who are dependent on other drugs.

To improve the quality of Federal drug treatment, I am recommending these steps:

In recognition of the devastating effects that certain nonopiate drugs can have if abused, I am directing the Secretary of Health, Education, and Welfare to expand resources devoted to care for abusers of barbiturates, amphetamines, and multiple drugs used in combination, including alcohol.

To help drug abusers return to productive lives, I am directing the Secretary of Labor to identify all Federal employment assistance programs which can help former drug abusers and to give me, within 120 days, his recommendations for increasing the access of drug abusers to them.

A sustained effort must be made to identify the reasons that people turn to drugs, including alcohol and cigarettes. We should seek more effective ways to make people aware of the health problems associated with such substances (particularly cigarettes and alcohol) and to respond in more constructive ways to the human and psychological needs they satisfy.

DRUG RESEARCH

In the past, there has been no serious attempt to coordinate Federal research on opiates and alcohol despite the many similarities in the effects of these two drugs. A joint Federal research center might not only save money, but also lead to greater scientific understanding of addiction problems. Therefore I am directing the Secretary of Health, Education, and Welfare to study the feasibility of making the Addiction Research Center responsible for coordinated research on a variety of drugs, including opiates, alcohol, and tobacco.

ADMINISTRATIVE ACTION

Improved treatment and prevention programs should be accompanied by appropriate changes in Federal regulations, administrative practices, and enforcement, among which are these:

First, I am recommending a conscious and deliberate increase in attention throughout the Federal Government to the problems related to the abuse of drugs that come originally from legitimate medical sources. Of particular concern are barbiturates, which despite their recognized medical use, are responsible for many deaths and are frequently used in suicide attempts. The withdrawal reaction of patients addicted to barbiturates can be more difficult and more dangerous than that associated with heroin withdrawal. They are frequently oversold, overprescribed, and overused. Therefore, I will:

—Instruct the Secretary of Health, Education, and Welfare to undertake a study of barbiturates and other sedative/hypnotic drugs to determine the conditions under which they can be most safely used.

—Instruct the Secretary of Defense, the Secretary of Health, Education, and Welfare, and the Administrator of Veterans' Affairs to review the

prescribing practices of physicians under their jurisdiction, and to discourage the medical use of barbiturates and sedative/hypnotics except in cases where it is unmistakably justified.

—Continue the program, already begun at my direction, by which the Drug Enforcement Administration has instructed its regional offices and regulatory task forces to give priority attention to barbiturate cases. DEA has also begun to investigate the "street" market in order to determine the source of illegal supplies so that suitable Federal action may be taken. In the near future, DEA will conduct a special accelerated audit of the 120 companies lawfully manufacturing barbiturates in this country and will also notify foreign governments of our desire to see them control their barbiturate exports strictly.

Second, I am directing the Secretary of Health, Education, and Welfare to review those sedative/hypnotic drugs particularly subject to abuse to determine whether any should be removed from the market, taking into consideration not only their safety to the individual but also the dangers they pose to the public at large.

Third, I support legislation giving the Food & Drug Administration the authority to apply standards of safety and efficacy to all drugs, by repealing those laws which exempt a variety of drugs because they were placed on the market before a certain date. A number of barbiturates fit into this category.

Fourth, Some physicians still knowingly overprescribe a wide variety of drugs. Although, as a result of careful education, physicians have voluntarily reduced their prescriptions for barbiturates by 73 percent during the last five years, a few are continuing to misprescribe these and other drugs deliberately. I am directing the Attorney General, in full cooperation with State officials, to begin a concerted drive to identify and prosecute these violators.

No government can completely protect its citizens from all harm—not by legislation, or by regulation, or by medicine, or by advice. Drugs cannot be forced out of existence; they will be with us for as long as people find in them the relief or satisfaction they desire. But the harm caused by drug abuse can be reduced. We cannot talk in absolutes—that drug abuse will cease, that no more illegal drugs will cross our borders—because if we are honest with ourselves we know that is beyond our power. But we can bring together the resources of the Federal Government intelligently to protect our society and help those who suffer. The sufferers include the overwhelming majority of the public who never abuse drugs but for whom drug abuse poses the threat of broken families, a lost child or fear to walk the streets at night. Beyond that, we must understand why people seek the experience of drugs, and address ourselves to those reasons. For it is ultimately the strength of the American people, of our values and our society, that will determine whether we can put an end to drug abuse.

JIMMY CARTER.

THE WHITE HOUSE, *August 2, 1977.*

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a message from the President of the United States on drug abuse, which was received today, be jointly referred to the Committees on Foreign Relations, Human Resources, and the Judiciary.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE HOUSE

At 3:04 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that:

The House has passed without amendment the joint resolution (S.J. Res. 79) to amend the Federal Home Loan Bank Act.

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 826) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes.

The House has passed the following bill in which it requests the concurrence of the Senate:

H.R. 4979. An act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nevada.

The House has agreed to the following concurrent resolutions in which it requests the concurrence of the Senate:

H. Con. Res. 182. A concurrent resolution providing for the printing as a House document of the pamphlet entitled "Black Americans in Congress";

H. Con. Res. 190. A concurrent resolution to provide for the printing of the brochure entitled "How Our Laws Are Made";

H. Con. Res. 217. A concurrent resolution to provide for the printing of a revised edition of "The Constitution of the United States of America";

H. Con. Res. 222. A concurrent resolution to authorize the printing of a revised edition of "The Capitol" as a House document; and

H. Con. Res. 320. A concurrent resolution directing the Secretary of the Senate to make certain corrections in the enrollment of the bill S. 826.

JOINT RESOLUTION ENROLLED SIGNED

The Speaker has signed the enrolled joint resolution (S.J. Res. 79) to amend the Federal Home Loan Bank Act.

The enrolled joint resolution was subsequently signed by the Acting President pro tempore.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following communications which were referred as indicated:

EC–1757. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report of a deferral of Energy Research and Development Administration budget authority that should have been, but was not, reported to the Congress by the President pursuant to the Impoundment Control Act of 1974 concerning the Intense Neutron Source Facility project; jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, and Energy and Natural Resources.

EC–1758. A letter from the General Counsel of the General Accounting Office transmitting, pursuant to law, a report on the status of budget authority that was proposed, but rejected, for rescission concerning the Patrol Hydrofoil Missile Program; jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, and Armed Services.

EC–1759. A letter from the Secretary of the Navy transmitting a draft of proposed legislation to amend chapter 3 of title 37, United States Code, to provide a subsistence allowance for members of the armed forces enrolled in certain officer candidate programs and for other purposes (with accompanying papers); to the Committee on Armed Services.

EC–1760. A letter from the Deputy Assistant Secretary of the Interior transmitting, pursuant to law, a copy of a proposed contract with Booz-Allen and Hamilton, Inc., Cleveland, Ohio, for a research project entitled "An Automated Rail Haulage System" (with accompanying papers); to the Committee on Energy and Natural Resources.

EC–1761. A letter from the Administrator of the Environmental Protection Agency transmitting, for the information of the Senate, changes in the estimates for three States in the report of February 10, 1977 estimating the costs of construction of publicly owned wastewater treatment facilities needed to carry out the provisions of the Federal Water Pollution Control Act (with an accompanying report); to the Committee on Environment and Public Works.

EC–1762. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within the past sixty days (with accompanying papers); to the Committee on Foreign Relations.

EC–1763. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Military Compensation Should be Changed to Salary System" (FPCD–77–20) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1764. A letter from the Assistant Secretary for Administration of the Department of Commerce transmitting, pursuant to law, a proposal to adopt a system of records in addition to those previously noticed in the Federal Register, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmental Affairs.

EC–1765. A letter from the Secretary of Labor transmitting, pursuant to law, a report entitled "Groups with Historically High Incidences of Unemployment" (with an accompanying report); to the Committee on Human Resources.

EC–1766. A letter from the Chairman, Board of Directors, and the Acting Executive Director of the Pension Benefit Guaranty Corportion transmitting, pursuant to law, the second annual report of the Pension Benefit Guaranty corporation reviewing the progress of the Corporation during fiscal year 1976 (with an accompanying report); to the Committee on Human Resources.

EC–1767. A communication from the President of the United States transmitting, pursuant to law, an amendment to the request for appropriations for the fiscal year 1978 in the amount of $2,500,000 for foreign assistance (with accompanying papers); to the Committee on Appropriations, and ordered to be printed.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PROXMIRE, from the Committee on Banking, Housing and Urban Affairs:

A report entitled "Report on the Oversight Hearings on the Federal Reserve System's Budget for the Calendar Year 1977" (Rept. No. 95–381).

By Mr. RIEGLE, from the Committee on Banking, Housing and Urban Affairs:

With an amendment:

H.R. 5294. An act to amend the Consumer Credit Protection Act to prohibit abusive practices by debt collectors (Rept. No. 95–382).

By Mr. EASTLAND, from the Committee on the Judiciary:

With an amendment:

S. 911. A bill for the relief of Mr. and Mrs. Brian Logan (title amendment) (Rept. No. 95–383).

S. 948. A bill for the relief of Chin-Ah-Park and Chin-Suk-Park (title amendment) (Rept. No. 95–384).

S. 1003. A bill for the relief of Me Young Lee (Rept. No. 95–385).

By Mr. HATFIELD (for Mr. ABOUREZK), from the Select Committee on Indian Affairs:

With amendments:

S. 1560. A bill to restore the Confederated Tribes of Siletz Indians of Oregon as a federally recognized sovereign Indian tribe, to restore to the Confederated Tribes of Siletz Indians of Oregon and is members those Federal services and benefits furnished to federally recognized American Indian tribes and their members, and for other purposes (Rept. No. 95–386).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. ROBERT C. BYRD (for Mr. MAGNUSON), from the Committee on Commerce, Science, and Transportation:

Richard J. Daschbach, of New Hampshire, to be a Federal Maritime Commissioner.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. RIBICOFF, from the Committee on Governmental Affairs:

John Maxwell Ferren, of the District of Columbia, to be an associate judge of the District of Columbia Court of Appeals.

By Mr. WILLIAMS, from the Committee on Human Resources:

Patricia Albjerg Graham, of Massachusetts, to be Director of the National Institute of Education.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. RANDOLPH, from the Committee on Environment and Public Works:

Peter Amory Bradford, of Maine, to be a member of the Nuclear Regulatory Commission.

William Drayton, Jr., of Massachusetts, to be an Assistant Administrator of the Environmental Protection Agency.

Joseph Mallam Hendrie, of New York, to be a member of the Nuclear Regulatory Commission.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. WILLIAMS, from the Committee on Human Resources:

Robert Oberndoefer Harris, of the District of Columbia, to be a member of the National Mediation Board.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. SPARKMAN, from the Committee on Foreign Relations:

Benjamin H. Read, of the District of Columbia, to be Deputy Under Secretary of State.

William Bowdoin Jones, of California, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Haiti.

Andrew Ivy Killgore, of Florida, a Foreign Service officer of class 2, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the State of Qatar.

Rodney O'Gliasain Kennedy-Minott, of California, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Sweden.

Peter R. Rosenblatt, of New York, for the rank of Ambassador during the tenure of his service as Personal Representative of the President to conduct negotiations on the future political status of the Trust Territory of the Pacific Islands.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calender year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: William B. Jones.

Post: Haiti.

Contributions, amount, and date:

1. Self, William B. Jones, none.

2. Spouse, Joanne G. Jones, none.

3. Children and Spouses, Lisa, Stephanie, Walter, none.

4. Parents, William T. Jones, La Velle Jones, none.

5. Grandparents, deceased.

6. Brothers and spouses, none.

7. Sisters and spouses, none.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

WILLIAM B. JONES.

POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Andrew Ivy Killgore.

Post: Doha, Qatar.

Contributions, amount, and date:

7. Sisters and spouses, Frederick G. Wessinger (bros.-in-law), $100.00 Richard Nixon Pres.'l Campaign.

Gainor O. Minott (sister), $50.00, 1972, McCloskey Repub. Pres.'l Campaign.

Elizabeth Minott Wessinger, $50.00, 1972, McCloskey Repub. Pres.'l Campaign.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

RODNEY O'G. KENNEDY-MINOTT.

POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Peter R. Rosenblatt.

Post: Personal Representative of President to negotiate on the status of the Micronesia Trust Territory.

Contributions, amount, and date:

1. Self, spouse, (see list attached as Rider No. 1.)

3. Children and spouses, none.

4. Parents, none.

5. Grandparents, none.

6. Brothers and spouses, Richard D. and Lois S. Rosenblatt—Approximate aggregate of $5,000 to the Democrat National Committee during the 4-year period.

Robert W. and Helen S. Rosenblatt—less than $100 per year aggregate.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

PETER R. ROSENBLATT.

RIDER NO. 1

Questions 1 and 2; contributions to candidate for nomination or election to Federal positions by my wife and me:

Amount, date, and donee:

$25, 1976, Norm Dicks.

$50, 1976, Friends of Les Aspin.

$118, 1976, Virginians for Zumwalt.

$25, 1976, O'Hara for U.S. Senate.

$100, 1976, Moynihan for U.S. Senate Committee.

$50, 1976, Committee for Fauntroy '76.

$50, 1976, James R. Jones Campaign.

$125, 1975, Jackson Dinner Committee.

$25, 1974, Friends of Les Aspin.

$50, 1974, "Doc" Morgan Reception Committee.

Mr. SPARKMAN. Mr. President, as in executive session, I report favorably from the Committee on Foreign Relations sundry nominations in the Diplomatic and Foreign Service which have previously appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of July 21, 1977, at the end of the Senate proceedings.)

ENROLLED JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that today, August 2, 1977, he presented to the President of the United States the enrolled joint resolution (S.J. Res. 79) to amend the Federal Home Loan Bank Act.

HOUSE CONCURRENT RESOLUTIONS REFERRED

The following concurrent resolutions were referred to the Committee on Rules and Administration:

H. Con. Res. 182. A concurrent resolution providing for the printing as a House document of the pamphlet entitled "Black Americans in Congress";

H. Con. Res. 190. A concurrent resolution to provide for the printing of the brochure entitled "How Our Laws Are Made";

H. Con. Res. 217. A concurrent resolution to provide for the printing of a revised edition of "The Constitution of the United States of America"; and

H. Con. Res. 222. A concurrent resolution to authorize the printing of a revised edition of "The Capitol" as a House document.

HOUSE BILL REFERRED

The following bill was read twice by its title and referred to the Committee on Energy and Natural Resources:

H.R. 4979. An act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nevada.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. JAVITS (for himself, Mr. CASE and Mr. WILLIAMS):

S. 1977. A bill to amend titles IV, XI, and XIX of the Social Security Act to increase the Federal matching rate for purposes of reimbursement to States under the programs of aid to needy families with children and medical assistance; to the Committee on Finance.

By Mr. GRAVEL:

S. 1978. A bill to amend the Internal Revenue Code of 1954 to provide an increased zero bracket amount and personal exemption deduction amount for individuals residing in Alaska and Hawaii; to the Committee on Finance.

By Mr. CHILES:

S. 1979. A bill to waive the statute of limitations with regard to the tort claim of David E. Janney against the United States; to the Committee on the Judiciary.

By Mr. PEARSON (for himself, Mr. SCHMITT, and Mr. GOLDWATER):

S. 1980. A bill to provide for a comprehensive and coordinated national climate program, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. DOLE:

S. 1981. A bill to provide for automatic adjustment of deduction to individual retirement accounts, et cetera, and for other purposes; to the Committee on Finance.

By Mr. TOWER:

S. 1982. A bill for the relief of John P. Hesch; to the Committee on the Judiciary.

By Mr. GRIFFIN:

S. 1983. A bill to amend the National Labor Relations Act, the Labor-Management Relations Act, 1947, the Labor-Management Reporting and Disclosure Act of 1959, and for other purposes; to the Committee on Human Resources.

By Mr. METZENBAUM (for himself, Mr. ALLEN, Mr. SPARKMAN, and Mr. GLENN):

S. 1984. A bill to amend the Appalachian Regional Development Act of 1965 in order to continue certain assistance to child development centers; to the Committee on Environment and Public Works.

By Mr. MATHIAS:

S. 1985. A bill to expedite action on certain permits by the Secretary of the Army; to the Committee on Environment and Public Works.

By Mr. McCLURE (for himself and Mr. GARN):

S. 1986. A bill to provide for the transportation within the United States of passengers in foreign-built inflatable rafts, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HELMS:

S. 1987. A bill to provide for increased employee ownership of business and accelerated capital formation; to the Committee on Finance.

By Mr. HUMPHREY:

S. 1988. A bill for the relief of Mr. Arthur Lardizabal Adiarte; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. JAVITS (for himself, Mr. CASE, and Mr. WILLIAMS):

S. 1977. A bill to amend titles IV, XI, and XIX of the Social Security Act to increase the Federal matching rate for purposes of reimbursement to States under the programs of aid to needy families with children and medical assistance; to the Committee on Finance.

Mr. JAVITS. Mr. President, for myself, Senator CASE and Senator WILLIAMS, I send to the desk for appropriate reference a bill to amend the Social Security Act to increase the Federal share of payments to States for medical assistance and aid to families with dependent children.

This bill is an important first step toward welfare reform, for it provides vital fiscal relief to the cities and States of our Nation that are being almost literally crushed by the burden of welfare payments.

By mandating a flat 75-percent reimbursement to States, this bill goes a long way toward eliminating inequities in the treatment of States by the Federal Government. Under present law the Federal share—which ranges from 50 percent to approximately 80 percent—results from a formula that relies heavily on the per capita income in each State. This formula is based on the erroneous belief that States with high per capita income are best able to meet their welfare costs. The formula is discriminatory because among the 12 States and the District of Columbia that presently receive the minimum 50 percent Federal reimbursement are those very States which currently face the severest fiscal crises due in large measure to welfare costs. And, these same States have the heaviest welfare caseloads—far out of proportion to the Nation as a whole. This is due mainly to the demographic fact of large migration of unskilled persons from the rural areas of the country to these industrialized States in the last two decades. Because the problem is a national one—every American has a right to lo-

cate where he or she will—it is unfar to penalize financially those States and localities that bear the greatest welfare caseload burdens.

The need for fiscal relief of welfare costs is too pressing a problem to wait for comprehensive programmatic welfare reform—desirable and essential as it is. Given the complexity and emotions surrounding the welfare problem, a major overhaul of the system could take some time. Badly hit State and local governments cannot wait for relief until then. Their need exists now, they are in financial jeopardy now, and the time for action is now.

This bill was introduced in the Senate by me in the last Congress and by Representative ABZUG in the other body. In this Congress the bill was introduced in the House by Representative HOLTZMAN and a group of cosponsors. Senators CASE, WILLIAMS and I intend to cooperate closely with Representative HOLTZMAN and the other House Members in this effort.

By Mr. GRAVEL:

S. 1978. A bill to amend the Internal Revenue Code of 1954 to provide an increased zero bracket amount and personal exemption deduction amount for individuals residing in Alaska and Hawaii; to the Committee on Finance.

Mr. GRAVEL. Mr. President, the legislation I am introducing today is designed to correct a basic flaw in our tax system that clearly discriminates against lower income persons in the non-contiguous States of Alaska and Hawaii.

Congress has followed the principle, since 1964, that poverty level income should be free from taxation. The report of the Ways and Means Committee of the House of Representatives on the Tax Reduction and Simplification Act of 1977 contained the following paragraph:

In the past, the Congress has used the minimum standard deduction . . . to establish, in conjunction with other provisions, the tax-free income level approximating the poverty level. This policy started with the Revenue Act of 1964. The Committee now believes that a higher floor is now needed to increase the income level at which people begin to pay income tax (the tax threshold) to offset its erosion by inflation.

The Senate Finance Committee report on this legislation contains a similiar statement.

While this policy has offered relief from taxes for wage earners at the poverty level, it has not been consistently applied with respect to Alaska and Hawaii. The Office of Management and Budget defines poverty level income for the purposes of eligibility for Community Services Administration programs. I ask unanimous consent that the poverty guidelines be printed in the RECORD.

The table indicates that Alaska and Hawaii receive an adjustment in the poverty level in recognition of the high cost of living in those non-contiguous States. However, the tax laws do not provide for a similar adjustment in the principle articulated above. In effect, persons at the poverty level in the continental United States escape tax liability. Poverty level families in Alaska and Hawaii do not.

This legislation provides for a 25-percent adjustment in the standard deduction and personal exemption for taxpayers in Alaska and a 15-percent adjustment for taxpayers in Hawaii. I ask unanimous consent that a table showing the effect of this measure be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

CSA POVERTY GUIDELINES

Family size	Nonfarm family	Farm family
Contiguous States:		
1	$2,970	$2,550
2	3,930	3,360
3	4,890	4,170
4	5,850	4,980
5	6,810	5,790
6	7,770	6,600
Noncontiguous States:		
Alaska (25 percent adjustment):		
1	3,720	3,200
2	4,920	4,210
3	6,120	5,220
4	7,320	6,230
5	8,520	7,240
6	9,720	8,250
Hawaii (15 percent adjustment):		
1	3,430	2,940
2	4,530	3,870
3	5,630	4,800
4	6,730	5,730
5	7,830	6,660
6	8,930	7,590

Note: Federal Register, vol. 42, No. 79, Monday, Apr. 25, 1977, p. 21109.

Family size	Standard deduction and personal exemption	Taxable income	Poverty
Contiguous States:			
1	$2,200+ $750	$2,950	$2,970
4	$3,200+$3,000	6,200	5,850
Alaska (25 percent adjustment):			
1	$2,750+ $950	3,600	3,720
4	$4,000+$3,800	7,800	7,320
Hawaii (15 percent adjustment):			
1	$2,550+ $850	3,400	3,430
4	$3,700+$3,400	7,100	6,730

Mr. GRAVEL. I am well aware that other areas of the United States experience high costs of living and I would favor similar relief for taxpayers nationwide. However, the Department of Health, Education, and Welfare has indicated that an accurate measure of cost-of-lving differentials across the United States would require an expenditure of $50 million to develop. Studies also indicate that the cost-of-living differential between any two points in the Lower 48 is small in magnitude compared to the differential between the Lower 48 and Alaska and Hawaii.

Since OMB already recognizes a different poverty level for these two States, I believe it is important that Congress provide equity in taxation for the taxpayers in these States. I urge the Finance Committee to act quickly on this legislation.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1978

A bill to amend the Internal Revenue Code of 1954 to provide an increased zero bracket amount and personal exemption deduction amount for individuals residing in Alaska and Hawaii

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 63 of the Internal Revenue Code of 1954 (relating to taxable income defined) is amended by adding at the end thereof the following new subsection:

"(i) Special Rules for Alaska and Hawaii.—

"(1) Alaska.—In the case of an individual who is a resident of Alaska and who is physically present in Alaska for more than 180 days during the taxable year, subsection (d) shall be applied by substituting—

"(A) '$4,000' for '$3,200',

"(B) '$2,750' for '$2,200', and

"(C) '$2,000' for '$1,600'.

"(2) Hawaii.—In the case of an individual who is a resident of Hawaii and who is physically present in Hawaii for more than 180 days during the taxable year, subsection (d) shall be applied by substituting—

"(A) '$3,700' for '$3,200',

"(B) '$2,550' for '$2,200', and

"(C) '$1,850' for '$1,600'.

(b) Section 151 of such Code (relating to allowance of deduction for personal exemptions) is amended by adding at the end thereof the following new subsection:

"(f) Special Rule for Alaska and Hawaii.—In the case of an individual who is a resident of Alaska and who is physically present in Alaska for more than 180 days during the taxable year, this section shall be applied by substituting '$950' for '$750' each place it appears. In the case of an individual who is a resident of Hawaii and who is physically present in Hawaii for more than 180 days during the taxable year, this section shall be applied by substituting '$850' for '$750' each place it appears.".

(c)(1) Section 3402(a) of such Code (relating to requirement of withholding) is amended by adding at the end thereof the following new sentence: "The Secretary shall prescribe special tables for use in withholding on wages paid to individuals for whom the amount of a withholding exemption is determined under section 151(f).".

(2) Section 6012 of such Code (relating to persons required to make returns of income) is amended by redesignating subsection (d) as (e) aad by inserting after subsection (c) the following new subsection:

"(d) Special Rules for Alaska and Hawaii.—In the case of an individual whose bracket amount is determined under section 63(i)(1), this section shall be applied by substituting '$950' for '$750' each place it appears, '$3,700' for '$2,950', '$4,950' for '$3,950', and '$5,900' for '$4,700'. In the case of an individual whose zero bracket amount is determined under section 63(i)(2), this section shall be appleid by substituting '$850' for '$750' each place it appears, '$3,400' for '$2,950', '$4,500', for '$3,960', and '$5,400' for '$4,700'.".

SEC. 2. The amendments made by this Act apply with respect to taxable years beginning after December 31, 1977.

By Mr. PEARSON (for himself, Mr. SCHMITT, and Mr. GOLDWATER):

S. 1980. A bill to provide for a comprehensive and coordinated national climate program, and for other purposes; to the Committee on Commerce, Science, and Transportation.

Mr. PEARSON. Mr. President, today I am introducing for myself, Senator SCHMITT, and Senator GOLDWATER, a bill that would establish a national climate program and a National Climate Program Office in the Department of Commerce.

This bill is based upon S. 421, a bill

that I introduced on January 25, 1977, and which was the subject of 6 days of hearings conducted by the Science, Technology, and Space Subcommittee. The excellent testimony and recommendations received during those hearings highlighted the great importance of a national climate program and the need for legislation creating such a program. I have made several important changes in this bill as a result of the hearings on S. 421. These changes include:

First, designating the Director of the Office of Science and Technology Policy as the Federal official responsible for establishing both overall policies and priorities for the national climate program and respective Federal agency involvement in the program;

Second, mandating the establishment of a National Climate Program Interagency Advisory Committee to advise the Director on the establishment of program policies and priorities;

Third, requiring the establishment of a National Climate Program Office within the Department of Commerce;

Fourth, the creation of State climate programs that serve as the State level focus of the national climate program.

Many witnesses at the hearings on S. 421 emphasized the complex interdisciplinary aspects of climate research activities and the interrelationships that exist between climate and other key national issues such as energy, food production, water resources, and transportation. This relationship was further emphasized by a report entitled "Energy and Climate" that was released last week by the National Academy of Sciences. That reported highlighted the far-reaching effects national decisions on energy policy would have on the Earth's climate and on man's activities. This bill recognizes both the interdisciplinary aspect of climate research and that factors dealing with the effects of climate on man's activities, and vice versa, must be evaluated in making decisions concerning a wide variety of key national issues. Thus, the Director of the Office of Science and Technology Policy, is called upon to establish the policies and priorities of the national climate program. This high level attention and focus on climate-related issues will help insure that such decisions are made only after the full range of alternatives have been explored, that the costs and benefits associated with each alternative have been fully evaluated, and that the directions chosen best serve the national interest.

A National Climate Program Office, within the Department of Commerce, would also be established by this bill. This Office would serve as the operational and administrative nucleus of the national climate program.

The State climate program addition to the bill reflects the views of many witnesses, that user group climate services have declined in recent years and are insufficient to meet the growing demand for climate-related information. Such services are particularly deficient in the agricultural sector. The State climate program established in this bill is a joint Federal-State effort that is designed to assist user groups throughout the Nation and provide the incentive to States to develop a climate program compatable with the national climate program.

Mr. President, the development and implementation of a national climate program is far overdue and would provide great benefits to the Nation. I am hopeful that the Commerce Committee and the Senate will take expeditious and positive action on this bill.

Mr. President, I ask unanimous consent that the text of my bill, together with a section-by-section summary of its provisions, be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1980

A bill to provide for a comprehensive and coordinated national climate program, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Climate Program Act".

SEC. 2. CONGRESSIONAL FINDINGS AND DECLARATION OF PURPOSE

(a) FINDINGS.—The Congress finds and declares the following:

(1) The present ability to anticipate and explain either natural fluctuations or man-induced changes of climate is insufficient to provide meaningful contributions to policy formulation concerning agriculture, energy, transportation, and other critical sectors of the economy.

(2) Climatic variability or change, even if sustained for short periods of time or if only of small magnitude, could pose serious problems for a world increasingly sensitive to climate. Climate change can significantly alter land and water use patterns, energy consumption levels and use patterns, population distribution, and world food production and have far-reaching consequences to our national economy, security, and well-being.

(3) The prospect for providing accurate monthly and seasonal forecasts is scientifically promising provided an accelerated program of basic and applied research is established and adequately funded. Such forecasts would yield enormous benefits to virtually all sectors of the economy.

(4) Large spatial gaps exist in the global climate monitoring system, particularly in less-developed countries and in the 70 percent of the Earth's surface covered by the oceans. Particular emphasis needs to be given to developing improved data gathering systems and increasing international cooperation in the collection, distribution and analysis of climatic data.

(5) There is a need for additional highly qualified individuals trained and educated in disciplines relating to eliminate research, analysis, data management and dissemination, and risk analysis and assessment.

(6) The effect of man's activities on the world's climate are little understood and represent a potentially significant variable in determining climatic conditions. Such activities may greatly influence and effect future climatic conditions. Much additional research, on a high priority basis, needs to be done on this issue.

(7) Existing effort dealing with climate research, monitoring, analysis and the dissemination of climate information are inadequate to meet existing and future needs of the Nation.

(8) The development and operation of a comprehensive and coordinated national program of climate research, monitoring, analysis, and information dissemination is needed. Potentially high benefits could derive to the Nation as a result of the implementation of such a program.

(b) PURPOSES.—It is therefore declared to be the purposes of the Congress in this Act to establish a comprehensive and coordinated National Climate Program that will enable the Nation to—

(1) better understand natural and man-induced climatic processes;

(2) relate climatic information to its implications and effects on man and his welfare; and

(3) effectively respond to climate-induced problems.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) The term "Committee" means the National Climate Program Interagency Advisory Committee.

(2) The term "Director" means the Director of the Office of Science and Technology Policy.

(3) The term "Office" means the National Climate Program Office.

(4) The term "Program" means the National Climate Program.

(5) The term "Secretary" means the Secretary of Commerce.

SEC. 4. ESTABLISHMENT OF THE NATIONAL CLIMATE PROGRAM.

The President shall establish a comprehensive National Climate Program to be administered by the National Climate Program Office established pursuant to section 5 of this Act. The Program shall include, but not be limited to, the following elements:

(1) Development and operation of a comprehensive and coordinated climate research, monitoring, analysis, and data management program designed to obtain a thorough understanding of the climate, its variations, its effects of man's activities on the climate, and to enable the Nation to effectively prepare for and react to climate-induced problems. Such a program shall include, in addition to basic applied research in the fields of climatology, meteorology, oceanography, agronomy, and other related disciplines, research and analysis to improve our understanding of the relationship between geologic, solar, atmospheric and oceanographic processes and climate.

(2) Improvement in the reliability of predictive capability, with particular emphasis placed on the effects climate would have on food production, water resources, energy, and other critical sectors of the economy.

(3) Improvement in the dissemination of climatological data and information in a relevant format on a timely basis to users, particularly those concerned with food production, energy, or water resources.

(4) Timely and widespread dissemination of alerts and assessments of (a) the risks and benefits, both actual and potential, to man and his activities and to the environment, resulting from climatic variables, and (b) the effect of man's activities, both actual and potential, on the world's climate.

(5) Development and operation of a global climate monitoring system, including the adoption of policies designed to increase international cooperative efforts in climate research, analysis, monitoring, and data dissemination.

SEC. 5. NATIONAL CLIMATE PROGRAM.

(a) COORDINATION AND POLICY FORMULATION.—Operation of the National Climate Program and shall be responsible for establishing overall Program policies, priorities, and respective Federal agency involvement in the Program.

(2) To insure diverse and meaningful Federal agency involvement in the Program, the Director shall establish a National Climate Program Interagency Advisory Committee to advise him regarding the establishment of Program policies and priorities. The Committee shall include representatives of Fed-

eral agencies conducting activities relating to the Program, including representatives of the Departments of Agriculture, Commerce, Defense, the Interior, State, and Transportation; Energy Research and Development Administration; Environmental Protection Agency; Federal Energy Agency; National Aeronautics and Space Administration; Council on Environmental Quality; National Science Foundation; and Office of Management and Budget.

(3) The Director shall establish and maintain such other advisory committees as he deems necessary or appropriate to assist him in carrying out his responsibilities under this Act. Members of such committees who are not employed by the Federal Government may receive compensation at the daily rate for GS–16 of the General Schedule when engaged in the actual performance of duties for the committee and while so serving away from their homes or regular place of business may be allowed travel expenses, including per diem in lieu of subsistence.

(b) NATIONAL CLIMATE PROGRAM OFFICE.—The Secretary shall establish within the Department of Commerce a National Climate Program Office. The Office shall be responsible for administering the Program in accordance with the provisions of this Act and the policies and priorities established by the Director. The head of the Office shall be appointed by the President by and with the advice and consent of the Senate.

SEC. 6. STATE CLIMATE PROGRAMS.

(a) AUTHORIZATION.—The Secretary is authorized to make annual grants to any State or State institution for not more than 66⅔ percent of the costs of administering the State's climate program in any one year. Federal funds received from other sources shall not be used to pay the State's share of the cost of the program.

(b) STATE CLIMATE PROGRAM.—The State Climate Program shall serve as the State level focus of the National Climate Program and shall provide, among others, the following services and functions:

(1) conduct research and provide analyses of climatic effects on State and local agriculture, water resources, and other critical sectors of the State economy,

(2) collect and monitor atmospheric data on a State-wide basis.

(3) provide advice to State and local government agencies regarding climate-related issues of concern to such agencies.

(4) provide information regarding climate and climatic effects to users within the State upon request,

(5) provide information to the Secretary regarding user needs within the State for climate services and data provided by the Federal Government,

(6) provide assistance to Federal agencies regarding State level climate-related information,

(7) conduct applied climate research in support of Federal climate predictive responsibilities, and

(8) conduct research on long-term climate-related issues and long-term planning for climate-sensitive activities within the State.

(c) PROGRAM REQUIREMENTS.—Prior to granting final approval of a State Climate Program submitted to the Secretary for approval, the Secretary shall find that:

(1) The State has developed and adopted a State Climate Program in accordance with the provisions of this Act and rules and regulations promulgated by the Secretary, and

(2) The State has—

(A) coordinated its climate program with the Program established pursuant to this Act, and

(B) established an effective mechanism for continuing consultation and coordination on climate related issues with Federal and local government officials and users within the State.—

The Secretary may grant interim approval of a State Climate Program for a period not exceeding 2 years. During this period, the State would be eligible to receive Federal grants as authorized in subsection (a) for the purpose of developing a State Climate Program consistent with the provisions of this Act and with rules and regulations developed by the Secretary.

SEC. 7. INTERNATIONAL COORDINATION AND COOPERATION.

The Director and the Secretary shall cooperate with the Secretary of State in (a) providing representation at all climate-related international meetings and conferences in which the United States participates, and (b) coordinating the activities of the Program with the climate programs of other nations and international agencies and organizations, including the World Meteorological Organization, the International Council of Scientific Unions, the United National Environment Program, and the Intergovernmental Oceanographic Commission.

SEC. 8. PREPARATION OF ANNUAL PLAN AND REVIEW OF THE OFFICE OF MANAGEMENT AND BUDGET.

(a) The Director, in conjunction with the Secretary and all other Federal agencies responsible for Program activities shall prepare and submit each year to the Office of Management and Budget, on or before the date of submission of departmental requests for appropriations to the Office, an annual plan and request for appropriations for the Program for the subsequent fiscal period. In preparing the budget. the Office of Management and Budget shall review the plan and the request for appropriations as a coherent, multiple-agency request.

(b) Section 304 of the Act of October 18, 1962 (76 Stat. 1097), is amended—

(1) by striking out "for fiscal year 1964 and each succeeding year" and inserting in lieu thereof "for the fiscal period beginning October 1, 1976, and ending September 30, 1977, and each succeeding fiscal year";

(2) by adding "and of the National Climate Program established under the National Climate Program Act" after "meteorology"; and

(3) by striking out "program" and inserting in lieu thereof "programs".

SEC. 9. ANNUAL REPORT.

The Secretary shall prepare and submit to the President and the Congress, not later than January 30 of each year, a report on the activities conducted pursuant to this Act during the preceding fiscal year. The report shall include, but not be restricted to, the following:

(a) a summary of the achievements of the Program during the previous fiscal year;

(b) a review and analysis of the progress made toward achieving the objectives of the Program;

(c) a review and analysis of the activities conducted under the constituent elements of the Program;

(d) a summary and evaluation of difficulties encountered in administering this Act;

(e) a summary of the plan and request for appropriations submitted for the upcoming fiscal year to the Office of Management and Budget pursuant to section 8 of this Act; and

(f) any recommendations for additional legislation which may be required to assist in achieving the objectives and carrying out the elements of the Program.

SEC. 10. AUTHORIZATION FOR APPROPRIATIONS.

(a) In addition to any other funds otherwise authorized to be appropriated for the purpose of conducting programs related to climate, there are authorized to be appropriated to the Secretary, and other Federal departments and agencies participating in the Program, for the purpose of carrying out the provisions of this Act, sums not to exceed $15,000,000 for the fiscal year ending September 30, 1978; not to exceed $35,000,000 for the fiscal year ending September 30, 1979; and not to exceed $55,000,000 for the fiscal year ending September 30, 1980.

(b) There are authorized to be appropriated to the Secretary sums net to exceed $12,000,000 for the fiscal year ending September 30, 1978; not to exceed $16,000,000 for the fiscal year ending September 30, 1979; and not to exceed $20,000,000 for the fiscal year ending September 30, 1980, as may be necessary for grants under section 6 of this Act to remain available until expended.

SECTION-BY-SECTION SUMMARY OF S. 1980

The National Climate Program Act would—

Section 2(a)—make Congressional findings that the present ability to anticipate and explain changes in climate is insufficient to provide meaningful contributions to policy formulation; climate change can have far-reaching conseqeunces to our national economy, society, and well-being; there is a need for additional individuals trained and educated in climate-related disciplines; existing Federal efforts dealing with climate research, monitoring, analysis, and information dissemination are inadequate to meet existing and future needs of the Nation; and the development and operation of a comprehensive and coordinated national program of climate research, monitoring, analysis, and information dissemination is needed.

Section 2(b)—declare that the purpose of Congress in this Act is to establish a comprehensive and coordinated National Climate Program.

Section 3—define the terms Committee, Director, Office, Program and Secretary for the purposes of this Act.

Section 4—require the President to establish a National Climate Program which shall include, but not be limited to, development and operation of a comprehensive and coordinated climate research, monitoring, analysis, and data management program; improvement in the reliability of predictive capability; improvement in the dissemination of climatological data; timely and widespread dissemination of climatic alerts and assessments; and development and operation of a global climate monitoring system.

Section 5(a)—require the Director of the Office of Science and Technology Policy to coordinate the establishment and operation of the Program policies, priorities, and Federal agency involvement; to establish a National Climate Prorgam Interagency Advisory Committee to advise him regarding program policies and priorities; and to establish such other advisory committees as he deems necessary.

Section 5(b)—require the Secretary of Commerce to establish a National Climate Program Office within the Department of Commerce to administer the Program.

Section 6(a)—authorize the Secretary of Commerce to make grants to States or State institutions for not more than two-thirds of the cost of administering a State Climate Program.

Section 6(b)—provide for the State Climate Program to serve as the State level focus of the National Climate Program for the purposes of conducting research and analyses of climatic effects on critical sectors of the State economy, collecting and monitoring statewide atmospheric data, providing advice to State and local governments, providing climatic information to users within the State, providing information to the Secretary of Commerce as to users' needs for climate services and data, providing State climatic information to Federal agencies, conducting climate research in support of Federal predictive responsibilities, and conducting research on long-term climate-related issues.

Section 6(c)—permit the Secretary of Commerce to grant interim approval of a

State Climate Program for a period not to exceed 2 years. Prior to granting final approval of a State Climate Program the Secretary of Commerce must find that the program submitted for approval is in accordance with the provisions of the Act and the rules and regulations promulgated by the Secretary, that the State has coordinated its climate program with the National Climate Program, and that the State has established an effective mechanism for continuing consultation and coordinaton with Federal and local government officials and users within the State.

Section 7—require the Director of the Office of Science and Technology Policy and the Secretary of Commerce to both cooperate with the Secretary of State in providing representation at all climate-related international meetings and conferences in which the U.S. participates and to coordinate the activities of the National Climate Program with the climate programs of other nations and of international agencies and organizations.

Section 8—require the Director of the Office of Science and Technology Policy, in conjunction with the Secretary of Commerce and all other Federal agencies responsible for constituent programs of the National Climate Program, to submit each year to OMB an annual plan and request for appropriations for the National Climate Program. OMB shall review the plan and request as a coherent, multiple agency request.

Section 9—require the Secretary of Commerce to prepare and submit to the President and the Congress, not later than January 30 of each year, a report on the activities conducted pursuant to this Act.

Section 10(a)—authorize to be appropriated, in addition to any other funds otherwise authorized for climate-related programs, to the Secretary of Commerce and other Federal departments and agencies participating in the National Climate Program for the purpose of carrying out the provisions of this Act sums not to exceed $15,000,000 for the fiscal year ending September 30, 1978; $35,000,000 for the fiscal year ending September 30, 1979; and $55,000,000 for the fiscal year ending September 30, 1980.

Section 10(b)—authorize to be appropriated to the Secretary of Commerce sums not to exceed $12,000,000 for the fiscal year ending September 30, 1978; $16,000,000 for the fiscal year ending September 30, 1979; and $20,000,000 for fiscal year ending September 3, 1980, as may be necessary for grants under section 6.

By Mr. DOLE:

S. 1981. A bill to provide for automatic adjustment of deduction to individual retirement accounts, et cetera, and for other purposes; to the Committee on Finance.

Mr. DOLE. Mr. President, I send to the desk a bill to protect the retirement benefits of millions of Americans.

Under the Employee Retirement Security Act of 1974, a taxpayer who is not an active participant in a qualified pension plan, may establish an individual retirement account. The participant can contribute a maximum of $1,500 per year for himself and in some instances $250 for a nonworking spouse. This fund is available to the individual at retirement.

EFFECT OF INFLATION

Since the enactment of ERISA in October of 1974, the Consumer Price Index has increased 21.5 percent. Unfortunately, it appears that we will continue to experience a rise in prices probably for the remainder of the decade. Although the taxpayer gets a tax deferred build-up of earnings from an IRA, the principal is constantly being eroded by inflation. My bill would make annual cost-of-living adjustments in the amount eligible for contributions. This would enable a taxpayer to keep up with inflation and preserve the purchasing power of the fund.

TAX REFORM ACT

Mr. President, the Tax Reform Act of 1976 expanded IRA rules to include a nonworking spouse. Consequently a spouse who does not have income from employment or self-employment has some access to a tax deferred retirement program.

While the change is well received the Senator from Kansas believes we need to take further steps to provide and protect retirement benefits.

MILLIONS DEPEND ON IRA

Mr. President, it is of utmost importance that the Congress assure individuals who have spent their careers in useful and productive work will have adequate incomes to meet their needs when they retire. The purpose of the cost-of-living adjustment is to prevent the erosion of the value of an employee's retirement due to inflation. Millions of Americans are depending on individual retirement accounts to provide security at retirement. Unless we can nullify the effects of inflation, retirement benefits will continue to decline.

I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1981

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

(a) DEDUCTION ADJUSTMENT—(1) Section 219(b) of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new paragraph:

"(7) COST-OF-LIVING ADJUSTMENT—The Secretary shall adjust annually the $1,500 amount in paragraph (1) to the nearest multiple of $50 for increases in the cost of living in accordance with regulations prescribed by the Secretary. Such regulations shall provide for adjustment procedures which are similar to the procedures used to adjust primary insurance amounts under section 215(1)(2)(A) of the Social Security Act. For purposes of this paragraph, the base period to be taken into account is the calendar quarter beginning October 1, 1976".

(2) Section 220(b) of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new paragraph:

"(8) COST-OF-LIVING ADJUSTMENT—The Secretary shall adjust annually the $1,750 amount in paragraph (1)(C) to the nearest multiple of $50 for increases in the cost of living in accordance with the regulations prescribed by the Secretary under section 219(b)(7).".

(b) CONFORMING AMENDMENTS—(1) Section 408(a)(1) of the Internal Revenue Code of 1954 is amended by—

(A) inserting "the maximum dollar amount" in lieu of "$1,500", and

(B) inserting at the end thereof the following new sentence: "For purposes of this paragraph, the term 'maximum dollar amount' means $1,500 as adjusted in accordance with section 219(b)(7) and in effect as of the first day of the taxable year."

(2) Section 408(b) of the Internal Revenue Code of 1954 is amended by—

(A) inserting "maximum dollar amount" in lieu of "$1,500" each place it appears, and

(B) inserting at the end thereof the following new sentence: "For purposes of this subsection, the term 'maximum dollar amount' means $1,500 as adjusted in accordance with section 219(b)(7) and in effect as of the first day of the taxable year of the owner."

(3) Section 409(a)(4) of the Internal Revenue Code of 1954 is amended by inserting "maximum dollar amount (as defined in section 408(a)(1))" in lieu of "$1,500".

(c) EFFECTIVE DATE—The amendments made by this Act shall be effective for taxable years beginning after December 31, 1977.

By Mr. GRIFFIN:

S. 1983. A bill to amend the National Labor Relations Act, the Labor-Management Relations Act, 1947, the Labor-Management Reporting and Disclosure Act of 1959, and for other purposes; to the Committee on Human Resources.

LABOR MANAGEMENT REFORM AMENDMENTS OF 1977

Mr. GRIFFIN. Mr. President, on July 18, 1977, President Carter transmitted to Congress a message on labor law reform which set out the following goals:

To make the NLRB procedures fairer, prompter, and more predictable.

To protect the rights of labor and management by strengthening NLRB sanctions against those who break the law.

To preserve the integrity of the Federal contracting process by withholding Federal contracts from firms that willfully violate orders from the NLRB and the courts.

To achieve those goals, the President recommended certain changes in the procedures and remedies available under the National Labor Relations Act as amended.

On July 19, 1977, legislation to implement those recommendations was introduced by the Senator from New Jersey (Mr. WILLIAMS) and the Senator from New York (Mr. JAVITS). Their bill (S. 1883) includes several proposed changes which were not mentioned by the President—changes which have long been sought by organized labor. Subsequently, Secretary Marshall indicated that the additional proposals also have White House endorsement.

Certainly, the goals of making NLRB procedures fairer, prompter, and more predictable—and of protecting the rights of both organized labor and management by strengthening NLRB sanctions against those who break the law are worthy objectives. I have been pressing for such goals for nearly 20 years.

However, I think it is noteworthy—and of concern to me—that the President omitted reference to a fundamental goal which should be most important of all: I refer to the need to strengthen individual worker rights as against abuses by either management or organized labor.

In an effort to be constructive as well as critical, today I am introducing a bill. It focuses primarily on workers' rights.

My bill would not only strengthen guarantees for individual workers, it would also buttress protection for the public, which is generally caught in the middle of disputes between labor and management.

The provisions of my bill are explained in a section-by-section analysis that will follow my statement in the RECORD. However, several points deserve particular emphasis.

In some respects, the President's message calls for a change in the underlying philosophy of the National Labor Relations Act—to make the statute punitive instead of remedial. Whether such a shift in basic approach makes sense could well be the subject of a separate debate. But, in any event, if Mr. Carter seeks to impose penalties upon those who violate NLRB orders, I wish he would do so in a way that would not "throw the baby out with the bathwater." I refer to the proposed sanction of debarring a company from Federal contracts.

As Louis P. Poulton, associate general counsel of the International Association of Machinists, AFL–CIO, told the House committee last year:

(Debarment) is directed at flagrant violators of the act . . . (T)his procedure could, in our opinion, adversely affect the employees that we are attempting to protect. For example, if an employer flagrantly violates the act and has one contract, that being with the U.S. Government, the loss of that contract would penalize the employees rather than help them. It would mean that the employer would have to shut his doors and terminate his employees. How this remedy helps under these circumstances we cannot comprehend.

Of course, when a worker is illegally discharged for union activities he should be fully protected. His job should be restored and he should be made whole for lost wages. But how can the job of an employee be restored to him if it no longer exists because Government contracts have been cut off?

I agree with President Carter that flagrant violators should be dealt with in a firmer fashion than is often the case today. However, a more sensible way to do that is proposed in my bill.

Instead of debarring a company—and its workers—from further Government contracts in the case of a flagrant employer violation, my bill would utilize the contempt power of the Federal courts to compel compliance with the law. At present, only the NLRB can bring an action for contempt of court to compel compliance with a Board order. Under my bill, the party who filed the unfair labor practice—usually a union—would be able to institute an action for contempt of a court. This change would place enforcement initiative in the hands of the charging party—not just the Board—in order to deal with a flagrant violator.

In addition, in order to meet the need for temporary relief prior to issuance of a court decree, in the case of a flagrant violation, my bill would also give the charging party the right to seek a section 10(j) injunction. Under present law, only the Board can ask for such an injunction. In connection with this proposed change, safeguards would be included to make sure that injunctive power would not be used as a tactical device to harass unions or small employers, and to minimize the increase in burden that such a change would place upon the courts. Such safeguards would include a heavier burden of proof for the private litigant who seeks a 10(j) injunction and a requirement that bond be posted to compensate a party for losses incurred if such an injunction is erroneously issued.

In the administration-backed bill there are also provisions which are supposed to speed up the handling of cases by the NLRB. On the surface, of course, this appears to be a worthy goal.

The legislation I am introducing also contains provisions to speed up the decisionmaking process. My bill would not add more members, but it would require that the Board sit in panels of three to decide all cases. It would also eliminate the present practice of requiring a "sign off" by each Board member in all cases. These simple changes would go a long way toward eliminating delays now experienced at the Board-member level.

With respect to representation elections, the administration proposes in its bill to set fixed deadlines—15 days in some instances—for the conduct of elections by the Board. This proposal could be a disadvantage for employees who want a reasonable length of time to hear and evaluatue arguments advanced by union organizers and employer spokesmen during the course of an organizing campaign. Such evaluation by workers may be particularly important in situations where the real decision is not whether a union is to be installed, but which of several competing unions should be selected.

Among other provisions, my bill would also guarantee that questions of union representation be decided by secret ballot. In all the years I have been dealing with our labor laws I have never been able to understand how some Members of Congress who zealously guard their own right to be elected by secret ballot could support efforts which are designed to take away or weaken the right of workers to decide by secret ballot whether they want a union—and which union they want—to represent them.

Needless to say, I have participated for many years in the congressional effort to develop principles that will promote peace between labor and management. In general, our labor laws have worked quite well. However, if we are to make wholesale changes in the complex fabric of our labor laws now, I feel strongly that some issues need to be addressed that are more fundamental and important than most of those contained in the recommendations from the administration. For example, we are in the process of formulating a national energy policy that would place greater reliance on coal as a primary energy source. Yet, the administration's proposals ignore the specter of stranger picketing that now stalks our Nation's coalfields and has caused drastic reductions in coal output.

I believe we ought to provide protection for employees and the public from violence committed during labor disputes. And I think it is essential that union members be safeguarded from fines and other penalties imposed by union officers for merely exercising rights that union members are supposed to be guaranteed by the law.

Furthermore, as in some other areas of the law, I believe that attorney fees ought to be available to employees who successfully seek relief under the "bill of rights" set forth in title I of the Landrum-Griffin Act.

In addition, I believe it is necessary to insist upon more effective enforcement of title IV of the Landrum-Griffin Act relating to internal union elections. With that in mind, my bill would transfer certain enforcement powers from the Labor Department to the Justice Department.

The legislation I introduce addresses these and other issues which are critical to any serious consideration of labor law reform. These measures are further discussed in the section-by-section analysis which follows:

It is obvious that I do not believe a debate about labor law reform should focus only on efforts by some to facilitate the work of union organizers. Rather, it should constitute a reexamination of the statutory framework that has been created to achieve the objectives set out in the preambles of the National Labor Relations Act of 1935, the Labor-Management Relations Act of 1974, and the Labor-Management Reporting and Disclosure Act of 1959. Those objectives include the establishment of "industrial peace," the friendly resolution of disputes in the workplace through recognition of rights and responsibilities on the part of employees, employers and union officials; and through the elimination of unfair labor practices.

As will be seen from the section-by-section analysis of my bill, with one minor exception, the first nine sections of my bill are similar to provisions already contained in a bill (S. 1855) introduced by Senator HATCH and Senator TOWER. I have included them in my bill to indicate my support for, and cosponsorship of, those provisions. However, I believe the additional proposals set forth in my bill should also be considered and adopted if meaningful reform of our labor laws is to be achieved.

Mr. President, I ask that the text of the bill be printed in the RECORD followed by the section-by-section analysis.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1983

A bill to amend the National Labor Relations Act, the Labor-Management Relations Act, 1947, the Labor-Management Reporting and Disclosure Act of 1959, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Labor-Management Reform Amendments of 1977."

TITLE I—AMENDMENTS TO THE NATIONAL LABOR RELATIONS ACT

PREAMBLE

SEC. 101. Section 1 of the National Labor Relations Act (29 U.S.C. 151) is amended to read as follows:

"FINDINGS AND POLICIES"

"SECTION 1. The denial of, or interference with, the right of employees to organize, form, join, or assist labor organizations, to bargain collectively, and to engage in other concerted activities, or interference with or denial of their right to refrain from any or

all of such activities leads to strikes and other forms of industrial strife or unrest, which have the intent or the necessary effect of burdening or obstructing commerce by (a) impairing the efficiency, safety, or operation of the instrumentalities of commerce; (b) occurring in the current of commerce; (c) materially affecting, restraining, or controlling the flow of raw materials or manufactured or processed goods from or into the channels of commerce, or the prices of such materials or goods in commerce; or (d) causing diminution of employment and wages in such volume as substantially to impair or disrupt the market for goods flowing from or into the channels of commerce.

"Inequality of bargaining power between labor organizations and employers substantially burdens the process of collective bargaining and affects the flow of commerce.

"Experience has proved that protection by law of the right of employees, to determine whether they wish to organize and bargain collectively encourages practices fundamental to the friendly adjustment of industrial disputes arising out of differences as to wages, hours or other working conditions.

"Experience has further demonstrated that certain practices by some labor organizations, their officers, and members have the intent or the necessary effect of burdening or obstructing commerce by preventing the free flow of goods in such commerce through strikes and other forms of industrial unrest or through concerted activities that impair the interest of the public in the free flow of such commerce. The elimination of such practices is a necessary condition to the assurance of the rights herein guaranteed.

"It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by protecting the right of employees to exercise full freedom of choice in determining whether they wish to designate collective-bargaining representatives and, when such representatives have been designated, by encouraging the settlement of industrial disputes through free collective bargaining."

SECRET BALLOT ELECTIONS

SEC. 102(a). Section 8(a)(5) of the National Labor Relations Act is amended to read as follows:

"(5) to refuse to bargain collectively with the representatives of his employes: *Provided,* That nothing in this Act shall be construed as requiring an employer to bargain collectively until a representative of his employees has been determined by means of a secret ballot election conducted in accordance with the provisions of section 9."

(b) Section 9(a) of such Act is amended—

(1) by striking out "designated or" immediately before "selected for the purposes of collective bargaining"; and

(2) by inserting between "selected" and "for the purposes of collective bargaining" the following: "by a secret ballot election."

UNION FINES

SEC. 103. Section 8(b)(1) of the National Labor Relations Act is amended to read as follows: "to restrain or coerce (A) employees in the exercise of the rights guaranteed in section 7: *Provided,* That this paragraph shall not impair the right of a labor organization to prescribe its own rules with respect to the acquisition or retention of membership therein: *Provided further,* That it shall be an unfair labor practice under this section for a labor organization to threaten or impose any fine or other economic sanction against any person in the exercise of rights under this Act (including but not limited to the right to refrain from any or all concerted activity or to invoke the processes of the Board); or (B) an employer in the selection of his representatives for the purposes of collective bargaining or the adjustment of grievances;".

TO PROVIDE FOR STRIKE VOTES

SEC. 104. Section 8(b) of the National Labor Relations Act is amended by adding at the end thereof the following new subsection:

"(8) to call, maintain, continue or resume a strike in any bargaining unit after:

"(A) a majority of the employees voting on the question have voted in a secret ballot referendum conducted by the Board, or by any other person or organization selected by the parties or designated by the Board, to conduct such referendum among the employees in such bargaining unit, not to strike or continue to strike; or

"(B) such referendum has been requested before a strike begins and the result thereof has not been certified.

"Any such referendum may be requested by (i) any labor organization which is a certified or recognized collective bargaining representative of employees in any bargaining unit whose members, in whole or in part, have an interest in the outcome of the controversy giving rise to the strike or potential strike, (ii) the employer, or (iii) 10 percent or more of the members of such bargaining unit. Such request may be made in writing at any time when the employees in such unit are contractually free to strike, or within not more than five days prior thereto, provided no such referendum may be held until at least thirty days have elapsed following any prior referendum among employees in the same bargaining unit.

"Any referendum pursuant to this subsection shall be conducted as expeditiously as possible and shall take precedence over elections pursuant to Section 9(c)(1).

"Any employee who participates in a strike after a majority of the employees in the same bargaining unit voting in a referendum conducted pursuant to this subsection have voted not to strike or not to continue a strike, shall not, during the existence of the strike or thereafter, unless reemployed or reinstated by the employer, be considered to be an employee of such employer for the purposes of this Act;".

PROTECTION OF FREE SPEECH

SEC. 105. Section 8(c) of the National Labor Relations Act is amended to read as follows:

"(c) The expressing of any views, arguments, opinion or the making of any statement (including expressions intended to influence the outcome of an organizing campaign, a bargaining controversy, a strike, lock out, or other labor dispute), or the dissemination thereof, whether in written, printed, graphic, visual or auditory form, shall not (i) constitute or be evidence of an unfair practice under any of the provisions of this Act, or (ii) constitute grounds for, or evidence justifying, setting aside the results of any election conducted under any of the provisions of this Act, if such expression contains no threat of reprisal or force or promise of benefit."

TO PROVIDE FOR ELECTION OF REMEDIES AND NLRB DEFERRAL TO ARBITRATION

SEC. 106. Section 10(a) of the National Labor Relations Act is amended by inserting immediately before the period the following: ": *Provided further,* That if an employer, or a labor organization on its own behalf or on behalf of employees, or employees on their own behalf or on behalf of other employees, could submit a dispute to binding arbitration under the terms of an existing collective bargaining agreement, or have agreed to submit a dispute to binding arbitration, or have submitted a dispute to binding arbitration, then such arbitration shall be the exclusive forum and such party or any person on whose behalf such action has or could be taken, shall only have the right to institute or maintain an unfair labor practice proceeding before the Board involving the same incident or subject matter when determinations of such arbitration are inconsistent with the rights granted by this Act: *Provided further,* That nothing herein shall deprive any party to a proceeding before an arbitrator, the Board, or the courts, from exercising any right of judicial review or appeal that he may possess under existing law."

POLITICAL CONTRIBUTIONS AND EMPLOYEE FREE CHOICE

SEC. 107. (a) Section 441(b)(5) of title 2, United States Code, is amended to read as follows:

"(5) Notwithstanding any other law, any method of soliciting voluntary contributions or of facilitating the making of voluntary contributions to a separate segregated fund established by a corporation, permitted by law to corporations with regard to stock holders and executive or administrative personnel, shall also be permitted to labor organizations with regard to their members: *Provided,* That no method, procedure or system by which union dues and other assessments are deducted from an employee's wages by an employer, either automatically or on specific authorization from an employee, may be utilized in the solicitation of contributions to such separate segregated fund."

(b) Section 8(b) of the National Labor Relations Act (29 U.S.C. 151) is amended by adding at the end thereof the following new paragraph:

"(9) to use, directly or indirectly, any part of the dues, assessments, or other moneys collected from any individual covered by an agreement authorized under subsection (a)(3) for any political purpose whatsoever or for any other purpose not directly related to those purposes specified in section 9(a) for which a labor organization is authorized to act as the exclusive representative of all employees in a bargaining unit: *Provided,* That nothing in this subsection (9) shall preclude a labor organization, if otherwise authorized, from expending moneys for lobbying or other activities to promote enactment or defeat of legislation directly related to the purposes specified in section 9(a): *Provided further,* That nothing in this subsection (9) shall preclude a labor organization from establishing and administering a separate contributory fund for political purposes or for any other purpose if all contributions to such fund are collected separately and paid voluntarily by individuals.

INDIVIDUALS WITH RELIGIOUS CONVICTIONS

SEC. 108. Section 19 of the National Labor Relations Act is amended to read as follows:

"Any employee [of a health care institution] who is a member of and adheres to established and traditional tenets or teachings of a bona fide religion, body or sect which has historically held conscientious objections to joining or financially supporting labor organizations shall not be required to join or financially support any labor organization as a condition of employment; except that such employee may be required, in lieu of periodic dues and initiation fees, to pay sums equal to such dues and initiation fees to a nonreligious charitable fund exempt from taxation under section 501(c)(3) of the Internal Revenue Code, chosen by such employee from a list of at least three such funds, designated in a contract between such institution and a labor organization, or if the contract fails to designate such funds, then to any such fund chosen by the employee."

PROTECTION AGAINST VIOLENCE

SEC. 109. (a) Section 8 of the National Labor Relations Act is amended by adding at the end thereof the following new subsection:

"(h) It shall be unlawful for any person to instigate, engage in, support, or condone

any violence, mass picketing, or other coercive conduct, at or about the premises of any person engaged or employed in commerce or in any industry affecting commerce."

(b) Section 10(l) of the National Labor Relations Act is amended by inserting between "or section 8(b)(7)," and "the preliminary investigation" the following: "or section 8(h),".

(c) Section 303(a) of the National Labor Relations Act is amended by inserting between "section 8(b)(4)" and "of the National Labor Relations Act" the following: "or section 8(h)".

JUDICIAL ENFORCEMENT OF CONTRACTS

SEC. 110. Section 301(a) of the Labor-Management Relations Act is amended by adding at the end thereof the following new sentences:

"Where there exists an agreement between an employer and a labor organization, whether express or implied, not to strike, picket or lock out, the court shall have jurisdiction to issue such temporary or permanent injunctive relief as is necessary to prevent any person from engaging in, or inducing or encouraging any employee of the employer to engage in, conduct in breach of such agreement, irrespective of the nature of the dispute underlying such strike, picket or lock out, and its jurisdiction to grant such relief shall not be limited by the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes," approved March 23, 1932 (U.S.C., Title 29, sctions 101–115)."

PROTECTION AGAINST PRODUCT BOYCOTTS

SEC. 111. (a) Section 8(b)(4)(i) of the National Labor Relations Act is amended to read as follows:

"(4)(i) to engage in, or to induce or encourage any individual employed by any person engaged in commerce or in an industry affecting commerce to engage in, a strike or a refusal in the course of his employment to use, manufacture, process, transport, or otherwise handle or work on any goods, articles, materials, or commodities or to perform any services; or (ii) directly or indirectly, to threaten, coerce, restrain, or picket any person engaged in commerce or in an industry affecting commerce, where in either case an object thereof is:"

(b) Section 8(b)(4)(ii)(B) of such Act is amended to read as follows:

"(B) forcing or requiring any person to cease using, selling, handling, transporting, or otherwise dealing in the products of any other producer, processor, or manufacturer, or to cease doing business with any other person, or forcing or requiring any other employer to recognize or bargain with a labor organization as the representative of his employees unless such labor organization has been certified as the representative of such employees under the provisions of section 9: Provided, That nothing contained in this clause (B) shall be construed to make unlawful, where not otherwise unlawful, any primary strike or primary picketing: *Provided further*, That any strike, picketing, or refusal to perform services or any inducement or threat thereof, causing or intended to cause any employer to cease or refrain from using, installing, handling, purchasing, leasing, or selling materials, machinery, products or services from other persons, or to impose, or refrain from imposing, upon customers, shippers, or suppliers particular methods of delivery or distribution, shall not constitute in any circumstances a primary strike or primary picketing, irrespective of any collective bargaining agreement or asserted work jurisdiction claims, but shall constitute a violation of this subsection;".

PRIVATE RIGHT TO SEEK CONTEMPT AND ELIMINATION OF FORUM SHOPPING

SEC. 112. (a) Section 10(e) of the National Labor Relations Act is amended—

(1) by striking out the first sentence and inserting in lieu thereof the following: "Both the Board and any charging party shall have power to petition any court of appeals of the United States, or if all the courts of appeals to which application may be made are in vacation, any district court of the United States, within any circuit or district, respectively, wherein the unfair labor practice in question occurred [or wherein such person resides or transacts business], for the enforcement of such order and for appropriate temporary relief or restraining order, and shall file in the court the record in the proceedings, as provided in section 2112 of Title 28, United States Code."

(2) by adding at the end thereof the following new sentence: "Both the Board and any charging party shall have the right to initiate appropriate contempt proceedings in the event of a failure to comply with any order of the court made pursuant to this section."

(b) The first sentence of section 10(f) of the National Labor Relations Act is amended to read as follows: "Any person aggrieved by a final order of the Board granting or denying in whole or in part the relief sought may obtain a review of such order in any circuit court of appeals of the United States in the circuit wherein the unfair labor practice in question was alleged to have been engaged in [or wherein such person resides or transacts business, or in the United States Court of Appeals for the District of Columbia,] by filing in such court a written petition praying that the order of the Board be modified or set aside."

ADDITIONAL INJUNCTIVE RELIEF

SEC. 113. Section 10(j) of the National Labor Relations Act is amended to read as follows:

"(j) The Board *or the charging party* shall have power, upon issuance of a compliant as provided in subsection (b) charging that any person has engaged in or is engaging in an unfair labor practice, to petition any district court of the United States (including the District Court of the United States for the District of Columbia), within any district wherein the unfair labor practice in question is alleged to have occurred or wherein such person resides or transacts business, for appropriate temporary relief or restraining order. Upon filing of any such petition the court shall cause notice thereof to be served upon such person, and thereupon shall have jurisdiction to grant to the Board or the charging party such temporary relief or restraining order as it deems just and proper: *"Provided*, That no temporary relief or restraining order shall be granted to a charging party unless such petition is supported by evidence beyond a reasonable doubt: And provided further, That no temporary relief or restraining order shall be granted to a charging party except on condition that such charging party shall first file an undertaking with adequate security in an amount to be fixed by the court sufficient to recompense those enjoined for any loss, expense, or damage caused by the improvident or erroneous issuance of such order or injunction, including all reasonable costs (together with a reasonable attorney's fee), and expense of defense against the order or against the granting of any injunctive relief sought in the same proceeding and subsequently denied by the court."

BOARD PROCEDURE

SEC. 114. The first sentence of section 3(b) of the National Labor Relations Act is amended to read as follows: "The Board shall delegate to any group of three or more members any or all of the powers which it may itself exercise."

TITLE II—ENFORCEMENT

ATTORNEY'S FEES

SEC. 201. Section 102 of the Labor-Management Reporting and Disclosure Act (29 U.S.C. § 401 *et seq.*) is amended by adding at the end thereof the following new sentence: "The court in such action shall, in addition to any relief granted to the plaintiff or plaintiffs, allow a reasonable attorney's fee to be paid by the defendant, and costs of the action.".

TRANSFER ENFORCEMENT OF TITLE IV (TERMS OF OFFICE: ELECTION PROCEDURES) FROM THE LABOR DEPARTMENT TO THE JUSTICE DEPARTMENT

SEC. 202. (a) Section 401 (h) and (i) of the Labor-Management Reporting and Disclosure Act is amended by striking out "Secretary" wherever it appears and inserting in lieu thereof "Attorney General".

(b) Section 402(a)–(c) of the Labor-Management Reporting and Disclosure Act is amended by striking out "Secretary" wherever it appears and inserting in lieu thereof "Attorney General".

(c) Title IV of the Labor-Management Reporting and Disclosure Act is amended by adding at the end therof the following new section:

"DELEGATION"

"SEC. 405. The Attorney General may delegate to the Secretary, either in whole or in part, the authority to conduct any election, hearing or other proceeding, or to promulgate rules and regulations, as provided by this title.".

SECTION-BY-SECTION ANALYSIS

TITLE I—AMENDMENTS TO THE NATIONAL LABOR RELATIONS ACT

Section 101—Findings and policies

This section amends the Preamble of the National Labor Relations Act to reflect contemporary labor policy. The Preamble in its present form places primary emphasis on federal encouragement of collective bargaining. As the thrust of the Taft-Hartley and Landrum-Griffin amendments was to provide a climate within which employees are provided the utmost freedom in choosing whether to engage in or refrain from union activities, the amendment is needed to harmonize the operative sections of the Act with its stated purpose. Accordingly, the amendments make clear that present labor policy guarantees employees the right both to join or to refrain from joining unions and to bargain collectively.

Section 102—Secret ballot elections

This section assures that employees will not be deprived of their right to a secret ballot election. Under existing law, an employee becomes a member of a union for purposes of collective bargaining when it is determined that a majority in an appropriate bargaining unit wish the union to be their exclusive representative. Of great concern is the fact that the Act does not expressly require that the will of the majority of employees be determined in a secret ballot election. As a result, the Board and the courts have interpreted the Act to permit the majority will to be determined by methods other than secret ballot elections.

For example, under the Supreme Court's 1969 decision in *N.L.R.B.* v. *Gissel Packing Company*, 395 U.S. 575, and related cases, union representation can now be imposed on units of employees who have never had the opportunity to vote on the matter in a secret ballot election, or even units that have voted against union representation in some instances. *E.g.*, *N.L.R.B.* v. *L. B. Foster Co.*, 418 F. 2d 1 (9th Cir. 1969), *cert. denied*, 397 U.S. 990 (1970); *Northwest Engineering Co.*, 158 NLRB 624 (1966), enf'd, 376 F. 2d 770

(D.C. Cir. 1967), *cert. denied*, 389 U.S. 932 (1967). The *Gissel* decision allows the NLRB to decide whether the employees in a particular unit are capable of making their own free choice in an election. If it finds they are not, then the agency can impose the choice on them, forcing them to accept a union, simply because at some point during the organizing period the union was able to obtain signatures of a majority on authorization cards. Practically everyone familiar with the use of authorization cards has agreed that they are not a reliable indicator of the employees' wishes. Indeed, a federal appeals court prior to *Gissel* called them "notoriously unreliable." *N.L.R.B.* v. *Flomatic Corporation*, 347 F. 2d 74, 78 (2d Cir. 1965).

Our national labor policy is founded upon majority rule, and the Board's decision regarding representation is binding not only on the employer, but also on any nonconsenting portion of the employees within the bargaining unit. Thus, it is vitally important that the process through which the majority makes its selection be fair, effective and reliable. Section 102, therefore, modifies the *Gissel* decision to assure that employees are given the opportunity to accept or reject union representation with the least interference by requiring secret ballot elections in all cases.

Strict use of the secret ballot would also help to overcome the Board's occasional problems of delayed decision-making for exclusive reliance on secret ballot elections provides the most expeditious, as well as the fairest, means of settling questions of representation. As one observer has commented.

"The utility of elections lies in final, definitive and unchallenged results; elections become useless when the results are challenged, uncertain, or rejected. Elections are intended to establish and stabilize representation, not leave it unsettled and in dispute. Samoff, *NLRB Elections: Uncertainity and Certainty*, 117 U. Pa. L. Rev. 228 (1968)." However, where the union's majority status is sought to be determined by authorization cards, litigation often arises because of the inherently unreliable nature of authorization cards. Because of the nature of such litigation, it is particularly time-consuming and results in needless delay of the Board's processes.

Section 103—Union fines

This section amends Section 8(b)(1) of the National Labor Relations Act to allow employees the full exercise of their rights under the Act and to enable union members to engage in any activity not prohibited by their applicable collective bargaining agreement without being subjected to union-imposed fines or penalties.

Under Section 7 of the Act, employees have the right to engage in concerted activities as well as the right to refrain from such activities. Thus, for example, Section 7 would protect a union member who exceeds production quotas unilaterally established and prescribed by the union or who crosses a picket line to report for work. Any attempt by the union to restrain or coerce the employee in the exercise of these guaranteed rights would constitute an unfair labor practice under Section 8(b)(1)(A). Similarly, a union's attempt to have the employer discharge or otherwise discriminate against an employee for engaging in such conduct would be violative of Section 8(b)(2) of the Act, and if the employer were to acquiesce to the union's demand, it would commit an unfair labor practice under Section 8(a)(1) and (3).

Despite these broad statutory protections, a series of NLRB and court decisions have construed the present law to permit unions to levy fines and other penalties against employees who have done nothing more than exercise rights guaranteed to them by law. In *N.L.R.B. v. Allis-Chalmers Manufacturing Co*, 388 U.S 175 (1967), the Supreme Court held it was not an unfair labor practice for a union to fine employees for crossing a picket line or to take the employees to court to enforce payment of such fines. Other decisions have upheld union discipline which penalized employees for petitioning the NLRB to conduct an election to determine whether the majority in the unit still desired union representation (*Tawas Tube Products, Inc.*, 151 NLRB 692 (1965), *aff'd*, 373 F.2d 443 (9th Cir. 1967), *cert. denied*, 392 U.S. 904 (1968)). Also, the Supreme Court has held that the present Act does not prevent unions from fining employees who exceed union-established production quotas. *Scofield v. N.L.R.B.*, 394 U.S. 423 (1969). Most recently, the Supreme Court held that the NLRB has no jurisdiction to inquire into the reasonableness of any union-imposed fine, thus opening the door to fine in any amount no matter how punitive or exorbitant. *N.L.R.B. v. The Boeing Company*, 412 U.S. 67 (1973). Section 103 would reverse these decisions by declaring it an unfair labor practice for a union to fine or threaten to fine individuals for exercising rights guaranteed to them under the NLRA or an applicable collective bargaining agreement.

Section 104—Strike votes

This section assures that employees in any unit involved in a strike or potential strike are given the opportunity during a strike, as well as prior to it, to vote by secret ballot on whether or not to strike or continue to strike. Under the present law, there is no obligation imposed on union officials to give rank and file members a voice in such decisions. This is not consistent with the concept of majority rule embodied in Sections 7 and 9(a) of the Act. Those provisions were included not only to insure the effective functioning of collective bargaining, but also to preserve the philosophy of democratic institutions. See H.R. Rep. No. 972, 74th Cong., 1st Sess. 18–20 (1935); S. Rep. No. 573, 74th Cong., 1st Sess. 13–14 (1935). If the NLRA is truly to reflect Congressional intent, the concept of majority rule should be extended to a decision which is of major concern to every rank and file member. Strikes should not occur or continue when a majority of the employees voting on the question in a bargaining unit object. A secret ballot vote is the only reliable method of determining employee preference in the highly charged atmosphere that prevails immediately preceding or during a strike.

The amendment, therefore, would guarantee union members the right to have their views as to whether to engage in strike activity clearly registered with union officials. Pursuant to the proposed amendment a percentage of the affected employees, the union, or the employer could insist on a strike vote. Failure of the union to abide by the majority view of its members as to whether to strike or continue striking would constitute an unfair labor practice.

Section 105—Protection of free speech

This section preserves the First Amendment rights of parties engaged in labor disputes. Section 8(c) of the Act provides that the expressing of "any views, argument, or opinion in written, printed, graphic, or visual form shall not constitute or be evidence of an unfair labor practice under any of the provisions of this Act if such expression contains no threat of reprisal or force or promise of benefit." Although Congress added Section 8(c) in 1947 to protect the free speech rights of all parties involved in labor disputes, subsequent NLRB and court decisions have seriously eroded this protection. The decisions have had the regrettable effect of intensifying the regulation of *both* employer and union campaign activities.

In *General Shoe Corporation*, 77 NLRB 124 (1948), the Board held that Section 8(c)'s protection is not available in representation proceedings. Rather, the Board concluded that it may set aside the results of a secret ballot election if one of the parties has made a campaign statement which, in the Board's view, tainted the "laboratory atmosphere" in which elections should take place. In exercising this self-proclaimed power, the Board has rather openly held employers to a higher standard than unions. *E.g., Oak Manufacturing Co.*, 141 NLRB 1323, 1325 (1963); *Primco Casting Corp.*, 174 NLRB 244 (1969). On the other hand, the appellate courts have tended to respond by applying stricter standards to union statements in an effort to insure evenhandedness.

For example, in *Celanese Corp.* v. *N.L.R.B.*, 279 F. 2d 204 (7th Cir. 1960), the court invalidated an election because a union had issued a campaign letter claiming credit for "Celanese fringes, as well as other plant conditions." The court said this propaganda tainted the laboratory atmosphere because it might be interpreted to mean the union was responsible for *all* such benefits, while in reality only *some* were won through the union's efforts. The same court held in another case that an election must be set aside even though the Board found the union's propaganda was "virtually accurate." The court said, "There cannot be 'virtually' the truth any more than there can be 'virtually' a virgin." *Allis-Chalmers Mfg. Co.* v. *N.L.R.B.*, 261 F. 2d 613 (7th Cir. 1958).

Holdings such as these subvert the purpose of Section 8(c), which is to insure that employees have the necessary information to make an informed decision concerning representation. Another way in which that purpose is undermined is through decisions holding that non-coercive expressions of opinion by employers, even though protected in themselves under Section 8(c), may be used as "evidence" to show that other conduct by the employer had an illegal motive. *E.g., General Electric Company*, 150 NLRB 192 (1964), enf'd, 418 F.2d 736 (2nd Cir-1969), *cert. denied*, 397 U.S. 965 (1970). The ironic effect of decisions such as those cited above has been that neither unions nor employers may exercise as much freedom today in campaigning for employees' votes as they could before Congress acted to guarantee their rights of "free speech."

Section 105 would rectify this situation and reaffirm the original intention of the Act to protect freedom of expression which does not contain a threat or a promise of benefit. It would eliminate the Board's sanction of setting aside elections solely on the basis of non-coercive communications. At the same time, the Board would still be allowed to set aside an election if the communication was in fact coercive, the test being whether the expression contained a threat of reprisal or force or promise of benefits.

The amendment would also have the effect of making the Board's case handling process more efficient. One comprehensive study of the NLRB election process has found that the Board's readiness to intervene and set aside elections: "has led to the expenditure of large and increasing amounts of the agency's time and resources in dealing with postelection questions in a period in which the Board's members as well as its critics have been protesting its inability to cope adequately with an ever-expanding caseload. Williams, Janus & Huhn, *NLRB Regulation of Election Conduct*, 438, (Univ. of Pa. Pub., Labor Relations and Public Policy Series 1974), citing Miller, *Toward an Improved Labor Judiciary*, 80 Lab. Rel. Rep. 143 (1972); Fanning, *The Viability of NLRB Regulation in the Future*, in *Collective Bargaining: Survival in the '70's?* 36–38 (1972)."

The study concludes that caseload pressures and their attendant delays have had

a destructive impact on the handling of representation questions, where prompt resolution demands high priority. Thus, for the Board to intervene and invalidate elections unnecessarily not only has an adverse effect on the interests of the parties immediately involved; it also diminishes the overall ability of the Board to provide effective regulation of the election process where it is needed.

Section 106—Election of remedies and deferral to arbitration

This section reflects the fundamental thrust of national labor policy to encourage the voluntary settlement of disputes by the parties involved and would have the additional effect of helping the Board reduce its caseload. Essentially, the amendment would further the policy first established by the Board in its landmark decision in *Collyer Insulated Wire*, 192 NLRB 837, 77 LRRM 1931 (1971). There, a union's § 8(a)(5) charge alleging unilateral changes in a collective bargaining agreement was deferred to arbitration for an initial decision. Since the *Collyer* decision, many unfair labor practice cases which otherwise would have initially come before the Board have been disposed of through arbitration. *Collyer* also prevents situations in which the same case is heard simultaneously in unfair labor practice and arbitration proceedings. Satisfactory results have been reached promptly at less expense to the parties and none to the government.

Under *Collyer* the Board will defer to arbitration, but retain jurisdiction to review arbitration awards in accordance with the standards enunciated in *Spielberg Mfg. Co.*, 112 NLRB 1080, 36 LRRM 1152 (1955). However, as the standards are rather vague, the Board is left with a great deal of discretion in overturning an arbitration award that does not comply with its particular view of fairness. See *Star Expansion Industrial Corp.*, 164 NLRB 563, 65 LRRM 1127 (1967); *D.C. Int'l Inc.*, 162 NLRB 1383, 64 LRRM 1179 (1967). A further weakness in the *Spielberg* doctrine is the Board's failure to adhere to its own standards. *See, e.g., N.L.R.B. v. Auburn Rubber Co.*, 384 F.2d 1, 66 LRRM 2129 (10th Cir. 1967). Most importantly, the Board's retention of jurisdiction effectively deprives the arbitrator's decision of any finality and undermines the policy of discouraging needless litigation.

The amendment would eliminate these problems by providing that once a party has elected its remedy, the tribunal's decision on the merits is binding. The Board's current practice of retaining jurisdiction over disputes deferred to arbitration encourages dissatisfied party to ignore the arbitrator's decision, lapse into noncompliance, and look to the Board for a more favorable resolution of the issue. In addition to creating needless and wasteful litigation, the present practice clashes with the federal policy of honoring contractual obligations and agreed-upon procedures for private dispute settlement.

Section 107—Political contributions and employee free choice

This section is intended (1) to assure union members that they will not be subjected to coercion in the solicitation of contributions for political purposes, and (2) to assure union members that their union dues will not be used for purposes foreign to a union's function as a collective bargaining agent. Existing federal law prohibits corporations and unions from making contributions or expenditures in connection with campaigns for federal offices. However, such entities are entitled to establish separate, segregated funds for such purposes and to expend monies to solicit strictly voluntary contributions to such funds. Although this statutory scheme appears on its face to be a fair and even-handed approach to union and corporation-sponsored political activities, the use of union checkoff procedures to assist in solicitation for union political action committees necessarily results in a degree of employee coercion. This amendment removes this potential for abuse in the present statute. Unions, like corporations, should be required to solicit political contributions through separate segregated funds independent of institutional crutches that frustrate the spirit and intent of the law.

Subsection (b) would reinforce Section 9(a) of the National Labor Relations Act which provides that a labor organization selected by a *majority* of the employees "shall be the exclusive representative of *all* the employees in such unit." Section 9(a) goes on to define the scope of the representative's duty which is to represent all the employees "for the purposes of collective bargaining in respect to rates of pay, wages, hours of employment, or other conditions of employment." The need for the amendment was well stated by Mr. Justice Douglas in *International Machinists v. Street*, 376 U.S. 740, when he said:

"The collection of dues for paying the costs of collective bargaining of which a member is a beneficiary is one thing. If, however, dues are used, or assessments are made, to promote or oppose birth control, to repeal or increase the taxes on cosmetics, to promote or oppose the admission of Red China into the United Nations, and the like, then the group compels an individual to support with his money causes beyond what gave rise to the need for group action."

And Mr. Justice Douglas went on to say:

"I think the same must be said when union dues or assessments are used to elect a Governor, a Congressmen, a Senator or a President. It may be said that the election of a Franklin D. Roosevelt rather than a Calvin Coolidge might be the best possible way to serve the cause of collective bargaining. But even such a selective use of union funds for political purposes subordinates the individual's First Amendment rights to the views of the majority. I do not see how that can be done, even though the objector retains his rights to campaign, to speak, to vote as he chooses. For when union funds are used for that purpose, the individual is required to finance political projects against which he may be in rebellion."

Thus, subsection (b) would make it an unfair labor practice for a union to use union dues for political or other purposes not related to the union's statutory function as a bargaining agent.

Section 108—Individuals with religious convictions

As the law now stands, only employees of health care institutions are entitled to withhold financial support of a labor organization if such support is in conflict with their religious beliefs. This amendment would extend such protection to all employees under the Act.

Section 109—Protection against violence

This section is addressed to the inadequacy of present remedies against persons that engage in violent activity during labor disputes. A law whose purpose is to promote industrial peace cannot function by blinding itself to the effect of violent conduct by either employers or union members on collective bargaining. Although violent conduct may result in an unfair labor practice under Section 8(a)(1) or 8(b)(1) of the Act, the only remedy available from the NLRB is a cease-and-desist order. The Board will not authorize even backpay for employees unable to work because of violent conduct by others during a labor dispute. In essence, it is only the on-going, continuing acts of violence or coercion for which the Act affords any relief, as a cease-and-desist order offers no consolation to a victim injured by a one-time violent occurrence. Further, even in those situations in which there are continuous acts of violence, the Board, the General Counsel, and the courts, have demonstrated great reluctance to take aggressive action to halt such conduct.

Violent activity which causes harm or damage to persons or property is not a federal crime so long as it occurs in conjunction with a legitimate labor goal. Nor is there any federal law which provides relief to persons injured by acts of violence where a labor organization is acting in pursuance of legitimate union objectives. For example, in *U.S.* v. *Enmons*, 410 U.S. 396 (1973), the Supreme Court held that "five acts of violence involving the shooting and sabotage of the employer's transformer and the blowing up of a company transformer substation" were not in violation of federal law because the activities were undertaken in order to obtain higher wages and other benefits for union members.

The amendment would correct this deficiency by making violent conduct an unfair labor practice warranting mandatory injunctive relief and providing the injured party compensation for any loss suffered as a result of such conduct. The amendment does not invade the legitimate rights of labor or management. But it does assure that those provisions of the NLRA which were meant to encourage unions and employers to pursue their own interests actively and vigorously do not also immunize the parties in a labor dispute from punishment when the welfare and property of the public are harmed.

Section 110—Judicial enforcement of contracts

This section, as does Section 106, further promotes the goal of industrial peace by buttressing "the strong congressional preference for the private dispute settlement mechanisms agreed upon by the parties" as described by the Supreme Court in *Buffalo Forge Co. v. Steelworkers*, 428 U.S. 397, 401 (1976). Clearly, when a union and an employer have agreed not to engage in strikes or lockouts, public policy dictates that they should be held to their agreement. However, under present law agreements by unions and employers not to strike or lockout are specifically enforceable only where the underlying dispute is subject to compulsory arbitration under an applicable collective bargaining agreement. See *Boys Market v. Retail Clerks Union Local 770*, 398 U.S. 235 (1970). The Court's decision in *Boys Markets* has been limited further by its more recent holding in *Buffalo Forge*. Even though the parties involved in the labor dispute in the latter case were bound by a collective bargaining contract containing a no-strike/no-lockout provision, the Court ruled that the union was still free to engage in a sympathy strike.

The amendment seeks to reaffirm the more reasonable approach of encouraging, not hindering, the peaceful settlement of contract disputes by resolving differences privately through methods other than work stoppages. This is done by making clear that Federal courts have power to enjoin breach of contract strikes by amending Section 301(a) of the Labor Management Relations Act to provide for specific enforcement of a no-strike/no-lockout clause irrespective of the wording of an arbitration clause that might also be included in the contract.

The amendment is also necessary if the President's goals concerning the development of a national energy policy are to be achieved. Congress and the Administration are in the throes of hammering out an energy policy that, among other things, would require new and existing electric power plants and major fuel-burning installations to use coal as their primary energy source. However, an energy policy forcing

greater reliance on coal that fails to deal with the obstacles to its continued production would clearly not be in the best interests of the American public. One such obstacle is the disturbing trend of "stranger picketing" that now permeates our nation's coal fields. Persons who bear no relationship to members of the bargaining unit will appear in front of entrances to coal mines and begin to picket.

Despite the fact that the United Mine Workers has a no-strike/no-lockout provision in its contract, the mine workers, who traditionally will not cross another's picket line, go out on strike in support of the stranger pickets. Such wildcat strikes are a contributing factor to the alarming decrease in the rate of coal production during the past year. Man days lost to wildcat strikes in the coal industry were up 92 percent and production down 89 percent compared with last year's figures. It should also be emphasized that the decreased production has resulted in the loss of the completely cost-free medical and hospital coverage for some 821,000 active and retired miners and their families. As revenues for the United Mine Workers' health fund are derived almost entirely from royalties paid on coal production, the drop in production has eroded the financial reserves of the fund. Section 110 would reverse this unhealthy trend by empowering district courts to enjoin such stranger picketing.

Section 111—Protection against product boycotts

This section adds a new proviso to Section 8(b)(4)(B) of the Act that would make product boycotts illegal. Under the amendment, a union would be barred from refusing to handle prefabricated materials regardless of whether the object of the boycott was to protect work jurisdiction or whether an agreement was purported to exist that established work jurisdiction under Section 8(e) of the Act. The effect of such a law would be to remove work practices that restrict the introduction of modern equipment and technology and to promote more economic work practices in the purchase, display and marketing of products. It should be noted that during consideration of bills to allow common situs picketing on construction sites in recent years, both the House and the Senate approved amendments endorsing the prohibition of product boycotts, the Senate doing so by a vote of 93–0.

Product boycotts most often occur when a union strikes to force prefabricated building materials off jobsites. Most product boycotts are prohibited under present law; however, a major exception was created by the U.S. Supreme Court's decision in *National Woodwork Manufacturer Ass'n v. N.L.R.B.*, 386 U.S. 612 (1967). That decision permits construction site employees to exert pressure against their employer to force or persuade him not to use prefabricated products which would eliminate work that the employees traditionally have performed on the jobsite. The result of the decision has been to slow technological progress necessary to hold down building costs in the construction industry. Although many commonly used building techniques have become outmoded, the *National Woodwork* decision has prevented builders from using prefabricated or factory assembled products on construction sites which, in turn, has smothered the growth of an industry needed to build and supply such products.

Several studies have indicated that the greatest potential opportunity for increasing productivity in the construction industry lies in the use of prefabrication techniques and large-scale industrialized production. The home building industry in the United States has not industrialized as have most other industries, and one study commission has reported that "more than almost any industry it produces under conditions similar to those a half century ago."

A prime cause for failure to utilize the advantages of prefabrication has been restrictive building practices negotiated by unions together with general opposition by building trades unions to techniques which might reduce the amount of construction-site labor required.

The effect of *National Woodwork* and pressure from the building trades has been pervasive. Contractors, given a choice of materials, are reluctant to utilize prefabricated components which might cause trouble leading to a costly shutdown of the job. Architects and engineers are reluctant to specify such products, fearing that union action might, in the end, result in an actual increase in job costs. And the ultimate result has been that industry has been unwilling to expend the large sums required to tool up for industrialized building because of the well-justified fear that union pressures will deny them a market for the product when developed.

Section 112—Private right to seek contempt and elimination of forum shopping

This section is directed towards improving the procedures of the National Labor Relations Act in order to aid those persons adversely affected by Board delays in the enforcement of its decisions. It would help in particular those parties who have been harmed by flagrant violators of the Act. Clearly, no person subject to the provisions of the Act should be allowed to conduct himself in violation of Board orders. These amendments would insure that relief obtained through judicial proceedings is not continuously postponed by inaction on the part of the Board.

Subdivision (1) of subsection (a) gives a charging party the right to petition the courts for enforcement of a Board order. Subdivision (2) of subsection (a) gives a charging party the right to institute contempt of court proceedings to compel compliance with court enforced Board orders. The deletions from Sections 10(e) and 10(f) provided in subsections (a)(1) and (b) of the legislation effectively remove the temptation to go "forum shopping" by (1) eliminating the various venue options, and giving the circuit in which the unfair labor practice occurred exclusive jurisdiction over petitions for review; and (2) placing the same limitation upon the Board and a charging party in applying to courts of appeals for enforcement of Board orders.

Section 113—Additional injunctive relief

This section speeds up the handling of cases by amending Section 10(j) to give a charging party a right to seek temporary injunctive relief while unfair labor practice complaints are being litigated. The Board currently has the power to seek such relief, but it has been rarely used and, when invoked, often only after long delays. In making this power available to charging parties, however, it is essential that safeguards be provided to prevent its being used to harass small employers and small unions. This is done by providing that the petition presented to the court, in support of such relief, must contain evidence beyond a reasonable doubt that the Act has been violated and by requiring that the charging party furnish an adequate bond to compensate for losses incurred if an injunction is improperly granted.

Section 114—Board procedure

This section is designed to eliminate delay on the part of the Board in disposing of its caseload by requiring that the Board sit in panels of three to decide all cases brought before it.

TITLE II—ENFORCEMENT

Section 201—Attorney's fees

This section amends Title I of the Labor-Management Reporting and Disclosure Act in order to encourage enforcement of the Bill of Rights of Members of Labor Organizations. Under the present law, a union member whose Title I rights have been violated must bear the entire cost of bringing suit for relief. The amendment would allow the court in such case to award attorney's fees to a successful plaintiff.

Section 202—Transfer enforcement of title IV (terms of office: election procedures) from the Labor Department to the Justice Department

This section is intended to shift enforcement of Title IV of the Labor-Management Reporting and Disclosure Act from the Labor Department to the Justice Department. Since passage of the Act in 1959, it is clear that the Labor Department has failed to enforce vigorously the procedures provided by the LMRDA which govern the elections of officers to local, national and international labor organizations. Shifting the enforcement authority as provided would insure that the agency enforcing the Act would not have any affiliation or inclination towards either business or labor.

By Mr. METZENBAUM (for himself, Mr. ALLEN, Mr. SPARKMAN, and Mr. GLENN):

S. 1984. A bill to amend the Appalachian Regional Development Act of 1965 in order to continue certain assistance to child development centers; to the Committee on Environment and Public Works.

Mr. METZENBAUM. Mr. President, I am today introducing a bill with Senators ALLEN, SPARKMAN, and GLENN to authorize continued funding for the more than 325 child development centers supported by the Appalachian Regional Commission in the 13-State Appalachian region.

The child development program was created in 1969 to provide Appalachian families with improved health, nutritional, and educational services. The program has been responsible for immunizing thousands of young children. It has made pre- and post-natal care available to mothers. Day care facilities established under the program have allowed over 9,000 parents to enter the work force. Infant mortality has declined sharply in the region, and, for the first time, large numbers of poor children in Appalachia have access to preprimary education. All of this has been accomplished at an annual cost to the Federal Governmert of $119 for each person assisted.

The child development program is an example of a Government project that works. It has provided tangible benefits to over 200,000 people in an economically depressed region at modest cost. In the long run, the human investments we have made in the children of Appalachia promise to pay back enormous dividends to the region and to the Nation as a whole.

Unfortunately, Mr. President, these valuable centers will face severe financial difficulties in the near future unless the Congress acts to maintain Federal assist-

ance at current levels. Without help, some will close.

This is so because under current law, the Appalachian Regional Commission can fund each center for no longer than 5 years. At the end of that period, centers are expected to be financially self-supporting.

The 5-year requirement was established in 1969 and may have been quite reasonable at the time. Since 1969, however, inflation, high unemployment, soaring energy costs, and a host of other problems have placed great strain on local funds that might otherwise be available to support the centers. If the centers are permitted to close because ARC assistance cannot continue, the people of the region will be reduced to the inadequate levels of service they experienced before the program started.

My bill would provide a period of grace for the centers by extending current funding levels for 2 years. It would also direct the Appalachian Regional Commission to investigate the difficulties these centers have encountered in finding alternative sources of support and to report back to the Congress on this matter within 18 months.

Mr. President, some centers have been able to attain financial self-sufficiency within the prescribed period of time, but many have not. I submit that it would be better to find out why so many centers cannot yet phase out their ARC support than to force struggling centers to close their doors The best estimates I have seen indicate that we can provide this breathing space for approximately $8 million over currently authorized expenditure levels.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1984

A bill to amend the Appalachian Regional Development Act of 1965 in order to continue certain assistance to child development centers

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That

(a) the Congress hereby finds that—

(1) an urgent need exists to maintain support for the Appalachian Comprehensive Child Development Programs; and

(2) the Appalachian Child Development Programs have made great strides in decreasing the infant mortality rate, increasing the number of healthy, well-nourished children through a sound program of pre-natal care immunization schedules, and nutritional guidance, while at the same time providing the opportunity for thousands of parents to enter the labor force; and

(3) the procedures for securing financial support from other sources by which these programs can become self-sufficient are prohibitively complicated and cannot meet the caliber and diversity of services now available.

(b) It is the purpose of this Act—

(1) to charge the Appalachian Regional Commission with the task of investigating the existing difficulties in turning over complete sponsorship of such child development programs to State or private agencies, and of reporting their findings and recommendations to the Congress; and

(2) to charge the Appalachian Regional Commission to provide transitional funds, as necessary, to maintain the Child Development Programs; and

(3) to encourage and promote even further the existing concerted regional effort of innovation and cooperation towards meeting the needs of children.

Sec. 2. The Appalachian Regional Development Act of 1965 is amended by inserting after section 214 the following new section:

CHILD DEVELOPMENT PROGRAMS

"SEC. 215. (a) In recognition of the importance to the regicn of assistance under this Act to child development programs the Commission shall—

"(1) continue such assistance at the current level through September 30, 1979; and

"(2) make a full and complete investigation and study of the child development programs being so assisted for the purpose of determining any problems with special regard to phasing out of ARC support in such programs, recommended solution to such problems, and a procedure under which complete sponsorship of such programs could be turned over to State or private agencies, or both.

"(b) The Commission shall make a report to the Congress of its findings and recommendations under subsection (a)(2) not later than one year after the date of enactment of this section.

"(c) Notwithstanding any other provisions of this Act, there are authorized to be appropriated such amounts as are necessary to carry out the provisions of this section."

Mr. GLENN. Mr. President, child development programs under the Appalachian Regional Development Act have been very successful in Ohio and other parts of Appalachia. Pursuant to the Appalachian Regional Development Act, these efforts were intended to be 5-year demonstration programs, with responsibility being assumed at the end of that time by State, local, or private agencies.

Many of these programs are now in their fifth year and will expire soon. Unfortunately, we see that State, local, and private agencies do not have the capacity to carry on these programs in the manner envisioned when the act was passed. I have spoken with representatives of these agencies, as well as with people of the region currently served by the programs. I find the programs are among the most popular, effective, and well-run Federal efforts in Ohio and sincerely believe their continuation is needed. We cannot allow these vital programs in economically depressed areas to lapse.

For these reasons, I wrote to Senator MCCLELLAN, chairman of the Appropriation Committee, and Secretary Califano of HEW last June 14 to determine if other existing funds could be used for the activities previously funded under the Appalachian Regional Development Act. I was specifically interested in Head Start funds available through the Office of Child Development of HEW.

I was able to determine that Head Start funds may be available to continue previously funded Appalachian Regional Development Act programs, and was advised by Senator MCCLELLAN that such an approach would be entirely consistent with existing appropriations. I am now pleased to report that Secretary Califano has responded by indicating his willingness to consider the use of additional Head Start funds for this purpose, and I look forward to his cooperation.

My colleague, Mr. METZENBAUM, today introduced legislation to extend funding under the Appalachian Regional Development Act, which I was happy to cosponsor. I commend him for this effort, and I believe it signifies the importance we all place on the ARC child development programs. The legislative approach, when combined with the administrative efforts I have undertaken, provides a two-track approach to the problem. Hopefully, one of these approaches will result in the children and families living in Appalachia Ohio continuing to receive the benefits that have heretofore been so helpful to them.

In addition, I commend the local Ohio social service agencies administering the ARC child development programs. Through their efforts the infant mortality rate has been reduced by over 50 percent in the last 5 years, mothers are receiving much needed prenatal and postnatal care, preschool children are receiving psychoeducational screenings in attempts to remedy any developmental disability, and mothers are being counseled about nutrition and home economics. These and the many more services being provided by the Ohio agencies must continue.

By Mr. MATHIAS:

S. 1985. A bill to expedite action on certain permits by the Secretary of the Army; to the Committee on Environment and Public Works.

FACILITATING COMMERCE IN OUR NATION'S HARBORS AND PORTS

Mr. MATHIAS. Mr. President, harbor dredging and filling activities are essential to maintain the flow of commerce into and out of our Nation's ports. A major problem facing the Maryland Port Administration and other port agencies around the country is the long delay they experience in securing U.S. Army Corps of Engineers permits for these vital harbor activities.

For example, Baltimore Harbor recently suffered through a delay of 3 years to gain a permit for a minor 5-acre filling project. And it took 5 years to obtain a permit for a diked disposal area vital to maintenance and new dredging activities in Baltimore Harbor.

The lengthy permit process resulted in higher dredging and construction costs to both the State and Federal Governments.

The problem of long delays experienced in securing dredging and filling permits was recently discussed in a publication of the U.S. Department of Commerce entitled "Untangling Dredging Regulations." The Department of Commerce concluded that "shortening the time required for permit approval is the most beneficial of dredging regulation reforms."

Unquestionably, a certain amount of time is necessary to prepare environmental analyses, conduct public hearings, and complete technical work on major dredge and fill applications. My bill would not shorten the time required for these important steps. Rather, it would merely put a time limit on appli-

cations which are "bucked upstairs" in the bureaucracy.

A look at the way this "bucking" process works illustrates the need for this bill. For example, if another Government agency objects to an application, the Corps of Engineers sends the application from the district level office to the divisional office; then to the Chief of Army Engineers, and ultimately to the Secretary of the Army. The Department of Commerce study indicates that this process gives the objecting agency an indirect "veto power" because of the very long delays that occur when a proposed project must go to the Secretary of the Army for approval.

The Corps of Engineers Division Office, the Chief Engineer's Office, and the Secretary of the Army only decide one way or another on a permit application which has received adverse comment. No additional environmental analysis is undertaken, nor is any other substantive technical work performed. Yet, months and even years of delay can occur while a decision is debated at higher levels. This potential for delay simply exists because there is no time limit for a final decision. My bill would put a stop to such delays.

The approach is similar to that of the Deepwater Port Act, which requires the Secretary of Transportation to approve or disapprove a proposed deepwater port site within 90 days after the last public hearing.

My bill places a deadline of 90 days for a decision by the Secretary of the Army after public hearings are held on such applications under the Refuse Act of 1899. It provides the same 90 day time frame for decisions pursuant to section 404(a) of the Federal Water Pollution Control Act and section 103(a) of the Maritime Protection Research and Sanctuaries Act of 1872.

While this legislation does not deal with other issues noted in the Commerce Department report, such as the need for well-defined policies, the lack of guidelines for decisionmaking, and the need for improved coordination among the agencies, it nevertheless would remove a major cause for delay in the present permit process. In doing so, my bill will go far toward helping our Nation's ports contribute to our economy and our world trade position.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1985

A bill to expedite action on certain permits by the Secretary of the Army

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 10 of the Act of March 3, 1899, known as the Refuse Act of 1899 (33 U.S.C. 403), is amended by inserting at the end thereof the following: "The Secretary shall approve or deny any application for a permit under this section or section 13 of this Act within ninety days after the receipt of such application.".

SEC. 2. Section 404(a) of the Federal Water Pollution Control Act (33 U.S.C. 1344(a)) is amended by inserting at the end thereof the following: "The Secretary shall approve or deny any application for a permit under this section within ninety days after the receipt of such application.".

SEC. 3. Section 103(a) of the Marine Protection, Research, and Sanctuaries Act of 1872 (33 U.S.C. 1413(a)) is amended by inserting at the end thereof the following: "The Secretary shall approve or deny any application for a permit under this section within ninety days after the receipt of such application.".

By Mr. McCLURE (for himself and Mr. GARN):

S. 1986. A bill to provide for the transportation within the United States of passengers in foreign-built inflatable rafts, and for other purposes; to the Committee on Commerce, Science, and Transportation.

EXEMPTING WHITE WATER RAFTING INDUSTRY FROM COAST GUARD REGULATIONS

Mr. McCLURE. Mr. President, I am joining with my colleague, Mr. GARN, in introducing a bill which would exempt the white water rafting industry from becoming needlessly regulated under the Vessels, Passenger, Inspection and Certification Act of 1956 and the Jones Act. The Inspection Act of 1956, administered by the U.S. Coast Guard, is designed to regulate coastwise shipping and requires that certain safety standards be met by commercial passenger vessels. While the act was never intended to apply to inland, recreational waters, the Coast Guard is beginning to take steps to add jurisdiction of the act to navigable waters of the United States and thus the white water rafting industry. My bill simply exempts inflatable rafts used in river running from regulations under the Inspection Act of 1956. The Jones Act is an additional problem as it prohibits foreign-made vessels from going between U.S. ports. Because the majority of rubber rafts used in the white water industry are made in France and Britain, an extension of the Jones Act would limit the number of rafts available and severely affect the industry. This bill exempts the white water industry from the Jones Act also.

Senator GARN and I have previously introduced a bill which would exempt the industry from the Jones Act. This bill will take care of both the Coast Guard and Jones Act problems at the same time. I feel this legislation will allow the boating public to be heard on the matter through the formal hearing process, and many Government and public agencies involved will also have the opportunity to comment.

At the present time, river runners are regulated by the Federal land manager through which the river runs. Thus some rivers are managed by the Bureau of Land Management, the Bureau of Outdoor Recreation, and the Forest Service. Safety standards for commercial boaters are established by the respective agencies and the outfitters and guides associations in each State also have certain safety standards that are met by their members. The Coast Guard regulations are not needed.

I wish that this legislation was not necessary but once again, I find myself trying to protect a segment of the American public from drowning in rules and regulations that are ridiculous. In this case, an important industry in the State of Idaho and throughout the country is being threatened by needless regulations.

Mr. GARN. Mr. President, a few months ago, I introduced legislation to except from the provisions of the Jones Act inflatable rubber rafts used in river running. It seemed to me inconceivable that provisions of law designed to regulate shipping between major ports of the United States, whatever their justification, could be used to prevent a river rat running between Craig, Colo. and Cisco, Utah from using a raft made in England or Taiwan.

The Jones Act has been on the books for years, of course, and no one dreamed of applying it to river rafts. The problem came following the passage of the Small Passenger Vessel Inspection Act in 1956. Of course that act was not aimed at river runners either. Its proximate cause was a tragic accident on a headboat out of one of the coastal towns in which a number of people were killed. As a result, the act was passed, to make certain that fishing parties on the bays and sounds of the Nation were safe.

That act has never been applied to river runners. However, there have been rumblings in recent years that the Coast Guard thinks it ought to apply it to river runners. Under the act, the Coast Guard certificates boats, following inspection and training. Part of the certification requires that the boats used comply with the Jones Act, that is, that they be of domestic manufacture.

The intricacy of the regulatory situation has taken some time to penetrate. It is now clear to me that exempting river rafts from the Jones Act would not remove the threat of regulation by the Coast Guard under the 1956 act.

However, it is even clearer to me that regulation by the Coast Guard is highly undesirable. River runners are already regulated by the States in which they operate, and by the Federal land managers in cases where the rivers run through Federal land. The Coast Guard has no expertise in this area, has regulatory responsibilities properly given to it by Congress, and has no need to step into the river trade. Indeed, the primary reason why the Coast Guard has taken so long to getting around to the river runners is that it knows full well that it is, so to speak, over its head.

Following my introduction of the earlier bill, I have discussed this matter at length with Senator McCLURE, and my staff has had extensive contacts with Congressman MICHAEL HARRINGTON'S staff. Congressman HARRINGTON has introduced an identical bill on the House side, and I am pleased to join with Senator McCLURE in this action today.

The people of this Nation have no desire to see bureaucracies expand their jurisdiction without congressional authorization. This bill gives us an ideal opportunity to remind the Coast Guard of the limits of its authority. Its passage will have no effect on the safety of river traffic, only on the regulatory burden on the runners.

By Mr. HELMS:

S. 1987. A bill to provide for increased employee ownership of business and accelerated capital formation; to the Committee on Finance.

THE EMPLOYEE BUSINESS OWNERSHIP AND CAPITAL FORMATION ACT OF 1977

Mr. HELMS. Mr. President, last year the Senate adopted legislation which extended the tax advantages for employee stock ownership plans—ESOPs—an overdue tax incentive which will encourage more business firms to adopt programs which would lead to a greater degree of ownership of companies by their employees—that employees will be able to have "a piece of the action."

The 1976 law extended until 1980 the tax advantage of an additional 1-percent investment tax credit—11 percent rather than 10 percent—when that 1 percent is contributed in stocks to an ESOP. In addition, one-half an added percentage investment credit is allowed—11½ percent rather than 11 percent—for contributions made to the ESOP as long as they are matched by contributions made by employees to the plan.

The net effect of these changes in the Tax Code is to provide added incentives to companies to provide employee stock ownership plans for their workers. However, since these particular provisions are tied to the investment tax credit, they tend to favor those companies which are capital intensive, rather than labor intensive. The firms which have the most to gain under present tax advantages are firms like Mobil Oil, Union Oil, Rockwell International, and other heavily capitalized firms.

According to Everell Allen, vice president of Towers, Perrin, Foster, & Crosby, a consulting firm, a labor intensive company like major retailers would find the benefits of present tax advantages give benefits in "ridiculously small amounts."

My bill would amend tax advantages to all firms and would not give an advantage to any one type of firm.

The need for this type of bill is great indeed. The average worker has been "turned off" on business because of a number of factors. Inflation, for example, is blamed in the popular press on businesses trying to raise prices faster than labor increases wages. This, of course, is an excuse to hide the real cause of inflation—Government deficits.

Inflation increases pressure that labor groups place on management in order to obtain pay increases commensurate with increases in the cost of living, and this does not help labor/management relations.

The purpose of the legislation is twofold: First, it provides a mechanism to encourage corporations to give stock in the company to employees, without discrimination in favor of management or any other class. It is predicated upon the belief that if our traditional American free enterprise system is to continue to work, and work well, a greater portion of the labor force must have a "piece of the action." By allowing all employees of a company to share in its ownership and its profits, we will be encouraging individual dignity of the average worker.

Second, this legislation, through the creation of tax deductions for gifts of stock to employees, will generate capital funds for the company. These funds will provide the vitally necessary capital for plant expansion, pollution abatement equipment, compliance with the occupational safety and health regulations, the installation of more energy-efficient equipment, and any of the host of capital needs. Of course, as these capital expenditures are made, as existing plants are expanded and new ones constructed, jobs will be created. As pollution abatement is installed, the impact of industrialization on the environment will be minimized. As more companies come in to full compliance with the OSHA regulations, the safety and health of the working people of this country will greatly improve. And, as industry begins to use energy in a more efficient manner, our national dependence upon foreign countries will be lessened.

The achievement of these important goals is not easy, and it certainly is not free. It requires capital investment. Where will the necessary funds come from?

We are told that at present our economy is suffering from a serious shortage of capital funds. Even as electric rates soar, plans to construct new generating plants are being cancelled for lack of funds. The high cost of energy is depriving industry of the capital it needs to purchase more energy-efficient equipment, and at present the costs created by the environmental protection and OSHA regulations are contributing to the inflationary spiral and to unemployment. If we as Americans are to enjoy the better life that we are all seeking for ourselves and our children, we must find the vitally necessary money to pay for it.

This Senator from North Carolina is not alone in his concern about the critical shortage of capital funds. Informed commentaries on the seriousness of the situation are being presented at every turn.

The economists at the New York Stock Exchange in their "most likely" scenario, envision a $500 billion gap between business investment demand and the supply of savings—capital funds—over the period from 1974 to 1985.

A Brookings Institution study calculated that—

Adding up all the capital necessary for all the projects that either promise a profitable private return or appear high on someone's list of social priorities for the rest of the seventies, yields a total of $2 trillion.

Another study projected needs to 1985 which range from $4 to $4.5 trillion. Obviously, unless business can come up with the necessary funds, we will not be able to meet pressing demands for energy, environmental protection, and other high priority needs.

To understand the seriousness of the situation not only for the decade ahead but for the present as well, compare the standing of the United States to other industrialized countries of the world. The U.S. Treasury Department reported that—

The United States ranking in real economic growth is among the lowest of the industrialized countries because a relatively low share of its output is being allocated to investment.

For example, during the period 1960 through 1973, the Treasury Department reported that the total share of our national output devoted to fixed investment averaged 17.5 percent compared to 35 percent for Japan, 25.8 percent for West Germany, 24.5 percent for France, 18.5 percent for the United Kingdom, and 20.5 percent for Italy. Indeed, the Treasury Department reported that—

The U.S. share of total national output devoted to . . . fixed investment . . . was lower than in any of the 11 major industrialized nations . . . studied.

What is more according to the Treasury report:

This lag in U.S. investment over the past 13 years has contributed to relative lower rates of advance of productivity and national output.

The report noted that—

This disparity in investment effectively lowered rates of advance in living standards of the average consumer in the United States, created shortages in basic materials industries during periods of economic expansion and added substantially to the inflationary consequences of high employment in recent years.

The Treasury Department further pointed out that—

The falling share of U.S. resources allocated to investment has limited job opportunities because had the growth of plant and equipment exceeded that of the labor force, more jobs would have been required to utilize that increased capacity.

Finally, the report concluded that—

The policy implications for the U.S. point towards encouragement of capital formation by minimizing tax disincentives, use of accounting methods which adjust earnings for replacement cost of capital and elimination of tax barriers to the flow of capital into productive uses.

And, as every Member of Congress is aware, simply from viewing recently enacted legislation, in addition to our requirements for capital investment for economic recovery, we must find the money to finance a multitude of economic and social programs in both the public and private sectors. Whether one agrees with these programs or not, whether one voted for or against them, they are now on the law books. They will have to be paid for, and that will claim an increasingly large share of capital investment.

In short, we in the United States are continuing, year after year, to demand more of everything. We want a cleaner environment, a greater level of energy independence, better transit facilities, improved housing, safer working conditions, more advanced health care, new consumer goods, and income security for our retirement years. We in America are demanding a better life, not for a select few but for every citizen of every background and station. The haunting question remains: How in heaven's name are we going to pay for it?

Amid all the gloom and prophesies of doom, there is a solution. And, in a very real sense that solution is a product of the kind of imagination and ingenuity

that has made America the great Nation that it is. This solution is evolved out of the principles associated with the Kelso plan and the employee stockownership plans—ESOP's. And, not surprisingly, an increasingly large segment of both the public and private sectors believe that the answer to the dilemma resulting from this intensifying capital crunch is to be found in a program that encourages increased employee ownership of corporate businesses through providing tax incentives to stimulate that ownership. Of course, the important byproduct of the corporate tax deductions used to encourage the employee business ownership is what accountants call retained earnings—but for our purposes we should call it capital for investment.

At present, there are three basic sources of private savings capital available to corporate enterprises. They are: First, retained earnings, where the corporation saves part of its profits instead of paying it out to stockholders in dividends; second, selling additional stock in the corporation; and third, long-term borrowing from lenders, either by selling bonds or obtaining more conventional loans.

The Employee Business Ownership and Capital Formation Act that I am today introducing stimulates job creation and capital formation by making it feasible to expand the first two sources of capital savings: retained earnings and issuance of additional stock, in a new and unique way. Expanding on the Kelso and ESOP concepts, it addresses our serious need for capital funds while providing a strong incentive to corporate America to bring the previously disenfranchised worker into the firm as a stockholder, who will receive tax-free dividends and thereby share in the profits that result from his labor.

This bill adds a new section to the Internal Revenue Code allowing corporations to give their employees stock in the corporation each year in an amount equal to 25 percent of the employee's salary or $25,000, whichever is the lesser. The maximum amount that can be given to an employee during his entire life with the corporation is $500,000, or an amount equal to 5 percent of the outstanding securities of the corporation, whichever is the lesser.

In order to encourage the employees to hold the stock and therefore to retain an ownership interest in the company, all dividends paid on the stock will be excluded from taxation as long as the employee or his spouse—in the event of the employee's death—continues to own the stock. However, if the employee wishes to sell the stock, he is free to do so although the tax exemption on dividends does not pass on with the sale.

No income tax would result to the employee at the time of the gift of the stock; but when it is sold, so much of the gain realized on the sale of the stock as is equal to the value when given to the employee would be includable in the employee's gross income. Any value of the stock in excess of the amount of the value when given would be taxed to the employee as a capital gain. There is no recapture provision respecting dividends paid to the employee or his spouse on such stock. Rather, such dividends are entirely free from taxation.

Of course, if the employee owned the stock at the time of his death, it would be included in his estate, and under the present Federal estate tax law, a new tax base would be created for the stock at that time. If the employee made someone a gift of the stock, applying present tax law, the recipient of the gift would take the stock at the employee's tax base. And, if the stock were sold by the recipient, the proceeds would be subject to the recapture provisions mentioned with respect to the employee.

It should be pointed out that the bill contains the same minimum participation standards and the same prohibition against discrimination that favors executives and high-salaried employees that was written into the Employee Retirement Income Security Act of 1974. This double safeguard will insure that all of the employees of a company benefit from this employee business ownership plan, not just management.

Any such gifts of stock to employees will be tax deductible to the corporation, subject to the limitations contained in section 404(a)(3) of the Internal Revenue Code. That is to say, the total deduction to the corporation shall not exceed 15 percent of the compensation otherwise paid during the taxable year to all employees under the plan.

If a company purchases the stock from the employee, that portion of the purchase price that is in excess of the value of the stock when given is deductible. This provides an incentive for smaller corporations, whose stock has a limited market, to purchase it from the employee, if the employee wishes to sell and cannot find a buyer. Under no circumstances would the employee be required to sell his stock.

The bill applies to the common stock of the corporation. But if the corporation has more than one class of common stock outstanding, the bill insures that the securities are distributed from the common stock possessing the greatest percentage of the voting power of all stock entitled to vote; or from stock issued by the corporation which is convertible into such a class no later than 1 year, after the termination of the recipient's employment.

Additionally, the bill amends the Employee Retirement Income Security Act of 1974 to exclude qualifying employee business ownership plans from the requirements of the labor provisions of the act—other than the reporting and disclosure rules—since those provisions are either not applicable to such plans or a plan which is created under this bill must by definition satisfy those requirements.

Since stock issuances under employee ownership plans are tantamount to a gift as opposed to a sale, the staff of the Securities and Exchange Commission has taken the position that they are exempt from the registration provisions of the Securities Act of 1933. However, since the position of the staff is not binding upon the Commission, the bill adds a securities exemption favoring the issuance of securities pursuant to this act, if the issuer is a reporting company and if issuances are limited to 1 percent of the outstanding securities during any 12-month period. Similarly, a provision is added permitting the resale of the stock by the employee or a remote purchaser of the employee stock. Otherwise, of course, the stock would be of limited value to the employee.

Finally, a conforming amendment is made to the Securities Exchange Act of 1934 permitting the issuing company to repurchase employee stock. As stated, this is to encourage smaller companies to insure that there will be a market for the stock if the employee wishes to sell it.

So, Mr. President, that is the technical explanation of this very simple, yet very important legislation. It offers corporations tax deductions for stock which they give to employees on a nondiscriminatory basis. This is stock which the employee owns immediately. It is not held in trust or otherwise encumbered with restrictions. The employee may sell the stock the day he receives it. Or, he may hold it and receive tax-free dividdends. When he dies, he may leave it to his spouse, so that for the rest of her life she may also receive tax-free dividends.

On the corporate side of the ledger, the corporation will be able to generage tax deductions which will provide the needed capital for plant expansion, pollution abatement equipment, compliance with OSHA regulations, energy conservation programs, and a host of other capital needs. In short, it will permit corporations to have more money to invest. This investment will in turn create more jobs to be filled by more employees, who will be able to receive more gifts of stock under this employee business ownership plan, so that they too will have a "piece of the action," an investment in the future of America.

Mr. President, I ask unanimous consent that a technical explanation of the bill be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TECHNICAL EXPLANATION OF THE EMPLOYEE BUSINESS OWNERSHIP AND CAPITAL FORMATION OF 1977

AMENDMENT OF INTERNAL REVENUE CODE

The bill provides for the addition of a new section to the Internal Revenue Code of 1954, designated as section 416.

Subsection (a) sets forth the general requirements for qualification as an "employee business ownership plan", which include many of the requirements applicable to qualified pension and profit-sharing plans under section 401. These requirements of section 401 which are incorporated by reference include the minimum participation standards of section 410 and the prohibition against discrimination in favor of executives and high salaried employees. Certain other requirements applicable to qualified pension plans were not included, since those requirements are either inapplicable to the type of plan contemplated by new section 416 or section 416 itself imposes more stringent requirements. For example, subsection (a)(2) requires the distribution directly to employees of the employer securities and, thus, the vesting rules contained in section 411 are unnecessary. Subsections (a)(3) and (a)(4) contain limitations on the amount

which can be contributed under the plan for the benefit of any one employee both during the entire period the plan is maintained and during any one year. The limitation with respect to the amount of employer securities which can be distributed to any one participant in any year parallels the limitation in section 415 for defined contribution plans.

Subsection (b) of new section 416 contains the rules with respect to the income tax treatment by an employee upon the receipt of employer securities distributed pursuant to a qualifying plan. These provisions will have the effect of excluding from the gross income the amount distributed to each employee under the plan. The employee will be subject to federal income tax at the time of his disposition of such securities, and since no income was realized by the employee upon the receipt of the employer securities pursuant to the plan, it is appropriate that to the extent of the gain on the subsequent disposition of such employer securities the amount previously excluded from gross income be included as ordinary income at such time. Any excess of the amount realized upon disposition over the amount included as ordinary income (since the person to whom this section is applicable will not have any tax basis in such securities) is treated as gain from the sale or exchange of such employer securities.

The use of the phrase "sale or exchange" is intended to permit such securities to be eligible for capital gain treatment when repurchased by the employer, irrespective of whether such repurchase can meet the requirements of paragraphs (1), (2), (3), or (4) of subsection (b) of section 302 (dealings with redemptions).

Under Subsection (c) the distribution by an employer or employer securities is deductible in a manner comparable to employer contributions to stock bonus or profit sharing plans, except that the limitations with respect to the amount which can be contributed to such plans is determined separately. Thus, the employer can maintain both a profit sharing and an employee business ownership plan and would be permitted a deduction of up to 30% of the compensation of participants in such plans. Furthermore, to encourage small employers to provide a market for their stock, the bill treats the amount includable in the employee's income as a capital gain upon the repurchase by an employer of employer securities as additional distributions of employer securities under the plan, thus permitting a deduction by the employer for those amounts.

Under subsection (d) the term "employer securities" is defined in a manner comparable to the definition in section 301(d) of the Tax Reduction Act of 1975, except that where an employer has more than one class of common stock outstanding he is required to distribute the common stock possessing the greatest percentage of the voting power of the distributing corporation. Furthermore, while securities, such as non-voting stock, which are convertible into such common stock may be distributed in lieu of such common stock, the bill requires that such securities be convertible into such common stock no later than one year after the termination of the participant's employment.

AMENDMENT OF EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974

Section 3 of the bill amends the Employee Retirement Income Security Act of 1974 to exclude qualifying employee business ownership plans from the requirements of the labor provisions of the Act (other than the reporting and disclosure rules), since those rules are either not applicable to such plans or a plan which is described in section 416 of the Internal Revenue Code must by definition satisfy those requirements.

AMENDMENT OF SECURITIES ACT OF 1933

Section 5 of the Securities Act of 1933 requires a registration statement to be in effect in connection with the sale of a security if directly or indirectly the mail or other instruments of transportation or communication in interstate commerce are to be used. Paragraph (3) of Section 2 of that Act defines sale to include every attempt or offer to dispose of or solicit an offer to buy a security or interest in a security.

Section 3 of the Securities Act lists securities, the issuance of which are exempt from the registration provisions of the Act. Section 4 lists transactions exempt from the registration provisions of the Act. The staff of the Securities and Exchange Commission has taken the position that issuance pursuant to employee plans are exempt from the registration provisions of the Securities Act of 1933 where such issuances are tantamount to a gift, on the theory that no "sale" takes place. The position of the staff, however, is not binding upon the Commission.

Therefore, to insure that distributions pursuant to new section 416 of the Internal Revenue Code do not violate the Act a securities exemption has been added to section 3 which provides that the issuance of securities pursuant to section 416 of the Internal Revenue Code is exempt from registration under the Securities Act of 1933 if the issuer is a reporting company and if issuances are limited to 1 percent of the outstanding securities during any twelve-month period.

Similarly, to permit resales of securities issued pursuant to new section 3(12) without registration, a new paragraph (6) has been added to section 4 permitting such resales as long as the person holding such securities is not an underwriter, dealer or the issuer.

AMENDMENT OF SECURITIES EXCHANGE ACT OF 1934

Section 13(e) of the Securities and Exchange Act of 1934 is designed to give the Securities and Exchange Commission the power to promulgate rules prohibiting the purchase of securities by an issuer if the Commission believes that such purchases would not be in the public interest or for the protection of investors. On December 6, 1973, the Commission published proposed Rule 13(e)(2) which would limit the manner and amount of securities that could be purchased by the issuer thereof. Although the proposed rule has never been adopted, the Commission has followed and applied the rule in everyday practice. To insure that proposed Rule 13(e)(2) if adopted would not prohibit issuer repurchases of securities issued under section 416 of the Internal Revenue Code, Section 13(e)(3) would be added which would deem repurchases of securities being issued pursuant to section 416 not to be a "purchase" under the provisions of section 13 of the Securities Exchange Act of 1934.

ADDITIONAL COSPONSORS

S. 77

At the request of Mr. MATHIAS, the Senator from New Mexico (Mr. DOMENICI) and the Senator from Vermont (Mr. LEAHY) were added as cosponsors of S. 77, to amend the Social Security Act.

S. 256

At the request of Mr. PEARSON, the Senator from Illinois (Mr. PERCY) was added as a cosponsor of S. 256, the Natural Gas Act Amendments of 1977.

S. 991

At the request of Mr. RIBICOFF, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 991, to establish a Department of Education.

S. 1313

At the request of Mr. PROXMIRE, the Senator from Ohio (Mr. METZENBAUM) was added as a cosponsor of S. 1313, relating to the expenditure of funds on major military or civil acquisitions.

S. 1393

At the request of Mr. BAYH, the Senator from Ohio (Mr. METZENBAUM) was added as a cosponsor of S. 1393, relating to constitutional rights of institutionalized persons.

S. 1503

At the request of Mr. THURMOND, the Senator from Maryland (Mr. MATHIAS) was added as a cosponsor of S. 1503, relating to the ban on the use of the chemical Tris.

S. 1610

At the request of Mr. ALLEN, the Senator from Arkansas (Mr. BUMPERS) was added as a cosponsor of S. 1610, The Taxpayer's Attorney Fee Award Act of 1977.

S. 1736 AND S. 1737

At the request of Mr. LEAHY, the Senator from South Carolina (Mr. HOLLINGS) and the Senator from New York (Mr. JAVITS) were added as cosponsors of S. 1736 and S. 1737, relating to the use of solar energy in homes.

S. 1738

At the request of Mr. LEAHY, the Senator from South Carolina (Mr. HOLLINGS), the Senator from New York (Mr. JAVITS), the Senator from Indiana (Mr. BAYH), the Senator from Arizona (Mr. DECONCINI), the Senator from Minnesota (Mr. HUMPHREY), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of S. 1738, relating to the use of solar energy in residential structures on family farms.

S. 1773

At the request of Mr. JAVITS, the Senator from Florida (Mr. STONE) was added as a cosponsor of S. 1773, the age discrimination in employment bill.

S. 1787

At the request of Mr. STEVENS, the Senator from Oklahoma (Mr. BELLMON) was added as a cosponsor of S. 1787, relating to the classification of certain lands in Alaska.

S. 1899

At the request of Mr. JAVITS, the Senator from Kentucky (Mr. FORD) was added as a cosponsor of S. 1899, the GI bill tuition equalizer measure.

S. 1921

At the request of Mr. DOLE, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1921, to amend the Internal Revenue Code.

SENATE JOINT RESOLUTION 65

At the request of Mr. KENNEDY, the Senator from Vermont (Mr. LEAHY) and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of Senate Joint Resolution 65, relating to representation in Congress of the District of Columbia.

AMENDMENTS SUBMITTED FOR PRINTING

PUBLIC FINANCING OF ELECTIONS—S. 926

AMENDMENT NO. 751

(Ordered to be printed and to lie on the table.)

Mr. LEAHY submitted an amendment intended to be proposed by him to the bill (S. 926) to provide for the public financing of primary and general elections for the U.S. Senate.

AMENDMENT NO. 752

(Ordered to be printed and to lie on the table.)

Mr. BAKER submitted an amendment intended to be proposed by him to the bill (S. 926), supra.

AMENDMENT NO. 755

(Ordered to be printed and to lie on the table.)

Mr. HELMS submitted an amendment intended to be proposed by him to the bill (S. 926), supra.

AMENDMENT NO. 756

(Ordered to be printed and to lie on the table.)

Mr. BELLMON submitted an amendment intended to be proposed by him to the bill (S. 926), supra.

FEDERAL WATER POLLUTION CONTROL—S. 1952

AMENDMENT NO. 753

(Ordered to be printed and to lie on the table.)

Mr. DOLE. Mr. President, today I am submitting an amendment for printing on S. 1952, Federal Water Pollution Control Act Amendments of 1977. The amendment relates to the "Buy America" provision originally in H.R. 3199.

HOUSE ADOPTED THE AMENDMENT

H.R. 3199 contained a provision adding a new section to the Federal Water Pollution Control Act. The new section 216, of the Clean Water Act, would provide that no grant may be made by the EPA for treatment works unless all manufactured and unmanufactured articles, materials, and supplies involved in the project are mined, produced, or manufactured in the United States. This restriction would not apply if the EPA determines the cost would be unreasonable, the materials are not readily available, or such a purchase would be inconsistent with the public purpose.

CONGRESS CREATED THE PROBLEM

I share the reluctance of most Members of Congress to take actions which may be interpreted as unfair protectionism for American manufacturers. Yet, in this case, a legislative answer is required because prior legislative action created the problem. American firms engaged in the production of pollution and water treatment equipment have been hurt and disadvantaged by two separate actions of Congress.

First, in carrying out its legislative mandate, the EPA has issued numerous regulations which have forced American manufacturers to invest large sums of money to clean up their air and/or water emissions. These costs become part of the manufacturer's total cost and inevitably must be reflected in his selling price.

Second, for water pollution control projects funded by EPA under Public Law 92–500, the municipalities must accept the lowest priced equipment offered by anyone who meets the technical specification. No other factors may be considered.

COMPETITION IS NOT EQUAL

This is fair and appropriate as long as all manufacturers are treated equally and each competing company has to meet the same standards. However, it ceases to be fair when the same EPA, in the administration of its programs, allows foreign manufacturers not covered by EPA emission standards to undercut regulated U.S. manufacturers in bidding on equipment for publicly funded water pollution control projects.

As foreign-made products enter the market the business obtained by U.S. producers drops. Then the largely fixed cost associated with their emission control equipment must be spread over a smaller base making them even less competitive. An underserved downward spiral results for the U.S. manufacturer.

In the private sector a purchaser considers many factors in making his buying decision. Price is important—but he also looks at the reputation of the manufacturer, his experience, local service capability, repair parts availability, and a variety of other factors. When a foreign supplier comes out on top of such an evaluation, he has earned the business.

JOBS ARE NEEDED AT HOME

It would seem wise to spend U.S. taxpayers' money where some of it will be recouped in future taxes paid. That occurs when pollution control equipment produced in the United States is purchased for projects funded by the EPA under Public Law 92–500. The U.S. manufacturer employs American workers who pay personal income taxes on the wages received. Assuming the manufacturer makes a profit, he also pays corporate income taxes. These personal and corporate taxes paid into the Federal Treasury produce an offset to the money originally paid out for the equipment.

When Public Law 92–500 construction grant funds are used to purchase foreign manufactured products, the above offset does not occur. Money originating from U.S. taxpayers flows to foreign workers and governments.

Further, equipment purchased from foreign manufacturers creates jobs in the foreign country at the expense of jobs at home. At times of high unemployment it means that U.S. taxpayer money is keeping some foreign workers employed, and at the same time, additional taxpayer money must be used to pay unemployment benefits to the idled American workers.

This makes no sense. Clearly U.S. taxpayer money should be spent, if possible, in the United States where it will help reduce unemployment costs and attendant personal hardships while increasing tax revenues.

I intend to bring this amendment up for consideration when the Senate debates S. 1952. Until that time, I ask that each Member of the Senate consider the equities of this amendment. American businessmen have proved for many years that they can compete in international markets if given a fair chance. I believe that U.S. firms should have that same fair chance in the United States and this amendment would insure that result.

RECOMBINANT DNA ACT—S. 1217

AMENDMENT NO. 754

(Ordered to be printed and to lie on the table.)

Mr. NELSON. Mr. President, on behalf of the Senator from New York (Mr. MOYNIHAN) and myself, I am today introducing an amendment in the nature of a substitute to S. 1217, a bill to regulate activities involving recombinant deoxyribonucleic acid (DNA) research.

S. 1217 has generated much new information and commentary since its introduction April 1, 1977.

The substitute proposal reflects new information and views, and differs from both the Senate bill (S. 1217) and from H.R. 7897, a bill pending before the House Interstate and Foreign Commerce Committee, with respect to a number of major issues: the nature and the extent of regulation necessary to combat potential risks from DNA research activities; the definition of recombinant DNA activities to be regulated; penalties for compliance; the authority of the Federal Government to preempt State and local regulations. The proposal reflects concerns expressed in supplemental views filed with the report (No. 95–359) of the Human Resources Committee on S. 1217.

We are interested in the views of all interested parties on this important legislation.

I ask unanimous consent that the amendment be printed in the RECORD following these remarks, along with supplemental views on S. 1217, and an article in the New York Times, July 31, 1977, by Walter Sullivan, science editor.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 754

Strike out all after the enacting clause and substitute the following:

SHORT TITLE

SECTION 1. This Act may be cited as the "Recombinant DNA Act".

FINDINGS

SEC. 2. The Congress finds that—

(1) research and other activities involving recombinant DNA will improve the understanding of fundamental biological processes;

(2) the knowledge gained from such research and other activities may be of great benefit to medicine and agriculture and may provide many other benefits to society;

(3) there exist, however, uncertainties regarding the extent to which recombinant DNA or organisms or viruses containing recombinant DNA and activities involving recombinant DNA may present a risk of injury to health or the environment, and there is a risk that such organisms and

viruses may spread quickly and without warning to persons, agricultural plants and products, and other items in or affecting commerce;

(4) the public interest requires that the health and welfare of the population of the United States be protected from such risk, and commerce in the United States is dependent upon such protection being provided; and

(5) to effectively accomplish such protection and consequently to effectively regulate commerce requires that the possession of recombinant DNA and any activity engaged in for its production (whether a research or commercial activity) be subject to control.

AMENDMENT TO THE PUBLIC HEALTH SERVICE ACT

SEC. 3. Title IV of the Public Health Service Act is amended (1) by redesignating part I as part J, (2) by redesignating sections 471 through 476 (and all references to such sections) as section 486 through 491, respectively, and (3) by inserting after part H the following new part:

"PART I—RECOMBINANT DNA

"DEFINITIONS

"SEC. 471. For purposes of this part:

"(1) The term 'DNA' means deoxyribonucleic acid.

"(2) The term 'recombinant DNA' means DNA molecules consisting of segments of DNA from different genomes which have been joined together outside of living cells and which have the capacity to infect some host cell and be maintained therein and which are novel. 'Novel' means, molecules that consist of segments of any DNA from different species that are not known to exchange chromosomal DNA by natural physiological processes. The Secretary shall prepare a list of DNA combinations (viral, extrachromosomal, or chromosomal) which are not novel. Recombinant DNA molecules formed from any combination of DNA's will not be considered novel when all of the components are derived from genomes known to replicate naturally within the organism used to propagate the recombinant DNA.

"(3) The term 'local biohazards committee' means a local biohazards committee established in accordance with section 476, and the term 'Advisory Committee' means the Recombinant DNA Advisory Committee established under section 481.

"(4) The possession in a State of recombinant DNA by any individual or public or private entity and any activity (including research and transportation) undertaken in a State by any individual or public or private entity for the production of recombinant DNA are collectively referred to as 'recombinant DNA activities'. The term 'public entity' includes any Federal, State, or local governmental entity.

"(5) The term 'Secretary' means the Secretary of Health, Education and Welfare.

"INTERIM CONTROL

"SEC. 472. (a)(1) During the period beginning on the tenth day after the date of the enactment of this part and ending—

"(A) eighteen months after such date, or

"(B) on the date the regulations required by section 475 take effect,

whichever occurs first, all recombinant DNA activities shall be carried out in accordance with the physical and biological containment requirements described in paragraph (2).

"(2) The physical and biological containment requirements referred to in paragraph (1) are the physical and biological containment requirements—

"(A) as contained in the recombinant DNA research guidelines of the Department of Health, Education and Welfare published in part II of the Federal Register for July 7, 1976,

"(B) if revised between July 7, 1976, and the tenth day after the date of the enactment of this part, as so revised, or

"(C) if revised under subsection (c), as so revised.

"(3) Before the expiration of the ten-day period beginning on the date of the enactment of this part, the Secretary shall take such action as may be necessary to publicize and make available the requirements described in paragraph (2), including the publication of such requirements in the Federal Register.

"(b) From the date of the enactment of this part until the expiration of the period described in subsection (a), all the requirements of the recombinant DNA research guidelines of the Department of Health, Education, and Welfare—

"(1) as published in part II of the Federal Register for July 7, 1976,

"(2) if revised between July 7, 1976, and the tenth day after the date of the enactment of this part, as so revised, or

"(3) if revised under subsection (c), as so revised, shall continue to apply as specified in such guidelines.

"(c) The physical and biological containment requirements of the guidelines described in subsection (a) which are in effect on the tenth day after the date of the enactment of this part may be revised only by regulations promulgated by the Secretary in accordance with section 553 of title 5, United States Code.

"(d)(1) Each individual or entity which, on the date of the enactment of this part, is responsible for the conduct of any recombinant DNA activity shall, in accordance with regulations promulgated under subsection (e) and before the expiration of ninety days from the date of the enactment of this part, report in writing to the Secretary—

"(A) such individual's or entity's name, and

"(B) a description of such activity and an identification of the place or places in which it is being conducted.

"(2) Each individual or entity which is to be responsible for a recombinant DNA activity to be commenced during the period described in subsection (a) shall upon the commencement of such activity report in writing to the Secretary such individual's or entity's name, a description of such activity, and an identification of the place or places in which such activity is to be conducted.

"(e) Before the expiration of the forty-five day period beginning on the date of the enactment of this part, the Secretary shall, without regard to subsections (c) and (d) of section 553 of title 5, United States Code, promulgate such regulations as may be necessary for the administration of the requirements of this section.

"(f) The regulations described in this section and in section 476 may be promulgated without regard to section 102(2)(C) of the National Environmental Policy Act of 1969.

"GENERAL REQUIREMENTS

"SEC. 473. (a) Except as provided under subsection (b), the following requirements apply under this part with respect to recombinant DNA activities:

"(1) Each facility in which a recombinant DNA activity is to be conducted shall be licensed in accordance with section 475.

"(2) The transportation of recombinant DNA and any other recombinant DNA activity (including an agricultural activity) which is not conducted in a facility shall be carried out in accordance with regulations promulgated by the Secretary under section 474.

"(b) The Secretary may, by regulation, exempt from the requirements of this part any recombinant DNA activity which the Secretary finds does not present a significant risk to health or the environment.

"CONTROL OF NONFACILITY RECOMBINANT DNA ACTIVITIES

"SEC. 474. (a) The Secretary shall promulgate regulations to control the conduct of recombinant DNA activities described in section 473(a)(2). Such regulations shall—

"(1) prescribe physical and biological containment requirements for the conduct of such activities;

"(2) apply as appropriate, to the conduct of such activities, the personnel safety requirements prescribed under section 475;

"(3) include such special requirements as the Secretary determines necessary for the conduct of recombinant DNA activities involving more than ten liters of cell cultures containing recombinant DNA and for the conduct of any commercial recombinant DNA activity which the Secretary determines may present a significant risk to health or the environment; and

"(4) include such other provisions as the Secretary determines to be necessary for the protection of health or the environment.

"(b) The Secretary shall consult with the Advisory Committee respecting the promulgation of the regulations required by subsection (a) (including the promulgation of amendments to such regulations other than amendments to make clerical or technical changes), and any notice of proposed rulemaking issued by the Secretary respecting such regulations shall contain any comments submitted respecting such regulations.

"(c) The regulations required by subsection (a) shall be initially promulgated within one year of the date of the enactment of this part and shall take effect upon the expiration of one hundred and eighty-days from the date of their promulgation.

"(d) The Secretary shall provide for an annual review of the regulations required by subsection (a) to determine if their requirements continue to protect health and the environment.

"(e) If the Secretary receives a petition for the promulgation of a regulation to prescribe an additional requirement under subsection (a) or to revise or repeal a requirement contained in a regulation promulgated under that subsection, the Secretary shall either approve or deny the petition within one hundred and twenty days after the date the petition is received by the Secretary. If the Secretary approves such a petition, the Secretary shall, as soon as practicable after the date the petition is approved, commence a proceeding as requested by the petition. If the Secretary denies such a petition, he shall notify the petitioner of the denial and the reasons therefor and shall publish such reasons in the Federal Register.

"LICENSES

"SEC. 475. (a)(1) Licenses for facilities in which recombinant DNA activities are to be conducted shall be issued, amended, and renewed in accordance with this section.

"(2) A license under this section is the authority for the conduct of recombinant DNA activities in the facility or facilities for which the license is issued. The Secretary shall prescribe guidelines respecting—

"(A) the types and number of facilities that may be covered by a single license, and

"(B) the types of recombinant DNA activities that may be authorized by a single license.

"(3)(A) The Secretary shall promulgate regulations to implement the administration of this section. Such regulations shall—

"(i) prescribe physical and biological containment for recombinant DNA activities authorized to be conducted under licenses issued under this section;

"(ii) prescribe requirements for—

"(I) laboratory safety training to be given to, and safety techniques to be followed by, personnel to be involved in such activities,

"(II) monitoring systems to protect against accidental exposure and other hazards to the health of such personnel while engaged in such activities,

"(III) the type and form of information to be given such personnel concerning the nature of the health risks presented by such activities and the frequency and manner of giving them such information, and

"(IV) the type and frequency of medical examinations to be given such personnel while engaged in such activities;

"(iii) prescribe requirements respecting reports to be made and records to be maintained by the holders of licenses issued under this section;

"(iv) include such special requirements as the Secretary determines necessary for the conduct of recombinant DNA activities involving more than ten liters of cell cultures containing recombinant DNA and for the conduct of any commercial recombinant DNA activity which the Secretary determines may present a significant risk to health or the environment; and

"(v) include such other provisions as the Secretary determines necessary for the effective administration of the requirements of this section.

"(B) Regulations required by subparagraph (A) shall be initially promulgated within one year of the date of the enactment of this part and shall take effect upon the expiration of one hundred and eighty days from the date of their promulgation.

"(C) The Secretary shall consult with the Advisory Committee respecting the promulgation of the regulations required by subparagraph (A) (including the promulgation of amendments to such regulations other than amendments to make clerical or technical changes), and any notice of proposed rulemaking issued by the Secretary respecting such regulations shall contain any comments submitted to the Secretary by the Advisory Committee respecting such regulations.

"(D) The Secretary shall provide for an annual review of the regulations required by subparagraph (A) to determine if their requirements continue to protect the public health and safety and the environment.

"(E) If the Secretary receives a petition for the promulgation of a regulation to prescribe an additional requirement under subparagraph (A) or to revise or repeal a requirement contained in a regulation promulgated under that subparagraph, the Secretary shall either approve or deny the petition within one hundred and twenty days after the date the petition is received by the Secretary. If the Secretary approves such a petition, the Secretary shall, as soon as practicable after the date the petition is approved, commence a proceeding as requested by the petition. If the Secretary denies such a petition, he shall notify the petitioner of the denial and the reasons therefor and shall publish such reasons in the Federal Register.

"(4)(A) A license to authorize the conduct in a facility of any recombinant DNA activity which under the applicable physical containment requirements promulgated under paragraph (3)(A)(i) requires physical containment at the equivalent of the P–4 level prescribed by the guidelines referred to in section 472 (a)(2), may only be issued, amended, or renewed by the Secretary. Any comments of the Advisory Committee and the local biohazards committee with jurisdiction over such facility shall be published in the Federal Register.

"(B) A license to authorize the conduct in a facility of any recombinant DNA activity which under the applicable physical containment requirements promulgated under paragraph (3)(A)(i) requires physical containment at the equivalent of the P–3 level prescribed by the guidelines referred to in section 472 (a)(2), may be issued, amended, and renewed by a local biohazards committee in accordance with this subparagraph. If the committee proposes to approve an application for the issuance, amendment, or renewal of such a license, such committee shall submit to the Secretary—

"(i) the application for such action together with any materials submitted to the committee respecting the application, and

"(ii) a statement of any conditions proposed to be imposed by the committee on the approval of the application to assure that requirements under this part applicable to recombinant DNA activities which would be conducted under the license are complied with,

and, within thirty days of the submittal of such application and statement, the Secretary shall review the application to determine if its approval would be in accordance with the requirements of this part. The local biohazards committee may approve the application unless within the applicable review period the Secretary determines that it may not be approved. The Secretary shall, subject to section 480, publish in the Federal Register the results of any application review conducted under this subparagraph, and the comments of the Advisory Committee on such application.

"(C) A license to authorize the conduct in a facility of any recombinant DNA activity not described in subparagraph (A) or (B) may be issued, amended, and renewed by a local biohazards committee. Upon the issuance, amendment, or renewal of a license by a local biohazards committee, such committee shall submit to the Secretary (i) the application for such action together with any materials submitted to the committee respecting the application, and (ii) a statement of any conditions imposed by the committee on the approval of the application to assure compliance with requirements under this part applicable to recombinant DNA activities which are to be conducted under the license.

"(D) If the holder of a license under this section proposes—

"(i) to conduct a recombinant DNA activity which is not authorized by such license, such activity may not be conducted under such license before it is amended to authorize such activity; or

"(ii) to alter or expand a facility licensed by such license, no recombinant DNA activity may be conducted in such facility before the license is amended to cover such facility as so altered or expanded.

The Secretary shall prescribe procedures, as appropriate, for the expeditious handling of applications for amendments of licenses.

"(E) If the Secretary determines that the issuance, amendment, or renewal of a license by a local biohazards committee under subparagraph (B) or (C) was not in accordance with the requirements of this part, or was not in the best interests of the public, the Secretary may take such action with respect to the license as he determines is necessary, including revoking, suspending, or limiting the license.

"(F) The issuance, amendment, and renewal of a single license to authorize the conduct of any combination of recombinant DNA activities described in subparagraphs (A), (B), and (C) shall be carried out jointly by the Secretary and the local biohazards committee involved in accordance with guidelines prescribed by the Secretary.

"(b) Any individual or public or private entity may apply for the issuance of a license under this section, and the holder of a license may apply for its amendment or renewal.

An application for the issuance or renewal or a license shall be made in such form and manner as the Secretary shall prescribe and shall contain—

"(1) a description of each recombinant DNA activity to be conducted under the license (including applicable research hypotheses, designs, and protocols), identification of the primary professional personnel to be engaged in each such activity and their qualifications, and a description of the facilities and materials to be used in each such activity;

"(2) assurances satisfactory to the issuer of the license that each recombinant DNA activity to be conducted under the license will be conducted in accordance with applicable physical and biological containment requirements prescribed under subsection (a)(3)(A)(i);

"(3) assurances satisfactory to the issuer of the license that in that conduct of each such activity there will be compliance with applicable personnel safety requirements prescribed under subsection (a)(3(A)(ii);

"(4) asssurances satisfactory to the issuer of the license that the holder of the license shall make such reports, and shall maintain such records, respecting each such activity (including reports, and records of any significant or recurring illness, serious injury, or death of any personnel engaged in such activity and of the health care provided such personnel while engaged in such activity) as are required under subsection (a)(3)(A)(iii);

"(5) a statement of the results of any evaluation made by or known to the applicant of the risks to health or the environment which may be presented by any recombinant DNA activity to be conducted under the license; and

"(6) such additional information as the Secretary may prescribe.

Applications for the amendment of a license shall contain the information required by the preceding sentence as the Secretary determines is necessary.

"(c) A license issued under this section shall be valid for such period (but not in excess of thirty-six months) as the Secretary may prescribe. Such a license shall contain such terms and conditions as the Secretary finds are necessary and appropriate to carry out the requirements of this section and shall identify each recombinant DNA activity which may be conducted under the license and the facility in which it is to be conducted.

"(d) The Secretary may revoke, suspend, or limit a license if he finds, after reasonable notice and opportunity for a hearing to the holder of the license, that the holder of the license, any employee or agent of the holder, or any person engaged in a recombinant DNA activity in such facility—

"(1) misrepresented any material fact in obtaining the license,

"(2) has engaged in or attempted to engage in, or represented himself as entitled to perform, any recombinant DNA activity not authorized by the license,

"(3) has failed to comply with any of the terms or conditions of the license,

"(4) has failed to comply with a request of the Secretary for any information or materials the Secretary finds necessary to determine the continued eligibility for the license or to evaluate the possible effects on health or the environment of the recombinant DNA activities conducted in the facility.

"(5) has failed to comply with a request of the Secretary to inspect any portion of the facility, its operations, or its records, which are related to recombinant DNA activities, or

"(6) has violated or aided and abetted in the violation of any requirement established under this part.

"(e) The Secretary shall, within one year after the regulations initially promulgated under subsection (a)(3) take effect, prepare a summary of the recombinant DNA activities authorized to be conducted under licenses issued under this section and shall, subject to section 480, make such summary

available for inspection by the public at reasonable times and places. Such summary shall be kept current by the Secretary.

"LOCAL BIOHAZARDS COMMITTEES

"SEC. 476. (a) No facility may be licensed under section 475 unless a local biohazards committee has been established in accordance with this section with jurisdiction over such facility. The Secretary shall prescribe the number and type of facilities which may be within the jurisdiction of a single local biohazards committee.

"(b) Each local biohazards committee (hereinafter in this section referred to as a 'committee') shall be established and operate in the manner prescribed by this section and regulations of the Secretary under this section. Such regulations shall be initially promulgated within one hundred and eighty days of the date of the enactment of this part, and shall provide that a committee may not exercise the functions prescribed by subsection (c) unless the Secretary has authorized its establishment for purposes of this part.

"(c)(1) Each committee shall have the authority prescribed by section 475 with respect to the issuance, amendment, and renewal of licenses under that section. A committee shall receive and consider license applications in accordance with such procedures as the Secretary shall prescribe. A committee may not approve an application for the issuance, amendment, or renewal of a license unless at least three-fourths of the members of the committee vote to approve the application. Upon the written request of any member of a committee for review by the Secretary of any decision of the committee respecting the issuance, amendment, or renewal of a license, the Secretary shall conduct such review and report the results of this review to the committee. Such a detailed statement of the reasons for requesting review by the Secretary.

"(2) A committee shall, with respect to a facility licensed under section 475, be responsible for such inspections (in accordance with section 477) and monitoring activities as the Secretary may require to assure that the recombinant DNA activities conducted in such facility are conducted in accordance with the requirements of this part and of the license of the facility. No person who is a member of a committee and who is engaged in or has a financial interest in any recombinant DNA activity may participate in any function of the committee with respect to such activity.

"(d)(1) Each committee shall have not less than seven or more than thirteen voting members. The members of a committee shall be individuals who by virtue of their training or experience are qualified to participate in the functions of the committee. At least one member of a committee shall represent the interests of nonprofessionals engaged in recombinant DNA activities and one shall represent a local public health authority within the jurisdiction of the committee; and there shall be two nonvoting members, one of whom shall represent a local government within such jurisdiction, and one shall be representative of the interests of a community within such jurisdiction. At least one-third of the voting members of any committee shall be individuals who are not employees of, and who do not have a financial interest in, any applicant for a license under section 475.

"(2) The Secretary may require a committee to use a biological safety officer to carry out the monitoring and inspection functions of the committee with respect to recombinant DNA activities described in subparagraphs (A) and (B) of section 475(a)(4). Such an officer shall have such public health, microbiological, and other appropriate training as the Secretary shall prescribe.

"INSPECTIONS

"SEC. 477. (a)(1) For purposes of enforcement of the licensing requirements of this part and the requirements of section 472 applicable to facilities, individuals (including employees and agents of local biohazards committees) designated as inspectors by the Secretary, upon presenting appropriate credentials and a written notice to the owner, operator, or agent in charge and after clearly informing him of their authority, are authorized to enter and inspect any facility in a State in which a recombinant DNA activity is being conducted or in the case of individuals conducting an inspection for a local biohazards committee, any facility under the jurisdiction of such committee in which a recombinant DNA activity is being conducted. A separate notice shall be given for each such inspection, but a separate notice shall not be required for each entry made during the period covered by the inspection. Such an inspection (A) shall be made during the normal business hours of the facility being inspected and in a reasonable manner, and (B) may extend to relevant equipment, materials, containers, records, files, papers, processes, controls, facilities, and all other things in the facility bearing on whether the recombinant DNA activity is being conducted in accordance with the licensing requirements of this part or the applicable requirements of section 472.

"(2) Upon completion of any inspection of a facility authorized by paragraph (1) and prior to leaving the facility, the individual making the inspection shall give to the owner, operator, or agent in charge a preliminary report which summarizes any condition or practice observed by such individual which, in his judgment, indicates a violation of the licensing requirements of this part. He shall also prepare a written final report of his findings and send it to such owner, operator, or agent within thirty days of the completion of the inspection.

"(b)(1) For purposes of enforcement of the requirements prescribed by or under sections 472 and 474, individuals (including employees and agents of local biohazards committees) designated as inspectors by the Secretary, upon presenting appropriate credentials to the owner, operator, or agent (if any of these be present) in charge of—

"(A) a vehicle or other conveyance which may be used in the transportation of recombinant DNA and in which the inspector has reasonable grounds to believe that recombinant DNA is present, or

"(B) any real property which is not subject to inspection under subsection (a) and in which the inspector has reasonable grounds to believe recombinant DNA is present,

and after clearly informing him of their authority under this paragraph, may enter such conveyance or real property at reasonable times, and inspect, at reasonable times and in a reasonable manner, such conveyance or real property and all things in that conveyance or real property which he has reasonable grounds to believe bear on whether a recombinant DNA activity is being conducted in accordance with the applicable requirements of section 472 or 474.

"(2) Upon completion of any inspection of a conveyance or real property authorized by paragraph (1) and prior to leaving it, the individual making the inspection shall give to the owner, operator, or agent in charge a preliminary report which summarizes any condition or practice observed by such individual which, in his judgment, indicates a violation of the requirements of section 472 or 474. He shall also prepare a written final report of his findings and send it to such, owner, operator, or agent within thirty days of the completion of the inspection.

"(c) At the request of an inspector conducting an inspection under subsection (a) or (b) of a facility, conveyance, or real property, the person in charge of such facility, conveyance, or property shall provide such samples of—

"(1) recombinant DNA in such facility, conveyance, or property, or

"(2) materials used in or produced by any recombinant DNA activity conducted in such facility or property, as the inspector may require to determine if the applicable requirements of sections 472, 474, and 475 are being complied with.

"(d) If during an inspection of a facility, conveyance, or real property conducted under subsection (a) or (b), recombinant DNA or any material used in or produced by a recombinant DNA activity which the inspector making the inspection has reason to believe presents a significant risk to health or the environment is found in such facility, conveyance, or property, such inspector may order the recombinant DNA or material detained (in accordance with regulations promulgated by the Secretary) for a reasonable period which may not exceed twenty days unless the Secretary determines that a period of detention greater than twenty days is required to institute an action under section 479(b), in which case the Secretary may authorize a detention period of not to exceed an additional thirty days. Any recombinant DNA or material subject to a detention order issued under this subsection shall not be moved by any person from the place at which it is ordered detained until—

"(1) released by the Secretary, or

"(2) the expiration of the detention period applicable to such order,

whichever occurs first.

"(e) No individual designatd by the Secretary to conduct an inspection under subsection (a) or (b) shall be required to obtain a search or inspection warrant from any judical officer before entering any facility, conveyance, or real property to conduct such inspection.

"(f) No individual who is engaged in or has a direct financial interest in any recombinant DNA activity may be designated by the Secretary to conduct an inspection under subsection (a) of the facility in which such activity is being conducted, and no individual who is engaged in or has a direct financial interest in any recombinant DNA activity subject to regulation under section 472 or 474 may be designated by the Secretary to conduct an inspection under subsection (b) with respect to the activity in which he is engaged.

"PROHIBITED ACTS AND PENALTIES

"SEC. 478. (a) No person may violate the provisions of this part or any regulation promulgated under this part.

"(b)(1) Any person who violates subsection (a) may have their license revoked, suspended, or limited by the Secretary in accordance with section 475(d).

"(c) Any person who knowingly or willfully violates subsection (a) shall be subject, upon conviction, to a fine of not more than $2,000. Each day a violation of subsection (a) continues shall constitute a separate violation for purposes of this subsection.

"(d) For a period of time to be determined by the court, no grant, contract, or other form of financial assistance for any purpose related to recombinant DNA may be provided under this Act to any person convicted under subsection (c) of a violation of subsection (a).

"INJUNCTION AUTHORITY; EMERGENCY PROCEDURE

"SEC. 479. (a) The district courts of the United States shall have jurisdiction over civil actions to restrain any violation of section 478 (a). Such a civil action may be brought in the United States district court

for the judicial district wherein any act, omission, or transaction constituting a violation of section 478 (a) occurred or wherein the defendant is found or transacts business. In any such civil action, process may be served on a defendant in any judicial district in which the defendant resides or may be found. Subpenas requiring attendance of witnesses in any such action may be served in any judicial district.

"(b) The district courts of the United States shall have jurisdiction over any civil action brought (1) for the seizure or destruction of any recombinant DNA, or any material used in or produced by a recombinant DNA activity, which recombinant DNA or material presents or may present a significant risk of health or the environment or (2) for other appropriate relief to prevent its production or movement. Such civil action shall be brought in the district court of the United States within the jurisdiction in which such recombinant DNA or material is found.

"DISCLOSURE OF DATA

"SEC. 480. (a) (1) Any information reported to, or otherwise obtained by, the Secretary (or any representative of the Secretary) or any local biohazards committee under this part, which is exempt from disclosure pursuant to subsection (a) of section 552 of title 5, United States Code, by reason of subsection (b) (4) of such section, shall not be disclosed, except that such information—

"(A) shall be disclosed by the Secretary to any officer or employee of the United States—

"(i) in connection with the official duties of such officer or employee under any law for the protection of health or the environment, or

"(ii) for specific law enforcement purposes;

"(B) shall be disclosed by the Secretary if the Secretary determines it necessary to protect health or the environment against an unreasonable risk of injury; or

"(C) may be disclosed by the Secretary when relevant in any proceeding under this part, except that disclosure in such a proceeding shall be made in such manner as to preserve confidentiality to the extent practicable without impairing the proceeding.

A research hypothesis, design, or protocol shall, for purposes of this paragraph, be considered to be information which is exempt from disclosure pursuant to subsection (a) of setcion 552 of title 5, United States Code, by reason of subsection (b) (4) of such section.

"(2) In any proceeding under subsection (a) of section 552 of title 5, United States Code, to obtain information the disclosure of which has been denied because of the provisions of paragraph (1) of this subsection, the Secretary or a local biohazards committee may not rely on subsection (b) (3) of such section 552 to sustain the Secretary's or committee's action.

"(b) Subsection (a) (1) does not prohibit the disclosure of any statement of an evaluation of risks submitted under section 475 (b) (5).

"(c) (1) In submitting data under this part, the individual or entity submitting the data may (A) designate the data which such individual or entity believes is entitled to confidential treatment under subsection (a) (1), and (B) submit each designated data separately from other data submitted under this part. A designation under this paragraph shall be made in writing and in such manner as the Secretary may prescribe.

"(2) (A) Except as provided in subparagraph (B), if the Secretary or a local biohazards committee proposes to release for inspection data which has been designated under paragraph (1) (A), the Secretary or committee shall notify, in writing and by certified mail, the individual or entity which submitted such data of the intent to release such data. If the release of such data is to be made pursuant to a request made under section 552(a) of title 5, United States Code, such notice shall be given immediately upon approval of such request by the Secretary or committee. The Secretary or committee may not release such data until the expiration of thirty days after the individual or entity submitting such data has received the notice required by this subparagraph.

(B) Subparagraph (A) shall not apply to the release of information under subparagraph (A), (B), or (C) of paragraph (1) of subsection (a), except that the Secretary may not release data under subparagraph (B) of such paragraph (1) unless the Secretary has notified each individual or entity who submitted such data of such release. Such notice shall be made in writing by certified mail at least fifteen days before the release of such data, except that if the Secretary determines that the release of such data is necessary to protect against an imminent, unreasonable risk of injury to health or the environment, such notice may be made by such means as the Secretary determines will provide notice at least twenty-four hours before such release is made.

(d) Any officer or employee of the United States (including any member or employee of the Advisory Committee) or member or employee of a local biohazards committee or former officer or employee of the United States or former member or employee of such a committee, who by virtue of such employment or official position has obtained possession of, or has access to, material the disclosure of which is prohibited by subsection (a), and who knowing that disclosure of such material is prohibited by such subsection, willfully discloses the material in any manner to any person not entitled to receive it, shall be guilty of a misdemeanor and fined not more than $5,000 or imprisoned for not more than one year, or both. Section 1905 of title 18, United States Code, does not apply with respect to publishing, divulging, disclosing, making known, or making available information reported or otherwise obtained under this part.

(e) Notwithstanding any limitation contained in this section or any other provision of law, all information reported to or otherwise obtained by the Secretary (or any representative of the Secretary) or by any local biohazards committee under this part shall be made available, upon written request of any duly authorized committee of the Congress, to such committee.

"(f) Each local biohazards committee shall be considered an agency for purposes of section 552 of title 5, United States Code.

"ADVISORY COMMITTEE

"SEC. 481. (a) There is established the Recombinant DNA Advisory Committee which shall advise the Secretary and make recommendations to the Secretary for the effective administration of this part.

"(b) The Advisory Committee shall consist of seventeen members appointed by the Secretary from individuals who by virtue of their training or experience are qualified to participate in the functions of the Advisory Committee. Of the individuals appointed as members of the Advisory Committee (1) one shall be representative of the interests of nonprofessional personnel engaged in recombinant DNA activities; (2) one shall be representative of the interests of entities engaged in such activities for commercial purposes; and (3) at least nine shall be individuals who are not actively engaged in any recombinant DNA activity and do not have a direct financial interest in such an activity. Of those nine individuals, at least four shall be scientists who are knowledgeable in the various scientific and medical disciplines necessary for an evaluation of the potential risks to health and the environment presented by recombinant DNA activities.

Receipt of a salary from an institution that sponsors recombinant DNA activity shall not qualify as a direct financial interest. One member of the Advisory Committee shall be a specialist in public health, one shall have background in the ethical concerns involved in biomedical research, and three shall represent the interests of the general public. The term of office of a member of the Advisory Committee shall be three years, except that of the members first appointed to the Advisory Committee, six shall be appointed for a term of one year and six shall be appointed for a term of two years, as designated by the Secretary at the time of appointment. Section 14 of the Federal Advisory Committee Act shall not apply with respect to the duration of the Advisory Committee.

"(c) Members of the Advisory Committee (other than officers or employees of the United States), while attending meetings or conferences of the Advisory Committee or otherwise engaged in its business, shall be entitled to receive compensation at rates to be fixed by the Secretary, but not at rates exceeding the daily equivalent of the rate in effect for grade GS–18 of the General Schedule, for each day so engaged, including traveltime; and while so serving away from their homes or regular places of business each member may be allowed travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

"EMPLOYEE PROTECTION

"SEC. 482. (a) No employer may discharge any employee or otherwise discriminate against any employee with respect to the employee's compensation, terms, conditions, or privileges of employment because the employee (or any person acting pursuant to a request of the employee) has—

"(1) commenced, caused to be commenced, or is about to commence or cause to be commenced a proceeding under this part,

"(2) testified or is about to testify in any such proceeding, or

"(3) assisted or participated or is about to assist or participate in any manner in such a proceeding or in any other action to enforce any requirement of this part.

"(b) (1) Any employee who believes that he has been discharged or otherwise discriminated against by any person in violation of subsection (a) of this section may, within thirty days after such alleged violation occurs, file (or have any person file on the employee's behalf) a complaint with the Secretary of Labor (hereinafter in this section referred to as the 'Secretary') alleging such discharge or discrimination. Upon receipt of such a complaint, the Secretary shall notify the person named in the complaint of the filing of the complaint.

"(2) (A) Upon receipt of a complaint filed under paragraph (1), the Secretary shall conduct an investigation of the violation alledged in the complaint. Within thirty days of the receipt of such complaint, the Secretary shall complete such investigation and shall notify in writing the complainant (and any person acting on behalf of the complainant) and the person alleged to have committed such violation of the results of this investigation conducted pursuant to this subparagraph. Within ninety days of the receipt of such complaint the Secretary shall, unless the proceeding on the complaint is terminated by the Secretary on the basis of a settlement entered into by the Secretary and the person alleged to have committed such violation, issue an order either providing the relief prescribed by subparagraph (B) or denying the complaint. An order of the Secretary shall be made on the record after notice and opportunity for agency hearing. The Secretary may not enter into a settlement terminating a proceeding on a complaint without the participation and consent of the complainant.

"(B) If in response to a complaint filed

under paragraph (1) the Secretary determines that a violation of subsection (a) of this section has occurred, the Secretary shall order (i) the person who committed such violation to take affirmative action to abate the violation, and (ii) such person to reinstate the complainant to the complainant's former position together with the compensation (including back pay), terms, conditions, and privileges of the complainant's employment. If such an order is issued, the Secretary, at the request of the complainant, shall assess against the person against whom the order is issued a sum equal to the aggregate amount of all costs and expenses (including attorney's fees) reasonably incurred, as determined by the Secretary, by the complainant for, or in connection with, the bringing of the complaint upon which the order was issued.

"(c)(1) Any employee or employer adversely affected or aggrieved by an order issued under subsection (b) may obtain review of the order in the United States court of appeals for the circuit in which the violation, with respect to which the order was issued, allegedly occurred. The petition for review must be filed within sixty days from the issuance of the Secretary's order. Review shall conform to chapter 7 of title 5 of the United States Code.

"(2) An order of the Secretary, with respect to which review could have been obtained under paragraph (1), shall not be subject to judicial review in any criminal or other civil proceeding.

"(d) Whenever a person has failed to comply with an order issued under subsection (b)(2), the Secretary shall file a civil action in the United States district court for the district in which the violation was found to occur to enforce such order. In actions brought under this subsection, the district courts shall have jurisdiction to grant all appropriate relief, including injunctive relief. Civil actions brought under this subsection shall be heard and decided expeditiously.

"(e) Subsection (a) of this section shall not apply with respect to any employee who, acting without direction from the employee's employer (or any agent of the employer), deliberately causes a violation of any requirement of this part.

"RELATIONSHIP TO OTHER FEDERAL LAWS

"Sec. 483. (a) Except as provided in subsection (b), notwithstanding any other provision of law, this section shall limit the authority of any Federal agency to regulate or to make any requirements applicable to recombinant DNA activities.

"(b)(1) Upon application by a Federal agency, and after consultation with such agency, the Secretary may exempt such agency from subsection (a).

"(2) An application for an exemption shall be accompanied by the proposed requirement and the reasons therefor.

"(3) If the Secretary grants an exemption, the proposed requirement shall be promulgated in accordance with section 553 of title 5 of the United States Code.

"(4) The Secretary may limit, alter, or withdraw such exemption.

"EFFECT ON STATE AND LOCAL REQUIREMENTS

"Sec. 484. (a) Except as provided in subsection (b), no State or political subdivision of a State may establish or continue in effect any requirement for the regulation of recombinant DNA activities.

"(b) Upon application of a State or political subdivision of a State, the Secretary may allow, by order promulgated after providing (in accordance with this subsection) notice and opportunity for an oral hearing on such application and after considering local conditions, exempt from subsection (a), under such conditions as may be prescribed in such order, a requirement of such State or political subdivision applicable to recombinant DNA activities if—

"(1) the requirement is more stringent than a requirement under this part which would be applicable to such activities if an exemption were not in effect under this subsection; and

"(2) the requirement is necessary to protect health or the environment and is required by compelling local conditions.

A State or political subdivision which submits an application under this subsection shall be given an opportunity for an oral hearing on such application to be commenced not later than sixty days from the date the application is submitted. The presiding officer at such a hearing shall upon conclusion of the hearing make a written recommendation to the Secretary respecting approval of the application upon which the hearing was held.

"(c) Within—

"(1) sixty days of the conclusion of a hearing held on an application submitted under subsection (b), or

"(2) one hundred and twenty days of the date the application was submitted,

whichever occurs later, the Secretary shall either approve or disapprove such application. The decision of the Secretary shall be in writing, shall, if a hearing was held on the application, contain the recommendation made by the presiding officer at such hearing, and shall include a statement of the reasons for the decision of the Secretary.

"TRAINING AND STUDIES

"Sec. 485. (a) The Secretary may conduct and support training in the safe handling of recombinant DNA.

"(b) The Secretary shall conduct or support on a continuing basis studies designed to assess the risks to health and the environment which may be presented by recombinant DNA activities.".

EXPIRATION OF ACT

Sec. 4. This Act expires five years after its enactment.

XI Supplemental Views of Senator Nelson

S. 1217, a bill to regulate deoxyribonucleic acid (DNA) activities has a laudable goal: the protection of public health and safety by requiring that uniform national guidelines be met by scientists conducting recombinant DNA research, both in publicly supported and private industry research laboratories.

However, I am concerned that S. 1217 is unnecessarily burdensome and detrimental to the future of this important biomedical research.

Scientists all agree that the joining together of different segments of deoxyribonucleic acid (DNA) is a potent tool for the conquest of disease and other beneficial scientific advances. The recently announced discovery that recombined genes facilitate the production of insulin by bacteria is an example of such an important breakthrough. Recombining fragments of DNA occurs continually in nature. Four years ago, however, at a 1973 Gordon Conference on Nucleic Acids, scientists involved in developing recombinant DNA research drew attention to the possible hazards of manmade recombinants.

Because scientists and laboratory technicians are at greatest risk of direct contact with the organisms involved, they have been most concerned with clearly defining the hazards. To date, despite many thousands of recombinant DNA experiments, no known hazards have occurred.

Nevertheless, as a result of concerns expressed in the 1973 Gordon Conference, and a 1975 Asilomar Conference, guidelines were promulgated by the National Institutes of Health (NIH) in 1976, which are required to be met by any researchers having Federal financial support. The guidelines, however, cannot be enforced in the private sector without enabling legislation.

Therefore, legislation to simply extend the NIH Guidelines to all sectors engaged in recombinant DNA activities seems appropriate.

NIH guidelines

The NIH guidelines prohibit certain kinds of recombinant DNA experiments and the release of recombinant molecules into the environment. Permissible experiments are outlined and are assigned both a physical and biological containment level, depending on assessment of potential biohazards.

Physical containment refers to methods used to prevent release of organisms containing recombinant DNA molecules from the lab. Relying on proven methods that have been developed for handling known pathogenic organisms in clinical and research laboratories, physical containment is approached in two ways: (1) standard microbiological practices and training are prescribed by the guidelines; (2) special kinds of equipment and facilities are used. Four levels of physical containment are described, progressing from least to most strict; P–1, P–2, P–3, P–4.

Biological containment refers to methods whereby organisms are weakened, so that, in the event of their escape from the laboratory, their survival is extremely improbable. The guidelines characterize three levels of impairment of a weakened laboratory strain known as E-coli K–12.

The guidelines also provide an administrative framework for their implementation and a compendium of safety information.

The guidelines require establishment of institutional bio-hazard committees for local review of recombinant DNA activities.

A Recombinant DNA Advisory Committee, under the auspices of the National Institutes of Health, meets regularly to review and update the guidelines. At their May 15, 1977, meeting, the Advisory Committee issued the following statement:

During this period the committee has become better informed about the general ecology and epidemiology of infectious microorganisms. Experiments have been reported showing that the incorporation of foreign DNA does not increase but rather tends to decrease the growth rate of microorganisms, and this further contributes to the unlikelihood that cells carrying recombinant DNA will survive in nature and produce harmful effects. Indeed, everything that we have learned has tended to diminish our estimate of risk. Nevertheless, the revised guidelines continue to represent a deliberately conservative approach, with the intent of erring on the side of caution.

Uniform guidelines

The Federal Inter-Agency Committee Recombinant DNA Research in 1976 proposed that a single set of national standards be applied to all recombinant DNA activities.

HEW and representatives of private industry testified before the Health Subcommittee that all laboratories receiving Federal grants now comply with the NIH guidelines, and private laboratories voluntarily impose the same guidelines on themselves. However, the extent to which the guidelines are enforced in the private sector, cannot be determined without Federal law.

Therefore, the administration proposed a bill, largely based on the committee's recommendations, which provided HEW with the responsibility for regulation and specified that the NIH guidelines be promulgated as initial standards. The scope of the regulation was directed to the use and production of recombinant DNA molecules. The Department was to exercise its regulatory authority

in close consultation with other appropriate agencies.

Scientists' concerns

A 1977 Gordon Research Conference on Nucleic Acids expressed serious reservations about pending legislation. An open letter to Congress, June 18, 1977, signed by 137 members of the conference states:

We are concerned that the benefits of recombinant DNA research will be denied to society by unnecessarily restrictive legislation.

Four years ago, the members of the 1973 Gordon Conference on Nucleic Acids were the first to draw public attention to possible hazards of recombinant DNA research. The discussions which started at that meeting resulted in the issuance in 1976 of the NIH guidelines for the conduct of this research.

We, members of the 1977 Gordon Research Conference on Nucleic Acids, are now concerned that legislative measures now under consideration by congressional, State and local authorities will set up additional regulatory machinery so unwieldy and unpredictable as to inhibit severely the further development of this field of research. We feel that much of the stimulus for this legislative activity derives from exaggerations of the hypothetical hazards of recombinant DNA research that go far beyond any reasoned assessment.

This meeting made apparent the dramatic emergence of new fundamental knowledge as a result of application of recombinant DNA methods. On the other hand, the experience of the last 4 years has not given any indication of actual hazard. Under these circumstances, an unprecedented introduction of prior restraints on scientific inquiry seems unwarranted.

We urge that Congress consider these views. Should legislation nevertheless be deemed necessary, it ought to prescribe uniform standards throughout the country and be carefully framed so as not to impede scientific progress.

The 137 undersigned are members of the 1977 Nucleic Acids Gordon Conference.

In addition, a number of other scientists and scientific organizations have expressed similar concerns, including the Inter-Society Council for Biology and Medicine, comprising officers of seven professional organizations; the American Institute of Biological Sciences, the American Society for Medical Technology, the American Society for Microbiology, the American Society of Allied Health Professions, the Association of American Medical Colleges, the Federation of American Societies for Experimental Biology and the National Society for Medical Research.

Thirteen members of the National Academy of Sciences signed a resolution as follows:

RESOLUTION OF THE NATIONAL ACADEMY OF SCIENCES, APRIL 26, 1927

Three years ago the National Academy of Sciences played an important role in initiating responsible and informed discussion on the need for controls and recombinant DNA research. The subsequent debate, both inside and outside the scientific community, resulted in a set of guidelines formulated under the sponsorship of the National Institutes of Health. Now the Congress is considering several drafts of detailed and far reaching legislation dealing with the regulation of recombinant DNA research.

The NIH guidelines are the result of careful deliberation and we favor their simple conversion into a uniform national set of regulations. However, much of the proposed legislation now before Congress would allow local communities or states to set their own stricter regulations, including even a complete ban on this type of research. It is reasonable for the local community to participate in supervising adherence to regulations. But the question concerns speculative rather than known dangers and these would not vary from one locality to another.

The research institutions of the country constitute an important national resource, and differing local options could subject that resource to arbitrary regulations. Overly restricting this type of research would severely degrade the capability of biomedical research and limit its contribution to the public welfare. In essence, it would allow a local community to affect a critical component of national policy. Above all, local option would set a dangerous pattern for the regulation of basic research in a manner that might deprive society of substantial future benefits.

Some of the legislation proposes to establish a national regulatory commission expressly to govern recombinant DNA research. Its broad powers for controlling basic research represent a wholly new and unfortunate departure. We are also concerned that it would set a precedent for the regulation of other areas of science. A much simpler and more flexible mechanism allowing for public participation could carry out those functions that may be needed.

Therefore, be it resolved that we voice concern about legislative developments in this area and ask the president of the National Academy of Sciences to relay these concerns to appropriate officials in the government.

D. Baltimore, B. D. Davis, H. Eagle, J. T. Edsall, C. Grobstein, D. M. Horstmann, R. Hotchkiss, R. J. Huebner, A. Rich, W. A. Rosenblith, F. N. Ruddle, R. L. Sinsheimer, E. L. Smith.

Thus, while I agree with the intent of S. 1217, I have serious reservations about its approach, based on scientists' concerns that it will impose unnecessarily burdensome controls on scientific research. My concerns are as follows:

(1) *Commission.*—The bill will create a new and expensive bureaucracy that is unwarranted.

Section 1801 of S. 1217 establishes an independent Commission to license, regulate and make policy decisions regarding recombinant DNA activities. Members would be appointed by the President, with Senate approval for the Commission Chairman. A majority of the members would be public, nonscientists. Section 1801(b) prohibits a majority of members on the Commission who are or have been engaged in recombinant DNA research. This would severely limit the expertise of a Commission whose major purpose is to protect health and safety from untoward effects of such research.

Furthermore, all members would have other primary responsibilities besides their Commission activities. Given the number and the highly technical nature of the assigned tasks, such a part-time Commission would be unworkable, in my view. Section 1816(e) permits the Commission to delegate technical matters to its staff or to ad hoc working groups; however, I do not believe it is our intent to delegate these important duties to staff. An important question also arises as to who actually would be accountable for the regulatory activities of such a free-standing Commission.

Section 361 of the Public Health Service Act already provides HEW with the following broad authority to regulate laboratory work with disease-producing microorganisms:

"The Surgeon General with the approval of the Secretary is authorized to make and enforce such regulations as in his judgment are necessary to prevent the introduction, transmission or spread of communicable diseases from foreign countries into the states or possessions or from one state or possession into any other state or possession."

Under this statute, the Center for Disease Control has established regulations for containment and requirements for working with different classes of organisms, including total prohibition on work with a few lethal microorganisms. As a result, there have been very few cases of laboratory-associated infection in the history of the United States and none that have spread to the community.

Existing law also provides HEW with authority to regulate private and public interstate clinical laboratories (Clinical Laboratories Improvement Act of 1967, Public Law 90–174) and legislation is being considered to broaden HEW's regulatory authority to intrastate clinical laboratories. This authority will not cover biomedical research nor is it my intent that it should, but as with the above-mentioned authority to regulate laboratory work with disease-producing organisms, it can provide an alternative mechanism in place for monitoring compliance with the guidelines for recombinant DNA activities.

Finally, the NIH has an administrative mechanism in place to implement its guidelines on recombinant DNA activities.

Therefore, a simple extension of HEW's authority to allow for enforcement of DNA guidelines in the private sector would accomplish the objective of establishing uniform national guidelines for recombinant DNA activities.

(2) *Penalties.*—Section 1809 establishes penalties for noncompliance, for "any person who knowingly, willfully or negligently" violates a provision of section 1803, general requirements and section 1808, prohibited acts. It authorizes a penalty of $10,000 for each violation with each day constituting a separate violation.

The term "negligence" is not clearly defined. Such a penalty also appears to be excessive and disproportionate. License revocation in itself is an effective penalty. Furthermore a dollar penalty would not deter those who wish to willfully disregard regulations. In short, we run the risk of enacting legislation which will obstruct the law-abiding while not effectively deterring the lawbreaker.

(3) *Seizure and destruction of research material.*—Section 1810 gives inspectors authority to seize and destroy "a hazardous product of recombinant DNA activities" with the approval of the Commission Chairman or his designee. A better procedure would be to seize and hold material pending a judicial hearing.

(4) *Preemption.*—On the whole, I support Section 1813, which expresses Congressional intent that Federal Guidelines supersede any and all laws regarding recombinant DNA activities of States and of political subdivisions. I believe, however, that the granting of exemptions should take into account the national interest. The purpose of legislation should be to establish uniform national standards to regulate recombinant DNA activities; otherwise, legislation is not necessary. Since microbes do not respect Federal, State, or community boundaries, the most effective standards will be those adopted internationally. If we are to negotiate for international standards, we must have good uniform national standards, not a potpourri of domestic standards.

Citizens should have input into decisions regarding protection of the health and environment of their local communities. However, the authority to grant exemptions should be at the Secretary's discretion, based on clear demonstration that the public health and environment is endangered. If a locality proposes more stringent requirements for DNA research as necessary to protect health and environment, it is likely that other communities would require it; thus, the Secretary should evaluate the need for inclusion of more stringent requirements in the general Federal guidelines, rather than grant individual exemptions from them.

(5) *Disclosure of research details.*—Detailed descriptions of recombinant DNA projects are required to be reported at three places in the bill: General requirements and licensure (secs. 1803(b)(1)(C) and 1803(b)(2)(A)(ii)), and registration of DNA projects (sec. 1818(a)). Such detailed descriptions of research protocols would thus be given to local biohazard committees; to the Commission for licensure; and to the Commission for purposes of registering each research project. Section 1803(c) requires the Commission to publish such information in the Federal Register with each license application.

The requirements impose enormous paperwork burdens on researchers. In addition, although Section 1817 contains certain exemptions from disclosure, it is not clear that it will protect the research protocols, designs, and hypotheses of academic and industry researchers. In a recent court ruling relating to subsection (a) of section 552 of title 5, United States Code (b)(4) (Freedom of Information Act), HEW was ordered to release research protocols on grounds they were not trade secrets (*Washington Research Project, Inc.* v. *DHEW*). A statute affording positive protection, therefore, for intellectual property rights associated with recombinant DNA activities should be developed in accordance with subsection (b)(3) of the Freedom of Information Act (FOIA).

(6) *"Sunset" provision.*—There should be a "sunset" provision that requires review of the need for the legislation after a reasonable time period.

(7) *Impact on small business.*—The paperwork and compliance requirements of the legislation will be particularly difficult for small companies to meet, putting them at competitive disadvantages with large industries. Compliance with the NIH Guidelines already has imposed administrative burdens on small laboratories, although they are able to meet the requirements.

In summary, I must dissent from the decision of the Committee to recommend passage of S. 1217 as reported. Appropriate legislation to allow the application of uniform Guidelines by HEW to all sectors will enable the United States to negotiate for international guidelines for recombinant DNA activities.

S. 1217, however, sets a bad precedent for future restrictive regulation of biomedical research in general. The compliance provisions and paperwork are excessive, possibly unworkable, and particularly burdensome for small businesses. The potential for obstructing research and impeding progress in conquering diseases appears to be much greater than the benefits accruing to the public through the provisions of this legislation.

[From the New York Times, July 31, 1977]

LEGISLATING THE LABORATORIES

(By Walter Sullivan)

One of the tragedies of modern science was the destruction of Soviet genetics during the 1930's and 1940's, in effect by government decree. It was decided by the leaders of the Communist Party that Trofim D. Lysenko was right and that classical Russian geneticists were reactionary and disloyal. Nikolai I. Vavilov, widely recognized as one of the world's leading plant geneticists, and many others were exiled. Vavilov apparently died in the labor camp at Magadan on the Sea of Okhotsh. Lysenko's ideas were applied to agriculture, resulting in near disaster.

Now it is being argued that in the United States steps are about to be taken toward similar suppression of genetic research, though the motives differ. The concern is for legislation pending both in Albany and Washington that would establish elaborate—some researchers say stifling—controls over research involving manipulation of the key molecules in genetics: those of DNA (deoxyribonucleic acid). Such altered molecules are known as recombinant DNA.

Ironically the legislation is moving toward enactment at a time when a number of those who first sounded the alarm on such research have become convinced by new findings that it can be done in absolute safety. The result is an intensive effort by such scientists to head off the most stringent provisions, particularly those in a Senate bill introduced by Senator Edward Kennedy.

There is also deep concern that Federal legislation will allow local and state governments to impose even more severe limits, or ban such research entirely.

Recombinant DNA molecules, as defined in the Senate bill, "consist of different segments of DNA which have been joined together in a cell-free system, and have the potential for entering and propagating in a particular host cell, either autonomously or as an integral part of that cell's genome." The genome is the cell's storehouse of information, coded into DNA, that controls its development, function and reproduction.

Among the goals of producing such molecules is the introduction of new capabilities into organisms, such as food crops, or the alteration of viruses and bacteria in the war against disease. Both the House and Senate bills, in their preambles, recognize these potential benefits, as well as certain health and environmental hazards.

The favorite tool for genetic research is a group of intestinal bacteria known as Escherichia coli. They occur in thousands of varieties. Most are harmless, even beneficial, inhabitants of the intestinal tracts of human beings and other warm-blooded animals. Some cause diarrhea, notably among tourists exposed to unfamiliar strains.

When recombinant DNA is allowed to enter a culture of such bacteria (known for short as E. coli) it proliferates there, making the bacteria an ideal "nursery." The fear has been that a bacterial culture with an "unnatural" load of genetic material might escape the laboratory and create an epidemic against which there was little or no resistance.

When biologists from many parts of the world met in Asilomar, Calif., in 1975 to consider a voluntary moratorium on some aspects of DNA research, pending assessment of possible hazards. Dr. Roy Curtiss 3d of the University of Alabama proposed that the K12 strain of E. coli could be made so helpless than it could multiply only under special laboratory conditions. There would then be no danger of its spreading.

Now, in a detailed report to Dr. Donald Frederickson, director of the National Institutes of Health, he has, in effect, reported success in this effort.

In recent weeks 277 participants in two of the Gordon Research Conferences in New Hampshire have signed protests against the proposed legislation. The conferences, each summer, bring together top-ranking researchers in a variety of fields.

One document was signed by 137 specialists in research on nucleic acids including DNA. The second was signed by 140 of 164 biologists at a five-day meeting on biological regulatory mechanism. It said "no indication of actual danger has been uncovered," and termed the proposed regulations unprecedented "prior restraint" that could "deprive society of needed improvements in public health, agriculture, industry and environmental protection." Lest the foundation supporting the conferences lose its tax-exempt status it was emphasized that the organization was in no way associated with the appeals.

Then, on July 14, Dr. Sherwood L. Gorbach of Tufts University Medical School reported to Dr. Frederickson on a workshop held at Falmouth, Mass., under sponsorship of two units of Dr. Frederickson's National Institutes of Health. The participants, some 50 in number, he said, "arrived at unanimous agreement that E. coli K12 cannot be converted into an epidemic pathogen by laboratory manipulations with DNA inserts."

During the workshop, researchers from American laboratories and the Public Health Laboratory Service in London told of tests with human volunteers supporting the belief that such bacteria cannot colonize outside the laboratory.

While the proposed supervision, inspection and accounting are not a complete novelty—they have features in common, for example, with those applied to private nuclear power plants—they have evoked vehement responses. Americans for Democratic Action, a liberal offshoot of the Democratic Party, stated in part: "It should be remembered that strict societal control of the activities of scientists has been a step in the establishment of totalitarian states." This, it added, led to "inhuman" experiments in Nazi Germany and to Lysenkoism in Russia.

The parallel with Lysenkoism, however, seems questionable. The purpose here is not to decree what is true but what is safe. The concern of those who first sounded the alarm—and now almost wish they had not—is that control over research will come into the hands of political appointees incapable even of understanding the issues.

The Senate bill provides for an 11-member National Recombinant DNA Regulation Commission to be appointed by the President. It specifies that six members be chosen "who are not and have never been professionally engaged in biological research." The other five would be specialists in such research but with no financial interest in recombinant DNA activities. The commission would be empowered to regulate and license the research and send inspectors to insure compliance.

The House bill is lower key. The Secretary of Health, Education and Welfare would promulgate the regulations, subject to "recommendations" by a Recombinant DNA Advisory Committee. Of the 17 members of that committee a majority would not be engaged in DNA research, but some in that majority could be biologists. Details of licensing procedures are left to the government. Local biohazards committees could do the inspections under government auspices. In cases of violation one bill provides for fines up to $10,000 per day. The other allows fines as large as $50,000.

The prospect of ill-informed regulation by local governments seems to have convinced many DNA researchers that the best they can hope for is a bill like that before the House, which leaves regulation in the hands of government. Guidelines for DNA research have already been set forth by the National Institutes of Health providing, in the most extreme cases, for safety measures as stringent as those used when biological warfare agents were being developed. These guidelines are widely accepted by the researchers as reasonable and prudent. They would presumably form the basis for more formal regulations.

Among those who signed the original 1974 appeal for a temporary moratorium was Dr. James D. Watson who shared a Nobel Prize for his work on the structure of DNA. Now he feels the call for caution has almost resulted in panic.

"The vision of the hysterics has so peopled biological laboratories with monsters and super bugs," he wrote recently, "that I often feel the discussion has descended to the realm of a surrealistic nightmare."

ENERGY POLICY ACT—S. 977

AMENDMENTS NOS. 757 AND 758

(Ordered to be printed and to lie on the table.)

Mr. JAVITS submitted two amendments intended to be proposed by him to

the bill (S. 977) to require that new and, to the extent practicable, existing electric powerplants and major fuel-burning installations, in categories to be determined, utilize other than natural gas or petroleum as their primary energy source in compliance with applicable environmental requirements, and for other purposes.

AMENDMENT NO. 770

(Ordered to be printed and to lie on the table.)

Mr. DURKIN (for himself, Mr. JACKSON, Mr. MAGNUSON, Mr. RANDOLPH, Mr. HASKELL, Mr. FORD, Mr. MATSUNAGA, Mr. ABOUREZK, Mr. HATHAWAY, Mr. WEICKER, and Mr. MCINTYRE) submitted an amendment intended to be proposed by them jointly to the bill (S. 977), supra.

ATTORNEYS' FEES—S. 270

AMENDMENTS NOS. 759 THROUGH 763

(Ordered to be printed and referred to the Committees on Governmental Affairs and the Judiciary, jointly.)

Mr. ALLEN submitted 10 amendments intended to be proposed by him to the bill (S. 270) to amend chapter 5 of title 5, United States Code—commonly known as the Administrative Procedure Act—to permit awards of reasonable attorneys' fees and other expenses for public participation in Federal agency proceedings, and for other purposes.

NOTICE OF HEARINGS

WELFARE REFORM AND HOUSING PROGRAMS

Mr. PROXMIRE. Mr. President, I should like to announce that the Committee on Banking, Housing and Urban Affairs will hold a hearing on Monday, August 8, 1977, on the relationships between welfare reform and housing programs.

The hearing will begin at 10 a.m. and will be held in room 5302, Dirksen Senate Office Building.

The committee would welcome statements for inclusion in the hearing record.

ADDITIONAL STATEMENTS

AMERICA'S PRIORITIES FOR THE NEXT DECADE

Mr. STEVENS. Mr. President, recently The Atlanta Constitution published excerpts from interviews by "People and Opinion" with six prominent Americans in the arts, religion, science, environment, business and public affairs. These outstanding men and women were asked to list their priorities for America's next decade. I have a great deal of admiration for one of these men in particular, and have often been guided by his wisdom and foresight. I believe that his comments will be of interest and benefit to all of my colleagues. This man is Walter J. Hickel, former U.S. Secretary of the Interior and former governor of my State of Alaska. I ask unanimous consent that the interview be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ISSUE: PRIORITIES FOR AMERICA'S NEXT DECADE

1. Equality of opportunity, the thrust of the country all during the 1960s and of the great equal rights laws of '64, '65, and is now pretty much the basis upon which the rest of the world sees us, has got to be a theme for America, because you . . . have to keep working at it.

2. Quality of life in general. If you don't have equality of opportunity it brings down the quality of life.

3. Family life. I think the country should start recognizing that we're looking at a very serious deterioration of family life. We had over 1 million divorces in this country last year and that's 1 million really tough failures on the part of young people. There were over 1 million abortions in this country last year and I think that says a great deal about the serious problems we're facing.

4. We need somehow to build a bridge between affluence and poverty. I think that if we all got together and did twice as much as we're doing now, and I mean countries like Japan, Europe and the socialist countries, we could wipe out deep, grinding poverty by the year 2000.

5. Peace on earth. If the world is ever blown up, we'll do it, we or the Russians. I don't have any easy answers. If you don't think this is a problem, consider that we're spending $300 billion on armaments this coming year.

Nancy Hanks, chairman of the National Endowment for the Arts.

Five areas this nation must address itself to in the next decade are energy, unemployment, revitalization of our cities, opportunities for the handicapped and elderly and international relations.

In all of these areas, the arts are actively involved and working to find solutions.

The arts are very much aware of the energy crunch. It is necessary that all levels of government, federal, state and local, work together to promote the use of alternative sources of energy in museums, theaters, concert halls and community arts centers. Arts administrators and public officials must realize the importance of both fuel economy and a revitalization of the inner city through the adaptation of existing buildings for performances and exhibits.

By stressing energy economy and downtown use, the arts promote accessibility to culture for our handicapped and senior citizens.

The arts also promote international good will and a better understanding of our world through the exchange of individual artists, performing companies and exhibits. And for all these reasons, the arts are helping reduce unemployment by creating an environment in which artists can enhance the quality of life for all.

Dr. Edward E. David, director of the federal Office of Science and Technology.

At first, national priorities seemed clear enough: Economic growth, employment, food, education, defense, health care, energy and environment. But how do we achieve them? The answer reveals deeper priorities.

Lasting progress toward our goals is traditionally hinged on individual ingenuity and initiative. These in turn stem from millions of individual decisions made each day. Any priorities must maintain this individuality while marshalling massive financial and human resources required for progress. Our system for technological innovation can show the way, for out of that system has come most good things in life and possibilities for aiding others. This innovation system accommodates belligerently independent scientists, ingenious engineers and practitioners, entrepreneurial zealots and imaginative marketers, most within conservative institutions. Barriers to continued wider use of such a diverse coalition arise from the tendency of governments to regulate and manage it all down to its roots according to some master plan which is politically comprehensible. Scientists and engineers have seen how this approach can stifle individuality and creativity.

Thus, our fundamental priorities should be to avoid (such) constraints, to foster an adventurous spirit, to increase the national appetite from new knowledge from science, to sharpen enthusiasm for technological change and to assure upward social mobility for individuals based on their abilities.

Richard L. Lesher, president of the Chamber of Commerce of the United States.

1. Halt inflation. This step is essential to the future health of our economy. We must have a healthy economy to provide the resources for all other desirable programs, whether social, environmental or defense.

2. Government reform/reorganization. Americans want more government services and lower taxes. The only way to enjoy that combination is to make the government operate more efficiently.

3. End the energy "crisis." A free market is the fairest and most efficient mechanism available for stimulating both maximum production and intelligent conservation of energy resources.

4. Improve economic education. Economic literacy has become an essential prerequisite to the responsible exercise of the obligation of citizenship.

5. Regain our confidence and trust. We have recently plumbed the depths of a national mood of negativism and nihilism. Our leaders from all walks of life have a very important responsibility to help restore trust in our basic institutions by conducting their affairs in accord with the highest standards of ethical and moral behavior.

Billy Graham, a noted evangelist whose crusades have gained him an international audience.

1. America should seek and welcome any increase in knowledge of and trust in the living God and Christ the Son. There is everlasting truth in the scripture, "except the Lord keep the City (the civilization), the watchman waketh but in vain."

2. America will be blessed to the degree that we learn to respect authorities, beginning with our parents. "Honor thy father and thy mother . . ." but, authorities should not be gods to whom we turn to solve all our problems. They are to assist us in bearing our own burdens and in doing good to one another.

3. Then, America should repent for every indication of unfairness or injustice to any segment of society. "Righteousness exalts a nation." That includes not reacting to injustices in vengeance.

4. Finally, give God thanks for what we have rather than complaining about what we may feel we want, especially material things, pleasures and power.

Walter J. Hickel, former U.S. Secretary of the Interior.

1. Get America back to work. If the Russians ever bury us, as Khrushchev said they would, it will not be because of ideologies or military might, it will be because they outwork us.

2. Redefine the environment. The environment is not a fad, and it will not fade. But the color of the environment is not just green. The color of the environment is real. A man who is cold, hungry and unemployed, is in an ugly environment. We must start to care about the total environment . . . people, people's needs and nature. We must never (forget) people are the most precious things on earth.

3. Solve the immediate energy problem with production. Conservation, alternate energy sources, and ultimately, fusion, are all part of the long range energy solution. But our immediate crisis can only be met by production, whether that's oil, gas, coal, or nuclear.

4. Free our people from the fear of using resources. We will find that the earth is inexhaustible, because God made man's mind inexhaustible.

5. Become less wasteful and more productive. It's the philosophy of many to redistribute wealth, but all they can do is distribute money. When that's gone all that's left is poverty. In any currency, the only wealth comes from production.

6. Keep America's conscience strong. Whether we like it or not, we're the only conscience the world has. If others falter, we come to their aid. But make no mistake, if America falters no other nation will be able to save us.

PASSIVE RESTRAINTS

Mr. RIEGLE. Mr. President, on June 30, Secretary of Transportation Brock Adams announced his decision on the required installation in new automobiles of passive occupant restraint systems.

According to that decision, passive restraint systems must be incorporated in new automobiles over a 3-year period beginning in model year 1982.

I believe Secretary Adams' decision is a reasonable one. I am impressed by the tremendous lifesaving qualities of passive restraints, estimated to be between 9,000 to 12,000 lives per year, and the ability to prevent from 100,000 to 200,000 severe injuries per year as well. Another reason for my endorsement of Secretary Adams' decision is that it provides the auto industry with realistic leadtime for implementation.

It is important to note the broad base of support the Secretary's decision has received thus far. A coalition has been formed, the National Committee for Automobile Crash Protection, to support the Secretary's decision. This group has an extremely broad base, including the insurance industry, organized labor, public interest groups, and health care organizations.

Under the terms of the National Traffic and Motor Vehicle Safety Act, Congress has an opportunity to review the Secretary's decision for a period of 60 calendar days, excluding recesses of more than 3 days. It is critical that Members of Congress be well informed about the benefits, cost, and feasibility of this safety decision.

Two important articles appeared in the press recently which deserve reprinting in the RECORD. One is by George Will, the noted syndicated columnist, and it deals with the issue of "freedom of choice"—a matter all Members should ponder in conjunction with the fact that we know that air bag technology is proven and available. The other was printed in the Wall Street Journal, June 29, 1977, and presents a balanced endorsement of air bags.

Both of these articles emphasize that air bag technology can be used to begin reducing the tragic suffering, grief, and economic loss that thousands of American families bear each year.

I ask unanimous consent that these articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

DRIVING WITHOUT RESTRAINT

(By George F. Will)

CHEVY CHASE VILLAGE.—Thinking he heard thunder, my neighbor went to close his car windows. Actually he had heard a commonplace tragedy, the making of a statistic. A woman died and a man nearly did in an occurrence shocking but routine: an automobile accident.

The car veered out of control on Connecticut Avenue, hit trees, fragmented, broke in half. Three of us arrived immediately. Emergency equipment arrived quickly. Cleaning up took hours.

In 1900, this "village," six miles from the White House, was where Washingtonians came for country breezes. Today, it is a small incorporated area near the center of a sprawling metropolis. It is divided by Connecticut Avenue, which passes around a traffic circle as it enters Maryland. Trees on the circle are heavily scarred. Crumpling steel and crying sirens are common sounds here as on many urban thoroughfares.

Increasingly, American driving reflects, I think, the sublimated fury of persons heading for infuriating jobs, the animal spirits of persons whose lives allow little scope for such spirits. As Daniel Moynihan wrote years ago, the automobile is "both a symbol of aggression and a vehicle thereof. . . . It is a prime agent of risk-taking in a society that still values risk-taking, but does not provide many outlets."

The endless epidemic of accidents is one of the nation's gravest public health problems. Automobile deaths and injuries have costs beyond counting, and are a special plague to the young. Of every 100,000 males at age 15, about 1,100 will die in accidents, most involving automobiles, before age 25—a death rate 20 times worse than polio inflicted at its worst.

As Moynihan notes, the social life of most Americans "now primarily takes the form of driving to a place where alcohol is consumed." And because traffic laws are widely ignored, almost everyone is a lawbreaker, and the incidence of arrest in America may be the highest of any nation in history. Repairing and replacing wrecked cars may provide 20 per cent of the business for the automobile industry, the nation's most important.

Such statistics are as lifeless as the woman who lay beneath blankets on the Connecticut Avenue median strip. But they describe a river of sorrow flowing from monstrously irrational behavior.

Most drivers frequently exceed speed limits, only 25 per cent use seatbelts, only four per cent use harnesses. Because slaughter behind the wheel is deeply rooted in aggression and other irrationality, it is very difficult to substantially reduce accidents by reforming drivers. So government has tried to reduce the severity of injuries received in accidents.

The public disliked, and the government quickly disconnected, the ignition "interlock" system that prevented cars from starting when safety belts were unfastened. Today, new cars just make a brief buzz of disapproval.

Government may yet require "passive restraints"—air bags that instantly inflate to cushion passengers in collisions. There is evidence that they would save many thousands of lives annually and may be one answer to what Moynihan has called "the seeming incompatibility of safe driving and mass driving." That is a considerable problem in a nation where more people drive than pay taxes or vote.

Air bags require no forethought by drivers, so they are suited to the American driving public. The air bags would probably cost manufacturers less than $100, a fraction of what car buyers exuberantly spend when loading their cars with snappy wheel covers and other options.

Long before the most recent Connecticut Avenue death, I regretted having once argued that government has no business requiring drivers to buy and use inexpensive devices that might save them from self-destruction. There is a pitiless abstractness, and disrespect for life, in such dogmatic respect for the right of consenting adults to behave in ways disastrous to themselves. Besides, too many children passengers are sacrificed on that altar. And a large part of the bill for the irrationality of individual drivers is paid by society.

Most important, society desensitizes itself by passively accepting so much carnage.

On Connecticut Avenue that evening, the police operated with the weary patience normal to those who are paid to look unblinkingly at what people do to themselves. "Go home," a policeman finally said, with barely noticeable disgust, to people standing around the debris. "Go home and watch television." After a while, we did.

THE PUBLIC HEALTH AND AIR BAGS: TIME FOR DECISION

(By Albert R. Karr)

(The health of the people is extremely important to the community, so that it cannot be left to the uncertainly of individual initiative, which the high incidence of curable disease shows to be inadequate.—John Bellers, Quaker cloth merchant and philanthropist, in a 1714 essay, paraphrased by George Rosen in a history of public health, 1958.)

WASHINGTON.—One disease that's been rampant in the U.S. for over 50 years has become the nation's third leading cause of death, yet much of it is curable right now.

This malady is the danger of injury and death from highway accidents. Heart ailments and cancer kill many more, but road fatalities amount to 40,000 or more a year and they're especially cruel in stealing the lives of many young people. Attempts to get Americans to buckle their seat belts have been largely fruitless. After years of observing the debate over auto safety, this reporter finds that a good case can be made for a more reliable way to protect car occupants.

That's to equip cars with air bags, which inflate automatically in a crash and cushion driver and passengers against the impact. The air bag is an effective and relatively inexpensive vaccine against death and serious injury on the road, backers say. It could have 9,000 to 14,000 lives annually out of 27,000 currently being lost in accident deaths inside cars, according to government and insurance-industry estimates. These so-called passive restraints offer "very great" safety benefits, declares Democratic Rep. John Moss of California.

The air bag's life-saving promise could become reality. Transportation Secretary Brock Adams plans to announce tomorrow whether he'll require air bags in future cars, subject to congressional approval. If he so decides, reversing a decision by his predecessor, William Coleman, he'd be following a longtime public-health tradition: Government officials are supposed to make decisions that protect the populace against disease and safety hazards when people can't do that for themselves.

When asked in public-opinion polls, Americans have consistently said that the experts should make these technical safety decisions. A 1974 Louis Harris poll showed three-fourths of those queried wanting the government to develop more auto-safety standards. In a survey by the Roper Organization in March of this year, 61% of the respondents said some group, presumably the government, should decide for them what safety features should be required.

Such views are crucial to the air-bag decision. After finding this device practical and effective, Mr. Coleman still ruled against requiring it because he feared the public mightn't accept it; instead, he tried to stimulate a test sales program by the auto makers. But health-and-safety advocates say his fear of public resistance was groundless and they add that officials must act anyway to protect lives.

Any "overt decision to allow high daily

losses of life on the American highways to continue, when technology is available to significantly reduce thoses losses, would be unacceptable," says Webster Todd, chairman of the National Transportation Safety Board, a government investigative agency. "Public acceptance will follow a decision for passive restraint," he says. "Public doubts can be overcome" by forceful government leadership, says Rep. Moss.

Misgivings about public acceptance of the air bag have not, of course, been the only point made against it. Auto manufacturers have questioned its reliability and have suggested that seat belts are more effective. The industry has also criticized the air bag as a costly extra that would drive auto prices still higher and tend to scare buyers away. But its advocates offer evidence to scotch these objections.

On the road, the air bag has worked when it's supposed to and has almost never inflated when it's not supposed to. Reports of lives saved by the air bag continue to mount. The death rate of riders in air-bag-equipped cars is far below that in other cars. The few people who have died in crashes in air-bag cars—four out of more than 200 total occupants—couldn't have been saved by either an air bag or a buckled belt, safety analysts say. Seat belts can't be expected to save many lives, they add, since only 20% of all car occupants are buckling their belts.

In its criticism of the air bag, the auto industry has warned of a cost in the $200-$300 range. But Mr. Coleman effectively undercut that argument, showing that the companies were using unusual accounting methods; he said $100 was a realistic figure.

It's also worth noting that the government has required many passive safety features in cars over the past decade—padded dashboards, energy-absorbing steering wheels, shatterproof windshields, fixed head restraints and the like—at a combined cost to motorists of about $350, and without handwringing over "public acceptance" questions. A poll sponsored by the Insurance Institute for Highway Safety showed most respondents being willing to pay for passive-type safety protection in their cars.

For one reason or another, some foes of the air bag have become friends. George Will, a conservative newspaper columnist, wrote in April that he regretted "having once argued that government has no business requiring drivers to buy and use inexpensive devices (like the air bag) that might save them from self-destruction. There is a pitiless abstractness, and disrespect for life, in such dogmatic respect for the right of consenting adults to behave in ways disastrous to themselves. Besides, too many children passengers are sacrificed on that altar. And a large part of the bill for the irrationality of individual drivers is paid by society."

The John Bellers argument in 1714 that people's health is too important to be left to the vagaries of individual initiatives "should . . . be reflected to the greatest extent technologically possible in federal standards requiring passive protection for motor-vehicle occupants," says Susan Baker, associate professor at the Johns Hopkins School of Public Health and an injury-control specialist.

One can only hope, Mrs. Baker says, that Secretary Adams has the courage of Coleman's convictions.'

THE DEATH OF DORCEY K. LYBRAND

Mr. THURMOND. Mr. President, on Wednesday, July 21, my home town of Aiken, S.C., was shocked and saddened by the death of one of its most eminent and respected citizens. In his 70 years, Dorcey K. Lybrand won distinction in so many ways that an exhaustive list of his virtues and accomplishments would be impossible to compile. He was an heroic naval officer, an outstanding lawyer, a conscientious citizen, an exemplary public servant, and a devoted husband and father. He was also my good friend and former law partner, and I cannot let him take leave of this world without a few affectionate words of tribute and farewell.

Dorcey Lybrand had unquestionably one of the finest legal minds of his generation. Having graduated from the University of South Carolina Law School in 1930, he set up his practice in Aiken. It was not long before he was one of the busiest lawyers in the area. People were drawn to him not only by his legal expertise, but by his sympathetic and kindly manner. He was the kind of man who could not say no to a fellow man in need, and many of his cases brought him little or no remuneration other than the lasting friendship and gratitude of his client.

His legal career was interrupted by World War II. A true patriot, he served in the U.S. Navy for 4 years. During this period, he participated in an episode which, although tragic, has for us the merit of letting us see in dramatic form his strength, resourcefulness, and leadership ability.

His ship had been sunk in the Atlantic. He and 46 crewmates huddled in a lifeboat in the middle of the ocean. For 33 days, 15 of them without food and water, they drifted. When they finally reached a small island in the middle of the Caribbean, the story of their grueling ordeal and amazing survival lifted the spirits of the whole Nation. His crewmates were lavish in their praise of Lt. Dorcey Lybrand, and his level-headed and calming demeanor.

After the war, Dorcey Lybrand resumed his law practice. Since by that time he had won the confidence of his fellow citizens so thoroughly, and since he so enjoyed the opportunity to serve them, it was only natural for him to involve himself in politics. This he did, and he won election to the State senate in 1949. He served two terms there, winning a reputation for rare integrity and dedication.

It was in 1951, after my term as Governor of South Carolina, that I had the privilege of becoming his professional associate. He, Charles Simons—now U.S. District Judge Simons—and I formed the partnership of Thurmond, Lybrand & Simons. The 4 years that we worked together were among the most gratifying of my life. It is hard to say which I admired more—his legal skills or his character. We remained close friends after I came to the Senate in 1954, and he was always ready with good advice and loyal assistance when I would seek it from him. He was serving as president of the Strom Thurmond Foundation at the time of his death.

The last two decades of his life saw him as tireless as ever in the performance of professional and civic responsibilities.

His legal practice continued undiminished, and he was active in the Aiken Rotary Club, Businessmen's Club, Chamber of Commerce, Bar Association, and United Way. He served the State as a member of the grievance committee of the South Carolina Bar Association and, only recently, as a member of the Commission for the Reorganization of the South Carolina State Government. Although he officially retired in 1973, and perhaps played a little more golf thereafter, friends and associates knew that his schedule remained fully. He simply derived too much satisfaction from his work to yield to the demands of age and health.

Dorcey Lybrand married twice and had the acute sadness of losing both his wives. A zealous family man, he sought consolation in caring for his children. He had no children by his first wife. By his second wife, he had one daughter—Miss Christine Lybrand of Aiken—and also had seven stepchildren—Mrs. Beverly Britton of Columbia, Miss Catherine Peterson of Columbia, Miss Gabrielle Peterson of Aiken, Daniel Peterson of San Antonio, Tex., David Peterson of Austin, Tex., Richard Peterson of Columbia, and Dominic Peterson of Aiken. He treated all of his children with unfailing love and generosity. I extend my sincere condolences to all of them, as well as to his sister, Mrs. John Raffield of Dalzell, and his brother, W. A. Lybrand of Wagener, his hometown.

To judge by my own feelings, I know what a gap is left in their affections by the death of Dorcey Lybrand. He shall be missed for years to come. Nevertheless, it somehow seems wrong to mourn too loudly when a life has been lived so fully and so well. Dorcey Lybrand was a lifelong and devout Methodist, and he died in Christian hope and confidence. He had good reason to harbor these feelings. His work in this life surely deserves the richest rewards of the next.

Mr. President, at the time of the death of Dorcey Lybrand a number of articles about him appeared in various South Carolina newspapers. In order that my colleagues may have convenient access to them and the additional information which they contain, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Aiken (S.C.) Standard, July 20, 1977]

DORCEY LYBRAND, 70, DIES

Dorcey Lybrand, former Aiken state senator and civic leader, died of a heart attack at 5:30 a.m. today at Aiken Community Hospital. He was 70.

Mr. Lybrand fell ill over the weekend while playing golf and was taken to Aiken Community Hospital where it was thought his condition was improving.

Funeral arrangements for Mr. Lybrand will be announced by George Funeral Home.

Lybrand had retired from law practice in 1973 and was a partner in Dexter Arms Apartments at the time of his death.

He served in the state Senate for two terms, from 1949–1952 and from 1957–1960. He was a native of Wagener and was a former senior partner in the law firm, Lybrand, Rich and Cain. He was a graduate of the

University of South Carolina Law School and a World War II Navy veteran.

Lybrand was a member and past president of the Aiken Rotary Club, Business Men's Club, Chamber of Commerce, and Aiken County Bar Association. He helped found the United Fund in Aiken County in 1951.

He was a member of St. John's United Methodist Church.

Sen. Strom Thurmond issued this statement this morning; "I am deeply saddened by the death of Dorsey Lybrand. He was my friend and former law partner and I never knew a finer man. A person of true character and unquestioned integrity, he also had great ability in his chosen profession of the law. He not only had served the public faithfully and well as a state senator and in other positions but also individually. He unselfishly provided legal and community services based on need rather than reward and was profoundly concerned with the well-being of those around him. His death is a great loss to his many friends and the community and state he served so well.

Surviving are: a daughter, Miss Christian Lybrand, Aiken, a brother, W. A. Lybrand, Wagener; and a sister, Mrs. John Raffield, Dalzell.

[From the Aiken (S.C.) Standard, July 21, 1977]

DORSEY LYBRAND

It was a common thing for individuals planning a civic project or business venture to seek out Dorcey Lybrand for his advice. With a great deal of wisdom and common sense, Mr. Lybrand dispensed such advice on many occasions. Undertakings that enjoyed his support were virtually assured of success.

Mr. Lybrand died early Wednesday after a short illness. He retired four years ago from an eminently successful career as a lawyer, and had since devoted considerable time to a favorite pastime—golf. But his law practice continued to have a hold on him; he found it difficult to say no to a client or friend of long standing.

Through the years Mr. Lybrand's clients often were persons of little means, and the payment, if any, might be in produce from a farm or vegetable garden. His friends were from every walk of life, and he chose them without regard for their station in life or income level.

Few men in Aiken County in this generation have held the influence that Mr. Lybrand possessed. And although he had achieved success in both politics and in his career, his influence was based not on political power or wealth but on his compassion and understanding of fellow human beings. He was at his best working quietly behind the scenes with responsible community leaders to bring about a needed reform or improvement.

Mr. Lybrand was generous with his means, and was a faithful member of St. John's United Methodist Church, where he had been a member of the Board of Stewards. He also donated one of the first personal scholarships awarded annually to a worthy student at USCA.

His civic activities were numerous, he had been president of the Aiken Rotary Club, the Business Men's Club, the South Carolina Easter Seal Board, the Hitchcock Rehabilitation Center, the Chamber of Commerce and the Aiken County United Fund, writing the constitution and bylaws still used by that agency.

He served on the grievance committee for the South Carolina Bar Assn. and at the time of his death was a member of a commission studying the reorganization of state government. Residents of Aiken and surrounding areas will long be indebted to him for his role in the establishment of the University of South Carolina's Aiken campus.

From his long career in the practice of law, the experience of having served in the State Senate on two occasions, and his wealth of friends of all ages and stations, he was a delightful conversationalist. Seldom, however, did he refer to a wartime experience in which he displayed rare heroism and unbelievable stamina.

He was a Navy officer aboard a ship that was torpedoed in mid-Atlantic in the summer of 1942. With 46 other survivors, he spent 32 days in a lifeboat before reaching a small island in the Caribbean. Meager supplies of food and water were consumed 15 days before land was sighted.

The starving crewmen were found on the island by the British speedboat enthusiast Betty Carstairs and taken to Nassau, where they were entertained by the Duke of Windsor, wartime governor of that island, and his duchess.

The episode was described in news accounts as "one of the most stirring stories of heroism of the war at sea," and Mr. Lybrand, then a lieutenant, was commended for the manner in which he calmed the men under his command in the lifeboat.

It was a trait he continued to demonstrate throughout his most useful life.

[From the Columbia (S.C.) State, July 21, 1977]

FORMER LEGISLATOR, D. K. LYBRAND, DIES

AIKEN.—Dorsey K. Lybrand, 70, a retired attorney, civic leader and former state senator, died Wednesday at Aiken Community Hospital after suffering a heart attack during the weekend.

Mr. Lybrand was born in Wagener, a son of the late C. K. and Callie Busbee Lybrand.

He retired in 1973 from the law firm of Lybrand, Rich and Cain, where he was senior partner.

Mr. Lybrand was a former law partner of U.S. Sen. Strom Thurmond, R–S.C. and U.S. District Judge Charles Simons Jr.

At the time of his death he was a member of the Commission for the Reorganization of the S.C. State Government.

Thurmond said Wednesday that Mr. Lybrand's death was "a great loss to his many friends and to the community and state he served so well. He described Mr. Lybrand as a "person of true character and unquestioned integrity."

Mr. Lybrand graduated from the University of South Carolina in 1928 and was a 1930 graduate of the university's law school.

His first senate term was from 1949 to 1952 and he returned to the upper house in 1957.

During World War II he served in the Navy for four years, attaining the rank of Lt. Commander.

In the early 1960s, he was instrumental in the establishment of the University of South Carolina's Aiken campus.

When he died, Mr. Lybrand was also president of the Strom Thurmond Foundation, which annually provides scholarships for worthy students.

Mr. Lybrand was a member and past president of the Aiken Rotary Club, the Businessmen's Club, the Aiken Chamber of Commerce and the Aiken County Bar Association.

In 1951 he assisted in founding the Aiken County United Fund, writing a constitution and bylaws still used by that agency.

Before his retirement, Mr. Lybrand was active in the S.C. Bar Association, serving on its grievance committee. He was a former director of the Palmetto Federal Savings and Loan Association and served on the advisory board of Bankers Trust.

Surviving are a daughter, Miss Christina Lybrand of Aiken; a sister, Mrs. John Raffield of Dalzell; a brother, W. A. Lybrand of Wagener; three stepdaughters, Mrs. Beverley Britton of Columbia, Miss Catherine Peterson of Columbia and Miss Gabrielle Peterson of Aiken; four stepsons, Daniel Peterson of San Antonio, Tex., David Peterson of Austin, Tex., Richard Peterson of Columbia and Dominic Peterson of Aiken.

Services will be 5 p.m. today at St. John's United Methodist Church. Burial will be in Aiken Memorial Park.

The family suggests that those who wish may make memorials to the Hitchcock Rehabilitation Center or a charity.

George Funeral Home is in charge.

[From the Augusta Chronicle, July 21, 1977]

DORCEY K. LYBRAND DIES; FORMER S.C. STATE SENATOR

AIKEN.—Dorcey K. Lybrand, 70, former South Carolina state senator, of 531 Highland Park Terrace died Wednesday in an Aiken hospital.

The funeral will be held at 5 p.m. today at St. John's United Methodist Church with the Revs. Robert E. James and Ben Hudnall officiating. Burial will be in Aiken Memorial Park cemetery.

Mr. Lybrand, of the law firm, Lybrand-Rich-Cain & Simons in Aiken, was a native of Wagener, S.C., and graduate of the University of South Carolina in 1928. He graduated from the university's law school in 1930 and was admitted to the state bar.

He began law practice in Aiken in 1931 and later formed a partnership with Charles E. Simons Jr., now U.S. District judge. He was a former law partner with Strom Thurmond. Mr. Lybrand served as magistrate in Aiken County from 1934 to 1942. He joined the U.S. Navy during World War II and was on active duty 45 months. During the early days of the war, his ship was torpedoed in the Atlantic and he spent 32 days adrift on a life raft. He was a lieutenant commander when he was discharged.

In 1948 Mr. Lybrand was elected to the South Carolina Senate and served until 1956. He was a member and past president of the Aiken Rotary Club, and member of the Aiken Businessman's Club, the Greater Aiken Chamber of Commerce and the Aiken County United Fund.

He was a board member of the Aiken County Easter Seal Society and the South Carolina Easter Seal Society. He was a member of St. John's United Methodist Church.

Mr. Lybrand was a member of the Aiken Bar Association and American Bar Association. On the state level, he served on the committee of professional responsibility and the committee of professional standards.

Survivors include one daughter, Miss Mary Christina Lybrand, Aiken; three stepdaughters, Mrs. Beverly Britton, and Miss Katherine Peterson, Columbia, and Miss Gabrielle Peterson, Aiken; four stepsons, Daniel Peterson, San Antonio, Tex., David Peterson, Austin, Tex., Richard Peterson, Columbia, and Dominic Petersen, Aiken; one sister, Mrs. John Raffied, Dalzell, S.C.; and one brother, W. A. Lybrand, Wagener.

Pallbearers will be Sen. Thurmond, Judge Simons, Arthur D. Rich, Warren Abernathy, Marshall Cain and Robert E. Penland.

Honorary pallbearers will be members of the Aiken Bar Association.

Memorial contributions may be made to charity.

Friends may call at the residence or George Funeral Home, Aiken.

[From the Augusta Chronicle, July 22, 1977]

DORCEY K. LYBRAND

When death came Wednesday to Dorcey K. Lybrand, at age 70, it brought to an end the life of an Aiken Countian whose wide range of public service and civic activities served to inspire many who felt his influence.

Concern for good government spurred the Wagener native to run in 1948 for the South Carolina Senate. He won, and served with distinction until 1956. Prior to that, he began an Aiken law practice in 1931 and later formed a law partnership with Charles

E. Simons, Jr., now a U.S. district judge. Mr. Lybrand was also a former law partner with Sen. Strom Thurmond.

Always sensitive to the needs of others, Mr. Lybrand gave without stint of his time and talent, working as a member and past president of the Aiken Rotary Club, a member of the Aiken Businessman's Club, the Greater Aiken Chamber of Commerce and the Aiken County United Fund.

His service in World War II included a naval stint. In fact, he came close to having his life snuffed out during the conflict in the Atlantic theater when his ship was torpedoed and he was forced to spend 32 days adrift in a life raft.

The leadership which Dorcey Lybrand displayed in the Navy, in civic groups, in his profession and in the state legislature mark him as one whose influence for the good will long remain with us. We join in extending sympathy to his family and the many others who mourn his departure.

CLEAN WATER ACT OF 1977

Mr. ANDERSON. Mr. President, the Environment and Public Works Committee on July 23, 1977, approved the Clean Water Act of 1977 after 2 weeks of intensive markup sessions and 15 days of public hearings on the Federal water pollution control program that began on June 1, 1977.

I strongly endorse the Clean Water Act of 1977 as reported by the Environment and Public Works Committee.

The committee bill is an affirmation of the commitment made by the Congress to the American people in 1972 with the passage of Public Law 92–500. While clearly placing the Senate Environment and Public Works Committee on record for restoring and preserving our Nation's water resources, this legislation reflects the 5 years of experience of the Congress, executive branch, permittees, and the public with the Federal Water Pollution Control Act. Deadlines are extended in some cases. Responsibilities of the States are expanded. Some sections of this complicated, detailed statute of 89 pages are rewritten. New programs are initiated. Nearly $30 billion is authorized. In total, the committee has made limited adjustments, refinements, and accommodations to the realities of administering a complex statute, without altering the basic goals and objectives of the 1972 act and the Federal Government's commitment to protect the water resources we are blessed with in these United States.

My interest in the Clean Water Act of 1977 is motivated, apart from my own personal commitment to protecting our natural resources, by the important role water resources have played in the development of the State of Minnesota and by the priority my gubernatorial administration placed on the protection of Minnesota's abundant water resources.

It was the Dakota Indians who so aptly named my State "Minnesota," for in Dakota Indian language "Minnie" means water and "sota" means white. In the 17th century, French explorers came by water from Montreal in their canoes westward along the northern shore of mighty Lake Superior, the greatest of the Great Lakes and the world's largest freshwater lake. These French voyageurs portaged over the towering forest-covered cliffs of the north shore of Lake Superior and were greeted by lakes—thousands of them.

The lake area that greeted the voyageurs now comprises the 1-million-acre Boundary Waters Canoe Area, the last remaining true wilderness area of its type in the United States, and a water-rich land of crystal clear lakes. Nearby the BWCA, another prized Minnesota resource, the Kabetogama Peninsula and surrounding Kabetogama, Rainy, and Namakan Lakes were set aside by the Congress in 1971 as the Nation's 33d and perhaps most unique national park, Voyageur's National Park—164,000 acres, of which about 60,000 acres are water and a park that is essentially only accessible by water.

Lake Superior, the Boundary Waters Canoe Area, and Voyageur's National Park—three of Minnesota's most important water resources, are by no means all of the water wealth of the North Star State. Minnesota, at the headwaters of three of North America's most important watersheds, the Lake Superior, Hudson Bay, and Mississippi River basins, is blessed with more than 4,000 square miles of inland waters, 15,291 lakes of 5 acres or more, and more than 25,000 miles of rivers and streams.

Minnesota's water wealth includes the mighty Mississippi River which winds its scenic and historic way along the State's eastern border and has its source at Itasca State Park. But the Father of Waters is not alone as a major riverway in our State. The breathtaking and scenic St. Croix River, now protected for generations to come as part of the National Scenic Rivers System, forms the eastern border of the State with Wisconsin. The St. Croix provides recreational opportunities for over 2 million people in the Twin Cities area, most of whom are only 30 minutes away from its clean and fast flowing waters. A score of other rivers wind through the State.

The lakes, rivers, and streams of Minnesota, are not the State's entire water resource for these surface waters are complemented by vast, pure groundwater resources that lie beneath large portions of Minnesota. It is estimated that the groundwater aquifers underneath Minnesota encompass 300 cubic miles.

Minnesotans, like their counterparts in all parts of our country, depend on these surface and groundwater resources for their livelihood, drinking water, and recreation. The cities of Minneapolis and St. Paul grew up on the banks of the Mississippi River where the water power of the Mississippi powered the flour milling industry. The Mississippi and Minnesota Rivers are major channels of waterborne commerce, moving agricultural and energy products and supplies to and from the State and region. The Port of Duluth is today a world port for interstate and international commerce moving on the Great Lakes. The iron ore and taconite from Minnesota's Iron Range have fueled the steel industry for a century as a result of ore boats moving steadily across Lake Superior bringing raw materials for the blast furnaces in Ohio and Indiana.

This same bounty of water in Minnesota forms the springboard for Minnesota's tourist industry. Five million out-of-state visitors annually trek to the North Star State and produce a tourist trade estimated at close to $1 billion. The lures to our State provided by these water resources are many and varied: fishing with 2 million licensed anglers; boating with 500,000 licensed watercraft; and a host of other recreational opportunities, in summer and winter.

Minnesota water resources are not only located and enjoyed in nonurban areas. Minneapolis, the City of Lakes, is known for its chain of lakes in the heart of the city and its annual "Aquatennial" celebration. St. Paul's several urban lakes likewise provide a variety of recreational opportunities for its residents.

A State as dependent on water as Minnesota knows all too well the consequences of unwise management of surface and groundwater resources. The continuing public support for restoring and preserving water resources in Minnesota is based not only on a historical stewardship of natural resources by our citizens but also from instances all too etched in the experiences of Minnesotans, where our water resources have been carelessly and thoughtlessly degraded.

The most difficult issue I faced as Governor of Minnesota for 6 years was the continuing pollution of Lake Superior at Silver Bay by Reserve Mining Co. Since 1955, nearly 200 million tons of taconite tailings have been disposed of in Lake Superior by this taconite company. Minnesotans are not proud of this misuse of the world's greatest freshwater lake. The long-sought and pending settlement of this insult to Lake Superior will be as much an emotional relief for our citizens as it will be a biological victory for Lake Superior.

The Reserve Mining Co. controversy, while commanding the attention of Minnesotans the past decade, is unfortunately not the only example of abuse and misuse of the water resources of the State. Industrial discharges to the St. Louis River deteriorated water quality in that northern Minnesota river and in St. Louis Bay of Lake Superior. The Mississippi and Rainy Rivers were subjected for decades to improperly treated paper industry effluent. Dredging by the Corps of Engineers in the Duluth Harbor and in the Mississippi River has been the source of the resuspension of tons of bottom sediments and pollutants.

While the State is ahead of most States in upgrading municipal wastewater treatment plants, downstream interests remain concerned today with noncomplying municipal discharges in St. Paul, Bemidji, and on the St. Croix River, south of a planned expansion of a treatment plant in St. Croix Falls—Dresser, Wis.

The clean lakes section of the 1972 act was prompted essentially by the concerns in Minnesota about the deteriorating condition of recreational lakes. Senator WALTER F. MONDALE developed the clean lakes program in response to problems he saw around the State where agricultural runoff, municipal and in-

dustrial discharges, and extensive sedimentation were ruining the recreational value of many lakes.

Minnesota has experienced pollution not only of surface water resources, but of its groundwater as well. Spills of chemical and hazardous wastes have threatened the States' vast, but fragile groundwater resources. The drought in Minnesota the past several years has dangerously depleted Minnesota's groundwater resources, as farmers and other water users have increased groundwater withdrawals since precipitation and surface water sources of water for agriculture have declined. Irrigation permit requests to the Minnesota Department of Natural Resources have increased 200 percent in the past year. The drought has also made Minnesota think carefully about their use of water as reservoirs have been drawn down around the State, wells gone dry, and the Mississippi River, the principal source of water for the Twin Cities, now flows at 60 percent below normal, after an all-time recorded low flow in August 1976.

In the western part of the State, concern over potential water quality impacts on municipal and industrial users of the Red River of the North as a result of irrigation return flows from the Garrison diversion unit, has prompted the administrative and legal involvement of the Minnesota Pollution Control Agency.

Consequently, Minnesota, by definition, throughout its history, and in present day life, is particularly dependent on her rich and varied water resources. And, Minnesotans, have seen their share of the careless and callous abuse of their water resources.

I became chief executive of Minnesota's State government in 1971. The State of Minnesota had, prior to that time, made good progress to protect and enhance the water resources of the State. When I now reflect on my 6 years as Governor of Minnesota, I believe there was no other subject area where more substantive, comprehensive progress was made than in the protection of Minnesota's air, land, and water resources. In my judgment, no State enacted a more comprehensive program of legislation to restore and preserve the environment than did Minnesota in those years. I would match my State's environmental record in this decade against any other.

A simple listing of the legislative and administrative actions taken in Minnesota since 1970 to protect its water resources is evidence enough of what one State has done to see that clean water can be enjoyed by the children and grandchildren of its residents: State siting of power plants, transmission lines, and other energy facilities. The Critical Areas Act to freeze development in areas of unique cultural, historical, or recreational value; $150 million in State matching dollars to supplement the Federal wastewater treatment construction grants program. Establishment of Voyageur's National Park. The Minnesota Environmental Policy Act as a State counterpart to NEPA. Regulation of the phosphate content of detergents. Regulation of the land disposal of chemical and hazardous wastes. A fivefold increase in the staff resources of the Minnesota Pollution Control Agency. The Minnesota Wild and Scenic Rivers Act. State funds for local land use planning. Controls over marine sanitation devices. Special protections for the St. Croix River. Comprehensive amendments to State water resource and drainage statutes. A floodplain management program. Civil penalties for the violation of State water pollution standards. Shoreland management legislation. A dam inspection and maintenance program. The Mineland Reclamation Act. Establishment of lake improvement districts. A statewide water information system. Land use and development controls for the Twin Cities metropolitan area. Prohibitions against the manufacture, sale and disposal of products containing PCB's. A regional environmental analysis of the potential water and other resource impacts from a copper-nickel mining industry. State controls of mining in the Boundary Waters Canoe Area. A groundwater resources inventory. A State environmental quality council charged with assessing long-term impacts on Minnesota's environment of further development in the State. A certificate of need process for all power plants and other energy supply and transportation facilities. Regulations to control the siting and operation of individual wastewater treatment systems.

This list is long and represents a great deal of effort. It indicates both a priority and practice in the State of Minnesota of protecting natural resources, particularly water resources.

The Federal Government, through Public Law 92–500, has also had a significant impact on the State of Minnesota. The Minnesota Legislature in 1973, following enactment of Public Law 92–500, moved expeditiously to grant the Minnesota Pollution Control Agency the necessary authority to impose civil and criminal penalties and provide additional staff resources, so as to enable the MPCA to be in the first group of States to receive delegation of the NPDES permit program. Minnesota has consistently obligated its entire share of construction grant funds. In fact, the State of Minnesota was a plaintiff in the successful litigation that forced the release of construction grant funds impounded by the Nixon Administration.

Throughout the State, both municipalities and industries are ahead of the national pace to construct facilities to comply with the 1977 secondary treatment and BPT deadlines. Only one major industry has not initiated construction of facilities to meet the 1977 BPT deadline. The Mississippi River is gradually being restored as municipal and industrial discharges to the State's largest receiving water come into compliance. Lake Minnetonka, west of the Twin Cities and an important recreational resource, was degraded by septic tank infiltrations that spawned algae blooms. Following the installation of a sewer system, that lake has seen a tremendous improvement in water quality.

The Duluth-Superior harbor has traditionally been listed as an area not in compliance with the Great Lakes Water Quality Agreement. In 1979, that area will see the end of the inadequate treatment of municipal and industrial discharges when a tertiary treatment facility is in operation to treat all municipal wastes from Duluth and surrounding towns and municipalities, and all industries that have for decades discharged into either the St. Louis River or St. Louis Bay.

Farther up the north shore of Lake Superior at Silver Bay construction at long last has begun on an onland tailings disposal system for the taconite wastes of Reserve Mining Co. If the construction schedule is met, the present 67,000 tons of taconite wastes that daily enter Lake Superior will be deposited on land in 1980.

West of Silver Bay at Ely, the operation of an advanced wastewater plant has successfully restored Lake Shagawa, part of the BWCA watershed, and for years degraded with heavy phosphorus loadings. Farther north, on the border with Ontario at International Falls, Boise Cascade Co. has made a significant investment in pollution abatement facilities to control discharges of pulp and paper wastes to the Rainy River. The improved effluent will resolve a sensitive issue between the two nations.

Across the State, hundreds of Minnesota's lakes that have for decades been the receiving waters for municipal discharges are gradually being protected by the construction of modern treatment works. With an appropriation recently made by the 1977 Minnesota Legislature, $150 million in State funds have been made available to match Federal funds.

Recreational lakes are also being protected by the growing interest of lakeshore owners in lake improvement projects. Minnesota was the birthplace of the clean lakes program and has received project grants to date for five lakes under this program. The Minnesota Legislature in 1977 expanded a State program to complement the clean lakes section and appropriated State matching funds for this purpose.

The State of Minnesota has also recognized the absolute necessity of the proper location and operation of septic tanks and other individual waste treatment systems. Comprehensive State regulations on individual systems will be soon promulgated by the MPCA and will be a model for other States on the regulation of individual systems.

Finally, in Minnesota the control of municipal and industrial point sources and the regulation of individual waste treatment systems, is being implemented with equal attention to the importance of nonpoint source controls. Minnesota has initiated a comprehensive section 208 program, both for the Twin Cities and for out-State Minnesota. Regional development commissions throughout the State are assisting the MPCA in the preparation of areawide water quality management plans to identify and recommend management strategies for nonpoint water pollution, particularly from agricultural activities.

I approached consideration by the Environment and Public Works of the Clean Water Act of 1977 with this Minnesota background.

I chaired three of the eight field hearings and attended all seven Washington, D.C., hearings of the committee on this legislation because of my interest in this program and my desire to hear from as many people as possible on how the Federal Government's efforts to clean up the Nation's waters were working and what adjustments, if any, should be made to the 1972 act.

Because of the widespread interest in Minnesota in water quality issues, Chairman RANDOLPH graciously granted my request that two field hearings and several field inspections be scheduled for Minnesota as part of the committee's field hearing schedule.

The two Minnesota field hearings were important to me so that Minnesotans—whether representing local or State governments, environment and citizens groups, farm or labor organizations, industries, or just themselves, would have an opportunity to be heard on this program outside of Washington, D.C. In congressional deliberations on the 1972 act, neither House nor Senate Public Works Committee had any field hearings in our State and to my knowledge, no field hearing on any environmental subject had been held in previous years by the Senate Environment and Public Works Committee in Minnesota.

At the Duluth and Alexandria hearings, 60 witnesses presented statements, either by invitation or on their own initiative, on a variety of aspects of the Federal water pollution control program. Many other individuals and interest groups have submitted written statements for the hearing record. My colleagues need only review the record from the Duluth and Alexandria hearings to see the important and wide-ranging recommendations that the Senate received in those 2 days.

There is no question that Minnesotans were given the opportunity to provide more input to the Senate Environment and Public Works Committee on water pollution than any other State. For that I am grateful to Senator RANDOLPH, Senator MUSKIE, and the subcommittee staff, and, to the many Minnesotans who attended the hearings in Duluth and Alexandria to demonstrate their concern for clean water. At the end of this statement is a listing of all witnesses who testified at Duluth on June 2 and Alexandria on June 3. I believe my colleagues will find this list both impressive in length and in the variety of interest groups represented. Nearly an equal number of individuals have since submitted written statements to the committee for the hearing record.

The Duluth and Alexandria hearings produced a wide variety of recommendations and suggestions to amend the Federal Water Pollution Control Act. Panel discussions were held on several issues including the 1977 and 1983 industrial deadlines, the control of toxic chemicals, the operations of large municipal systems, the problems of small communities, the use of alternative treatment systems, the clean lakes program, and sections 208 and 404. In addition, the subcommittee staff and I were able to see several municipal treatment works in Duluth, Ely, St. Cloud, and Alexandria that have been constructed with Federal funds.

During markup of the Clean Water Act of 1977 I offered a number of amendments, and supported many others, based on testimony from the Minnesota field hearings, the Seattle, Wash., field hearing that I chaired, and the Washington, D.C., hearings.

These amendments relate to various sections of the Federal Water Pollution Control Act and are described in the committee report:

First. Section 105—Authorizes the EPA to assist in the operation and maintenance costs of research or demonstration treatment works.

Second. Section 109—Expands the use of construction grant funds for the training of municipal treatment works operators.

Third. Section 203—Permits the EPA or State agency to be a party to a contract between a consulting or engineering firm and a municipality for enforcement purposes.

Fourth. Section 204—Amends the industrial cost recovery system to allow the reduction in ICR payments of users that implement flow conservation practices, to allow municipalities to use a portion of ICR payments for administrative costs, and to exempt small users from ICR, under certain conditions.

Fifth. Section 312—amends the marine sanitation device section to require a minimum of secondary treatment of wastes from commercial vessels on the Great Lakes and other navigable waters, and other provisions.

Sixth. Section 314—Amends the clean lakes section to require EPA support of State lake restoration surveys, authorizes an additional $450 million for the clean lakes program, and includes report language expressing dissatisfaction with the administration of the clean lakes program by the EPA.

Seventh. Section 404—Mandates that all dredging activities of the U.S. Army Corps of Engineers be conducted in compliance with applicable State water quality standards, and all other State substantive and procedural requirements.

Eighth. Section 516—Requires EPA to analyze the problem of municipal combined sewer overflows.

Ninth. Section 516—Requires EPA to analyze the status and potential of projects that utilize municipal wastewater and sludge for a productive purpose.

I supported several other amendments in committee on the control of toxics, the use of alternative systems, the delegation of authority to State agencies, the protection of wetlands, and the control of agricultural nonpoint water pollution.

I will indicate to my colleagues my interest in these subjects during floor consideration of this legislation.

While I support the Clean Water Act of 1977, on the subject of authorizations for the construction grants program, I believe the committee should have increased the annual figure for this program above the administration's recommendation.

The administration's recommendation of a 10-year authorization for the construction grants program of $4.5 billion annually is based on the remaining Federal share of the construction of eligible treatment works nationwide. This figure assumed, however, that the Congress accepts the recommendations of the administration to eliminate several eligible categories. The committee, while eliminating major sewer rehabilitation projects and the control of discharges from separate storm sewers from eligibility, did not exclude collector sewers as the administration also recommended. Depending on the method of application of the collector sewer eligibility criteria that were adopted, up to $11.9 billion of collector sewer projects remain eligible for Federal funds. Consequently, the basis for the $4.5 billion annual authorization no longer is completely valid.

The committee also adopted several amendments to the construction grants program that will increase the ability of the States to obligate construction grant funds. The result should be an accelerated pace of treatment works construction to correct water quality problems. I recently requested the Congressional Research Service to study the obligation capability of selected States for municipal wastewater treatment grant funds. The CRS concluded that an annual obligation in excess of $4.5 billion is possible, if current legislative and administrative constraints in the construction grants program are removed.

The committee adopted in this legislation several amendments to increase the obligation capability of the States:

First, the 5-year construction grants program authorization assists those States that have been fearful of increasing staff resources, so as to handle a large number of projects, without a multiyear commitment from the Congress that these personnel will be used productively.

Second, the State certification amendment, that permits the Administrator to allot 2 percent of a State's annual appropriation for the management of the construction grant program, will assist the States in speeding the flow of dollars to municipalities, engineers, and contractors.

Third, the combined step 2 and step 3 grants will reduce the processing time for many projects.

Finally, the restoration of previous EPA staff cutbacks in the fiscal year 1978 budget and the language in this report urging the administration to provide EPA with additional personnel for the construction grants program, will, if implemented, increase the efficiency of EPA in processing annually the thousands of construction grant project applications.

Consequently, the basis for an annual multiyear authorization of $4.5 billion is no longer valid. Further, the other rationale cited to keep the authorized level to that figure, the inability of the administrative system to obligate a larger figure, is called into question by several amendments the committee has adopted in this legislation.

I believe an annual authorization of $5 billion or even $6 billion is justified for the construction grants program, if not

for fiscal year 1978 because of phase-in problems, certainly for the remaining 4 years of the authorization period. I consider the construction grants program both crucial Federal assistance for the improvement of the quality of our Nation's waters and a public works program far more productive than many other present uses of public works dollars.

It seems to me that these two good public policy purposes could be better served if additional Federal dollars were authorized for the construction grants program. In addition, since inflation costs for the construction of municipal treatment works exceeds the national average, additional funds in the near term will result in the construction of more treatment works.

Accordingly, it is my judgment that the annual authorization for the construction grants program should be increased. I did accept the judgment of Senator MUSKIE in markup that in this bill, the figure of $4.5 billion be retained. I urge my colleagues on the Environment and Public Works Committee to analyze the impact of the final version of the Clean Water Act of 1977 on the construction grant authorization level and determine, for the fiscal year 1979 budget, whether a higher level is justified. I also will urge the Carter administration, in light of this committee's action on eligible categories and the other amendments I have mentioned, to reassess its recommendation of $4.5 billion.

In December 1971, I testified before the House Public Works Committee on amendments to the Federal Water Pollution Control Act. In reading through that testimony it is interesting to see what issues of concern to a Governor in 1971 were enacted in Public Law 92–500.

I concluded that testimony before then Chairman John Blatnik, from Minnesota's Eighth Congressional District, as follows:

> We must act now to reshape priorities so that both clean water and productive capacity are achieved. If we do not act, rivers like the Buffalo, Rouge, and Cuyahoga will continue to catch fire because of the pollution in them. And nobody sets his house on fire just to keep temporarily warm. When that glow is gone, all we are left with is ashes. Our people deserve a better legacy.

National priorities were reshaped by Public Law 92–500. Much has been accomplished since passage of the 1972 act to insure that our waters are cleaner for our children and grandchildren than they are today.

This legislation continues the Federal commitment to clean water. It deserves prompt consideration and enactment by the Senate. Implicit in the Clean Water Act of 1977 is that the Nation's glass of clean water is now half full. The severe pollution in the Buffalo, Rouge, and Cuyahoga Rivers, that caught the attention of the public and the Congress in earlier years and gave impetus to the 1972 act, are now only memories.

But the burning rivers of the past are now replaced by Kepone in the James River, and PCB's in the Great Lakes and Mississippi River. Seven out of 10 municipalities still are not discharging adequately treated effluent. Nonpoint source pollution has not been confronted. One hundred and twelve chemicals have been found in the drinking water of New Orleans. Contaminated fish in Florida's Biscayne Bay are not suitable to eat.

Cancer mortality is increasing and what we drink is increasingly suspect as the cause. Wetlands continue to be threatened. Treated municipal effluent and sludge is in most cases merely discharged, incinerated, or land-filled, instead of being used, as in many other countries, for its water content or nutrient value. Chlorination of water is suspect because of the potentially harmful chemical compounds that are formed in the chlorination process. And the use of pesticides will increase by 50 percent by 1984 with potentially serious consequences of pesticide runoffs to the waters of the Nation.

The challenge of clean water for all Americans remains. The Clean Water Act of 1977 continues the commitment of the Congress in Public Law 92–500, to restore and maintain the ecological health of our Nation's water.

Mr. President, I ask unanimous consent that a list of witnesses at the hearings on June 2, 1977, and June 3, 1977, in Duluth, Minn., and Alexandria, Minn., be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

WITNESS LIST—DULUTH, MINN.
JUNE 2, 1977

Sandra S. Gardebring, Executive Director, Minnesota Pollution Control Agency.
Dr. Alden Lind, Save Lake Superior Association.
Representative Arlene Lehto, Minnesota House of Representatives.
Joseph Foran, Minnesota Public Interest Research Group.
Ken Carlson, Minnesota Power and Light Company.
Richard Nachbar, Boise-Cascade Corp.
Russell Susag, 3M Co. (representing Dr. Joseph Ling).
Gary Welk, Northern States Power Co.
Dr. Steve Chapman, Clear Air-Clear Water Unlimited and Minnesota Environmental Control Citizens Association.
Mayor Robert Beaudin, City of Duluth.
Jim Hoolihan, City of St. Cloud (representing Mayor Al Loehr).
Richard Dougherty, Metropolitan Waste Control Commission.
Cliff Grinde, Western Lake Superior Sanitary District.
Ben Boo, Western Lake Superior Sanitary District.
Milt Knoll, Hoerner-Waldorf-Champion International.
David Zentner, President, Izaak Walton League of America and member, Minnesota Pollution Control Agency.
Jerry Seck, Leech Lake Reservation Business Committee.
William Marks, Michigan Department of Natural Resources.
Walter Sherman, Flambeau Paper Co.
Thomas Smrekar, Potlatch Corp.
Gretchen Van Hauer, Duluth Chapter, National Audubon Society.
Fern Arpi, Virginia, Minn.
Karen Carlson, Save Lake Superior Association.
Gloria Hamman, Duluth League of Women Voters.
Betty Hetzel, Superior, Wisconsin League of Women Voters.
Bethel Anderson, Society Concerned About a Ravaged Environment.
Charles Walbridge.
Robert Charleston, Black River Falls, Wis.
Don Eckstrom, Clear Air-Clear Water Unlimited.
Marjory Christenson, Minnesota Environmental Control Citizens Asosciation.
Alderman Freeman Johansen, City of Cloquet.
Charles Stoddard, Northern Environmental Council.
Milton Mattson, Save Lake Superior Association.
Glen Merdelson.
Gail Merland.

WITNESS LIST—ALEXANDRIA, MINN.
JUNE 3, 1977

Duke Addicks, Minnesota League of Cities.
Mayor Morris Sheppard, City of Madison Lake.
Roger Machmeier, Citizens Advisory Committee on Individual Sewage Treatment Systems.
John Sullivan, Alexandria Lake Area Sanitary District.
Richard Neises, Minnesota Green, Mississippi Clean, Inc.
Bud Anderson, Minnesota Conservation Federation.
Paul Davis, Minnesota Pollution Control Agency.
Vern Reinert, Minnesota State Soil and Water Conservation Board.
Mattie Peterson, Izaak Walton League of Minnesota.
Cy Carpenter, President, Minnesota Farmers Union.
Russ Schwandt, President, Minnesota Agri-Growth Council.
Ted Shields, Minnesota Association of Commerce and Industry.
Joe Schilling, Minnesota Pollution Control Agency.
George Dimke, Rice Creek Watershed District.
John Elwell, City of Albert Lea.
Perry Smith, City of Minneapolis.
Dr. Joseph Shapiro, University of Minnesota.
Senator Myrton Wegener, Minnesota State Senate.
Sandy Dibrito, City of Perham.
Hal Haugejorde, Green Lake-New London-Spicer Sanitary District.
Dwayne Osland, Green Lake-New London-Spicer Sanitary District.
Williard Pearson, President, Minnesota Association of Watershed Districts.
Robert Wetherbee, Wilkin Soil and Water Conservation District.
Merritt Bartlett, Clearwater River Watershed District.
Tony Haasser, Office of Congressman Arlan Stangeland.
Archie Zeithamer, Alexandria, Minn.
Lloyd Melvie, Dassel Area Environmental Association.
Gary Martens, Minnesota Association of Farmer Elected A.S.C.S. Committeemen.
Larry Schultz, Osakis, Minn.
Ruth Ray, Upper Minnesota River Valley Regional Development Commission.
Leo Rust, North Dakota Farm Bureau.
Ed Grady, Minnesota Farm Bureau Federation.
Alderman Robert Larson, City of Rochester.
Verlyn Marth, Herman, Minn.
Helen Von Lorenz.
Jim Von Lorenz.

SENATORIAL CRITICISM

Mr. SASSER. Mr. President, Sunday's Washington Star carried an article written by former Senator Eugene J. McCarthy. It bore the intriguing title of "How Not To Criticize a Senator."

The article described the attempts, by White House personnel, to portray the able and experienced chairman of the Senate Subcommittee on Energy Research and Development as having developed an "unwitting" position on the question of whether the United States should construct a prototype liquid metal fast breeder reactor at Clinch River, Tenn.

This issue is one about which good and decent men and women hold deeply different views. Our Founding Fathers designed our political structures to permit the freest possible exchange of differing ideas about matters which affect our entire community.

I sincerely believe debate over public questions ought not sink to the level of accusing U.S. Senators of taking positions for mean and base reasons. Separation of powers and comity between the branches of Government demand a higher plane of debate than would appear to have taken place in this case.

I ask unanimous consent that the full text of his article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, July 31, 1977]

HOW NOT TO CRITICIZE A SENATOR

(By Eugene J. McCarthy)

Frank Church is a U.S. senator from the state of Idaho. He is also the chairman of the Senate's Energy Research and Development subcommittee. For ten years he has studied the problem of nuclear energy. For ten years he has supported experimentation with the fast breeder process and, as part of that, the building and operation of the test reactor at Clinch River, Tenn.

On May 2nd of this year, Sen. Church spoke on "Arms, Energy and the Atom" at the Massachusetts Institute of Technology. In his speech, the senator advocated completion of the fast breeder. He said that the Carter administration in deferring nuclear fuel reprocessing and the introduction of the fast breeder program, is trying to avoid entering the plutonium stage of nuclear energy development. The Carter policy, he said, is the equivalent of "nuclear isolationism" and will, if carried out, reduce rather than enhance U.S. influence on worldwide nuclear development.

Church gave three major arguments in support of his position. First, he said that the energy-deficit countries, stricken by a 600 per cent rise in oil prices since 1973, know that the breeder process is the one technology now offering some relief from their dependence on expensive foreign oil. Second, he noted that the administration, while opposing development of the fast breeder, offers no satisfactory substitute for oil. The United States is like the man on shore who advises the drowning man to take deep breaths of fresh air if he wants to survive.

Church's third argument is a rebuttal of those who assert that the breeder reactor will cause a great proliferation of nuclear weapons. He points out that building a breeder plant as a way of getting material for bombs is most expensive, and would delay production of such bombs for at least the time during which the reactor is being tested. It is anticipated that breeder technology will not be ready for marketing until 1990. Building plants will take another ten years. (This is a better postponement than we are likely to get from the SALT talks.) In the meantime, countries which have uranium, trained personnel, and the proper facilities can—as India did—produce bombs with no help from a breeder plant.

This is the record. Now for the political response.

Sen. Church's facts were not challenged. But the administration tried to make him out to be an "unwitting victim" of industry lobbying. (Administration spokesmen evidently are men of sound judgment, wittingly responding to Adm. H. G. Rickover.) Being called unwitting, like being called a dupe of the Communists, is an ultimate insult to a member of the U.S. Senate. Better to be called corrupt or malicious than to be called "unwitting" by nameless members of the administration.

Sen. Church was labeled the "liberal champion of the Clinch River facility," as though libera's on faith should be against the facility. The implication was that the senator had defected or become a heretic.

Opposition to the breeder reactor is a new condition for liberal qualification, despite the fact tht liberals took the lead in bringing nuclear power under civilian control. Liberals have been in the forefront of efforts to control the building and dispersion of nuclear weapons. Libera's have been strong supporters of the International Atomic Energy Agency, and of the Non-Proliferation Treaty.

Liberals, I have always thought, believe in a rational order. They believe that man can, by reason and moral commitment, give some direction to political order. They have never held that new technology should be buried because there is danger in it, or that new knowledge should be suppressed. They were for electricity. They were for studies of radioactivity. They supported the risky experiments with vaccinations, and now support experiments in nuclear biology.

The White House also suggested that Sen. Church is under a Rasputin-like influence from Orval Hansen, a former Republican congressman from Idaho, now a lawyer representing some members of the nuclear industry. Yet there is no evidence of undue influence on Church by Hansen or anyone else.

Finally it was suggested that the senator supports the Clinch River project because of its possibility for jobs in Idaho. (It is estimated that there might be 200 new jobs in Idaho if Clinch River is continued.) There is no evidence that Sen. Church would surrender principle for jobs in his home state or for political advantage. He was, for example, an opponent of the war in Vietnam when the anti-war position was far from popular. He showed no concern for the military procurement or the new jobs that the war might provide for Idaho.

There are four things which an administration should not do when it finds itself in disagreement with a member of the U.S. Senate.

First, it should not say that a senator is "unwitting."

Second, it should not suggest that he should have voted otherwise than he did because of some political label that has been attached to him.

Third, it should not even hint that the senator is under the influence of some outside person, guru, wife or husband, secretary, administrative assistant, chairman of his committee or even a wise old friend.

Fourth, it should not on an issue of principle or of serious moral significance charge him with having taken a position in order to serve baser political motives affecting his constituency.

Faced with opposition from Sen. Church on the issue of the nuclear breeder reactor, the Carter administration violated all four of these rules.

MEDICAL HELP FOR THE ESKIMO PEOPLE IN CANADA'S FAR NORTH

Mr. ANDERSON. Mr. President, in this day of inflationary prices and rising medical fees, I was very pleased to read an article concerning the outstanding efforts of Dr. Earl Krebs, a dental surgeon from Minnesota.

He volunteers 4 weeks of his valuable time each year to giving much-needed medical service to the Eskimo people in Canada's far north.

I am proud to acknowledge Dr. Krebs as a fellow Minnesotan, and wish to have his commendable service recognized. I ask unanimous consent that the following article from the June 29, 1977, issue of the Guardian of Charlottetown, Prince Edward Island, Canada, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN DENTAL SURGEON OFFERS HELP TO JAMBOREE

(By Allison MacKinnon)

CABOT PARK.—A dental surgeon from Minnesota who travels into Canada's far north for four weeks every year to give voluntary service to the Eskimo people is among the staff who are attending the 4th Canadian Scout Jamboree at Cabot Park.

Dr. Earl Krebs, wife, Jean, and their teen age daughter are travelling with him and working as volunteers during the 10 day event which begins July 1.

When asked why he gave this service at great personal cost, Dr. Krebs was quick with his answer, "God has been good to me. I am so lucky; I have a wonderful wife and six children; I can afford to give because nothing has been taken from me".

These annual sorties into Canada's north all began when Dr. Krebs attended a scout jamboree at Fort Churchill in 1970. It was the second such event held for the natives of Canada's north. His first actual experience in dental surgery came a year after, and he has been making annual treks ever since.

GETS ADVICE

The motivating factor came from one of the nurses who after seeing the doctor teaching the native boys certain crafts and athletic skills said, "why are you spending your time teaching them leather crafts and tossing the cabre. Have you ever looked at these children's teeth" . . . That was it. The doctor saw what the nurse meant. When he started the next year he set his office hours from 8 a.m. to 1 a.m., the next day.

Sometimes the only thing that could be done for the health of the children would be to extract all of their teeth to prevent infection to the whole system. The adults were cared for after the children's bedtime.

Dr. Krebs said he was fortunate that his wife, Jean, allowed him to get away.

"As a matter of fact, it was she who saw the need first", he added. The American dentist said he has developed a great respect for the Eskimos. "We have developed a kinship which is close to a blood-brother."

SPIRITUAL

He observed that the Eskimo is essentially a spiritual person, and to expand on this thought, took the instance of complimenting a man on a piece of his stone carving. The Eskimo replied, "oh, it was not I who made that image, it was in the stone all the time. I just let it out".

"An Eskimo loves his family", Dr. Krebs continued." They share with each other as well as with their neighbors. Wife beating was never known in an Eskimo family—that is until very recent years."

SENATOR HUBERT HUMPHREY

Mr. MUSKIE. Mr. President, Marquis Childs comments in the Washington Post

this morning that HUBERT HUMPHREY has renounced ambition. That is not precisely correct. As long as I have known my dear friend from Minnesota, I have also known that his overriding ambition was not for office of favors, power, prestige or position. No, his guiding ambition has been to help people—his constituents, his countrymen and his world.

In that ambition, he has succeeded as few men have. I will leave further judgments to the history books, for HUBERT will surely be in them. For now, we are all grateful that he is still driven by his true ambition.

Mr. President, I ask unanimous consent that Marquis Child's column from the August 2, 1977, Washington Post be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

KUDOS FOR HUMPHREY

(By Marquis Childs)

If there's one man around this town who can be called an optimist it is Hubert Horatio Humphrey. This is all the more remarkable in view of the blows he has taken over the years of his experience in riding the political roller coaster. On top of it was a major cancer operation with a follow-up of chemotherapy, which he cheerfully describes as his bi-weekly dose of poison.

Being Lyndon Johnson's vice president was like being chained to the Loch Ness monster. Then came the 1968 election when, with Johnson glowering in his retreat in Texas, Humphrey failed until too late to disavow the Vietnam war The victory by Richard Nixon was by such a squeak that with it went all the sad might-have-beens for Humphrey.

The presidential virus is all but incurable and in 1976 Humphrey toyed with the idea of running again. He had the good sense, however, to stay out of the primaries. Today, his past ambition is behind him, and it is no exaggeration to say that he is devoting himself with all the intensity of the Humphrey temperament to working for the success of his President and his country.

I had a talk with him the other day between long and arduous stints on the Senate floor. He spent three consecutive days shepherding the foreign-aid bill to passage, with sessions running until 9 p.m. or even later. Humphrey is one of four senators who have regular, weekly meetings with Carter, along with five House leaders.

"On balance I would say he is doing all right," Humphrey said after speaking of certain differences between the Congress and the White House. "I am not trying to protect him. I was not on the bleachers for him, but every time I work with him I feel a little better.

"I have been at a lot of meetings with President Kennedy, President Johnson, and a few other Presidents. But these are the most candid, open and frank discussions I have ever experienced. I think he does realize that the relationship got off to a bad start. He has been told so in so many words by Bobby Byrd [Senate majority leader], Tip O'Neill [Speaker of the House], and the rest of us chirp in and let him know:

" 'Mr. President, it is one thing to cancel our projects, but it is another how you do it. It is one thing to send messages up here, but it is another how you follow up. And I suppose that if there is any weakness in the administration it is that they are trying to do too much too soon.' "

Humphrey contested with Byrd for the leadership post and came out second best. His first move was to go to Byrd to say, "Bob, I want you to be a great leader; I want to help you. I don't know how much time I've got around here but I want to help you." They have had a close and friendly partnership ever since.

The President has taken a long time, in Humphrey's view, to realize what a hold Congress' new budgeting procedure has over federal spending. The spending guidelines laid down by the Congressional Budgeting Office, under the direction of Sen. Edmund Muskie (D-Maine), are jealously guarded, taking precedence over the executive budget.

"So he is experiencing what I would call a very normal, healthy, competitive relationship between the executive and the Congress on the separation of powers, considering that the Congress today doesn't roll over like it used to. It really is a different Congress since Vietnam and Watergate. It's very assertive."

And Humphrey thinks that is a good thing. He is not afraid to ask the tough questions. When he had Chairman Arthur Burns of the Federal Reserve System before the Joint Economic Committee, he "blew the whistle on him" with respect to the loans advanced by New York banks to developing nations. "And the banking fraternity up in New York went crazy." Burns' response to the banks was, "Get your house in order."

Humphrey gives him credit for that, although he believes the power the chairman wields is too great, particularly when the chairmanship is a holdover from a previous administration. Although he is for the independence of the Fed, he thinks the chairman and the President should have coinciding views on fiscal policy. "Otherwise you can reduce taxes here $50 billion and Arthur Burns can raise the discount rate one-half of one per cent and, hell, it is all gone."

Having renounced ambition, Humphrey is as free as a bird. In the past his weakness was his trust of associates who were undeserving of that trust. A man of compassion and an exceptionally keen mind, his mistakes were those of the heart rather than the head. Now, as an independent agent, he is following his own course, and that course is winning him kudos as never before.

APPRECIATION AWARD

Mr. CHILES. Mr. President, it is with pride that I would like to bring to the attention of my colleagues an honor which has been bestowed upon a fine citizen of the State of Florida.

Mrs. Howard P. Winton of Melbourne, Fla., was recently selected by the Auxiliary to the American Optometric Association, as the recipient of the organization's 1977 Appreciation Award. Each year, the appreciation award is bestowed upon an individual member who has made outstanding contributions beyond customary expectations toward advancing the objectives of the auxiliary.

With so many members across the Nation working through their optometric auxiliaries toward the health and welfare of the public, it was indeed a singular honor for a Florida citizen to be chosen for this award.

WHERE DO THE DEPARTMENT OF DEFENSE PROCUREMENT DOLLARS GO?

Mr. BAYH. Mr. President, last week the Senate adopted an amendment to the Department of Defense appropriations bill which I cosponsored that would require all prime contractors receiving contract awards of $10,000 or more to file an annual report with the Department of Defense showing the amount of defense work performed by their subcontractors by State. This amendment also provides that the Secretary of Defense shall submit an annual report to Congress showing on a State-by-State basis, the total amount of DOD funds paid to subcontractors. Mr. President, I want to first of all commend my distinguished friend and able colleague, the Senator from Ohio, Mr. METZENBAUM, for his initiative in providing this vehicle with which we can know where some $20 million in the Federal funds are going every year. It is important for those of us representing the Midwest and Northeast regions of the country because it is no secret that investment of the defense dollar has a healthy economic impact. This is not to say that we should rely on the DOD budget to generate jobs when, in many instances, spending in other areas is a more efficient creator of employment. But precisely because DOD is the Government's largest single procurement agency—some $44.9 billion annually accounting for 75 percent of the total for all Federal agencies combined—we ought to know where these dollars are going.

The $20 billion I mentioned above is an estimate of funds derived from subcontracts awarded by DOD prime contractors. The problem arises in connection with this figure because present Defense Department accounting methods do not provide an accurate picture of where these dollars are spent. This feature of tracking DOD funds are pointedly criticized in a study of the Northeast-Midwest Research Institute called "Defense Subcontracts: Which Companies Get Them and Why Doesn't the Pentagon Know Their Names?" That study noted:

The failure of the Defense Department to track the secondary distribution of its expenditures may result in a systematic overcounting of the money flowing into other states. When many of the firms that contracted for defense production were first established, their headquarters tended to be located in the urban centers of the Northeast and industrialized Midwest. More recently, however, many firms are locating production lines in the south and west where labor and energy costs are thought to be less than in other regions of the country, while continuing to maintain headquarters in urban centers. DoD, however, reports its expenditures by the state where the prime contractor's headquarters is located. Thus, while it may appear, by reviewing DoD contract awards, that the Northeast and Midwest are receiving their "fair share" of defense dollars, this may not be the case.

Mr. President, I believe that the Metzenbaum amendment will provide us with a system that will help us determine if States and regions are receiving their "fair share" of Federal dollars. This does not mean setting up some arbitrary formula whereby the region with 25 percent of the population would receive 25 percent of the DOD procurement dollar. Still, when we realize that over the 1960–75 manufacturing employment for the Great Lakes States grew by only 3.2 percent while regions such as the Southeast and Southwest increased by 43.3 percent and 67 percent respectively, it is clear that imbalance exists where this policy is concerned.

The July 2, 1977 issue of the National

Journal underlines the potential for confusion here. In terms of Defense contracts awarded it appears that Indiana fared not too badly in fiscal year 1976 with $161 million in Defense contracts awarded, more than any of the other Great Lakes States. However, without knowing how much of this money was actually spent in the State in the award of subcontracts, it is difficult to judge the extent of real economic benefit accruing to localities. In plain English, we just do not know and we will not know until the Metzenbaum amendment becomes law and DOD is required to resume the practice it dispensed with in 1973 which will accurately track the procurement dollar.

Certainly, this is not the only issue that merits consideration and action with regard to Department of Defense procurement policies. It is, however, one we must address if we are to move intelligently and constructively review further defense construction and procurement decisions which can have such a pronounced impact on communities throughout the country.

GENOCIDE CONVENTION UNSIGNED AS ATROCITIES CONTINUE

Mr. PROXMIRE. Mr. President, recent reports from Cambodia indicate that Communist rulers in that country have turned against the people with vengeance. Human rights are being sacrificed left and right.

Wholesale slaughter of the civilian population began, Jack Anderson and others have reported, within hours after Khmer Rouge soldiers swarmed over Phnom Penh on April 17, 1975. These killings have since been recognized as the first part of a deliberate campaign to remake society.

Civilians were ordered out of the city, herded into death marches, forced to struggle into the countryside without food or water.

At the end of the marches, the harassed people were put to work planting rice and building dikes. Families were separated and marriages forbidden.

By the thousands, Cambodians were dragged out of their villages to be shot or bulldozed alive into mass graves. Anyone with an education was executed.

The number of executions has fallen off some in recent months but the loss of civil rights continues. Marriages are now permitted, but a love affair can be a capital offense. There are no newspapers; three short propaganda messages are broadcast daily.

Mr. President, mass killings did not stop with the death of Adolf Hitler. Jack Anderson, in fact, recently characterized the Communist rulers of Cambodia as more oppressive than "Adolf Hitler at his worst."

The Senate has an opportunity to help stop the atrocities associated with genocide. It can ratify the Genocide Convention. Admittedly, genocide is only one manifestation of the disregard for human rights. But it is by far the worst, and perhaps the most forgotten.

HYDROPOWER FROM SMALL DAMS

Mr. ANDERSON. Mr. President, several months ago President Carter requested a 90-day survey by the U.S. Corps of Engineers of the potential hydroelectric capacity of the 48,000 small dams presently used only for flood control or water resource related uses. The results of this study are expected shortly and may offer details of an additional energy source which has not received a great deal of attention.

In a recent article in the Christian Science Monitor it was reported that almost 30 million kilowatts in electrical capacity are potentially available at existing small dams. Richard Dunham, Chairman of the Federal Power Commission estimates that small hydrodevelopment costs would range from $500 to $1,000 per kilowatt compared to $800 to $1,200 for coal and nuclear power plants. Hydropower's environmental impact would be less significant than either of these two sources.

Making the most use of our renewable resources to generate our ever-increasing need for electricity makes sense to me.

In order that others may learn more about this as yet untapped source of power, I ask unanimous consent that the text of the Christian Science Monitor article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMALL DAMS—ENOUGH POWER FOR NEW YORK CITY

(By Clayton Jones)

WASHINGTON.—President Carter and Congress are about to open the floodgates, literally, of an energy source once common in 19th-century America—small dams.

Thousands of existing small dams, including some that once ran old flour mills, could become pint-sized plants, almost doubling U.S. hydroelectric power and slashing electric bills for many Americans, according to a still-unveiled report ordered by President Carter.

Harnessed simply by adding turbines, in-place dams would generate seven times more energy than what the administration anticipates from new solar heating in 1985 and almost the same amount of electricity produced today by nuclear plants, say U.S. energy planners.

In his April energy message President Carter requested a 90-day survey by the U.S. Army Corps of Engineers of potential electrical capacity at some 48,000 untapped dam sites. The Corps of Engineers report, still to reach the President's desk, doubles original estimates of electric power available from such dams.

"The deeper we investigate small dams, the more watts we find," says a staff aide to U.S. energy chief James R. Schlesinger.

Almost 30 million kilowatts in electrical capacity are potentially available at small dams, according to the study, with an additional 21 million kilowatts possible by rehabilitating and expanding present hydroelectric dams. That combined new generating capacity would satisfy the electrical needs of New York City, or 9 million people, calculates Federal Power Commission official Ronald A. Corso.

To spur conversion of now-idle dams, U.S. lawmakers are planning to add a $300-million, three-year program onto the President's energy package, which now is working its way through Congress. A House vote is expected in early August, and the Senate takes up the idea in early fall.

The program, sponsored by Rep. Richard L. Ottinger (D) of New York, would provide up to 75 percent of the funds needed for demonstration projects of small hydroelectric dams, built by either public utilities, private companies, or individuals. Time needed to obtain licenses and permits would be shortened to less than nine months.

Costs of the new hydroelectric projects would be far below fossil fuel plants—and must less damaging to the environment, say U.S. officials. Richard Dunham, power commission chairman, told Congress that small hydro development costs would range from $500 to $1,000 per kilowatt compared with $800 to $1,200 for coal and nuclear power plants.

Already, a handful of utilities are planning to use abandoned or nonhydroelectric dam sites as alternatives to investing in large nuclear or coal-fired plants. The corps report found 16,639 recreation reservoir dams, 7,776 flood-control dams, 7,279 water-supply dams, and 6,329 irrigation dams that potentially could be harnessed with turbines.

In Springfield, Vermont, for instance, the town selectmen plan to use seven old mill dams dating back to the turn of the century to supply the electrical needs of the town's 10,000 residents.

But they will have to look to European manufacturers to buy turbines because American companies make only giant models for large dams. When installed, the small hydroplants will cut the town's electric bill in half, says selectman Chester Scott. "And when it's paid for, we'll be sending dividends to every home instead of a bill," he adds.

In New England, especially, the move to use old dam sites will help out an energy-pressed economy. Tapping 10 percent of the estimated 3,000 sites in New England could theoretically supply Boston with all its electrical needs. The corps study finds the greatest potential in that old mill region, followed by the Mississippi Valley and the upper Northwest.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Juan G. Blas, of Guam, to be U.S. marshal for the district of Guam for the term of 4 years vice John T. San Agustin.

Hugh Salter, of North Carolina, to be U.S. marshal for the eastern district of North Carolina for the term of 4 years vice James R. Durham.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, August 9, 1977, any representations or objections they may wish to present concerning the above nominations with a further statement whether it is their intention to appear at any hearing which may be scheduled.

MINNESOTA FACING CONTINUED NATURAL GAS SHORTAGE

Mr. HUMPHREY. Mr. President, our country is facing a very serious natural gas shortage. Last winter, over 21 percent of the amount of gas required to be delivered under contract was curtailed.

Now the Federal Power Commission projects curtailments of over 23 percent of the gas under contract for the coming winter.

The FPC predicts that interstate pipelines will have 169.9 billion cubic feet of gas less than last winter. At least 29 pipelines may have difficulty in maintaining their required service levels.

Mr President, in Minnesota the customers of Northern Natural Gas Co. can expect natural gas curtailments this winter to be as severe as last winter—if not worse.

Minnesota feels this interstate gas shortage most acutely. Last winter, medium-sized commercial and industrial users of natural gas—priority "2–C" on the FPC curtailment schedule—were without gas for 45 days. Based on a survey taken in mid-June, the FPC now estimates that the same users may be curtailed as many as 88 days if we have a normal winter this year. The curtailment will be longer if it is a colder than normal winter.

Natural gas shortages are becoming an annual crisis in Minnesota. Our schools and businesses, our farms and industries are being threatened with closure each winter because utilities serving Minnesota cannot get enough natural gas.

Minnesota has no significant in-State reserves of natural gas. Last winter, Minnesota's major natural gas supplier —Northern Natural Gas—purchased and transported up to 176 million cubic feet per day of gas under the emergency provisions of the Natural Gas Act. Without these emergency gas purchases, authorized by congressional action, the curtailments would have been even more severe. Similar purchases are our only hope for getting through the next year without severe shortages Continued gas shortages like this are a serious challenge to both our industrial and agricultural economies in Minnesota. Natural gas not only powers our factories and heats our offices, schools and homes, but it is also the vitally important ingredient for making fertilizer, herbicides and pesticides.

But, in the long run, we must look to other energy sources, such as solar and geothermal, for our growing agricultural and industrial energy needs. Conservation of energy also is essential. But over the next 5 to 10 years, in order to maintain the vitality of our national economy, in order to keep schools open, homes warm, and businesses operating, it is absolutely imperative that quick and decisive action be taken to assure Minnesota of an adequate supply of natural gas.

Congress is considering the President's proposal to reregulate natural gas. It is important that we remove the price distinction between interstate and intrastate natural gas in order to provide Minnesota with more gas. The President's proposal would accomplish this. And, although it may mean somewhat higher prices to some Minnesota customers, passage of this measure can play a crucial role in easing natural gas curtailments.

One of our greatest benefactors in providing us with natural gas has been our neighbor to the north. Canada deserves our gratitude for her emergency gas exports this past winter. And we must continue to work cooperatively with her to produce, transport, and utilize efficiently the vast natural gas resources we share in Alaska and the northern Yukon.

There is enough gas in Alaska to supply this country with 5 percent of our natural gas needs for 25 years. These reserves could reduce the bite of our current shortages considerably. But in order to do so, it is crucial that those areas which have the greatest shortages be the first to receive these supplies. Whether we in Minnesota have access to that gas is an important decision that will have to be made in the next 2 or 3 months. There is no doubt that we certainly need it.

At present, we import natural gas from Canada at a faster rate than we can ever expect to receive it from Alaska. However, unless Canada is able to get access to her gas reserves in the northern Yukon—a project that is not now economically attractive—the Canadian Government may have to begin curtailing gas exports to the United States by the time we begin receiving Alaskan gas.

Of the three proposals being considered for transporting Alaskan gas to the lower 48 States, only the overland routes would help Canada gain access to the northern Yukon reserves. An overland route would thus insure continued imports of Canadian natural gas.

The Arctic gas proposal would pipe Alaskan gas across Canada to the Midwest, but so far it has not met the approval of the Canadian Government. In fact, supporters of Arctic have now joined the Alcan consortium. The Alcan proposal has been appraised more favorably—particularly in terms of its cost and environmental impact. The third proposal would bring Alaskan gas to California via oceangoing tankers, and would not assist in assessing the northern Yukon reserves.

It is clearly in Minnesota's interest to support an overland pipeline. This will assure us of continued gas imports from Canada as well as from Alaska.

I fully intend to continue to work with other members of our congressional delegation in making this view known to the President.

NINTH ANNIVERSARY OF SOVIET INVASION OF CZECHOSLOVAKIA

Mr. PELL. Mr. President, August 20–21, which falls during the congressional recess, will be the ninth anniversary of what has appropriately come to be known as the Soviet Day of Shame—the brutal invasion of Czechoslovakia in 1968 by 600,000 Soviet and other Warsaw Pact troops. It is lamentable that in the current atmosphere in the United States of skepticism—and even cynicism—about the course of East-West détente our memory of what the peoples of the small and peace-loving country of Czechoslovakia tried to do 9 years ago seems to have dimmed.

In the spring and summer of 1968, the Czech and Slovak peoples, acting in accordance with the U.N. Charter's principle of "the sovereign equality" of all U.N. members, tried to humanize the Communist system under which they had lived for 20 years. This was a purely internal matter which threatened no other nation; yet the Soviet Union, apparently believing that some sovereign U.N. members are more equal than others, violated article 2 (4) of the U.N. Charter which states that—"All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations."

I have long had an interest in and personal acquaintance with Czechoslovakia. It seems only a short time ago when, as a young Foreign Service officer, I established the American Consulate General in Bratislava at the time of the Communist putsch of February 25, 1948. Through the years since then, I have sought to visit Czechoslovakia as often as I could and to stay in touch with conditions in that country. I was there just prior to and just following the Soviet invasion of 1968. I observed at the time that the fact that the Soviet Union did not have to use force directly to make Czechoslovakia a Communist country but had to employ a major military force 20 years later in order to keep it Communist says something dramatic about the appeal of communism after two decades of exposure to it.

Mr. President, on August 1, 1975, the 35 participants in the Conference on Security and Cooperation in Europe signed a final act in Helsinki relating to security in Europe, and economic and humanitarian cooperation. I was encouraged at the time by the fact that among the principles to which the participants, including the Soviet Union, subscribed, was one which stated that "no consideration may be invoked to serve to warrant resort to the threat or use of force" against the territorial integrity or political independence of any state. My colleagues may recall that in 1968, the Soviets justified their invasion in the name of "proletarian internationalism"—also known as the Brezhnev doctrine.

The fact remains, however, that some 50,000 to 70,000 Soviet forces remain in Czechoslovakia with the principal mission of insuring that no more Prague springs occur. Until the Soviet occupation of Czechoslovakia ends, there is no realistic prospect for the Czechs and Slovaks to exercise their sovereign rights as set forth in the U.N. Charter and reiterated in the Helsinki Final Act.

The Commission on Security and Cooperation in Europe was set up by an act of Congress in June of 1976 and signed by President Ford, to monitor compliance with the Helsinki Final Act. That Commission, of which I am proud to serve as co-chairman along with Congressman DANTE FASCELL of Florida, will play an important role in the U.S. Government's effort to insure that the principles agreed to at Helsinki—including the nonuse or threat of force—will mean something to the peoples of both East and West.

While there is hope—and it is only that for now—that Soviet aggression in

Eastern Europe may be a thing of the past, we must not forget what happened in 1968 nor allow the Soviet Union to forget that its invasion and continued occupation of a neighboring country is in contravention of solemn obligations.

Mr. President, I ask unanimous consent that a statement prepared by the Czechoslovak National Council of America and issued each year beginning in 1971 be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FREEDOM IS INDIVISIBLE

On this sad occasion of the Ninth anniversary of the brutal Soviet-led invasion and occupation of peaceful and freedom-loving Czechoslovakia, we American citizens of Czech, Slovak and Subcarpatho-Ruthenian descent, again remind the entire world of this Soviet violation of key principles of international law incorporated into the Charter of the United Nations:

The brutal Soviet aggression and occupation:

(1) violated the sovereignty of a member state of the United Nations (Article 2, Section 1);

(2) was carried out in violation of Article 2, Section 4, which prohibits the use of military force in the relations between individual members of the United Nations;

(3) violated the principle of self-determination of peoples (Article 1, Section 2);

(4) was in conflict with Article 2, Section 7, which prohibits outside intervention in matters essentially within the domestic jurisdiction of any state;

(5) was in conflict with a number of resolutions of the General Assembly of the United Nations, particularly with Resolution 2131 (XXI) adopted at the meeting of December 21, 1965, upon the Soviet Union's own motion, prohibiting any intervention in the domestic affairs of any state and guaranteeing its independence and sovereignty.

The continued Soviet occupation of Czechoslovakia is another crime against the right of a small country to determine its own destiny and aspirations. The invasion was an intervention by the forces of reactionary communism to prevent the Czechs and Slovaks from establishing their own social order that did not endanger anyone and sought to contribute to the building of bridges across the discords of a divided world and to lend aid to a better understanding and cooperation among all nations on the basis of true progress and humanity.

The people of Czechoslovakia have not resigned themselves to these aggressive plans of Moscow. The day of August 21, is being commemorated in Czechoslovakia as a "Day of Soviet Shame" in a mighty and disciplined resistance against Soviet pressure. We are joining our friends in Czechoslovakia in asking the entire civilized world to support the people of Czechoslovakia in their effort to achieve "The withdrawal of Soviet Troops from Czechoslovakia."

IN PRAISE OF THE FRATERNAL ORDER OF EAGLES

Mr. HUMPHREY. Mr. President, on Friday, July 29, I was invited to address my fellow members of the Fraternal Order of Eagles at their 79th annual international convention in Minneapolis.

Each of you is probably familiar with some aspect of the work of this remarkable organization that has made important contributions to communities throughout America.

Founded in 1898 by vaudeville troupers to promote peace, prosperity, gladness and hope, the order has flourished and expanded to the great benefit of the communities and countries it serves.

Although dubbed the Fraternity of the Common Man, Eagle history is a record of outstanding members and uncommon achievements. Six Presidents of the United States have been Eagles: Theodore Roosevelt, Warren G. Harding, Franklin D. Roosevelt, Harry S. Truman, John F. Kennedy, and Jimmy Carter. A typical cross-section of America, Eagles include the famous and obscure, mighty and humble, great and small.

The Eagles won the nickname, "the Fighting Fraternity," through vigorous support of social legislation. From 1910 to 1940, the order was in the vanguard of social legislative progress.

Here are a few highlights from the history of this order since its founding in 1898:

In 1911, in Missouri, the order sponsored the first Mother's Pension Act and, a year later, was instrumental in enacting in Wisconsin the first Women's Compensation Act.

A few years later, the Eagles began to demand elimination of the poorhouse. In 1923, the Montana Legislature passed the first old age pension law of the Nation, sponsored by a prominent Eagle legislator. Eagles continued the campaign for social legislation at the State level, while campaigning for a national Social Security Act.

At the signing ceremony for the Social Security Act, President Roosevelt presented a pen to the order as a symbol of his approval of the "Fraternity's vision and courage."

Eagle civic and benevolent contributions have been generous in meeting community service and program needs.

In the decade of the 1950's, the Eagles raised over $1 million for the Damon Runyon Cancer Fund; in the 1960's, the Eagles founded the Max Bear Heart Fund, which has donated over $2 million for heart research. The Eagles have now founded the Eagles Cancer Fund, which has raised over $2 million in addition to the Damon Runyon Cancer Fund. Most recently, the Jimmy Durante Children's Fund was founded to support research into the catastrophic diseases of childhood.

Now, the Eagles are leading spokesmen for the welfare of older Americans.

They support legislation which permits the aged to live in dignity and self-respect, including legislation to prohibit discrimination against the over-40 worker. They have created within 3,200 local Eagles units retired Eagles activities clubs and a Golden Eagle Fund to raise and distribute funds for gerontological research.

I was proud to have the opportunity to praise and encourage this public-spirited organization, and to discuss with them the continued need for enlightened social policy. I ask unanimous consent that my remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HUBERT H. HUMPHREY, 79TH ANNUAL CONVENTION OF THE FRATERNAL ORDER OF EAGLES

What a privilege it is to be among my friends and fellow members of the Fraternal Order of Eagles and to share in your annual celebration of peace, prosperity, gladness and hope.

I can't think of a better motto, nor one that is more typically American. Since its founding almost 80 years ago, the Order has undertaken a wide range of civil and benevolent works and programs in communities throughout this nation.

Many charters of government have spoken in solemn tones of peace and prosperity, of life and liberty. But happiness and gladness and hope bespeak an optimism that is distinctly American.

Civic responsibility is another American tradition. In America's frontier experience, communities preceded governments, and created their own rules to meet public needs and to enforce public duties. The new world fostered a continuing creative tension between individualism and the urge to join and to organize, a legacy still very much alive.

A third thread that recurs in the fabric of our culture is activism. We demand much from our government because we elect it and direct it.

If the American people want strong government, they want it to be competent, fair and compassionate as well.

Today I want to mention several areas in which government has provided successful leadership.

One of our great social advances was passage of the Social Security Act. Eagles can recall with particular pride their instrumental role in this move to increase the security, dignity and well being of older Americans. The great system they helped establish underpins our economic stability. Its role grows more crucial in the context of dramatic social and demographic changes.

These changes include the weakening of the close, extended family. Together with an unprecedented mobility, this trend has left many elderly Americans stranded in isolation and poverty without the aid and comfort of relatives.

At the same time, the number of older Americans is rising. Life expectancy moved from an average of 47 years in 1900 to 76 today. In 1900, one in every 25 Americans was 65 years of age or older. Today, that number is one in 18. Yet society remains geared to the needs and desires of the young.

Social and demographic changes are intensified by inflation that erodes the small, fixed income of the elderly. As a group, they are the poorest Americans. Nearly 60 percent receive less than $3,000 a year in income, and at least three million live in dire poverty. Yet their health needs are the greatest.

The Social Security Act, with all its limitations, is a basic social policy that affects the life of virtually every American family.

Thirty-three million persons receive benefits under Social Security. One hundred seven million people pay taxes to support the trust funds. It has become one of the nation's most important and enduring institutions, outstripping the expectations of even its most visionary supporters.

To continue to perform its vital function, the Social Security system must keep pace with changing realities.

Almost every Congress has seen improvements in benefits and coverage. Now there is a good case for reexamining some of the premises and restrictions which made sense when the Social Security Act was created but have less validity in a new social and economic climate.

Social Security was conceived as an insurance program to replace wages lost by retirement and disability. An outgrowth of the depression, it was designed not only to re-

place lost earnings, but also to encourage older workers to leave their jobs and make room for the unemployed. It reassured an infant labor union movement that wages would not be depressed by the willingness of the elderly to work for low pay.

But today our goals should be an economy dynamic enough to create jobs for all Americans who wish to work, from teenagers to the aged.

To permit those elderly persons who wish to work to remain in the labor force would increase our gross national product and decrease public assistance payments.

I believe it would do a great deal for the mental and physical health of Americans who prefer productive labor to idleness, who want wages instead of poverty, and who want to work with others rather than exist in isolation.

I consistently have supported legislation to liberalize the so-called retirement test, or limitation on earnings, to permit older Americans to achieve a better standard of living.

But a major overhaul in benefits requires that we act now to address weaknesses in the financial base. Congress is working on proposals by the Administration to prevent a shortage in trust funds created by a long period of simultaneous inflation and high unemployment, a miscalculation by Congress that over-adjusted for inflation, and the increasing proportion of elderly in the population.

We must restore a financially stable Social Security system—this must be a priority in the 95th Congress.

As a parallel to the income security established 40 years ago by Social Security, the time has come to make health care accessible to every American.

One of my first legislative proposals as a freshman Senator in 1949 was to establish a national program of health insurance. In 1965, Congress passed Medicare as a dramatic commitment to the health of this nation's elderly. Although its value has been seriously eroded by inflation, not one of us would be willing to withdraw this basic protection from elderly Americans.

Americans spend more per capita than any other nation for health care. And health care costs double every five years. Medicare and Medicaid, which together absorb 60 percent of health spending by the Department of Health, Education and Welfare, will jump 23 percent next year.

The health care cost this year is $160 billion or almost 9 percent of our total gross national product. Yet millions of people lack adequate care. Forty million Americans are without hospital or surgical insurance and 18 million have no public or private insurance whatsoever. Millions live in seriously underserved geographic areas.

We have more information on how to provide better care than ever before in our history.

If we do not improve the health of all Americans dramatically, it is because we have not brought to the solution of this problem America's special brand of know-how, determination and pragmatism.

There are those who contend that health care is entirely the province of private enterprise. This philosophy maintains that health care should be available to those who are willing and able to pay for it, and not necessarily to those who want and need it.

I reject this viewpoint. Health care is a basic right, not the expensive privilege of a few. And government has a creative tradition of planning, regulating, financing and delivering health care for vulnerable groups, and whenever resources must be mobilized on a national scale.

At the National Institutes of Health, Federal tax dollars have built the world's greatest medical research institution to stimulate and sustain a network of research by universities and individuals. I am most familiar with the work of the National Cancer Institute which directs the National Cancer Program, a systematic all-out attack on the disease most feared by the majority of Americans.

Not measured by our hopes or impatience, but by achievements alone, the National Cancer Program has made enormous strides in both basic research and improved clinical care.

In the 1930's, less than one cancer victim in five lived five years after treatment.

Today, the ratio is one in three. Treatment could save 345,000 lives or half of the persons who get cancer each year.

Retinoids, a combination of natural and synthetic Vitamin A, offer new hope for cancer prevention. New methods such as combined drug treatments, blood transfusion, immuno-therapy, CAT scanning and ultrasound detection of tumors have been developed and disseminated. Modern surgery gets better results with less radical operations; radiation therapy has fewer side effects; and chemotherapy attacks some advanced cancers and prevents some tumor recurrence.

For others, the key to hope is basic research which is unlocking the mystery of the chemistry, structure and behavior of cells, and the immune defense system.

We have only begun to reap the benefits of the groundwork laid by the world's most intense, professional and coordinated attack on cancer. The generous support of private organizations such as the Eagles brings us even closer to victory.

Increasingly, clues point to environmental causes and life style as mechanisms which trigger disease. Efforts to identify and eliminate environmental hazards have been expanded greatly. Although nutrition has long been recognized as essential to good health, research into the relation between nutrition and disease is in its infancy.

Physicians and medical schools have given the subject only peripheral attention and quacks and faddists too frequently have moved in to fill the void of scientific knowledge.

Neglect of nutrition reflects a bias toward acute care which permeates the health care system—while preventive health care goes relatively unnoticed. The emphasis on sick care instead of health care means we have not even scratched the surface of preventive medicine as an element in both good health and cost control.

Better safeguards against industrial and environmental hazards, and the application of principles of good nutrition, could reduce vulnerability to cancer and other diseases. We can reduce the debilitation of illness and the side effects of treatment by careful nutrition control.

Increasingly reliable evidence suggests that diet has treatment potential as well.

There is some evidence that tumor growth may be influenced by limiting the concentration of amino acids, or that special diets to reverse the loss of weight and appetite that often accompany cancer may strengthen the body's immune system.

I have spoken today of the government's role and achievements in some very basic aspects of human welfare. This role is and should be one of leadership. But in America each individual, and individuals working together in groups, ultimately decide the values their government will protect and the services it will provide.

It is fashionable to be cynical about government as an expression of the will of the people. But I'm old-fashioned.

I believe that the average American still has a deep-rooted trust in government as an instrument to shape a better society and to promote those common goals of health, prosperity, peace, happiness and hope.

We are not suffering from an excess of activism. What we need is wider participation in this activism.

Ours is a huge, disparate nation with pluralistic institutions. Washington has no monopoly on knowledge. There are many functions that can be improved by an injection of common sense and a sensitivity to local needs. We need an intelligent division of responsibilities, and an active collaboration between public and private sectors and among local, state and national governments.

The climate is ideal for a new partnership between individuals and their government. Our president was elected with a mandate to streamline the Federal Government to make it more ethical, responsive and efficient. President Carter's town meetings and press conferences are more than symbols. They are a sincere effort to keep government close enough to the people to hear their ideas and enlist their support.

This is a clear trend in Congress as well. We have adopted a strong code of ethics. Right now, we are debating a system of mixed public and private financing for Senate elections to encourage small individual contributions and to limit attempts at influence-buying.

Citizens have new rights of access to government information and to decision-making processes. Sunset legislation now before Congress sets up a strict schedule of review to eliminate government programs that fail to perform their mission.

Regulation and paperwork are under scrutiny. We are trying to reduce delays and paperwork and to insure that regulatory agencies serve the consumer.

It is estimated that the Federal Government spends $20 billion annually to print, process and store its own forms, while it costs the public another $20 billion to fill them out. New laws and new information requirements will continue to originate paperwork. But we can do a great deal to simplify, to reduce the overlap, and to drop requirements that are obsolete or unnecessary.

The Fraternal Order of Eagles has demonstrated its high sense of personal and community responsibility. It has played an active role in communities across America as a proven friend of youth, of the elderly, of veterans and of our needy neighbors. It has mounted campaigns against cancer, heart disease and catastrophic childhood disease. It has been in the vanguard of major social legislation at the state and national level.

My purpose today has been to endorse and praise this civic eagerness and stress its important role in national priorities and programs. The community concern and participation fostered by civic organizations at the local level is the lifeblood of representative and decent government.

You have done a great job, and we will count on you to continue.

WALTER "SALTY" BRINE—A MAN WHO CARES BOTH ON AND OFF THE AIR

Mr. PELL. Mr. President, Walter "Salty" Brine, during more than 30 years as morning man at WPRO–radio has become a Rhode Island institution. His sincerity and the knowledge that he cares about them, both on and off the air, has swelled the ranks of his listeners to the point where he has established himself as the premier morning man of Rhode Island radio.

Many police and motorists report that when "Salty," as he is known to his listeners, warns of an accident on the road ahead of them, the traffic slows down as soon as he warns his listeners.

In his private life, he also cares deeply about helping others and has devoted years to community work. He has been actively involved in fund raising efforts for handicapped and retarded children since 1959 and has helped with numerous additional charitable causes.

Two Rhode Island newspapers have published articles about Walter "Salty" Brine this year. One is in the Rhode Islander magazine in the Providence Sunday Journal of July 31. The other is in the April 14 issue of the East Side newspaper.

Mr. President, I ask unanimous consent that the two articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the East Side, Apr. 14, 1977]

SALTY BRINE JUST KEEPS ROLLING ALONG

(By Joyce Holdsworth Warrick)

He has been the morning man at WPRO for 35 years and is still number one in the ratings. What is the secret of Salty Brine's success?

"He's always new, fresh and unpredictable," says newsman Bud Toevs who has worked with Brine for 22 years.

According to Sherm Strickhouser, "he's a habit . . . no, it's more than that—Salty's got . . . class!"

Brine, himself, doesn't know the answer but he does have a philosophy about announcers and radio personalities.

"You can't just be a nine-to-five man. You must want to be something to yourself and to feel you're doing something for the community," says Brine seriously.

An example of his own beliefs, Brine has devoted years to community work. Since 1959 he has been consistently and actively involved in fundraising efforts for handicapped and retarded children.

The seed idea of helping the handicapped generated from a "noon meeting" at Galilee one summer in the late 50's. The four men involved were Brine, former Congressman John Fogarty, the late Arthur Trudeau and Roger (Cap) Wheeler who died in 1969 and for whom Sand Hill Cove has been renamed.

From this meeting came the Salty Brine Fund Days, an effort that would lead, ultimately, to the founding and construction of the Trudeau Memorial Center in Warwick.

"The retarded would not be where they are, in this state, if it hadn't been for Trudeau. He literally gave his life for them," Brine recalled.

Brine has recently participated in the Meeting Street School benefit on Channel 12 and will appear again, in September, on the Jerry Lewis Muscular Dystrophy Telethon.

There is no fund raising involved in the Salty Brine Trips but these excursions, begun as a station promotion, have turned into yearly economical group vacations for many New Englanders. For Brine these trips have been a source of "deep and lasting" friendships.

Perhaps the least publicized yet most self-gratifying of Brine's community work stems from a tragic childhood experience.

At ten he lost his leg in an attempt to hop a freight train.

"Whenever I hear about someone who has lost a leg, I immediately go to see him because of what I went through. Nobody came to see me when it happened and told me I would be able to walk again. It never is easy when you lose a leg but I walk for them . . . I show them my leg and tell them they will be able to get on their feet and walk," says Brine, adding "their gratitude is enough reward for me."

Walter (Salty) Brine, the son of a carpenter, was born in Boston in 1918. He graduated from Staley College in Brookline in 1941 with a bachelor of arts in Oratory. His first job, a part-time one, was at WNAC in Boston where he was nicknamed 'Salty.'

"We did the news in dramatic form in what you might call first person with Francis Cronin at the organ. It was for Sunshine Crispy Crackers . . . my first sponsor," Brine recalled with a nostalgic smile.

He came to Rhode Island and WPRO in 1942.

His morning show was called the TNT review. "It was Time, News and Temperature but the war was on so we changed the last T to Tunes." He hummed a few bars of the theme song. "That's a tune I'll never forget," he laughed.

Television arrived in the 1950's and Brine, while continuing with his radio shift, became the first live personality on Channel 12.

His TV show, 'Salty's Shack,' ran for almost 12 years with Brine and collies Jeff (Jeff I died and was replaced by Jeff II) as hosts, featuring an assortment of guests, cartoons and children's films.

Brine and his wife live in Narragansett. Their seaside home has become a landmark, pointed out by guides on sightseeing tours. They have one son, Wally, 28, who beamed Brine proudly "is the top man at WJBQ in Portland, Maine. Boy, he's really something!"

Time has been kind to the tall, still handsome announcer. His hair is silver now but his unlined face and bright brown eyes radiate vitality and enthusiasm.

Admittedly he is "himself" on the air and he's sincere, genteel and refreshing. It may be that those qualities are reminiscent of an era when life was a little less complex and seemingly gentler to us.

[From the Providence Sunday Journal, July 31, 1977]

WHY IS SALTY BRINE?

(By Anthony L. DiBiasio)

Why is Salty Brine?

Wait a minute. Everyone knows who Salty Brine is—unless you've been dead for the past three decades. But why he is is another matter.

Starting with biographical facts doesn't help much. Born in Boston in 1918 to a working class family, Salty, or rather, Walter Brine, was graduated from Staley College in 1941 with a BA in "Oratory." He picked up his first job (and the nickname Salty) at what is now WNAC, Boston. His first show in Rhode Island was in 1942, a program called the TNT Review (Time, News and Temperature). He and his wife lived in Cranston for many years and now make their home in Narragansett (where his seaside domicile is often pointed out to the tourists) and are communicants of St. Mary's Church there, where Salty sings and plays the organ on Sundays. ("It's usually a full crowd when people know Salty will be in attendance," says one parishioner.) His son Walter is a DJ in Portland, Maine.

Doesn't help much, does it? Okay, more to come.

For more than 30 years Salty Brine has been the morning man (as radio folks call it) at WPRO and nobody, and I mean nobody, on any of the other stations has been able to top him over the stretch in ratings.

Oh, there are other radio personalities who are more professional, and some who are wittier, and some who are more sophisticated, and more intellectual, and have better voices and deliveries, and, well, better everything. Salty Brine is not tops in any of those requisites normally attributed to radio stars. So, why is Salty Brine a Rhode Island institution? First, words from the friendly side:

Dick Rakovan, general manager for WPRO, says he can sum up Brine in one word: "Believable." Said Rakovan, "He's truly a unique human being." But the manager did not always think so. When Rakovan first came to Rhode Island and to WPRO his first reaction on hearing Salty's show was: "My God, what have I been saddled with?" If Brine were to take a tape recording of his show out of town, said Rakovan, "he would be laughed at." Then Rakovan went on to say that what Salty has is "an indefinable unique quality." Back to square one. Why is Salty Brine?

"Well," said Rakovan, "for one thing you don't have to be hip to listen to him." He has even heard people say they could not stomach the star of morning radio (yes, there are heretics amongst us) and some who say Salty is trite. "So, okay," said Rakovan, "it might not be chic to listen to Salty, but obviously thousands of people listen to him anyway but many won't admit it." Closet Salty freaks?

Mr. Rakovan claims Salty Brine is "a common man, an ordinary man, lovable," and that he is "right up there with baseball, apple pie, ice cream, and Chevrolet."

There is more to this solicited panegyric but first, these words from the opposition:

A high level executive from another station (i.e., a competitor) who shall remain nameless, thinks Salty is "a nice guy; you can't find anyone who knows anything bad about him—sort of like Joe Garrahy." And then, warming up to his subject, he said the concept of the Brine phenomenon is "ridiculous." While he admitted to a unique combination of factors he said, "Look, if I were to put a 60-year-old guy on the air and have him play rock music people would think I'd gone bananas. But he, Salty, gets away with it."

"People from out of town think he's awful," the executive went on to say, "but he has believability—hey, he's a personality, not a DJ. And he produces results for his clients, the advertisers."

The advertisers? They love Salty.

"Generations of Rhode Islanders have grown up with Salty," said Jim Duffy of Media Services, Inc., an agency which, among other things, arranges air time for its clients. "The rapport he's developed with his audience is incredible—and it's a huge audience, too." That fact is borne out by the Neilson ratings of radio, something called Arbitron. From its listener surveys a confusing-looking maze of figures is computer printed, showing audience levels for several time slots. To make it easy for me, Jim Duffy quoted one representative set of figures which showed that Salty had more than 44,000 listeners while his nearest competitor had fewer than 37,000. But most dramatically pointing to Salty's personal pull, the figures for WPRO drop to around 21,000 right after Salty is off the air at 10 a.m.

And that's one reason, said Duffy, why WPRO is able to charge twice as much (when Salty is on) as other stations can for a commercial minute: $70. And apparently Salty is worth the extra charge, for Duffy claimed many advertisers ask for him directly. "You gotta buy Salty," they plead. "We want him to do our spot."

There is a saying among media people that in order to have something go over well in Rhode Island it has to be "folks." Duffy said, "Salty appeals to Rhode Islanders; they trust him because he is just plain folks himself. In fact he is King of Folks."

It's hard to believe but Salty's reign as King of Folks has been in jeopardy from time to time, albeit infrequently, and even then only slightly so. There is a story which continues (despite denials) to make the rounds, that around two years ago, when Salty's ratings had dropped to where he was, horror-of-horrors, only number two (though by a very slight margin) someone at WPRO

suggested the problem was Salty's need of a more youthful appearance. And, so the story goes, Salty, a man who never even had his hair styled, went out and had his hair styled. And dyed. Red. And bought a leisure suit to wear. And then was seen by his Public. And the public reaction was not nice. It was not the good ol' Salty people had grown up with. And Salty unstyled his hair, discarded his leisure suit and washed out the red. And, as one ad man put it, "The whole damn thing (ratings)' came back again."

Dick Rakovan says the story is "plain bull." Salty says it isn't important enough to really discuss. (He also said that about his salary, which is alleged to be more than $60,000 per year.)

Bud Toevs, WPRO newsman, explains the Salty phenomenon by saying his co-worker of almost 25 years is "reachable." No need to go through secretaries; just pick up the phone, dial, and Salty will answer in person. "He's like Jimmy Carter," said Toevs. "People have the same feeling of elation when they talk with him. People are able to tell their troubles to Salty and he'll listen."

Toevs, as did many others, told of Brine's quite giving of his time to the sick and the handicapped and disadvantaged. "And without fanfare," said Toevs. "He'll just show up at a hospital and talk with kids and never take any credit for anything like that, and that's the way it's been for years."

Amplifying on the why of Salty Brine, Toevs recounted a story of just how well known and liked is Salty Brine. Toevs' son was to make his confirmation and Salty, the boy's godfather, was to witness. Everyone was inside St. Elizabeth's Church in Bristol waiting for the only two people who were late: Salty and the (then) Bishop. Well, Salty arrived and, said Toevs, "You could hear people, beginning at the rear of the church, whispering 'Salty's coming, Salty's coming,' like a low rumble growing in intensity as Salty came down the aisle, until, when he arrived at his seat, he was given a standing ovation." When the Bishop arrived a few minutes later only silence greeted him. "Imagine that!" said Toevs. "A standing ovation for Salty and nothing for the Bishop!"

Everyone, it seems, knows of Salty Brine and has an opinion about him. Teenagers with whom I spoke said they listened to him because he always gives the "school out" reports and, as one 14-year-old put it, "Besides, my mom would kill me if I tried to change the station."

A 70-year-old Providence woman, speaking with an Italian accent, said she always listens to Salty Brine. "I like him," she said, "because you can understand everything what he says." And, she continued. "He makes you laugh, he talks so funny."

A middle-aged Greenville housewife said she really can't stand Salty, and listens to "Sherm" instead. (Most Rhode Islanders seem to be on a first name basis with their radio stars.) "I'll tell you one thing, though," she said. "If you say anything nasty about Salty Brine you're going to get clobbered by thousands of people."

At a rural ginmill I posed the question of *why* is Salty Brine to a table crowded with revelers. "I have him set on my clock radio," said a woman as she quaffed a beer. "I dislike his voice so much I know I've got to get out of bed to turn him off—it's the only way I can get up in the morning."

Her friend disagreed. "He's an institution," she said. "He's been around so long I can never remember being without him—I've been with Salty longer than I've been with my husband." To which her low-seniority husband added, "Salty is popular because he gives the news and stuff."

"Salty Brine is like a woman," offered another drinker, "always jabbering about nothing in particular." And another said Salty was great because he gives the time "more concisely."

"He's so deeply good," said another woman, staring into her drink. But she confessed she didn't listen to him any more and has switched to another station because she doesn't like WPRO's music. "Quite frankly, though," she sighed, "I feel disloyal because Salty woke me up for 20 years; he was my friend. Now I feel guilty."

And so it went, closer now to finding out the why of Salty but not there yet. So, let's visit with the man himself as he performs his magic. And now, heeeeerrrrressss Salty!

Walter Salty Brine, star of morning radio and King of Folks, does not sit in a chair at the radio station console. He stands there, feet spread apart, hands manipulating controls, much like a sea captain at the wheel on his bridge. He is dressed in white loafers, red-and-white-check pants, blue shirt with sleeves rolled halfway up his arms, and a red tie. Around his neck hangs a light-weight plastic earphone (hands cupped to the ear exist only in memory). And protruding from the console is a long boom microphone into which Salty is speaking, much like, well, like a ship's captain giving a now-hear-this into an intercom tube.

He deftly slides a cassette tape commercial into a slot and pushes a button, and a jingle for Pearl Bailey auto sales blasts across the airways on the station that reaches the beaches. Turning down one of the knobs Salty does a voice-over with the music: "Have you visited my friend Paul?" he asks his audience, and then launches into a reading of the prepared commercial script. But he doesn't just read what's printed about the cars he's pitching, he ad-libs—reverently.

"Ohhh," he says, voice filled with awe, "I just saw a niiice Cordoba yesterday at Paul's and it is (whispering now) beautiful. See him today!" And the jingle comes up and Salty taps his foot a bit.

Effortlessly Salty patches into out-of-state weatherman Elliot Abrams and both men carry on their conversation live, over Radio 63. "Hello Elliot!" says Salty, his head pointing north, shoulders hunched south, elbows flapping east and west. "How are you on this beautiful day?" he asks as veins in his neck bulge, his teeth flash and his eyes widen, just as in his television commercials.

He and Abrams chat about the weather and more ("How about those Red Sox? ohhhh-ho!") and then, so smoothly that it's really painless, Salty works in a commercial. "Say Elliot? Do you know who brought your broadcast to the public?" And answering his shill, "It was IN-Bank, ohhh, yes. Several convenient locations!"

Salty's headquarters are a 10-by-10 room on the second floor of the new WPRO building on the Wampanoag Trail. From the lone window in the room Salty can watch as his listeners commute to Providence. "I'm captain of the ship in here," he says. "I have the authority to put people out of this room," he tells me (although I'm not quite sure why), "and I've had occasion to do it in the past."

He points to an array of very official-looking licenses tacked to a back wall. "You need one of those to do this," he says, defining "this" with a sweep of his hand to the console. A close look at the licenses shows that one Walter Brine is the holder of an FCC "restricted radio telephone permit" (the same kind radio-dispatched cabbies and oil truck drivers have).

The music (which is selected by the program director and not the on-air personalities) is mostly on tape cassettes which are stacked in holders, each row color-coded for such categories as up-tempo, slow, oldie, new, hard, etc. "Modern radio is strange," says Salty smiling down at me as I prop myself on a cold metal chair (the room is air conditioned to the temperature of rigid Cool Whip). "It's a curious thing to me that we have people in their 50s and 60s who listen to rock," he says smiling. "Is it because we give so much info with the music?" I suggest, smiling in return, maybe they listen because it's the Salty Brine. He smiles an "aw shucks" smile.

(A digression: Salty Brine has one of the nicest smiles I've ever had sent my way. Even a misanthrope like me could feel the warmth of it. But it was downright dangerous to be so close to that smile. I could feel myself weakening, my innate surliness being melted away in all that warmth. Superman's reaction to Kryptonite could not have been more deleterious. It's almost enough to make one forget the bumpkin TV commercials Salty does for WPRO-sponsored trips to Disneyland and other exotic places.)

Like a statewide multiple-listing Welcome Wagon, he takes calls over the phone and makes notes of birthdays, anniversaries and other special occasions and then broadcasts them over the airwaves of the people for the people.

The pace of his show is brisk as he sets up a commercial here, grabs a music tape there, banters with news and weathermen, takes phone calls. "Who's going to retire!" he fairly shouts into the phone, laughing at the same time. "I'm going to die on this job—my wife won't let me retire!" As he talks, his hands, when they aren't pushing buttons and switches, are stuffed into his back pockets, and his head bobs up and down like a mooring in rough seas—and, always, he smiles.

But at one moment, when he got word of a commuter-hour car accident, he frowned and shouted into the microphone to his driver listeners: "You people out there better be careful! There's an accident on the road. Slow it down!" I swear that I could see the traffic on Route 114 slow perceptibly.

"We've got a family out there," Salty says of his audience, "and we've got to keep them alive and happy." By 10 a.m. Salty's tour of duty at the station is over and he packs up his notes and newspapers (the Journal and the Visitor, a couple of weeklies and the National Enquirer) and turns over his audience—or at least half of it—to the next "personality."

If we analyze the minutes of each hour of the show the question comes up as to whose show it is. Surely, it can't be only Salty's voice that people tune in for. For example:

A sample hour:

News: 14 minutes.

Weather: 3 minutes.

Commercials: 13 minutes.

Music: 13 minutes.

Total: 43 minutes . . . and that leaves 17 minutes for Salty to work his magic.

It can't really be answered, this question of why is Salty Brine, probably because there is no one answer. Everyone is right, of course: those who say he's a cornpone, those who say he is a sincere human being, those who say he isn't professional, those who say he's warm and honest, those who say he couldn't make it anywhere else, those who say he's an institution.

The correct answer, if there must be one, is all of the above. Or maybe none of the above. Maybe, because he gets so much public exposure, his million-watt smile is the why of Salty Brine.

Only one thing is for sure, and on this almost everyone agrees. It was put best by Jim Duffy of Media Services: "Salty Brine will never happen again. He's one of a kind."

NATIONAL FILM DAY

Mr. HUMPHREY. Mr. President, Monday, August 22, is a good day to go out to a movie. On that day the motion picture industry will celebrate National

Film Day to recognize the important role which film has played in the cultural heritage of America. Film companies and theaters in every State will donate a portion of their box office revenues on National Film Day to the American Film Institute.

The film industry has organized and sponsored National Film Day to help support AFI activities in preserving America's film heritage and assuring the growth of our Nation's film culture. Motion pictures are one of America's few indigenous art forms—a source of entertainment as well as education, ideas and information.

The American Film Instiute, which is celebrating its 10th anniversary this year, was created by the National Endowment for the Arts to preserve our Nation's film history and to encourage film training and new talent. In its first decade of existence, AFI has preserved nearly 14,000 films which otherwise might have been lost forever to chemical deterioration. Among these films were important classics which are part of the American fiber of the first half of this century.

AFI also conducts several important programs to encourage the development of new filmmakers. It operates the Nation's leading independent film conservatory, where each year scores of young filmmaking students are trained in the art of film and are supervised and guided by the Nation's finest film talent.

On behalf of the National Endowment for the Arts, AFI administers a national program which has since 1968 awarded more than 200 grants totaling upward of $1.5 million to underwrite the production of experimental and innovative independent films. During the past 2 years, AFI has also created a program to encourage women to become film directors. AFI has also coordinated a national effort to enhance film education programs and to help colleges and universities develop such programs—which are highly sought by students who recognize film as a creative and provocative medium. A recent AFI survey found that film education is a "growth" area, with 100,000 college students in film or television courses each semester.

With all these activities, and despite the fact that AFI was created by the Federal Government, less than half of the Institute's budget comes from Federal funds. The balance is private funds which match in part the assistance AFI receives from the National Endowment for the Arts. National Film Day is one of the sources for these private funds.

Yet another symbol of AFI's growing support from the private sector is the remarkable surge of its national membership which has grown fivefold since its 1974 levels. Much of this growth can be traced to the introduction 2 years ago of American Film, a lively journal.

Through these and other activities AFI has raised well over $10 million in private funds to support its activities during the past 8 years.

The American motion picture industry is to be commended for its support of AFI and for its organization of National Film Day. The American Film Institute needs and deserves support as it fulfills its mission of maintaining and enhancing the one unique American art form, the movies.

The American public can show its support of the American Film Institute and its work by the appropriate means of going to a movie theater on National Film Day. A sizable portion of the ticket price on that day will go directly to the American Film Institute and its projects, and that is a worthwhile activity.

PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification from the Department of Defense of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the RECORD at this point the three notifications I have just received.

There being no objection, the notifications were ordered to be printed in the RECORD, as follows:

TRANSMITTAL NO. 77-49—NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Korea.

(ii) Total Estimated Value:

Major Defense Equipment (as included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR)), $60.5 million. Other, $8.7 million. Total, $69.2 million.

(iii) Description of Articles or Services Offered: Fourteen (14) F-5F aircraft, associated with equipment and spare parts.

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 1, 1977.

TRANSMITTAL NO. 77-52—NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Germany (FRG).

(ii) Total Estimated Value:

Major Defense Equipment (as included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR)), $24.8 million. Other, 1.6 million. Total, $26.4 million.

(iii) Description of Articles or Services Offered: Sixteen (16) warhead sections, nine (9) guidance and control sections, seventeen (17) first and second stage sections and sixteen (16) flight instrumentation sets for the Pershing missile.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 1, 1977.

TRANSMITTAL NO. 77-53—NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Germany (FRG).

(ii) Total Estimated Value:

Major Defense Equipment (as included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR)), $12.9 million. Other, $6.2 million. Total, $19.1 million.

(iii) Description of Articles or Services Offered: Three (3) complete MK 86 Naval Gunfire Control Systems, system support and spare parts.

(iv) Military Department: Navy.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: August 1, 1977.

GERMAN MARSHALL FUND: PARTNERSHIP IN ADDRESSING PROBLEMS OF INDUSTRIAL SOCIETIES

Mr. HUMPHREY. Mr. President, June 5, 1977, marked the 30th anniversary of the Marshall plan, which brought Europeans and Americans together in an unprecedented common effort to rebuild war-ravaged Europe. That date also marked the fifth anniversary of the German Marshall Fund of the United States: A memorial to the Marshall plan. The fund, an independent American foundation in Washington, is based on a uniquely generous action by the Federal Government of Germany in appreciation of postwar U.S. assistance: a gift of 150 million deutschemarks—about $65 million at current exchange rates—in 15 installments voted annually by the German parliament, the Bundestag. The foundation is dedicated to promoting understanding of problems common to industrial societies.

On the anniversary occasion last month President Carter sent a message of appreciation to the President of the German Parliament, pointing out how much our industrial societies have to learn from each other and observing that the Marshall plan could have no finer memorial than the German Marshall Fund which makes it possible for new generations of Europeans and Americans to exchange ideas and experiences in surmounting common problems.

Since beginning full operations in January of 1974, the German Marshall Fund has made grants for over 100 projects in basic areas chosen by the trustees, such as urban affairs, labor-management relations, employment policies, problems of working women, land use and criminal justice. Significant transfers of practical experience across the Atlantic have resulted. In its international problems program the fund has concentrated its efforts in fields such as the international coordination of domestic economic policies, problems of international trade, and international management of resources and the environment.

Under its president, Benjamin H. Read, and an outstanding board of trustees chaired by Prof. Harvey Brooks, Benjamin Peirce, Professor of Technology and Public Policy at Harvard University, the fund has begun to realize the

promise which this magnanimous German gift has made possible. Few private foundations in the United States are giving greater support to international activities.

The programs of the German Marshall Fund are well described in an article by Mr. Robert Roth in the Philadelphia Evening and Sunday Bulletin of June 9, 1977, and in recent statements by the fund's chairman, and its president. Mr. President, I ask unanimous consent that these materials, along with President Carter's message, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JUNE 2, 1977.

MESSAGE FROM PRESIDENT JIMMY CARTER

On the thirtieth anniversary of the European Recovery Program, I wish to express the appreciation of the American people for the Federal Republic's magnanimous gift five years ago which provides the financial basis for the German Marshall Fund of the United States.

Three decades ago the Marshall Plan enabled Europeans and Americans to work together to meet essential human needs in the difficult post-war years, to rebuild cities and to create the means of employment. Today the social, economic, and political issues that trouble Europe and America and other regions are less visible and dramatic. But they are more complex and deep-rooted and will require a cooperative effort as great as that of the Marshall Plan.

Governments and international organizations cannot master these problems by themselves. We need the help of private institutions like the Fund which are dedicated to assisting Americans and Europeans to work together toward a solution of our common problems.

Our industrial societies have much to learn from each other and from the other nations of the world. The unique gift of the German people is making it possible for new generations of Europeans and Americans to exchange ideas and experiences in surmounting the problems which confront our peoples. The Marshall Plan could have no finer memorial.

UNITED STATES, EUROPE TRADE USEFUL IDEAS

(By Robert Roth)

WASHINGTON.—The complaint most frequently voiced against the news media is that they print or broadcast only the bad news, that they have neither time nor space for the good things that happen. Well, something good happened in Washington this week and this column will be devoted to it.

The good news was the arrival in Washington of 12 members of the British, Norwegian and West Germany parliaments who have come to study how the American Congress works. That hardly seems worth throwing one's hat in the air for, but it is part of something very much worth cheering about. It is part of a unique exercise in international good will known as the German Marshall Fund of the United States. The fund paid to bring these European parliamentarians here. Next year it will finance a reciprocal flight of members of Congress to European capitals.

If that still seems like nothing much to get excited about, consider some of the other things the fund is doing. It is sponsoring a continuing effort to help Europeans and Americans solve the problems of industrial societies. It has initiated and financed 85 projects, involving the United States and Canada and European countries in such areas as coordination of public services in metropolitan areas, rehabilitation of substandard housing, mass transportation planning, waste disposal, rent control, day care for children, labor conditions, labor-management relations, collective bargaining by public employes, land use, criminal justice—the list is long and keeps growing for the fund itself is designed to keep going.

Typically the fund promotes the interchange of officials, scholars and industrial experts among the cities, counties and other governmental units of North America, Europe and Japan. Typically it involves exchanges between Boston and Grenoble, France, between New York and Hamburg, between Atlanta and Copenhagen.

The fund, an outright gift of $50 million, was established on June 15, 1972, the 25th anniversary of the Marshall Plan, as a gesture of appreciation by West Germany for what the United States did through the Marshall Plan to lift up its fallen enemy. The Bundestag of the Federal Republic of Germany voted the money unanimously, with the active support of all four German political parties. The fund is administered by an American board of trustees, chosen by Americans without German intervention. The board selects the projects to be undertaken.

"Industrial societies have much to learn from each other in both domestic and international affairs," said Benjamin H. Read, president of the trustees, in discussing the underlying purpose of the fund. "Despite political, social and cultural differences, which often make difficult the transefer of knowledge and practice across national frontiers, many of the most pressing problems confronting industrial societies are increasingly similar. And yet there are few resources or institutions to facilitate sharing of information and experience. Solutions found satisfactory in one country are often unknown in another."

The fund is dedicated to supplying that lack.

"And thus we follow up on the bill for common effort that characterized the Marshall Plan program," said Chancellor Willy Brandt in announcing the formation of the German Marshall Fund. "Let the memory of the past become our mission for the future."

Or, he might have said, bread cast upon the waters has a way of coming back. That is gospel, which by definition is good news.

THE GERMAN MARSHALL FUND OF THE UNITED STATES

(Report, 1972–77—A Memorial to the Marshall Plan)

CHAIRMAN'S LETTER

"And thus we follow up on the will for common effort that characterized the Marshall Plan program," Chancellor Brandt stated after announcing in June of 1972 the commemorative gift which provides the financial base for the German Marshall Fund of the United States. "Let the memory of the past become our mission for the future."

The mission of the Fund, as spelled out in the deed of gift which I received from the Chancellor on that occasion five years ago, is to provide new opportunities for Americans and Europeans to work together in resolving the common problems of industrial societies.

The German act of commemoration represented an expression of political imagination fully matching the American initiative of a quarter century earlier. The similarities between that period and the present are substantial though the issues, of course, have changed. Then, as now, societies on both sides of the Atlantic face common external problems. Then, as now, there is a community of shared values in both regions. Then, as now, progress on many common problems requires pooling of knowledge and efforts. Since the achievement of postwar reconstruction and recovery, however, the commonalities among today's problems are not always recognized.

People, goods, and ideas cross national boundaries with increasing ease and frequency, but the flow is highly uneven. In the basic sciences there exists a worldwide community in which such boundaries are fading in importance. The growth of multinational corporations has accelerated the process in the world of industry. But significant practical knowledge and experience, much of it related to the day-to-day conduct of domestic affairs, scarcely moves from its point of origin. Much of this knowledge is highly localized in application, including such matters as urban governance, the organization of work, the control of land use, and the administration of justice.

In charting the programs of the German Marshall Fund, the original trustees and the colleagues who have subsequently joined our ranks have given first attention to efforts to let Americans and Europeans learn from each other about the day-to-day management of domestic affairs. We are convinced that many domestic problems have common features and perhaps common solutions in different industrial countries and that efforts to discover and exploit these commonalities warrant support by the Fund. In addition, we have given increasing emphasis to economic, resource, and environmental aspects of international common problems and developed projects which bring together European and American officials and private experts to develop new understanding and alternative policy solutions to such issues.

The domain in which we are operating is far broader than can be covered by any one program or foundation. With its modest resources, the Fund has sought to identify areas of high leverage where a small commitment can have large multiplier effects. After five years we take some pride in the number of talented persons in North America, Europe, and elsewhere who have been helped to learn from each other as a result of Fund support.

The quest for new approaches to common problems and men and women of talent to carry out needed work is an unending one, and we solicit and welcome suggestions from concerned persons everywhere.

The trustees are keenly aware of the responsibility and privilege to expend wisely, for the mutual benefit of Europeans and Americans, the resources which have been entrusted to our direction. We pledge the continuation of our best efforts to carry out this trust—HARVEY BROOKS.

Spring, 1977.

STATEMENT BY PRESIDENT

Astonishment and pleasure are the usual reactions of Americans upon learning about the generous gift of the German people five years ago which established the German Marshall Fund of the United States—A Memorial to the Marshall Plan. And no wonder, for there are no precedents for the act of commemoration announced by Chancellor Willy Brandt on June 5, 1972, the twenty-fifth anniversary of the address by Secretary of State George C. Marshall heralding the European recovery program.

With the unanimous consent of the Bundestag and all four political parties represented there, the Federal Republic of Germany, "in expression of special appreciation" for American post-war assistance, pledged to provide 147 million Deutsche Mark in fifteen yearly installments to make possible the Fund's formation as an independent U.S. tax-exempt foundation.

The German Marshall Fund is dedicated to helping Americans and Europeans to learn from each other and from others to better understand and resolve "common problems of industrial societies, both domestic and international." It is administered without influence by German authorities by an American Board of Trustees selected by Americans.

This report sets forth the record of the Fund during its first five years covering program commitments of $6.5 million for eighty-five projects, some constituting multiple ongoing activities. In this introductory section, I discuss (I) the goals, resources, and policies that govern Fund actions, and (II) progress under each of our programs. Later sections include summaries of all projects sponsored from the beginning of operations in January 1974 until early 1977, with commentaries about areas of priority interest, listings of publications and other products, financial statements, and information about trustees, officers, staff, and consultants. An earlier special report described the history of the gift and subsequent planning period.

Industrial societies have much to learn from each other in both domestic and international affairs. Despite political, social, and cultural differences, which often make difficult the transfer or adaptation of knowledge and practice across national frontiers, many of the most pressing problems confronting industrial societies are increasingly similar. And yet there are few public or private resources or institutions available to facilitate systematic transfer and sharing of information and experience. Existing literature, particularly where translations are required, seldom records the successes and failures of any society in meeting such problems in a manner useful to those responsible for coping with like problems elsewhere. Solutions found satisfactory in one country are often unknown in another.

The key phrase in the charter of the German Marshall Fund directing its activities towards the "common problems of industrial societies" could not have been more happily chosen and opens up numerous opportunities for useful work. Trustees have had to delimit program development with careful attention to long-term budget goals.

Since the Fund is intended as a "permanent memorial" to the Marshall Plan, trustees have set aside and invested substantial portions of the early installments to accumulate residual assets sufficient to sustain activities at a meaningful level after 1988, when the entire gift will have been received. In dollar values at dates of transfer, the first five yearly installments have totalled $18 million. The Board has allowed annual commitments to expand gradually to a rate of almost $3 million during the fiscal year June 1, 1976–May 31, 1977. By the latter date, as a result of investment growth, the uncommitted residual assets are expected to amount to more than $12 million.

Due regard for resource constraints and the breadth of stated purposes of the Fund required difficult decisions about priorities. Trustees decided to select a limited number of "common problems" on which to concentrate most resources and directed the staff to develop projects for support within these priority areas rather than to rely mainly on random external initiatives. Several questions were asked in setting priorities. Are the problems of central and widespread concern to individuals in many industrial societies? Are the problems similar enough to warrant efforts to share information and experiences about alternative approaches? Is there receptivity to change in the way such problems are handled? Are the problems being addressed adequately by others in public or private life?

Applying these tests, the Board of Trustees decided that activities under the Fund's programs on domestic and international common problems should concentrate on selected aspects of urban affairs, employment and conditions of work, land use, criminal justice, international economic and resource issues, and related communications and media activities. The Fund intends to remain active in these priority areas for a sufficient time to test original hypotheses about accomplishing useful results, or until others are in a position to carry on needed work, but priorities will change and new ones will be designated from time to time.

Two other general policies, relating to the participation of practitioners and the involvement of European as well as American individuals or issues in sponsored projects, were established to govern Fund actions.

Practitioners and Experts. Progress on any one of the complex problems chosen requires efforts by persons drawn from the world of action as well as the world of thought, and from many disciplines and occupations.

Primary Fund support goes to individuals and organizations in different societies with similar responsibilities, interests, and practical experience in handling like problems. Emphasis is placed on developing sustained working relationships between practitioners and experts from public as well as private life, on applying existing knowledge and experience, on staffing positions essential to carry out needed information and exchange work, and on disseminating findings and recommendations to both specialized audiences and the public.

Mayors and city managers as well as urban specialists from universities and research centers, union leaders and members as well as labor-management relations experts, lawyers and judges as well as professors of law have participated in Fund projects. Wherever possible, individuals charged with responsibilities for conducting public affairs as well as those who think and write about such problems, have been involved.

European-American and Other Involvement. Activities to enable Europeans and Americans to learn more from and about each other are the primary focus of the Fund. But the terms of the gift recognize that industrial societies exist in all regions and that an increasing number of problems are common to all countries. By Board decision, all projects supported by the Fund must involve directly or indirectly both United States and European (Western or Eastern) participants or issues, but additional industrial and developing country interests may be included as appropriate and feasible. U.S. and non-U.S. persons and organizations are equally eligible for support, without regard to which persons or groups have more to contribute to or learn from a given project.

Thus the United States and one or more European countries have been involved in all eight-five projects in this report by direct participation of nationals or as a principal focus of activity. In this sense, the Federal Republic of Germany, France, and the U.K. have each been involved in more than half of all projects; Italy and Sweden in more than twenty; Belgium, Canada, Denmark, Japan, Netherlands, Norway, and Switzerland in more than ten; and more than sixty other countries in one or more projects. As indicated by these numbers, several countries have been involved in most Fund projects. Only a few have been bilateral in nature.

Initiatives from Americans have accounted for all but a dozen projects to date, doubtless reflecting the location of the Fund in the United States and the greater experience of Americans in dealing with foundations. In 1976, the Fund retained European representatives in Bonn and Paris to help develop more European-initiated projects.

In accoradnce with its mandate, the German Marshall Fund sponsors programs on both domestic and international problems common to industrial societies and on European American studies.

From the outset, the Fund has given highest priority to its program on domestic common problems—i.e., problems for which private or public persons and organizations at local leve's within one country have essential policy or implementation responsibilities, and those which are similar to problems in other countries. Experience has amply borne out the wisdom of the choice. In the problem areas stressed by the Fund—cities, employment, land use, criminal justice—concerns throughout the industrial world are strikingly similar: traffic congestion, urban blight and sprawl, unemployment and underemployment (especially among the young, women, and minorities), and overburdened or outmoded judicial systems.

In these areas, the Fund has found that it is able to fill a needed role not presently performed by others. National official representatives stationed in foreign countries are almost exclusively concerned with traditional international relations and commercial matters, and are neither trained nor expected to monitor domestic problems. On the other hand, private persons and local officials who may be interested in establishing contacts with counterparts in other countries and learning from their experiences face serious obstacles. For reasons noted, they can seldom rely on their own country's embassies abroad. Other institutions dedicated to facilitating international working relations on domestic matters are virtually non-existent. Substantive contacts and communications tend to be scant, intermittent, and generalized—based on occasional trips, journal articles, or professional association meetings. International travel is increasingly expensive and sometimes risks charges of "junketeering." Identification of specific potential gains from establishing ties with foreign counterparts is usually difficult. The principal advantages are often intangible—ideas about alternative approaches to problems applicable to like situations elsewhere only with adaption.

But there are real and demonstrable benefits to be obtained from international activities on domestic common problems, as can be illustrated by a number of projects supported by the Fund. American city managers are working to transfer and develop a range of urban systems and technologies observed in England, Germany, and the Netherlands. French and German authorities have monitored innovative practices in the administration of justice in New York City that appear to warrant experimentation in Paris, Hamburg, and elsewhere. Young American experts have helped British government hosts to effect reforms in matters of pre-trial detention and employment of former offenders. Manpower experts from the United States have learned much from contacts with European counterparts about measures used to combat unemployment during recession. American newspaper editors in all parts of the country have found that their readers are interested in regular articles by European and Japanese journalists on the approaches and perspectives of other countries about diverse common domestic problems. Land use experts have found that practices in many other industrial democracies have evolved in high-density situations environmental amenities which hold useful lessons for U.S. jurisdictions.

The early activities of the Fund in priority areas represent beginnings only, but definite headway has been made. In the urban field, new efforts have been institutionalized to coordinate the previously fragmented international activities of U.S. and Canadian local government and professional groups, to facilitate U.S.-European urban technology exchange, and to provide American practitioners with regular reports about important urban innovation abroad and occasional opportunities for first-hand observations. Priority attention to selected issues of employment and conditions of work has resulted in Fund support for Europeans and Americans interested in changing patterns of labor-management-government relations in both areas and ways to establish better communications, with emphasis on job creation, work improvement, and the special

problems of women in the workforce. A major project on comparative land use practices in eight industrial countries is expected to yield important findings and recommendations in 1977. In the area most recently designated for Fund priority attention, American experts have been helped to undertake long-term collaborative work with British and French officials to improve the machinery of justice. Like projects are under active exploration with German authorities. In the United States and to a lesser extent in Europe, persons and groups with serious international concerns in these fields are turning with increasing frequency to the Fund.

It has been harder to define an appropriate and distinctive program for the Fund in the second area of its mandate: international common problems. Modern societies face evergrowing numbers of such problems which will be resolved, if at all, only by more enlightened and coordinated policies and actions by governments. The traditional agenda of diplomatic, military, and arms control problems has been lengthened by a long list of predominantly economic and resource problems, which have an immediate and often urgent impact on most industrial societies. It is these so-called interdependence issues on which the Fund has focused its international problems program.

National decisions about inflation, taxes, fiscal and monetary matters, trade, capital and labor, and environmental standards often have both direct and indirect consequences in other countries. Although governments, international organizations, and foreign affairs specialists and others in private life are giving such matters increasing attention, many of these new international relationships are only beginning to be understood. All too frequently known or predictable international consequences of national actions are ignored or addressed without sufficient consideration of the mutual or conflicting interests of other countries. No two industrial democracies have, for example, yet evolved fully coordinated policies to combat unemployment, inflation, and other major economic problems, despite shared values and close economic connections.

Obviously the potential role of a private organization in such matters where government interests dominate is highly circumscribed. Anyone with substantial international experience, however, knows how difficult it is for national governments to deal effectively with complex modern international economic and resource issues, which require new forms of accommodation and joint efforts by diverse governmental, intergovernmental, and private interests. All too often, official attention is concentrated on gaining short-run national advantages rather than on developing durable forms of cooperation with other countries.

Under this program the Fund has concentrated its support on selected international economic, resource, and environmental issues, seeking not to duplicate efforts by governments and others commanding far greater resources. It has supported projects to bring together American, European, Japanese, and other officials and private experts interested in developing new understandings and alternative policy solutions to problems of international trade and industrial subsidies, inflation, the coordination of major economic decisions of leading industrial countries, and long-range energy policies. Issues of this kind are also the focus of Fund-supported exchanges of leading younger European and American parliamentarians.

The trustees have authorized projects to improve public and private understanding in the United States and Europe of situations of rapid political and economic change. Thus, in 1976, the Fund cosponsored a three-day conference in Lisbon at which U.S., Portuguese, and other European economists examined the current problems of Portugal's economy and its economic relations with the rest of Europe and America. Similar projects are under consideration for 1977 and future years.

The Fund is also exploring the feasibility of future activities concerned with the response of industrial societies to the needs of developing countries, the design of improved institutional machinery to deal with certain international economic, resource, and environmental issues, and new facets of East-West economic relations.

The purpose of all Fund projects and plans under the international problems program is to assist others in developing joint U.S.-European and wider appraisals and policy options for the new agenda of common economic and related issues facing the industrial countries.

Communications and media activities have been stressed by the Fund under both domestic and international common problems programs. The objectives here have been twofold:

—to disseminate comparative international experience in areas of priority interest—cities, work, land use, criminal justice—to the American public and to specialized audiences, both as part of all regular projects and in separately commissioned writings and media programs; and

—to increase general U.S. public awareness of the approaches and perspectives of other industrial societies towards a broad range of common problems, both domestic and international.

As a result of Fund projects, twice-weekly articles about such problems by outstanding European and Japanese journalists are now appearing in dozens of newspapers across America as part of the International Writers Service edited by Stanley Karnow; European commentators can be heard in most major U.S. cities on the regular weekly half-hour public service "Atlantic Dateline" program anchored and produced by Edward P. Morgan and John O'Toole; and public television network series and special public affairs programs by Bill Moyers, Martin Agronsky, and others have included European views and film.

The third Fund mandate is to support European-American studies. U.S. scholarly interest in comparative study of European and U.S. issues has been greater than resources available to support adequate training and research, particularly in recent years, as support from both foundations and government agencies has declined. Few European scholars have been involved in research on contemporary U.S. developments, and support for research in the U.S. has been scarce in most European countries. The European-American studies programs support research and contact among scholars in the social and policy sciences.

The German Marshall Fund Fellowship program provides individual support to advanced U.S. and European scholars doing comparative research on domestic and international issues of importance to industrial societies. Awards are made to persons whose research projects promise to contribute to a better understanding and resolution of significant contemporary and emerging issues, particularly their economic, social, and political aspects. All fellowship projects sponsored by the Fund have both a U.S. and a European dimension. Projects focus on a broad range of significant contemporary problems, in addition to the issues of priority interest to the Fund in its other programs.

Awards totalling approximately $750,000 have been made to more than thirty U.S. and European scholars in the first three years of the fellowship program. The grants have been made to scholars working on such issues as economic policies of governments towards their own less developed regions, and comparative employment, housing, and energy policies.

Scholars tend to be isolated from one another by language, geography, disciplines, and other factors. The Fund has encouraged activities designed to diminish this isolation through assistance to two networks of scholars established to strengthen cooperation and communication with peers in different countries and disciplines. The Council for European Studies, a consortium of some three dozen U.S. universities with graduate programs focused on Europe, helps to establish contact among interested scholars in Europe and the United States through its newsletter, its support for research planning groups, and other activities. The Joint Committee on Western Europe of the Social Science Research Council and the American Council of Learned Societies includes social scientists from different countries working together to develop new perspectives on issues of common interest.

The early development of the Fund's programs has been made possible by the understanding and support of many friends in the United States, Germany, and elsewhere. No organization could have had a more thoughtful and constructive governing body. I would like to express thanks to my colleagues on the Board of Trustees who have given so generously of their time and counsel without compensation, and particularly to our Chairman, Harvey Brooks, whose wise and dedicated leadership has been the greatest single source of strength for all of us. Many talented consultants have helped us on a part-time basis to develop programs and projects, and such help has permitted us to avoid building a large administrative structure. Finally, I extend most special thanks to those who share with me the full-time responsibilities and rewards of conducting the Fund's affairs: R. Gerald Livingston, Peter R. Weitz, Marianne Santone, Brenda Appleby, Doris Washington, Denie Weil, Christina Graf, Nancy Palmer, and our European associates, Marion Bieber in Paris and Gebhard Schweigler ih Bonn.

Three decades ago, the Marshall Plan enabled a generation of Americans and Europeans to work closely together in resolving post-war recovery problems of greatest immediacy. The return of relative material well-being, normal commercial competition, and many other preoccupations have tended to obscure the long current agenda of complex and urgent common problems.

Those of us entrusted with the governance of the Fund have been given an unparalleled opportunity to design and to support new initiatives by Americans, Europeans, and others to address contemporary common problems. We have found that there are no shortages of ideas or of men and women of talent, vision, and dedication needed to improve understanding and to suggest new means of resolving the problems which we have chosen as our priorities.

Those priorities will, of course, change in the years ahead to reflect new and emerging issues. The acceleration of social and technological change is evident in all industrial societies—in growing demands for participation in the conduct of public affairs, and in stresses on institutions as familiar but diverse as our families, our courts, our newspapers, and our places of employment. We are determined that the Fund remain responsive to change. We invite new program suggestions from concerned persons everywhere.

The experiences of the German Marshall Fund during its first five years as recorded in the main body of this report permit only interim judgments, but we are increasingly confident of the Fund's ability to accomplish needed ends that are in keeping both with the spirit of the gift and the Marshall Plan.

—BENJAMIN H. READ.

Spring 1977.

MARY E. KING DELIVERS A THOUGHTFUL SPEECH ON THE IMPORTANCE OF VOLUNTEERS IN ACTION IN IMPROVING HEALTH CARE

Mr. PELL. Mr. President, Mary King, the Deputy Director of ACTION, delivered a thoughtful and meaningful statement and the condition of health care in the United States and around the world and on the contributions of ACTION volunteers in the health field when she spoke to the national convention of the American Medical Association.

Ms. King, who has deep personal experience and interest in the health area, made a forceful case for the importance and effectiveness of volunteer efforts in improving health care. ACTION's programs, including the Peace Corps, VISTA, and the foster grandparents retired senior volunteer program—RSVP—have already targeted several initial areas for increased involvement. Domestically, RSVP and VISTA are working to stem and reverse the recent frightening trend of nonimmunization of children against childhood diseases, such as polio, measles, rubella, diptheria, and mumps. In other nations Peace Corps volunteers have led the way in working to introduce preventative care, emergency care systems, and nutrition and public sanitation planning to every village and region where they were assigned.

This is an extremely impressive record. I am privileged to serve on both Senate Committees, Human Resources and Foreign Relations and in particular on the Health Subcommittee which have authorizing responsibility for ACTION's programs, and I am delighted at the focus on planning, prevention, and volunteer efforts which Ms. King has so eloquently enunciated. The continuing problems of health care are startling, both at home and abroad, and volunteer efforts must be fully utilized to solve these problems. I am confident that with Ms. King's involvement and goals, as enunciated in her speech, ACTION will be in the forefront of that movement, where it belongs and where it brings great and deserved credit to all of its volunteers and to our country.

Mr. President, I believe that all of us would greatly benefit from reading Ms. King's words and ask unanimous consent that her full remarks be printed at this time in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Remarks by Mary E. King

Good morning. It is a privilege to have the opportunity to talk with you. As part of my responsibilities for VISTA, the Peace Corps and several federal programs for the aging, I am concerned with the level of health care received by some of this nation's—and the world's—neediest people.

We are all aware and proud of the remarkable advances achieved in the science and technology of medicine during the last 40 years. The mechanical pacemaker, the EEG and kidney dialysis provide daily miracles many of us casually take for granted. Yet, during the last ten years a situation has developed which now calls into question the attainability of adequate, affordable health care for all Americans. Recent statistics reveal the scope of the problem.

In 1965, Americans spent $39 billion, less than six percent of Gross National Product (GNP) for health services. By 1976, the per capita yearly figure for health care had topped the $600 mark. Physicians' fees rose from $44.21 per capita in 1965 to $96.09 in 1974.

Hospital costs recently have been rising at an annual rate of 14 or 15 percent, which is more than twice as fast as the rise in the consumer price index. Today, more than 40 cents of every health dollar is consumed in hospital costs.

However, recent rises in both family and national expenditures for health care have not necessarily meant corresponding improvements in health status. The United States, for instance, continues to lag behind many other countries in terms of overall health status. In a country which boasts a physician-to-population ratio of approximately one to 700—when the world ratio is one to 50,000—we are tied for sixteenth among developed nations in the infant mortality rate. Our average life expectancy is lower than that in 14 other countries.

For the residents of the District of Columbia, for example, the startling fact is that life expectancy is actually lower than that for people in Sri Lanka, a country with a per capita income of $198 per year.

But the picture is not entirely bleak. We have made dramatic progress in certain areas In the last 15 years especially, we have improved the availability of physician services and largely eliminated the gap between visits made by rich and poor, black and white, through the increased access provided by the Medicare and Medicaid programs. In addition to somewhat better organized care programs, the number and kinds of health professionals who provide such care have been greatly expanded.

Our medical schools increased the number of physicians in training by 50 percent during the period 1970 to 1976. During this period, the ratio of female to male medical students increased, as did the proportion of minority groups and low income students. Nursing schools have also increased their enrollments by an impressive 52 percent and the clinical training of nurse graduates has been broadened and upgraded to give them larger and more direct patient care responsibilities. New kinds of health workers, notably physician assistants, have also been entering the field in rapidly increasing numbers.

There has been an encouraging trend toward family practice residencies as well, and an increased interest in the development of rural health care systems. Two other noteworthy developments have been the establishment of community medicine departments in medical schools and the trend toward decentralization of services from large city hospital outpatient departments into the community.

Nevertheless, it is obvious that something fundamental has gone wrong with our system of health care. Yesterday's all-purpose family doctor has become today's medical specialist, a technician who concentrates on organs, rather than on the whole person. Consequently there is no central figure responsible for coordinating the entire care a patient should receive. The patient is often confused by a maze of fragmented, uncoordinated services and the multiple medical records generated by them. No single medical care provider is aware of all the patient's problems, diagnoses, or treatment.

At the same time, the use of sophisticated, expensive technology, most recently epitomized by the controversial CT scanner, is being introduced without clear indications of its possible value or potential harm. Since the Second World War, our thinking, our energies, and our resources in the field of medical care have emphasized the dramatic breakthroughs achieved in curative medicine. Preventive care has largely been ignored. As a result, much needs to be done to reduce and eliminate risks to good health.

Our recent record in childhood immunization points up the work that needs to be done in prevention. There are 52 million children between the ages of one and 14 in the United States.

Approximately 19 million have not been completely immunized against polio, 14 million are not protected from measles and rubella, 13 million are inadequately immunized for diptheria-pertussis-tetanus and 25 million have not been immunized against mumps. Under the able leadership of HEW Secretary Califano and Ms. Betty Bumpers, a project is being designed to address these extensive problems of under-immunization. A large part of the organizational effort of the program will be accomplished by volunteers, including ACTION-related volunteers from VISTA and the Retired Senior Volunteer Program (RSVP).

In addition to programs like this, we need massive health education programs for adults so they can assume individual responsibility for their own health and understand the multiple causes of disease as well as the genetic, environmental and behavioral factors which contribute to health. With necessary information at hand, they will be able to make adjustments in lifestyles which contribute to overall good health.

If this and more is going to happen in the area of prevention and control, we need to change our health care spending habits. Currently, only three cents of every health dollar goes for disease prevention. Less than half a cent is spent on health education. A miniscule quarter of one cent is expended on environmental health.

Our medical care is disease-oriented and the hospital is the first line of defense, instead of the last. Millions and millions of Americans now rely on the emergency room for their health care requirements. There needs to be a fundamental shift in emphasis to primary and preventive health care so that the highly technical and expensive resources of the hospital are not overused and abused.

Ironically, the emergency room and the hospital are also the entry point for health care in most of the developing nations of the world. On recent visits with Peace Corps volunteers overseas, I have seen that just as we have done in the last 30 years, many developing nations spend three-quarters of their health dollars on curative, institutionalized health services. They have established large, sophisticated hospitals in their capital cities. Stocked with modern equipment and often staffed with people trained in Europe and America, these facilities may serve perhaps 15 percent of the population. Their services are inaccessible and prohibitively expensive to those living in teeming slums, outlying district towns and isolated rural valleys and villages.

Sadly, the same is true for many segments of our society, too. Particularly for rural residents and the low-income elderly, there has been a significant reduction in the availability of service. For children under five in low-income families, conditions of service availability have not improved substantially during the last five years.

With the establishment of the National Health Service Corps, the AMA's own Rural Health Division, and such innovative programs as the University of Arizona's rural health residency project, the problems peculiar to rural health delivery are beginning to receive the kind of organized attention that may lead to balance between urban and rural health care.

According to the U.S. Public Health Serv-

ice, approximately one out of every two rural residents—more than 31 million people—live in areas designated as medically underserved. Obviously there is a need to create a process for attracting individuals from these areas into training, and providing incentives for them to return and stay. Perhaps this could be done through consolidation of services in one location with a coordinated transportation system to link patients with physicians. Or through a community-run facility which would remain in place despite a shifting group of physician providers. Or by amending state and federal laws to provide more equitable reimbursement for physician services in rural areas vis-a-vis urban areas.

During the last 50 years, many rural regions have gone from a high point of relative prosperity to bleak poverty as the bulk of their populations—drawn by the economic magnets of large regional and urban population centers—have migrated outward and fragile economies have subsequently shattered. In varying degrees, these rural communities have been left with the conditions that widespread poverty breeds: high rates of infant mortality, poor diets and malnutrition, lack of potable water and private sanitation, high incidences of both childhood and adult disease, illiteracy, and ignorance.

Because our modern system of health care delivery is so centralized and so dependent on its sophisticated technology, it cannot adequately deal with such basic, widespread human problems. The curative approach alone just doesn't work. It is too mechanistic; too specialized.

To deal with such problems effectively, we must develop rational regional health planning which is built from the ground up, and not from the top down. The Health Planning Act of 1974 (P.L. 93-641), in which many of you are involved as members of Health Systems Agency Boards, is an important part of our national effort to plan rationally to meet the health needs of every American.

Physicians can and should play a central role in the return to sound preventive practices. You have the technical capability to eradicate certain diseases and thereby change our health status indicators. In view of this, physicians should take on the responsibility of assuring that no patient goes without an immunization check. Preventive services, such as a simple blood pressure check, should also become part of the routine, as should consultations with patients about the health risks they take due to their particular lifestyles.

Building on the success of the worldwide smallpox eradication campaign, the 150 member states of the World Health Organization (WHO) have committeed themselves to the goal of immunizing all children in the world against polio, measles, diphtheria, tetanus and whooping cough by 1990. As I listened to discussions at the recent World Health Assembly in Geneva, it was evident that unless the childhood immunization program is effectively carried out in this country, the United States may fail in accomplishing a goal to which vastly poorer nations are committed.

In addition to this world immunization goal, American physicians should be aware of a second important WHO goal: to provide an adequate level of health care for all people in the world by the year 2000. These two goals were established through skillful leadership by the director, the Danish physician, Dr. Halfden Mahler, and his Nigerian Deputy, Dr. T. A. Lambo.

Physician participation in special programs is certainly not new, nor is it extraordinary. In Sodus, N.Y., for instance, in a project sponsored by the University of Rochester, a physician group pledged itself to maintain measles immunization checks on all patients. The program consumed little time and less money. Its rewards were substantial. If we apply the same kind of conscientiousness to the WHO goals, the payoffs will outweigh any of the costs involved.

As far as the ACTION Agency is concerned, we will do all in our power to develop to the fullest our participation in health education and other appropriate health service programs with our almost a quarter of a million volunteers. As an example of what we can do, I would like to highlight a program in Hawaii to which VISTA volunteers have made great contributions.

There, bilingual volunteers are serving newly-arrived Filipino, Samoan and Korean immigrants in a statewide project sponsored by the Hawaii Department of Health. Both urban and rural in its outreach, the project encourages immigrants to have tests for tuberculosis and other communicable diseases. VISTA volunteers have contacted over 10,000 people so far and have assisted 8,000 of these in taking advantage of Public Health Service facilities. In addition to health service referrals, the volunteers have helped the immigrants get assistance from state agencies concerned with employment, welfare, and food stamps.

Another good example of an effective approach to our medically underserved areas is the Beaufort-Jasper Comprehensive Health Services, Inc., a broad-based community agency set up in 1970 by the U.S. Office of Economic Opportunity with the leadership and assistance of Senator Ernest Hollings.

Beaufort and Jasper counties occupy the southeastern tip of South Carolina. They lie along the coast just north of Savannah, Georgia, and include within their jurisdiction impoverished and isolated sea islands as well as the posh resorts of Hilton Head. At the start of the Health Services program, county residents suffered from skin diseases, rotting teeth, malnutrition, uncorrected vision problems, sores and a variety of other infections. A startling two-thirds of the children in the two counties had intestinal parasites.

In the seven years since it began operation, Beaufort-Jasper has had dramatic success. Infant deaths, for example, have declined from 32 per 1,000 in 1965 to 22 per 1,000 in 1975; fetal deaths fell from 39 per 1,000 to 10 per 1,000 in the same period. Wells and proper sanitation have been installed for 1,600 families. Hypertension is markedly reduced. Parasite infestation has almost disappeared. Projects like this illustrate the integral role organized health services can play within a community. They show us that health care cannot and should not be taken out of its overall human context. The laboratory approach to disease is necessary for research and development of vaccines, and for new medical technologies. But for these two counties, and hundreds like them, the isolated clinical approach is not appropriate.

Appropriate health services delivery systems are a vital piece in the puzzle of overall human development. As the South Carolina example has proven so well, a health care system based in the community and sensitive to its total needs can serve as the focal point for a comprehensive development effort.

In view of this, we must ask: Why is it that we are alarmed by the thought of lagging behind the Soviet Union in armaments, but seem unconcerned to remain behind the rest of the world in access to primary health care?

Some of the developing nations are now beginning to turn their emphasis from centralized facilities specializing in institutional curative medicine to a broad-based preventive approach. They are beginning to expend their limited financial and human resources according to national plans for development which fully integrate health needs with those for agriculture, industry and education. These nations are increasingly sophisticated in their analysis of the limitations of institutionalized approaches to their problems.

In Niger, for example, an intriguing alternative to Western health models is being implemented with Peace Corps assistance. Villagers, chosen by their villages, are being trained to provide primary health care services to their communities. Each village team consists of a health care worker responsible for delivering treatment and developing hygiene, as well as a traditional birth attendant trained in comprehensive midwifery. Rural medical officers provide the necessary link between these primary health workers and the curative resources of Niger's regional and national hospitals. This tri-level amalgam will provide effective outreach which ensures a successful, integrated system of health care. A significant feature is the participation in the system by the villagers themselves. Peace Corps volunteers who are assisting in Niger's national program are deeply impressed by its effectiveness.

In Honduras, the second poorest nation in this hemisphere, Peace Corps has joined in a government program designed to reduce the incidence of Grades II and III malnutrition among children under five from 70 to 40 percent in five years. With limited resources at its command, the Honduran National Social Welfare Board is concentrating its effort in four of the country's eight administrative regions.

Twenty Peace Corps volunteers, 15 of them nutritionists, are working with Honduran counterparts in several regional community centers operated by the Board. Mothers and children participate in a comprehensive nutrition program. While the children eat balanced meals, volunteers and their Honduran counterparts teach the basics in food preparation, household sanitation and nutrition to the mothers. As limited as the program may be, its results will go far to implement an overall national plan for development.

Although the Health Planning Act is a step in the right direction, the concept of national planning of any sort has never fared well in the United States. We need to organize and rationalize our efforts in order to conserve and spend our resources wisely and to the best effect. Our 302 different federal health programs suffer from a lack of cooperation, coordination and careful planning. There is endless overlapping, duplication and waste. We lag behind many of the developing nations of the Third World in a comprehensive overall approach.

For more than eight years, Senator Edward Kennedy and Congressman Paul Rogers have led the fight for comprehensive health reform to improve our ability to provide adequate health care for all Americans. And now President Carter's proposed new policies in health, if established, will direct needed changes that will ensure every American receives adequate, affordable care.

The President's call for national health insurance, hospital cost containment and child health assessment may seem too radical for some. But for those 38 million Americans without insurance coverage; for those hospital patients facing mountainous bills; and for those millions of poor children who do not receive good, regular health care, the President's proposals are responsive and responsible.

There is a great deal of concern and confusion in our country about what ought to be done about health care. The problems will not be resolved overnight. But the overriding point of the matter is that health is essential to a society's development and that we must constantly strive to provide adequate health care for all.

I am confident that we can overcome the challenges facing us.

Thank you very much.

DR. MARY EDWARDS WALKER

Mr. MATHIAS. Mr. President, a grave injustice was righted recently when the Department of the Army restored the Congressional Medal of Honor to Dr. Mary Edwards Walker, the first and only woman ever to have received this high honor.

Dr. Walker has finally been vindicated. Her courageous service as a U.S. Army surgeon during the Civil War is at last properly recognized.

Dr. Walker was an extraordinary and courageous lady who did her duty at great personal risk and sacrifice. Even after being captured and taken prisoner by the Confederate forces in Richmond, Va., she continued to treat her fellow prisoners, begging her captors for medical supplies.

She was first awarded the Congressional Medal of Honor on November 11, 1865, by President Andrew Johnson. The original citation for the medal had been written by President Abraham Lincoln—characteristically on the back of an envelope.

Unfortunately, a technicality got in the way of Dr. Walker's recognition because she was a contract physician and on June 3, 1917, her medal was revoked by the Army. This action was a cruel insult to the devoted woman doctor who gave of her talents far above and beyond the call of duty.

But Dr. Walker was not one to submit meekly to such an affront. Dr. Walker simply refused to give up the medal and wore it until her death in 1919. She also fought to the end to have the revocation order rescinded.

In fact, her death resulted, in part, from a fall on the Capitol steps where she had come to petition Congress to restore the Congressional Medal to her.

Happily, "Dr. Mary's" heirs and friends kept up the fight for this unique feminist. And at long last—60 years later—justice had been done. The Medal of Honor has been restored to the only woman ever so honored—Dr. Mary Edwards Walker.

I am confident that all my colleagues are as gratified as I am that right and justice have finally prevailed. Dr. Walker was truly an outstanding American and her life can serve as an example of dedication and tenacity to all of us.

Mr. President, I ask that the Medal of Honor citation by President Andrew Johnson be printed in the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICE.

Whereas, it appears from Official Reports that Doctor Mary E. Walker, a graduate of Medicine of the Medical School at Syracuse, New York "has rendered valuable service to the Government, and her efforts have been earnest and untiring in a variety of ways," and that she was assigned to duty and served as an Assistant Surgeon in charge of female prisoners at Louisville, Kentucky, upon the recommendation of Major-Generals Sherman and Thomas, and faithfully served as a contract Surgeon in the service of the United States, and has devoted herself with patriotic zeal to the relief of our sick and wounded soldiers, both in the field and hospital, to the detriment of her own health, and has also endured hardships as a prisoner of war four months in a Southern prison while acting as a contract Surgeon, and

Whereas, by reason of her not being a commissioned officer in the military service, a brevet or honorary rank cannot under existing laws be conferred upon her; and

Whereas, in the opinion of the President, an honorable recognition of her services and sufferings should be made, it is ordered

That a testimonial thereof shall be hereby made and given to the said Doctor Mary E. Walker, and that the usual medal of honor for meritorious services be given her.

Given under my hand, in the City of Washington, D.C., this eleventh day of November, A.D. 1865.

ANDREW JOHNSON, *President.*

By the President:

EDWIN M. STANTON,
Secretary of War.

FTC COMMISSIONER DOLE AND SENATOR DOLE ON THE NEED FOR AN AGENCY FOR CONSUMER PROTECTION

Mr. PERCY. Mr. President, recently Senator DOLE and his wife, Federal Trade Commissioner Elizabeth Hanford Dole, spoke on opposite sides of the Consumer Protection Agency issue before the American Advertising Federation. Commissioner Dole and a majority of the members of the Federal Trade Commission went on record not long ago in support of the legislation.

In her remarks, Commissioner Dole observed that, under the current system, consumers lack the same voice as businesses when issues affecting them are considered in government:

I can tell you from personal experience—both at the FTC and as Deputy Director of the White House Office of Consumer Affairs—that I have seen, first hand, the type of "clout" which an industry can bring to bear for or against government actions which may affect it. Certainly business' voice should be heard, but the strength and volume of that voice exceeds by a long shot, anything I have ever seen on the consumer side. . . . The truth is that on many issues, consumerists are firing popguns compared to some of the big howitzers that business rolls into Washington.

Commissioner Dole underlined the urgency for the proposed Agency by pointing out that the Federal Government decides how to spend more than 1 dollar of every 3 in the United States. Where Federal spending amounts to such a large share of the gross national product, it is essential that everyone—businessman, worker, and consumer—be given equal influence in the way decisions are made.

In response to his wife's remarks, Senator DOLE cautioned against creating additional layers of bureaucracy to insure that the existing ones are doing their jobs. DOLE contended:

The old ostrich approach of funding a new bureaucracy to solve a particular problem is a practice whose time has come and, to the relief of most Americans, gone.

I have occasionally heard Senator DOLE's argument that the proposed Agency might counter our effort to streamline much of our bureaucratic machinery. As Commissioner Dole aptly points out, however, establishment of an Agency for Consumer Protection could well serve to reduce the amount of unwanted, ineffective, and inefficient regulation under which consumers and businessmen alike chafe. She noted:

Not more, but less regulation could thus be one of the fruits of an Agency for Consumer Protection, and new regulations would evolve in a much more enlightened environment.

In his talk, the good Senator from Kansas as usual is crisp in articulating his reasons for opposing the Agency. But while clear, I believe he is clearly wrong. As many times as I have found myself in agreement with him on issues in the past, in this instance I must concur in the wisdom and logic of his wife.

As Government insiders who have dealt extensively with businesses and consumers, both Commissioner Dole and Senator DOLE are exceptionally well-qualified to speak on these issues. I ask unanimous consent to have their remarks printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE AGENCY FOR CONSUMER PROTECTION: A FEDERAL TRADE COMMISSIONER'S VIEW

(By Elizabeth Hanford Dole)

Mr. Chairman, Distinguished Members of the American Advertising Federation, and Senator Dole:

I appreciate the opportunity to appear before you this morning. Someone told me that to come over here and give a speech supporting the Agency for Consumer Protection was like a Christian volunteering for duty in the lion's den.

But I'm more hopeful than that. I'm counting on you for a fair hearing, and I would also like to think that we could discuss the Consumer Protection Agency more dispassionately than some have in the past. Unfortunately, it has become too much of a symbol, for some now look on the agency as a make or break issue. This is really not a test of virility to see who has the loudest voice in the jungle. What we need today, as the Congress nears a vote on the Consumer Protection Agency, is a little more light and a little less heat.

I would suggest that there is really only one central issue in this debate: will the consumer be given an effective voice within the vast catacombs of the federal government?

I and a majority of the members of the Federal Trade Commission about a month ago went on record in support of this legislation. We indicated that the resolution of competing visions of the public interest openly and forcefully presented produces decisions which best serve the public interest. In keeping with this principle of open advocacy, my husband, who recently went on record opposing the agency, will tell you why he is no longer able to support it. I'll let him have the last word here, and hope that others have the last word when the final votes are tallied.

Opponents of the agency tell you that we already have a multitude of agencies to look after the consumer's interest. As a member of the FTC. I am proud of the work we are doing at our agency to protect consumers' rights, but I can tell you from personal experience—both at the FTC and as Deputy Director of the White House Office of Consumer Affairs—that I have seen, first hand, the type of "clout" which an industry can bring to bear for or against government actions which may affect it. Certainly, business' voice should be heard, but the strength and volume of that voice exceeds, by a long shot, anything I have ever seen on the consumer side. At the Federal Trade Commission, we are blessed by what I consider to be

the most talented staff in Washington, but there are times when staff cannot, on its limited budget, come anywhere close to matching the resources and sheer manpower commitment which many private firms and industry associations can muster.

It is a gross distortion of reality to argue that the consumer is an effective participant in the decisions of government today or has representation equal to that of the businessman.

Many consumers feel that major decisions are made at the highest echelons of government without so much as a "how-do-you-do" to consumer interests. But you say, what about Ralph Nader and the army he has organized along the banks of the Potomac? Aren't they enough for the consumer? The truth is that on many issues, consumerists are firing popguns compared to some of the big howitzers that business rolls into Washington. That's why sincere efforts are being made by people like Esther Peterson, Special Assistant to the President for Consumer Affairs, and consumer groups ad some business leaders to win support for the agency. Yet the average consumer may once again find that he has been out-gunned and outmanned.

You know yourself how important federal decisions have become in our daily lives. How often have you been to business luncheons where the speaker complains that federal spending now accounts for almost 35 percent of our GNP? Probably more times than your stomach cares to remember. But the point is that if the federal government is going to decide how to spend one dollar out of every three in our society, if the federal government is going to regulate or tax almost every living creature, big or small, then it is absolutely essential that each of us—businessman, worker, farmer, consumer—have equal influence on the way those decisions are made. Until we have a Consumer Protection Agency, or its equivalent, the consumer will always be on the outside looking in.

But, say the opponents, this agency will just add another layer of government—more regulations, more bureaucrats, more red tape, more wasted spending. Those who say the agency entails more big government should take a harder look at what's being proposed. I share the frustration with big government; but getting down to specifics, I also think those who diagnose an adverse public response to this agency are wrong. They have their fingers on the wrong pulse. According to the recent Lou Harris Survey, a majority of the people surveyed favored the creation of the agency—52 percent to 34 percent opposed. Only among senior business managers and business consumer affairs leaders did a majority oppose it. Therefore, in our zeal to make government leaner and more effective, let's not sweep aside good and bad programs alike without distinction. We should not instinctively reject all new initiatives, even those aimed at providing better government. In the area of regulation, when decisionmakers have good information, government is better. I believe the Consumer Agency would strike a blow for good government. It is a step in the right direction toward restoring consumer confidence that someone in Washington is listening.

I don't intend to dot every "I" and cross every "T" on the specifics of the pending bills, but I should point out that the agency would have no regulatory powers; no authority to set rates, routes, or standards; no mandate to issue licenses, rules, or orders; no inspectors to slap you with fines. This agency would not be more of the same old stuff. It would have only the power to present a consumer viewpoint before other agencies and the power to seek court review of an adverse ruling.

Moreover, its ability to gather information—to generate more paperwork—would be strictly limited. Before contacting business, it would have to try to get its information from existing government agencies or other sources. Except in extraordinary circumstances, it may not seek information from small business, or for that matter from anyone else until the Office of Management and Budget has reviewed its request. Even then, if the request is burdensome or duplicative, a court may set it aside. These limitations go a long way toward meeting business concerns about burdensome information gathering.

In short, the agency could only obtain enough information to ensure that it could play a meaningful role in Washington. In this respect, many consumers astutely perceive this agency not as more bureaucracy at its worst, but government at its best. It might just wind up surprising a few of you as well, because in many areas, the agency is likely to be a friend—not a foe. When regulations cost consumers millions or even billions of dollars but reap few benefits, all of us have a mutual interest in their elimination. Not more, but less regulation could thus be one of the fruits of an Agency for Consumer Protection, and new regulations would evolve in a much more enlightened environment.

Right now consumer programs are scattered everywhere. We need an agency with an overview to set priorities, get the information, and then be free to talk about the issues. The Consumer Agency fills this bill.

In addition to being a consumer advocate, it would also serve as a consultant to various agencies on consumer issues. It would be a clearinghouse for consumer complaints; an office in government to guide consumers through the federal maze of agencies, bureaus, divisions, departments, and administrations.

In an environment of big government, fragmentation of functions rewards those with great resources and savvy who "know their way around" a complex bureaucracy. The average consumer doesn't have the funds to buy "Washington" expertise.

Even well organized consumer groups are hard pressed just to keep track of the matters which interest them all over government. Add to that the cost of preparing to present a case and the further cost of presenting it, and it is obvious that these groups cannot be expected to undertake the task. For one thing, they're too thinly capitalized.

It is sound domestic policy, in my view, to have a government forum constantly in tune with what consumers are saying about the markets in which they shop. And it seems especially sound when government's own hand adds dead weight in some areas and no weight in others where a need exists.

Another criticism lodged against this agency is that it cannot possibly speak with a single voice for people with interests as diverse as consumers. I suggest to you that if you just ask the consumers, they won't be in the least troubled by the idea of being represented by a single agency.

No one dismisses the Department of Agriculture when the interests of small farmers and agribusiness diverge on farm policy. I haven't heard many businessmen, big or small, asking that we dismantle the Commerce Department. And for that matter, the American Advertising Federation, as an organization, opposes the agency, while some of its members support it. No one would argue that any of these organizations are ineffective or unnecessary simply because unanimous support cannot be rallied for any *single* position. As I said, consumers are just asking for a fair shake.

Even if all consumers don't see every issue eye to eye, they still have an interest in being heard. This agency would detect those majority of instances in which a common consumer interest is clear and strong, such as ensuring that laws are being enforced and in combating fraud and monopolization. And it would be uniquely equipped to distill and then present more than one consumer interest which may have an important bearing on the outcome of a case.

Let me make one final point. As leaders of the business community, all of you are keenly aware that public confidence in our major institutions has badly slipped in recent years.

Nowhere has that decline been more precipitous or more threatening than with regard to business, and I know that many of you are asking each other how you can restore public confidence in business and in the principles of free enterprise. Let me suggest that you will not be advancing your cause if business lobbyists succeed in killing the legislation establishing this infant agency. Indeed, you run a considerable risk of inviting another public backlash.

If this were just another regulatory agency that was going to impose more paperwork and more cumbersome rules upon business, I could understand the vehemence of the opposition. But obviously that is not the case.

Too many people today distrust government as well as business. They feel these are mammoth institutions making important decisions that will shape their daily lives, but they—the general public are being pushed aside, mere spectators. Perhaps this is why so many consumers feel that government as well as business is unresponsive and insensitive to their needs. In a nation which values its free institutions—free government and free enterprise—this is not a healthy state of affairs. Thus, in a very real and meaningful sense, you and I—government and business—both share an interest in bringing the consumer in out of the cold.

As a Federal Trade Commissioner, I believe that this new agency would be a strong ally in government. Sure, we might lock horns with each other from time to time, but as I read its proposed mandate, our objectives would be the same—to encourage free markets in which the consumer is sovereign. The key difference is that the FTC makes sure that business complies with consumer protection law, while this new agency would encourage government agencies to consider the consumer when making decisions.

In the past few years, the consumer movement has matured in America. It is no longer willing to accept paternalism, but wants equal representation. It says that consumers deserve an effective voice in the affairs of government. Like unions, farmers, and other interest groups that have marched down this road before, the American consumer movement no longer wants to be patted on the head and shunted aside. No longer are consumers willing to scrounge for crumbs that fall to the floor. The Agency for Consumer Protection would give them their own place at the table, as equals. And that, I believe, is where they belong.

Sometime when you're mulling over this issue again, you might remember a few years ago when General Douglas MacArthur was marking his 84th birthday. He walked out of the Waldorf Astoria, and newsmen asked him what he thought was the central issue of our time. MacArthur replied: "It's the age-old struggle: the roar of the crowd on one side and the voice of your conscience on the other."

Ladies and gentlemen, in the days ahead, I hope that you will listen to the voice of your conscience.

Thank you.

REMARKS OF SENATOR BOB DOLE

Mr. Chairman, distinguished officers and members of the American Advertising Federation and Madam Commissioner:

We live in a time of full disclosure. Therefore, let me confess that part of my opposition to the Consumer Protection Act, as it is humbly entitled by its sponsors, arises from

personal considerations. The principal advocate of the Act, Mr. Ralph Nader, described the bill in dramatic terms early in its troubled history on Capitol Hill. He said that it would create a "strike agency" to "revolutionize" the government and to "reform its entire apparatus". I want no such thing to happen to our previous speaker.

Before I turn to the other reasons why I oppose the legislation, let me disclose also that I am shamelessly biased in favor of Commissioner Dole, who is a distinguished member of the Federal Trade Commission and the very best advocate that any consumer could want in Washington. She is, I submit, living refutation of her own belief that consumers are unrepresented in our government.

SUPPORTED LAST YEAR'S BILL

My final disclosure is that I am a convert. I voted for and actively supported the Consumer Protection Act in 1970, 1974, and 1975, for some of the reasons that our prior speaker has just addressed. You may be interested to know why I have changed my mind.

The tired argument that the consumer is unrepresented has been the bill's shibboleth since the time, many years ago, when it was a mere gleam in Mr. Nader's eye. I have come to believe that this is not the case—a view shared by the General Federation of Women's Clubs, the largest women's organization in the world, when they adopted a resolution last Wednesday opposing the establishment of the Consumer Protection Agency as currently proposed.

COST OF EXISTING AGENCIES: $1.2 BILLION

We rely in this country on the marketplace as the principal consumer advocate, and we have the antitrust division of the Justice Department and the Federal Trade Commission to make certain that markets operate fairly and efficiently. And there is a cluster of other consumer protection agencies in our bureaucratic galaxy, most of which have been created within the past decade, whose powers now extend to practically every commercial activity in the United States. They include the Consumer Product Safety Commission, the Food and Drug Administration, the Environmental Protection Agency, the Federal Energy Administration, the Occupational Safety and Health Administration, the National Highway Traffic Safety Administration and the Nuclear Regulatory Commission, among others. Why not increase the effectiveness of these existing agencies rather than superimpose on them a further level of federal bureaucracy. Did you know that these agencies alone will cost us an estimated $1.2 billion in fiscal year 1978.

Another reason why I have changed my mind is my decision to take the President of the United States at his word. He campaigned hard on several themes; and it seems to me that practically every one of them is contradicted by the creation of a new independent agency to tie up the Executive Branch in litigation whenever that agency, not President Carter, feels that consumer interests need to be protected.

Candidate Carter challenged Mr. Nader as the nation's high priest of consumer advocacy. He said that he personally would be the number one consumer advocate, and he has taken steps to vindicate this promise by plucking many of the most ardent consumerists in the land from their private domain and placing them in high positions throughout the government. In fact, it's been said there would be no one left to run the new agency. He cannot be the nation's top consumerist by creating a Nader-inspired litigation strike force that will operate beyond his control. They will outdo him every time.

Candidate Carter said, and President Carter continues to say, that he is pledged to cut down on government spending, to reorganize the government more efficiently, to reduce bureaucratic harassment of business, and to control inflation. If these pledges are sincere, and I hope and believe that they are, it is an odd time indeed to create a new agency of the kind now urged upon us. It isn't enough to say, as he did on August 9, 1976, while addressing a group of consumerists from the "Public Citizen Forum" that, "This agency is different."

The new agency will cause a direct increase in government spending of $15 million during its first year of existence. After that, as is the case with any government agency, the sky is the limit. For example, you all know about OSHA—its first full year's authorization was $376,000, and OSHA's budget for this year is $133,300,000. And the Environmental Protection Agency's authorization for its first full year was $679 million, but EPA's total budget for this year is $6 billion. The CAB's original authorization was $14,026,480, and its present budget calls for $92,812,000.

What about government reorganization that we hear so much about and that we on Capitol Hill have been doing something about by creating, for example, a new Department of Energy? If reorganization to make government more responsive and efficient is a sincere concept, why then do we need a super-agency to police that government? I find the two concepts utterly inconsistent, and I find the reorganization course far more appealing. We should follow the President's lead in putting our governmental house in order before we create an independent agency to do it for us.

GOOD GUYS AND BAD GUYS

I have welcomed President Carter's assurances that governmental harassment of business and government-inspired inflation will be controlled by his Administration. But I see none of that in the consumer protection bill.

The premise of the bill—an unfortunate one I believe—is that there are good guys and bad guys in this world of ours. The bad guys are businessmen who captivate the government and line their pockets with gold at the expense of the good-guy consumers. Now the good guys will have their own super good guy in government.

I won't bore you with my views on the ancient debate over who wears the white and who wears the black hat. It will suffice to say that the Consumer Protection Act is anti-business. The new agency can use compulsory process to impose burdensome information demands upon businessmen: it can tie up expeditous government decisionmaking on which businessmen rely by intervention and litigation, and it can generally increase the climate of suspicion and distrust of business.

PRICE TAG FOR MORE GOVERNMENT

Nor will the President's wish to control inflation be served by consumer advocates. There is a price tag for more government, and it is a vast mistake to assume that business pays that price. Costs incurred by government intervention are passed on to consumers in the form of higher prices for goods and services. More bureaucracy will not serve President Carter's expressed desire to limit inflation.

So the basis for my new opposition is founded largely in the hope that our new President will succeed as the nation's premier consumer advocate, that government reorganization will trim away the fat and make our bureaucratic complex more responsive, that businessmen will be less harassed, and that inflation can be controlled. The Consumer Protection Act will work directly against the President in these efforts.

We hear a lot about "consumers" these days, and I am all for them. Everyone is a consumer, so perhaps the new agency should be called the Agency for Everyone's Advocacy.

But if you think of it in those terms, you come to realize that we already have such an agency in Washington. We call it the Congress, and just in recent years we have enacted a host of consumer-oriented legislation. For example: the Toxic Substances Control Act; Consumer Product Safety Act; Magnuson-Moss Warranty Federal Trade Commission Improvements; the Anti-Trust Improvements Act; Meat, Egg and Poultry Inspection Acts; Truth in Lending Act; Fair Credit Billing Act; the Equal Credit Opportunity Act; and a host of related consumer laws. I was informed as recently as yesterday by the Library of Congress that in this Congress alone some 531 bills touching on consumer concerns have been introduced; and in the 94th Congress, some 831 bills were introduced.

If we pass this bill, we are saying in effect that Congress, and indeed the President, are incapable of making certain that the government represents the interest of the people. I am unprepared to make that statement.

If the Federal Trade Commission or the Consumer Product Safety Commission or any other entity of this government is not performing its mandate to serve the Public Interest, then Congress and the President should do something about it. The Congress can and does exert enormous influence by virtue of its oversight authority. In the past several years the President has installed vigorous consumer representation offices within every major department of the Executive Branch. The great attention given to consumer problems by both branches over the past several years is additional evidence that now persuades me that there is no need for a new independent agency.

CREATE NEW AGENCY TO POLICE THE OLD ONES?

The old ostrich approach of funding a new bureaucracy to solve a particular problem is a practice whose time has come and, to the relief of most Americans, gone. Consider first the illogic of creating a new agency to police the old ones. I find little comfort in the concept that more bureaucracy is the answer to problems created for the most part by too much bureaucracy.

Moreover, an independent super-agency is not the proper solution to the ancient dilemma of who shall guard the guards themselves. The Constitution, as I understand it, places that burden elsewhere. Congress and the President serve that function as the only elected officials in our federal system. It is our job to assure that every agency of this government serves the best interest of all the people all the time. If the job is not being done, it is our fault. The creation of a new ship of state flying the flag of consumerism does not relieve us of the burden.

Getting back to the question of identifying who "consumers" are, the promoters of the consumer protection legislation have contrived a neat way to get around the fact that a consumer is no different than a person. One can also ask what is a "consumer interest". The advocates define a particular "consumer interest", and they say that this "consumer interest" is unique and separable from our other interests.

CONSUMERS NOT ALL THE SAME

This, I have concluded, makes no sense. There is no palpable consumer interest that one designated bureaucrat can or should represent. What is your interest in foreign grain sales? Well, this depends very much on who you are, does it not? Are you a farmer? A city-dweller? A baker? A foreign consumer? A taxpayer? What about balance of payments, international agreements, or foreign relations generally? When the new consumer advocate rushes headlong into this terribly

complex issue, whose interest will be advocated? What role would such an agency play in a saccharin ban?

The point is that you can't put on blinders and vigorously advocate what may be the interest of one consumer without doing violence to the interests of others. And you can't single-mindedly run the government for the benefit of the "consumer interest", even if there were such a thing. We have enough polarization institutionalized in our government now. The broad public interest, as defined and addressed by the Congress and the President, is the only interest that government has any business representing.

All of this brings me to a crucial point—the new consumer agency will have too much power. It is simply naive to accept, as some apparently do, that it will always be a small agency, that it will have no direct regulatory authority, and that it cannot impose its will on anycne.

BUREAUCRATIC GROWTH

That it will be a small agency is refuted by history. I can see it now. Fifteen million in the first year, twenty million in the second year, and twenty-five million in the third year as authorized in the bill, will be woefully inadequate, they will tell us. The Agency will have only scratched the surface of regulatory abuse, they will tell us. A few million more next year and the next year and the next is very necessary, they will tell us. What disturbs me even more is that we on Capitol Hill hardly blink at millions anymore.

And remember, this will be the representative of the American consumer speaking. By clothing the consumer advocate with the apparent authority of the people, we will have created a very potent political force.

By the same token, the lack of direct regulatory authority should be no problem for the new agency. The power of compulsory process, the power to intervene, and the power to sue—all on behalf of the American people—will afford immense leverage to the consumer advocate. These powers, even the threat of their use, will be sufficient to make the best established government official wither.

PRESIDENTIAL AUTHORITY

With all this power, whether legal or political, it would seem that there should be substantial accountability at the very least to the President. Try as I might, I see no practical controls on the agency. Although the legislation places it technically in the Executive Branch, it can sue the Executive Branch. The Courts have said that you cannot sue yourself, even if you are the President of the United States. The power to sue is the crux of the bill; so there is no way that the consumer advocate can be controlled by the President. He or she will be a free agent, roaming in the pastures of high government policy, speaking loudly and carrying a big legal and political stick.

Let me turn briefly to some specific areas of concern. Energy is one that is on everyone's mind. Less than one week after the President called upon a confused, skeptical nation to face the energy crisis, the Consumer Agency's principal advocate questioned the President's conclusion that this nation faced a critical shortage of energy resources. Now suppose that this were the officially-designated consumer representative speaking. Can you imagine the frustration, confounding effect of such a statement and its potential for deterioration of the national will?

FOOLHARDY AND IRONIC VENTURE

Take grain sales, which I mentioned earlier. The President made numerous campaign commitments against future grain embargoes, which he may or may not find himself able to keep. But the point is that decisions on issues of this magnitude should be arrived at by the President and the Congress. The enabling of a collection of lawyers with a narrow view to tie up these decisions by lawsuits, public statements, or any other means is a foolhardy venture at best.

There are still many unanswered and unanswerable questions about the scope and responsibilities of a Consumer Protection Agency: How will the Consumer Protection Agency decide what is a "consumer interest"? Will the agency be permitted to intervene in informal activities as well as formal proceedings of other agencies? Should the Agency be allowed to petition for or intervene in judicial review of other agency actions?

Should the Agency be given the right to directly subpoena trade secrets and other confidential information from business and industry? What will be the extent of exemptions? This latter area of concern is particularly controversial.

There has been no argument over the issue that national security agencies, such as the FBI and the CIA, should be completely exempt from the new agency's activities.

There is great irony in the legislation as it now stands. Labor supports the bill, because labor is exempt. Others would support the legislation if they were exempt. Everyone would support the legislation if everyone were exempt.

What consumers need now is protection from this agency. I shall continue to vote to protect the consumer—by voting against the so-called Consumer Protection Act of 1977.

MARYLAND'S YOUTHFUL POETS DEMONSTRATE THE BEAUTY AND POWER OF THE ENGLISH LANGUAGE

Mr. MATHIAS. Mr. President, for the past 4 years an amazing poetry program has been going on in Maryland schools. The statewide program, sponsored by the Arts Council of Maryland's Department of Economic and Community Development, has brought distinguished Maryland poets into the classroom to conduct poetry writing workshops. This poets-in-schools program is supported by grants from the National Endowment for the Arts and the artists in schools program and is designed to heighten students' awareness of the scope, beauty, and power of language. It has done that remarkably well. But is done far more than that.

The results of the program have astounded even the experts. Three anthologies of poems, covering 4 years and written by students from elementary school through high school, have been published. This year's anthology, "The Bird's Wings," has been described by poet-critics as "an amazing demonstration that creativity and imagination know no age limit." Carol Faulkner Peck, poet and editor of "The Bird's Wings," describes the student-poets as "impressive in their spirit and energy, their willingness to try new ideas, and above all their sheer delight in language that shines through at all grade levels."

The poetry-writing workshops, which consist of 5-day classroom sequences plus a day devoted to working with teachers in orientation and follow-up sessions, have paid at least one unexpected dividend. They have stimulated students to read more. One of the poets, who participated in the program, suggests that the general increase in student reading may have been a "natural consequence of their urge to read their own poems aloud in class. It was infectious. The students expanded their reading and vocabulary in fascinating and painless ways."

This year's student anthology includes the work of 130 young poets in 16 counties and 51 schools. It is available from the Maryland Arts Council, 15 W. Mulberry Street, Baltimore, Md., 21201, or the department of economic and community Development, 2525 Riva Road, Annapolis, Md. 21401.

The poets-in-schools program has proved to be just as rewarding an experience for the poets who have participated in it as it has been for the students themselves.

"The children left me bruised, battered, bloodied and bowed—mentally" Eastern Shore Poet Mary Wood commented, "but then, at the end of the five sessions—there were those glorious poems."

Most of the poets confessed surprise at the quality of the verses of the students and acknowledged that the program had had considerable impact on their own work.

Linda Vlasak, project director for the Maryland Arts Council, said that the first sampling of poems by the students "did not prepare us for the embarrassment of poetic riches that was to follow."

"Many hundreds of poems were written," she said, "in the course of each semester, some very good, some fair, some outstanding—all of them brimming with life and the freshness of youth." Mrs. Vlasak believes that working with the young poets had a freeing effect on her own work. "I trust more. I dare more," she says.

This year in addition to the anthology of student verse, the Maryland Arts Council has also published an anthology of 60 of the poets' work, entitled "A Sampling of Poems." It is edited by Eric Cheyfitz, Baltimore poet, writer, teacher, and musician and himself one of the poets-in-schools participants.

Other poets-in-the-schools were:

LIST OF POETS

Donald Cook, young poet from Western Maryland who now lives in Annapolis.

Alan Britt of Owing Mills, Md., who teaches at Eastern Shore Community College.

David Lewis Bergman, a teacher at Towson State University, who has received many awards including the coveted Robert Frost Prize in 1971.

Mary Azrael, a Baltimore poet who teaches English at the Peabody Institute. She is coauthor of "A Child's World of Music".

Roderick Jellema of Silver Spring, professor at the University of Maryland, codirector of the National Poetry Center and recipient of a prize awarded by the National Endowment for the Arts.

Alice Moser, who recently moved from the Eastern Shore to Chalmette, La., and is active as editor and consultant for several literary publications.

Robert Day, novelist and Assistant Professor of English at Washington College in Chestertown, Md.

Daniel Mark Epstein of Baltimore who has won the Robert Frost and Stephen Vincent Benet awards, as well as an award from the National Endowment for the Arts fellowship for creative writers and the 1977 Prix de Rome.

Rodgers Kamenetz, of Baltimore, co-founder of special program for teaching poetry to rural school children.

Lena Dale Matthews, of Baltimore, who helped start a poetry program in schools of Samson County, North Carolina.

Sister Maura, SND, past chairman and Professor of English at the College of Notre Dame of Maryland, Baltimore, widely published, recipient of many awards for distinguished teaching. Sister Maura has conducted writing workshops for the poet-teachers in the poets-in-the-schools program.

Nancy Protho, of Silver Spring, a poet and teacher.

Gary Sange who has taught creative writing courses in Maryland and now lives in Richmond, Va.

William Joseph Sullivan, Jr., a Baltimore poet, who has published many poems and short stories.

Robert Wickless, Maryland poet and teacher, resident of Frederick, Md.

Susan Yaruta, recent graduate of the College of Notre Dame and won first prize for poetry in contest sponsored by the Atlantic Monthly.

So that my colleagues may judge the caliber of our Maryland student-poets and of their poet-mentors, I ask unanimous consent to have printed in the RECORD several poems from "The Bird's Wing," and from "A Sampling of Poems."

There being no objection, the poems were ordered to be printed in the RECORD, as follows:

"THE BIRD'S WING"

A poem is not the sun
But the sunlight,
A poem is not the bird
But the bird's wing
that flows in the air.

By Sue Ann Zeniel, Grade 5/6, Yorkwood Elementary, Baltimore City.

People
are a living thing
a something not dumb.

By Brian Vandegrift, Fort Smallwood Elementary, Anne Arundel County.

I am me! Can't you see that
I am me! Trees are not me!
Cats are not me! I am a
person with high feelings!
Different things I think!
You know it's fun being me!

By Jody Bowman, Grade 4, Randallstown Elementary, Baltimore County.

"A SAMPLING OF POEMS"

THE FALL OF A HOUSE

(By Alice Moser Claudel)

It seems so strange
To see a house brought down
Like a hunted creature,
Buckling at the knees;
The geometric pattern broken
And rooms once vital,
Harried by the breeze.
Silent . . . the cats come home
And no one knows,
Seeing their troubled eyes,
What of their old world
In these battered bricks
They still surmise.

FAIRLEE CREEK

(By Robert Day)

Exploring, we have driven our open jeep
Along the bank, following Fairlee Creek to the Bay.
It is cold for April. Ahead.
A knot of fishermen are hunkering
Among their shacks, fixing lines.
Nets hang from trees like winter vines.
Bateaux,
Like Caleb Bingham's boat, sit on still water.
It is deep here.
We stop. Like spooked cats the fishermen stare.
We could film them, paint them, catch
Silhouettes with quaint techniques, trap
Mood with lighting. They stare.
We hear our engine idling
We should have come by water.

THE SECRET

(By Daniel Mark Epstein)

She would not pick up stones
even the most beautiful ones
or keep them, let alone
keep them, they never look
the same on the windowsill, or in
a bowl as in the brook,
she would not
pick flowers either
and they grow
so much faster than stones.

A STATE JUDGE'S VIEW OF FEDERAL AND STATE COURTS

Mr. DECONCINI. Mr. President, recently the chief justice of the Supreme Court of Minnesota, Robert J. Sheran, testified before the Subcommittee on Courts, Civil Liberties, and the Administration of Justice of the House Judiciary Committee. Chief Justice Sheran presented a comprehensive analysis of the judicial needs of the citizens of this country and he offered several suggestions as to how the Federal Government can cooperate with State governments to improve our Nation's dual court system. Among other matters, he pointed out that the LEAA program has been of great assistance in stimulating improvements in the court systems of most of the States. However, he also emphasized that it was imperative that Federal programs to aid State court systems should not diminish the independence of the State courts.

So all Members of the Senate may have the opportunity to read Justice Sheran's remarks, I ask unanimous consent that his prepared testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

THE STATE OF THE JUDICIARY AND ACCESS TO JUSTICE

(Statement of Robert J. Sheran, Chief Justice of the Supreme Court, State of Minnesota, and Chairman of the Federal-State Relations Committee of the Conference of Chief Justices)

Mr. Chairman and Members of the Subcommittee: As Chief Justice of the State of Minnesota and Chairman of the Federal-State Judiciary Committee of the Conference of Chief Justices, I consider it a privilege to appear before this subcommittee of the House Judiciary Committee to express the views of a state court judge on the subject: "The State of the Judiciary and Access to Justice."

I speak from the viewpoint of a state judge. My views are conditioned by commitment to this provision of the Constitution of the State of Minnesota (art. 1, § 8):

"Every person is entitled to a certain remedy in the laws for all injuries or wrongs which he may receive to his person, property or character and to obtain justice freely and without purchase, completely and without denial, promptly and without delay, conformable to the laws."

From the perspective of those who supply judicial services, we have in this country two separate and independent systems—the one federal, the other state. The members of this committee are acutely aware that the primary responsibility for the support and development of the federal judicial system rests with the United States Congress. As the chief justice of a state court system, I know that the comparable responsibility for the support and development of the state courts falls upon the legislatures of the respective states.

But from the standpoint of the citizen-user, the distinction between federal and state courts carries no real meaning. He knows that he has a legal problem which must be solved, sometimes by proceedings in court. Whether access to justice is by way of a federal court or a state court is, to him, immaterial. If he is a defendant in a criminal case, he is entitled to and expects a fair and speedy trial in one court system or the other. To an individual who sues or is sued for damages or other civil relief, it is important that a judicial tribunal be available where his problem can receive expeditious and skilled attention. Whether such a court is supervised by a federal judge or a state judge makes no difference to the litigants.

It is axiomatic that access to the courts is sometimes made difficult by the congestion caused by ever-increasing demands for assistance in the resolution of disputes. We know that the business of the courts has greatly increased as a result of changes in our national life. Two hundred years ago the United States was made up of 13 colonies with about 3 million people engaged in an essentially agrarian economy. Today, our population is well in excess of 213 million, and the increasing complexities of an industrial society have brought more than a corresponding increase in the number of conflicts and controversies which our courts are called upon to decide. Especially during the last 20 or 30 years, citizens have become alert to and insistent upon asserting the conviction that the Declaration of Independence meant what it said in declaring that all men are created equal and endowed equally with the inalienable rights of life, liberty, and the pursuit of happiness.

In my judgment, these changes constitute progress and are all to the good. But we must deal effectively with the mass of litigation now reaching the courts. If we do not provide a forum for the rational solution of these controversies, alternative methods of dispute resolution may be found. And the most tempting alternatives—self-help or a more authoritarian system—are unacceptable in a civilized and democratic society.

The increasing caseload problem is particularly acute in the federal system. Federal district court filings have increased over 100 percent since 1960. The increase in appealed cases in the federal system has been even more dramatic. The statistics and personal observations have convinced me that the federal courts desperately need relief.

The trends and circumstances which produced a doubling of the federal caseload in 15 years persist and may accelerate. For example, federal-question cases now represent about 45 percent of the total civil filings in the federal district courts. Every year, many new federal laws and regulations are enacted, and justifiably so, at least to the extent that the problems addressed can more effectively be dealt with on a national rather than a local basis. But new federal law generates more federal-question litigation. The truth of this statement finds support in these statistics: In 1960 there were some 13,000 federal-question cases; by 1975, the number

had reached 52,000. This is a trend which will continue for the foreseeable future, I believe, notwithstanding the legitimate concerns and prudent admonitions which have been expressed on the subject.

Although antitrust litigation accounts for only 1.2 percent of the civil filings, the complexity of these cases adds greatly to the over-all burden. Because there is a broad public consensus that competition serves the public interest and should be stimulated, the likelihood is that antitrust litigation will increase rather than decrease in the years ahead. The same considerations apply to the environmental cases now reaching the federal courts in increasing numbers.

Civil rights cases and prisoners' petitions together account for about 25 percent of the federal filings. Of these, almost half are habeas corpus proceedings following criminal convictions in the state courts. Because the decisions of the United States Supreme Court upon which these petitions are based have become to be accepted as sound in principle, it is unlikely that such appeals for postconviction relief will diminish.

Federal diversity-jurisdicton cases account for 26 percent of the civil filings in federal district court. Since the free and extensive movement of goods, services, and people among the states is a fact of life in the 20th century, we must anticipate that cases pitting citizens of one state against citizens of another will continue, and perhaps multiply.

II.

One "logical" solution to the problem would be to increase the number of federal judges to make it possible for them to handle the work coming into the courts. Legislation is making its way through Congress which represents movement in this direction. But even when enacted, this legislation may not provide a sufficient number of additional judges to enable the federal courts to deal with their present and projected caseload problem.

If the logical solution to the federal caseload problem is not fully attainable, other measures must be taken if our citizens are to have adequate access to our courts.

III.

An alternative or complement to increased judicial manpower is the diversion of cases to forums other than the federal courts. Diverted cases might be resolved by judicial or nonjudicial means. Arbitration, mediation, and conciliation, for example, are nonjudicial methods of dispute resolution which have enjoyed greatly increased usage in recent years. This is a trend which should be encouraged in appropriate types of cases. But we cannot realistically expect nonjudicial methods of dispute resolution to siphon off more than a small percentage of the cases which will reach federal courts. If substantial assistance is to be provided, it probably must come from the state courts.

IV.

To what extent are the state courts to be in a position to help? State courts, too, have experienced increasing demands upon their facilities. The rate of caseload growth in the federal courts over the last 15 years figures out to about a 7 percent annual increase. The rate of increase seems, however, to be progressive. The comparable rate of growth in the state courts of Minnesota, Kansas, and Iowa figures to 3 to 4 percent annually. But in more populated and industrial states, such as Ohio and Michigan, the average annual rate of growth has been 7 to 8 percent.

These statistics give us reason to pause, but I nonetheless believe that the state court system could satisfactorily assimilate and handle a fairly large proportion of the cases now heard in federal district court. The number of state court judges of general jurisdiction available to assume the additional work amounts to a sizable figure. In Minnesota, for example, we have four federal district court judges and one senior federal district judge available for the trial of cases. But there are 72 state district court judges, 31 of whom sit in the Minneapolis-St. Paul area. And under the Minnesota Reorganization Act of 1977, it will be possible to employ the services of an additional 100 or more county court and municipal court judges to handle trial work in courts of general jurisdiction.

My conviction is this: If there is litigation now being handled in the federal courts which could be handled as well, or almost as well, in the state court system, then it would be better in the long run for the state judges to hear the cases. For the first 100 years of our national history, state courts heard cases involving questions of federal law. It was not until 1876 that this category of cases was moved to the federal system. Federal-question cases could be moved back to the state courts again, in whole or in part.

Diversity jurisdiction, on the other hand, has always been exercised by the federal courts, on the premise, originally true, that the state courts might not deal fairly with the parties who were "foreigners." Whatever the historical reasons for the rule, exclusive federal diversity jurisdiction is not currently justified by either pragmatic or logical reasons. These cases should be left to the states. The state courts would be as able to handle cases where diversity exists as they are able to handle the many cases now coming before them where the subject matter is almost identical but where the cases are not eligible for federal court treatment on diversity grounds. The assumption that state court systems are prejudiced and provincial and that federal courts are needed to protect nonresidents from unfair treatment cannot be justified generally. The extension of the jurisdiction of state courts over nonresidents resulting from state and federal interpretation of state long-arm statutes has already brought a significant number of diversity cases to the state court systems where the amount involved is less than $10,000; and the litigants are being treated fairly without regard to whether they are or are not residents of the forum state.

It has been suggested that the shift of diversity cases from federal to state court should be limited to situations where the plaintiff is a resident of the formum state, and that the minimum amount in controversy should be increased from $10,000 to $25,000. To my mind, the reasons which support this modification of federal diversity jurisdiction support with equal validity the transfer of all federal diversity jurisdiction to state courts.

Diversity jurisdiction now entertained by the federal courts where the amount in controversy exceeds $10,000 should be returned to the states, as recommended by such authorities on judicial administration as Chief Justice Warren E. Burger, who, in his 1977 report to the American Bar Association at Seattle, said:

"* * * I would strongly urge that Congress totally eliminate diversity of citizenship cases from the federal courts. * * * I urge you to give full support to the elimination of diversity jurisdiction from the federal courts without further delay."

The change recommended by Chief Justice Burger would transfer nearly one-fourth of the filings from the four federal district judges in Minnesota and spread them among about 200 state judges. I believe that the trial courts of Minnesota are prepared to accept responsibility for this litigation which is naturally within the area of their competence, and join in urging that diversity jurisdiction be transferred to the state courts. I believe other states are similarly situated.

In the other areas where the burdens of our federal courts are increasing, the possibility of assistance from the state courts may be more limited. It is doubtful that the state courts are as capable as are the federal courts in dealing with complicated antitrust and environmental litigation having multistate impact. Federal judges, appointed for life, are probably best able to deal with civil rights problems, particularly in cases where the constitutional right asserted is one for which there is little or no local sympathy. However, in the last few years, decisions of the final appellate courts in many of our states have given proof of a willingness to accept political risk in defense of the rights of the individual. The national implications of many labor disputes, likewise, seem to justify federal preemption in this area.

Finally, the federal caseload problem could be significantly improved if federal district court habeas corpus review of state court convictions could be made unnecessary. I do not mean to suggest that we turn back the clock to a pre-Gideon v. Wainwright era. On the contrary, I applaud the Gideon decision and Fay v. Noia and the other United States Supreme Court decisions which have broadened the scope of the due process clause of the Fourteenth Amendment so as to extend the protections of the Federal Bill of Rights to persons accused of crimes in state court proceedings.

Nonetheless, federal district court habeas corpus review of state court convictions is a high-volume, time-consuming and essentially duplicative endeavor which could be made unnecessary. The best way to eliminate this duplication of effort is to establish in the states criminal procedures which satisfy fully all federal constitutional requirements. Appellate and postconviction review of these cases can then be handled at the state level, permitting the federal courts to accept the state court dispositions without repetition of the process of review. Such is the present state of affairs in Minnesota, and similar results can be achieved in all other state jurisdictions.

The suggestion has been made in testimony before this subcommittee that state courts are not as alert to the necessity of protecting the constitutional rights of defendants in criminal cases as are the federal courts. Our experience in Minnesota is to the contrary. The federal district courts in our state and our circuit court of appeals have, for practical purposes, no occasion to review the trial of criminal cases in our state courts. The reason for this is that from the time the March 18, 1963, decisions of the United States Supreme Court were announced we have made it our business to assure that the constitutional rights, both state and federal, of defendants tried in our criminal court system are fully protected.

The specific methods employed to assure the soundness of our convictions in criminal cases include these:

(1) Statutory provision for counsel in all criminal cases involving imprisonment, regardless of demand or waiver;

(2) A routine pretrial hearing, actively directed by the trial judge, the purpose of which is to surface all claims of constitutional infringement;

(3) A transcript of the trial court proceedings at public expense, without technical requirements to prove indigency;

(4) Automatic postconviction review, unimpeded by time limitations or procedural niceties;

(5) Routine review of all criminal convictions, where the defendant has been sentenced to imprisonment, by the Supreme Court of Minnesota, with remand readily available where claims of constitutional infringement are made on appeal but were not presented to or considered by the trial court.

Our experience has told us that a state court system which is determined to avoid infringement of federally protected constitu-

tional rights can accomplish this objective without imposing upon the federal court system for help.

V.

The relief which will thus be given to the federal courts will, to be sure, increase the burdens of our state courts. But additional expenses incurred as a result should be, and I think will be, shared by the federal government. The method by which this objective is to be accomplished is now being carefully analyzed by both federal and state entities for ultimate decision. These comments on current developments in this area:

VI.

It is imperative that the state court systems maintain their identity and independence. I am confident that our state courts and our state court judges will do everything feasible to make the judicial system as a whole acceptable to as many of our citizens as possible and will be willing to integrate their efforts in any reasonable way with that of the federal court system. But this assumes allocation of responsibility on terms which are neither demeaning nor intrusive. Federal funding or revenue sharing must be looked upon as a means of adding strength to the state judicial systems and not as a method for extending federal authority to areas better managed on a state or local basis. The preservation of the independence of the state judicial systems is, I believe, the imperative which must undergird all joint efforts to deal with common problems relating to access to the courts.

VII.

If it can be assumed that the employment of federal funds for the improvement of judicial services in the states can be accomplished without impingement upon the independence of the state judiciary, the question becomes one of the form and method by which this is to be accomplished.

In analyzing the problem it is important to keep in mind that the funding requirements of the state court systems fall into two general categories:

(1) The support and maintenance of institutions, such as the National Center for State Courts and the National College of the State Judiciary, which operate on a national level in providing service and assistance to the court systems of the several states; and

(2) The funding of activities directed by the several state court systems, either statewide or in localized areas.

As of now, the principal source of federal funding for the needs of state courts is the Law Enforcement Assistance Administration. The state court systems have been strengthened by block and discretionary grants received through the LEAA, particularly in the development of improved methods of court administration. Prior to 1976, the judicial systems of many of the states felt handicapped in applying for LEAA funds by being placed in competition with the apprehension and corrections agencies in their respective states. The restraints upon the judiciary, both traditional and ethical, make it difficult for judges to engage freely in this kind of competition. The result was that in many of the states the share of LEAA funds employed for the improvement of the judiciary was insignificant or disproportionate. Amendments to the Safe Streets Act adopted in 1976 by the Congress seek to alleviate this situation by establishing a priority for funding of judicial branch programs; for judicial participation on state planning agencies; and for the establishment of judicial planning agencies whose recommendation for the disbursement of funds allocated to the judiciary were to be, except in rare instances, binding on the planning agencies in the several states. These reassuring steps taken by the Congress in 1976, however, seem to be jeopardized currently by reductions in the budget of the LEAA for 1977–78 which may fall more heavily on the judiciary than on any other of the elements involved in law enforcement.

A further limitation upon the effectiveness of LEAA funding so far as the state court systems are concerned is the limitation which has been placed upon the use of such funds within the states by the requirement that the funds be employed for the improvement of "criminal justice." Justice—including criminal justice—in the state court systems can be best achieved if the entire system is strengthened, including the components which are employed in the trial of criminal cases.

Even more important, the funds made available through LEAA for national projects affecting state court programs—such as the National Center for State Courts—should continue until some adequate substitute provisions for support of these institutions has been achieved. The National Center for State Courts, soon to be centered at Williamsburg, Virginia and the National College of the State Judiciary in Reno, Nevada, have provided the perspective and much of the initiative which has made the dramatic improvement in our state court systems in recent years possible. This could not have been accomplished without federal funding through the LEAA; and the preservation of these institutions with the assistance of federal funding is of paramount importance to the state court systems, which have benefited so significantly from their existence.

We are informed that changes in the structure of the LEAA are in the making. This being the case, there are certain principles or approaches which, it seems to me, are of the utmost importance from the standpoint of our state judicial systems:

(1) The National Center for State Courts and the National College of the State Judiciary should receive priority attention, at least until the states are able to assume financial responsibility for these essential undertakings;

(2) Whether in the form of block grants or revenue sharing, federal financial support for state judicial systems should be assured;

(3) The deployment of federal funds for the improvement of state judicial systems on a statewide or local-area basis should be determined entirely or in significant part by those charged with the responsibility for the operation of the judicial system in each of the several states;

(4) The employment of a national entity such as the National Institute of Justice to direct and monitor the allocation and use of federal funds by state court systems should be structured in such a way that the state judicial systems will have a participating voice in the formulation of plans and policies.

VIII.

While the employment of federal funds to assist in the improvement of state judicial systems is important, it is but one of many facets of the problems of coordinating the state and federal judicial systems to increase the accessibility of justice in our courts. Other illustrations are: The efforts which are currently underway to coordinate federal and state rules of criminal procedure; the Consumers Controversies Resolution Act; federal programs with respect to the treatment of juveniles; the employment of federal resources to control the use and traffic in drugs; the employment of the services of expert mediators for complicated disputes—these are matters which are and in the future will increasingly become matters of joint concern to the federal government and the judicial systems of the several states. The belief is that the state court systems through the Conference of Chief Justices should establish communication with the significant committees of Congress so that you will have access to our views in formulating federal legislation which has impact on the operation of the state court systems. The fact that you have invited me to be here today on behalf of the Conference of Chief Justices is an appreciated step forward in achieving this goal. My hope is that we will be able to continue these methods of communication on a regular and well-defined basis in the future.

IX.

In summary, I believe:

(1) Every citizen should have access to our court system as the ultimate forum for the resolution of unavoidable disputes and the protector of his constitutional rights.

(2) The demand for access to our court systems in this country can be expected to increase significantly in the years ahead—a demand which will be implemented by plans for prepaid legal insurance and other methods of making legal services more generally available.

(3) Efforts to divert, where appropriate, the processes of dispute resolution from the federal and state court systems are to be encouraged and accelerated, but such diversion is only a partial answer to the problem.

(4) Notwithstanding reasonable expectations of dispute diversion, it can be expected that our federal court system will continue to be overburdened unless a significant part of the jurisdiction presently exercised by the federal courts is assigned to our state court systems.

(5) Our state court systems are able and, I hope, willing to provide needed relief to the federal court system in such areas as

(a) More complete review of state court criminal proceedings to assure that federally defined constitutional rights have been fully protected;

(b) Increased participation in the resolution of federal-question cases;

(c) The assumption of all or part of the diversity jurisdiction presently exercised by the federal courts.

(6) The state court systems will be able to carry an increased share of the judicial burden, to the extent that their progress is adequately funded in part from federal resources.

(7) Increased communication between congressional commitees considering legislation affecting state courts and such entities as the Conference of Chief Justices will be useful.

(8) The constitutional structures and procedures by which federal funds can appropriately be used to achieve national goals in the delivery of justice while respecting the independence of the state judicial system require further study, but difference of opinion as to the method of achievement of the goals should not obscure the importance and necessity of federal-state cooperation in improving the administration of justice in all of our courts.

THE EXTRAORDINARY MRS. BARKER CELEBRATES A LIFETIME OF SERVICE TO GOD, COUNTRY, AND HUMANITY

Mr. MATHIAS. Mr. President, this coming Monday—August 8—a very remarkable Marylander will celebrate her 102d birthday. Ada Moyer Barker was born on August 8, 1874, in a little town near Lake Ontario in Canada. But, she has lived for many years in Wheaton, Md., and we are proud to claim her as a Marylander.

Today I would like to share with my colleagues some of the details of Mrs. Barker's extraordinary life.

When she was 9, Ada Moyer determined to dedicate herself to Christian service and at the age of 18, while attending a meeting of the Christian Missionary Alliance, she was so struck by the hymn "The Story Must Be Told" that she resolved to become a missionary. As she recalls now "the bass came strong repeating 'it must be told, it must be told.'"

Her resolve prompted Ada Moyer to enroll in the Bible Training School in Toronto, now the Ontario Bible School, and later took her to Turkey and Armenia as a missionary.

In the summer of 1899 shortly before leaving for Turkey, Ada Moyer met Ford Barker, the man who later was to become her husband. When he learned she was about to leave for Armenia, he went to Toronto to visit her. Together they vowed that if their paths should cross again they would marry.

Miss Ada Moyer set out by train from Vineland, Ontario, for New York City in November 1899. There she met Miss Fredericka Honk and the two women in deaconess uniforms sailed for Turkey, a 6-week trip in those days. On New Year's morning in the year 1900, three intrepid young women mounted horses and donkeys to begin the 4½ days' journey over rough mountain paths to Hadjin, Turkey. Ada Moyer and Fredericka Honk had been met at the coast by Miss Rose Lambert, the first missionary to Armenia. Before beginning this last leg of their journey, the women had traveled by train to Adana passing through Tarsus, St. Paul's birthplace.

It was soon discovered that the mission in Hadjin needed the help of a man and a year and a half later, Ford Barker arrived from Canada, having been ordained before leaving. True to their vow, as soon as they were reunited, Ada Moyer and Ford Barker were married. To arrange the ceremony they had to travel 3 days on horseback and 2 days by steamer and train to Smyrna where a British counsel general performed the civil ceremony. They were then married by a minister as well. While in Smyrna they were the guests of American missionaries who, as Mrs. Barker recalls, enjoyed having a wedding.

For the next 15 years the Barkers worked together at the boys' orphanage in Hadjin and then at Everek. During those 15 eventful years the Barkers sustained many hardships but their faith never wavered.

When World War I broke out, Mr. Barker was in North America seeking funds to improve the mission. Mrs. Barker, as the oldest of the missionaries left in Armenia, took charge. They were determined to remain with the orphans although the war had tied up the funds for the mission. But they were ordered to leave. For 3 days they were prisoners of war as they traveled by covered wagon to the coast. Throughout, Mrs. Barker was confident that she would be able to return to the mission, that the war would soon be settled, but this was not to be. Instead they were put on ships and sent home.

Mr. Barker was serving in Hamilton, Ontario, when the troubles in Smyrna took place. On that occasion, Canada agreed to take in 100 children survivors from Smyrna. But problems developed when 50 of the children arrived in Toronto with no knowledge of English and Mrs. Barker stepped into the breach to take charge until things settled down.

In the final years of Mr. Barker's life, the family lived in Bradenton, Fla., and when Mr. Barker died the Armenian boys in America, whom they had helped, erected a monument in the cemetery at Bradenton to the "Father of Orphans, Messenger of God, Devoted Evangelist and Fisher of Men."

Mrs. Barker, who lives in Wheaton with her daughter, Grace, still spends her winters in Florida. As she looks back over her long, eventful life, Mrs. Barker marvels at how the Lord has taken care of her for 102 years. I think we too can marvel at the life of this unusual woman. And we can rejoice with her on the great contribution she has made to humanity throughout her life.

I ask that my colleagues join me in saluting Mrs. Barker and wishing her a very happy birthday.

CHICAGO'S MIDWAY AIRPORT

Mr. KENNEDY. Mr. President, the people of Chicago stand to benefit substantially if legislation passes to reduce Federal economic regulation of commercial air transportation. In a hearing held in Chicago this past Saturday, the House Aviation Subcommittee explored the impact of airline regulation on the city of Chicago and specifically on Chicago's Midway Airport. The hearing revealed how Federal regulation is blocking and thwarting the inauguration of low-fare scheduled air service from Chicago's Midway Airport to 14 other cities within 500 miles of Chicago. The regulatory obstacles are harming travelers, shippers, employment, and the development of economical air travel. Senator CHARLES PERCY testified at these hearings, Mr. President, and presented a compelling case for legislative change.

I am pleased that Senator PERCY is an important and active cosponsor of S. 689, the Cannon-Kennedy bill, which is now before the Commerce, Science, and Transportation Committee in the final stages of consideration. I am hopeful that under the able leadership of Senator HOWARD CANNON, who is managing the bill in the committee, and the help of Senator PERCY and other sponsors, aviation regulatory reform legislation will reach the Senate floor after the August recess.

Mr. President, I ask unanimous consent that Senator PERCY's testimony of July 30 be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CHARLES H. PERCY BEFORE THE AVIATION SUBCOMMITTEE OF THE HOUSE PUBLIC WORKS AND TRANSPORTATION COMMITTEE, JULY 30, 1977

I welcome the interest of this Subcommittee in the revitalization of Midway Airport, and in the larger issue of airline regulatory reform.

Fulfilling the transportation needs of residents of the South Side, Southwest Side, and surrounding suburbs is an important personal goal of mine. I have a special interest in the South Side: my mother was born at 35th Street and Cottage Grove Avenue; I was a student at the University of Chicago; and I have conducted numerous meetings with constituents on the vital needs of this area in the almost eleven years that I have been a United States Senator.

I know how much a revitalized Midway would mean to so many of the people in this area—not only in terms of creating new jobs, increasing residential and commercial property values, and renewing whole neighborhoods, but in terms of genuine pride in their community. If New York City, Los Angeles, Washington, D.C. and the San Francisco Bay area can have more than one airport, why is virtually every flight into Chicago stuffed into O'Hare Field? As a result, carriers lost $44 million in additional fuel costs in 1976 because of air traffic and taxiing delays at O'Hare.

Right now you are sitting in a $12 million terminal building that is devoid of the sounds of travelers; there is hardly any commercial traffic at Midway. But just close your eyes for a moment and pretend that we did not have a federal Civil Aeronautics Board.

Instead of stone silence, you probably would be hearing the humming of jet engines, attached to Boeing 737's or DC–9's bringing in passengers from Detroit, Indianapolis, St. Louis, Buffalo, Omaha, Memphis, Cincinnati, Cleveland, Columbus, Dayton, Des Moines, Kansas City, Louisville, Minneapolis, Pittsburgh, and other cities as well.

There would be passengers rushing to grab taxicabs and limousines to spend the weekend in Chicago touring the King Tut exhibit or sightseeing along Lake Michigan or dining in a Hyde Park or New Town restaurant. Conversely, residents from the Metropolitan area, as far away as Waukegan and Kankakee, would be arriving at Midway to board flights at up to a 53 per cent discount under the fares currently offered by the airlines at O'Hare to visit friends or relatives in distant cities. These would not be the well-dressed executives you see at O'Hare traveling on expense accounts. Rather, they would be South Chicago steel workers, Maywood construction workers, students from DePaul, Loyola or Wheaton College—travelers who previously stayed at home or wasted energy by driving.

United Airlines estimates that on its flights of an hour or more, the average household income of the pleasure traveler is $25,400 and the average household income of the business traveler is $33,660. Contrast that with an average family income in this country of $15,000.

A 1974 Gallup poll showed that 76 per cent of the population had not flown in the previous year and that 45 per cent had never flown at all. It is small wonder that 85 per cent of all intercity travel is by private automobiles.

That is why I was excited to hear last October that an enterprising firm had applied for air service from Midway Airport with reduced fares of up to 53 per cent below those charged by other airlines. Such fares would, if approved, make it possible for untold numbers of lower and middle-income citizens to afford to fly. They could simply go out to the airport and fly with fare reductions three times larger than those offered by the established airlines.

Several other firms soon followed suit, one offering service to as many as 14 cities. Even the CAB-certificated airlines at O'Hare suddenly became interested in serving Midway Airport.

We had hoped that the CAB would act quickly on these applications. But for nine months, we waited for a definite Board decision on how it would handle this case. Then, just last Thursday, the Board agreed upon a

one-year deadline to process the applications for low-fare service.

A time certain for rendering a decision is precisely what I had been seeking from the Board ever since it established the ground rules for this case back in May. At that time, it appeared that, unless drastic action was taken by the Board, it could well take two to three years or more to process this case. In speeches on the Senate floor and in public forums, I strongly urged the Board to set a tight deadline for itself.

The deadline means a decision by August 1, 1978 with operating certificates being issued by October or November 1978. A start-up of service by May 1979 is therefore possible.

The Board was only able to act after setting aside its own rules and adopting, what it termed "extraordinary procedures."

I commend Alfred Kahn, the newly-appointed CAB Chairman, for having the courage to break precedent and bureaucratic procedures to expedite the processing of these applications. However, there is still one part of the Board's action which I believe should be reversed. It intends only to process applications for the six largest markets served from Chicago — Minneapolis, Detroit, St. Louis, Kansas City, Cleveland and Pittsburgh.

The Board ignored an additional nine cities that several applicants had proposed to serve from Midway. These nine cities are Indianapolis, Cincinnati, Dayton, Columbus, Buffalo, Memphis, Des Moines, Omaha, and Louisville. The Board said that it would take until 1979 or 1980 to process these applications and that it did not want to further delay the case by hearing arguments for the larger six markets and the smaller nine markets at the same time.

I wish to explain why I consider that to be a flawed decision. It is not a faulty decision because it would appear to favor Midway Airlines, which applied for the six cities, over Midway (Southwest) Airway, which applied for 14 cities, and Wright Air Lines which applied for one. Frankly, it doesn't matter to me which of the applicants receives approval. In fact, I hope they all gain approval, and compete among themselves through quality, low-cost service. All the applicants are superbly qualified. Salomon Brothers, a conservative and highly respected Chicago financial house, would not have pledged substantial sums of money to Midway Airlines if it did not believe that it could be successful. Lamar Muse, who earns a 37 per cent return on equity at Southwest Airlines (compared with 3.6 per cent for the CAB regulated carriers), would not have applied for the Midway service if he did not feel he could make a go of it.

But the CAB action to date was flawed because it ignored the success of low-fare intrastate airlines in California, Texas, and Florida in developing new markets. For instance, when a low-fare intrastate airline began service between the lower Rio Grande Valley of Texas and Houston, traffic went up 43 per cent after the fare was slashed. Many of the new travelers are lower-income Mexican-Americans who could not previously afford to fly. This decision limiting the nine cities could mean potential markets of 3 million people will be denied service.

Consider the application of one carrier to fly between Chicago and Louisville where 122,280 passengers traveled by air in 1975. Frank Borman, President of Eastern Airlines, which abandoned its certificated service between Chicago and Louisville several years ago, told the Senate Aviation Subcommittee on March 29, 1977, that: "No one wants to fly between Chicago and Louisville." He is right, none of the CAB-certificated carriers except Delta provide nonstop service between those two points. Absent competition, is it mere coincidence there are no 20 per cent off night-coach flights between these two cities, even though Delta has night coaches to virtually every city in the South where it faces competition?

Hopefully, the Bureaus of Economics and Operating Rights will revise their original request for large doses of irrelevant information from the applicants. Preparation of these exhibits drains the applicants before they have a chance to fuel-up their first plane. For example, quoting from their original request for exhibits, why in the world do they want to know:

"What is the daily volume of telephone calls between the two cities?

"1. During hours when full rates are in effect.

"2. During hours when reduced rates are in effect." (Section III, F, Information Responses of the Board Order.)

Do the Bureaus mean that they want long distance telephone data for just the six nonstop city-pairs at issue, or for all the potential connecting markets such as St. Louis to Cleveland via Midway? Do the Bureaus really mean just telephone calls made from the cities at issue or the metropolitan areas? Some of the airports involved are located in the suburbs, as in Detroit and St. Louis. Do the Bureaus want the suburban telephone calls included too? How about WATS line calls, used by many businesses, and collect and third-number billings? I am sure that it will take the bureaucrats months to straighten out these issues while puzzled Illinois Bell officials, who may be called upon to provide this data, try to figure out what the number of long distance telephone calls has to do with the redevelopment of an airport. I am puzzled too.

Here is another request:

"What is the annual volume of passenger surface origin-destination traffic between Chicago and the given city, by direction, for each of the following modes?

"1. Private automobile.

"2. Bus.

"3. Rail.

"Give the data for the most recent year available. If origin-destination data are not available, give the total passenger travel for each mode.

"What is the passenger travel time from city center to center for each mode? (over the most commonly used routing where alternate routings exist.) Show the daily schedules for bus and rail.

"What is the cost per passenger trip for each mode?

"What is the distribution of automobile trips, by number of passengers per automobile, between the two cities?

"Where toll roads or toll bridges form part of the most widely used route, what is the total amount of such tolls for a one-way trip?" (Section III, A–E, Information Responses of Board Order.)

Now that is a tall order. I hope the Transportation Center at Northwestern University has been alerted.

The applicants, here, too, may have to go back to the Bureaus for clarification. For instance, the Bureaus asked for the passenger travel time from city center to the center for each mode. Those of you who have driven between Chicago and Detroit know that the driving time can vary sharply based on the time of day and the route. Do the Bureaus, for instance, want the time to Detroit from downtown clocked via the Dan Ryan Expressway and the Chicago Skyway or via the Dan Ryan and the Calumet Expressways and Interstate 80? Each is quite popular and it could make a difference in the running time.

The Bureaus also requested information about toll roads and toll bridges. Again, why? What do the Bureaus mean? Quite a few motorists prefer to drive on Interstate 94 all the way to Minneapolis, avoiding the Northwest Tollway. But, some who take Interstate 94 perfer to drive on the Edens Expressway to the Tri-State Tollway to the Wisconsin State line while others prefer toll-free U.S. 41. What do the Bureaus want? Maybe these Bureaus really wish to take over the job of the Federal Highway Administration.

These esoteric requests go on and on. But what clearly emerges is the picture of a Civil Aeronautics Board that is hopelessly mired down in trivia.

I hope that Chairman Kahn tells these zealous nit-pickers that work in his agency to focus on Midway, not on telephone or toll-road traffic, when they make their revised requests for information from the applicants.

A reasonable and prudent person might logically ask for an explanation of why the CAB had to adopt "extraordinary procedures" to hear these low-fare applications and why it has excluded nine cities from future Midway schedules.

One need go no further than the 1938 law which established government regulation of the airlines. It was a law primarily designed to protect a fledgling airline industry from competition. In a sense, the law served its purpose. Most of the airlines, under a protected environment, have grown and prospered as competitors were frozen out.

No application by an entrepreneur to start up a trunk carrier has been approved in the Board's 40-year history. Eighty applications have been rejected between 1950 and 1974. The Midway applicants are seeking precisely such interstate trunk authority. They are asking the Board to allow them into "the Club." But prior to opening the door wide, the Board is asking hundreds of questions that only serve to impede entry.

That procedure must be changed. CAB Chairman Alfred Kahn, who is directly responsible for Thursday's Board action, has said that he needs "a new set of instructions from Congress." That is precisely why I cosponsored legislation this year to reform the airline industry. This bill, now being marked up by the Senate Aviation Subcommittee, combines the best features of the Cannon-Kennedy and Pearson-Baker bills. It is supported by President Carter, former President Ford, Chairman Kahn, and former CAB Chairman John Robson. It is supported by Sears, Roebuck & Co., the National Association of Manufacturers, Ralph Nader, Common Cause, the National Taxpayers Union, the American Association of Retired Persons, the National Association of State Aviation Officials, the National Association of Counties, the National Consumer's Congress, and others.

It is supported by Chicago-based United Airlines, the nation's largest carrier, Pan American World Airways, Hughes Airwest, and Frontier Airlines (which will resume service into Chicago this September with nonstop service from Lincoln, Nebraska).

This bill is important to this nation and it is important to Midway for these reasons:

It establishes strict procedural deadlines for processing applications for new service. It allows the Board 10 months to make these types of decisions, instead of years. If this new law would have been in effect last year, the Board would have had to hand down a decision on the Midway case in August, instead of a year from now.

It firmly establishes a policy that low-fare innovative service should be an important element of the national air transportation network. Under such a policy, it would be difficult to place the Midway applicants on the defensive, as the Board has done in this case. The Board would be forced to rule on low-fare service from Midway to all 15 cities.

The Board could not stop fare reductions of up to 35 per cent during the day and 55

per cent at night, which dovetails perfectly with proposals by the Midway applicants.

Cargo airlines could expand more easily and cargo rates would be deregulated. Midway, with its proximity to the industrial heartland of Cook County and northwestern Indiana, could very well expand into a major freight center, especially in view of its nearness to the Stevenson Expressway and the proposed Burnham Corridor.

The passage of this bill will not only result in a revival of Midway Airport, but it is likely to mean more jobs. The reasons for this are clear:

First, at least one of the Midway applicants plans to hire 1,200 employees, all based at Midway. Its annual payroll is estimated at $16 million, with a ripple effect in the community of at least another $20 million. Another applicant reports receiving 300 employment inquiries from well-qualified former airline employees, many furloughed by the certificated carriers.

Second, Federal Express, an air freight carrier of small packages, has indicated to my office that it plans to locate a major air freight center either at Midway or Rockford. It reportedly expects to employ 500 to 700 persons at an annual payroll of $5 million, and would spend an additional $5 million to $7 million in start-up costs, including new construction. These figures do not include contracts with vendors to supply goods and services. Company "hub" facilities would be built in either Denver or Colorado Springs and in the New York metropolitan area. The company currently has small facilities at both Midway and O'Hara where 96 people are employed. It plans to expand service to Bloomington-Normal, Champaign-Urbana, Rantoul, Danville, Kankakee, Decatur, Quincy and Rockford. And, if Federal Express does not choose Midway, I am confident that other air freight forwarders will.

In recent years Federal Express has prospered largely because it is outside the purview of federal regulations. Since it uses smaller planes, it is exempt from federal regulations that mandate rates, routes, where air freight forwarders can fly, and how much they can charge. On its first night of operations in 1973, the company flew 18 packages on 10 aircraft to 22 cities with 200 employees. Four ye rs later, it carried about an average of 25,000 packages every night on 40 aircraft to 75 airports, while employing 2,500 persons.

It is clear that the CAB-certificated carriers do not wish to service Midway. The CAB met with certificated airlines on 15 different occasions between April 8, 1970, and June 28, 1976, in an attempt to get certificated service back into Midway.

The airlines returned briefly to Midway in the early 1970's but pulled out because of major losses and the 1973 fuel crisis.

On January 21, 1976, the City of Chicago and the certificated carriers resumed discussions to revitalize Midway. United Airlines obtained discussion authority from the Board. Subcommittees were appointed and studies were ordered. In the end, on February 22, 1977, the airlines advised the Board that they would not reinstitute service at Midway. Currently, only Delta provides Midway service.

The government, even with its broad powers, could not force the certificated airlines, heavily dependent upon connecting traffic at O'Hara, to operate what they concluded would be money-losing flights out of Midway.

Now we find the same CAB that failed to bring about service into Midway expediting the processing of applications of service to six cities, but ignoring the need for comparable service to an additional nine cities. The Board needs more flexibility to permit firms that are willing to risk their capital in what they have concluded would be profitable service to go ahead and provide that service.

Some might argue that Thursday's decision means there is no need to change the current law. But, in reality, the Board acted because it had a far-thinking chairman who was willing to bend the rules and established procedures. The next chairman might not be so inclined. Reform must be firmly written into the law. It should not depend on whether we have a "good guy" sitting as CAB chairman.

I would recommend at this time that the Board immediately begin to process applications for service to the additional nine cities and set a decision deadline date—perhaps February 1, 1979.

Looking to the interests of homeowners in the Midway area, I believe the prospect of a stabilized neighborhood and increased property values outweigh the possible nuisance of increased noise. However, to minimize that concern, I urge that the Federal Aviation Administration work together with the airlines and community leaders to sharply limit or curtail Midway flights between the hours of 10:00 p.m. and 7:00 a.m. This is now being done in Washington, D.C. and San Diego.

In conclusion, this proposed law would be the best possible vehicle to revitalize Midway because it will open the doors wide to competition on the basis of price. A great deal more attention will be given to the benefits of and need for low-fare service.

I am convinced that regulatory reform must be a top priority for Congress. Toward that end, I am concentrating on a two-pronged effort.

The first prong is to seek passage of the Regulatory Reform Act of 1977 (S. 600), which has been co-introduced by myself, Majority Leader Byrd, and Senator Ribicoff. Forty-one of our colleagues in the Senate are co-sponsoring the legislation. It evolves from the belief that we must identify those instances in which the costs of regulation have begun to outweigh the benefits and make the legislative changes necessary to correct these imbalances. A unique feature of this bill is that it would require the President and the Congress to clearly define and analyze our long-unexamined assumptions about the nature of, and the need for, federal regulation of industry and commerce. If enacted, it would compel the executive and legislative branches to subject the arguments in favor of continued regulation to painstaking critical scrutiny according to a systematic timetable, agenda, and discipline.

The second prong is to make certain that a strong airline reform bill is approved by the Senate this fall. The law which permitted the CAB to delay this case and then to reduce the levels of projected service from Midway must be changed for the sake of the nation and for the sake of the citizens of metropolitan Chicago.

THANKS TO THE LIBRARY OF CONGRESS

Mr. DECONCINI. Mr. President, we are all aware of the many services offered by the Library of Congress to congressional Members and their staffs. In terms of background and in-depth research, the staff of the Library is an invaluable aid to all of us.

However, we are not always aware of the many and valuable services provided by the Library of Congress to private citizens. One of my constituents, Mr. R. A. Nellis of Prescott, recently sent to me a copy of his letter of thanks to the reference department of the Library of Congress. The actions taken by the Library in Mr. Nellis' case are especially heartening since he is blind and has little access to sources of information.

Mr. President, I would like to insert Mr. Nellis' letter into the RECORD and extend my own thanks to the Library for their continued willingness to assist and be of service to all members of the American community. Their actions are remarkable and encouraging in a time where the perceived responsiveness of the Federal Government is at an all time low. This letter is truly a tribute to the hard work and devotion of the Library of Congress staff.

Mr. President, I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 24, 1977.

The LIBRARY OF CONGRESS,
Reference Department, Reference and Biographical Division, Washington, D.C.

GENTLEMEN: I recently received from you the answers to three rather incidental questions, but questions which had been hounding me and I had been unable to answer locally. One dealt with the correct spelling of a word, one dealt with the Office of the President pro tem of the U.S. Senate and finally one asked for a biographical sketch of a U.S. Representative to Congress from a state other than Arizona.

I sent these questions to you with little expectation of receiving a response to such incidental subjects. Much to my surprise, within a few weeks I had, not only answers, but complete, thorough answers with further references to my three questions. My questions were sent to you in long hand because at the time I did not have a secretary. In my long hand letter, written by a hospital volunteer, I mentioned my disabilities, but you had no reason to believe me or assume that because of those disabilities I deserved any special attention. Anybody could have said what I did, even though what I did say was true.

This kind of response from what we all recognize as a Washington mass of confusion, chaos, and inefficiency is certainly refreshing.

I am a subscriber to the Library of Congress, Division for the Blind and Physically Handicap's, "Talking Book" Program and have often written to them expressing my gratitude and regard for their extraordinary efficiency. They are efficient as part of the U.S. Government, which is remarkable, but if they were a private profit oriented operation they could not be more efficient. I now have the same opinion of your division.

The Library of Congress never ceases to amaze me.

Thank you for your courteous and thorough response and you will probably be hearing from me in the future. By copy of this letter to my two Senators and one Representative in Congress I am asking that they read into the "Congressional Record" a statement to the effect that one average citizen from their state, who deserved no special attention, received rather remarkable special attention to rather incidental questions.

Thank you for your courtesy and fast response.

Sincerely,

R. A. NELLIS,
Veterans' Administration.

YOUTH UNEMPLOYMENT—A WORLDWIDE PROBLEM

Mr. HUMPHREY. Mr. President, a recent article written by Mr. Jean Ross-Skinner in the July issue of Dun's Review outlines the horrifying magnitude and permanence of the youth unemployment crisis in Western Europe. Is high youth unemployment here to stay? Mr. Ross-Skinner's article suggests the answer is yes—unless the governments of Western Europe radically improve their jobs programs for youths.

There is no doubt that the prospect of 2 million or more of the next generation of workers remaining permanently jobless is beginning to frighten our European allies. I suggest that we Americans also take notice of the European dilemma—for the United States suffers from many of the same ailments that have caused this lost generation of European youth.

In the United States, 18.6 percent of teenage workers were jobless in April of this year, more than double the 7.1 percent rate for the work force as a whole. As Mr. Ross-Skinner points out, in the long run, perhaps most disturbing is that industry's capital investment is being directed less at adding to existing productive capacity than to replacing it with more capital-intensive, labor saving plants.

Necessity, however, has been the mother of invention, and the Europeans are way ahead of us in devising job programs targeted at the young unemployed. Mr. Ross-Skinner briefly outlines the kind of government help the Western European countries are planning.

I suggest that all my colleagues read this article and find out about these European job promoting measures. Youth unemployment is one problem that will be looking us straight in the eye for quite a while. We can learn from our European friends' attempts to solve this problem.

As Mr. Ross-Skinner suggests, these idle hands are no idle threat. We must not allow youth unemployment to swallow the productive drive and creativity of an entire generation. We must learn from the European experience. I exhort my colleagues to read this article.

I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE'S JOBLESS: NO END IN SIGHT?

(By Jean Ross-Skinner)

With unemployment expected to keep rising, the EEC is now looking hard at long-range programs to create more jobs.

Is high unemployment here to stay? This is the question that anxious Europeans are beginning to ask. Until recently it was widely assumed that economic revival, as in previous times, would bring back the jobs—if not to the high levels of the preoil-crisis world, at least to manageable unemployment levels. Only this time it has not happened. Indeed, the evidence is piling up that Western Europe may be suffering from serious structural unemployment that can be cured only by long-range programs to create jobs.

The unemployment figures tell the story. Back in late 1973, the seasonally adjusted unemployment rate throughout the European Economic Community was a low 2.7 percent. By the pit of recession in late 1975, it had soared to 5.2 percent. The cautious economic recovery in 1976 brought no improvement. On the contrary, unemployment worsened slightly to 5.3 percent—or 5.5 million—by years' end. The unemployment rate has crept up even further since January, and the Organization for Economic Cooperation and Development forecasts that EEC unemployment will reach 6 million by the end of this year, even though economic growth is expected to continue. European unemployment is probably higher than the current 7 percent in the U.S., since European statistics include only people who have registered as being unemployed.

French unemployment is at a post-World War II high of 4.7 percent, even with a 9 percent rise in industrial output last year; Britain, with 5.6 percent jobless, is close to its record high; Belgium suffers 7.1 percent unemployment; even prosperous Germany—which only a few years ago was importing workers to make up for labor shortages—reports a 4.2 percent rate; and Italy's official 3.9 percent rate cloaks the worst plight of all, with countless unemployed who have dropped out of the search of jobs altogether. "It has been clear for over a year now that recovery isn't creating the necessary jobs," says economist Peter Melvyn of the Geneva-based International Labour Office.

UNEMPLOYED YOUTH

As in the U.S., Europeans are worried most of all about the high unemployment rate among the young. For the failure of industry to generate new jobs has coincided with a big increase in the work force stemming from the European "baby boom" of the 1960s. In the nine Common Market countries, the number of teenagers and young adults entering the job market every year has increased around 14% since 1971, and the yearly tally will continue to climb well into the 1980s. In the U.S., on the other hand, the number of young job seekers is expected to start declining soon. Currently, around 40%—or 2 million—of the Common Market's total unemployed are under 25 years old, and the length of time they are out of work has risen sharply.

Making matters worse is the substantial imbalance between available jobs and skills. It is partly a sectoral and regional phenomenon; for example, the decline of such industries as construction, shipbuilding and textiles has boosted the jobless rate in Britain's northwest (textiles) and France's big ship-building cities. Primarily, though, the mismatch is due to European educational systems. Geared to academic learning, Europe's schools currently launch one-in-three graduates without any vocational training or even a glimmering of how industry works. When youngsters do have skills, they are often the wrong ones. Many skilled German youths, for example, are being retrained without ever having found jobs in their original fields.

This lack of job preparation applies to the college-educated as well as to teenagers, and there is serious unemployment among university graduates. In Italy, where youth unemployment is most serious, nearly half of next year's graduates are expected to remain jobless.

The boom times of the 1960s and early 1970s also fostered high job expectations among the young that are unrealistic today. Finding only openings that offer less than the expected job satisfaction and pay, many young people are rejecting them and waiting for something better. They are extending their studies or living off unemployment benefits or their parents. As more and more of these educated young people stop looking for work, they are creating a whole new class of unemployed.

Increasingly, too, industry is passing over young applicants to hire experienced workers. For one thing, the latter are now readily available. For another, most European countries have enacted strict minimum-wage limits, which have boosted the cost of hiring young workers and wiped out their former attractiveness as trainees.

In the long run, perhaps most disturbing of all for Western Europe's employment outlook is that industry's capital investment is being directed less at adding to existing productive capacity than to replacing it with more capital-intensive, labor-saving plant. This trend, which began in the late 1960s, is due in part to industry's continuing pessimism about future growth, but mostly to the high cost of labor. Labor costs have soared even faster than prices and have been swelled further by big increases in social-benefit contributions. And a recent flurry of legislation has made it far harder for companies to fire workers, which forces them to regard labor increasingly as a fixed rather than a variable cost. In Germany, for instance, while domestic capital investment has increased 45 percent since 1969, stepped-up automation has boosted the amount of capital invested per worker by 55 percent, and the total number of jobs over the period has dropped 6.4 percent.

Service industries, traditionally big youth employers, have also been hit by high labor costs. So jobs have disappeared here too. Meanwhile, inflation fears have prevented governments from boosting spending to create jobs.

GOVERNMENT HELP

To be sure, the Common Market countries are pushing ahead with a number of national plans to boost jobs. Many are designed to improve and expand training. France, for example, will soon introduce a program that guarantees 90 percent of the minimum wage to youngsters out of school who are willing to take vocational-training courses. In Britain, the government is paying grants to companies for each long-term trainee taken on in addition to their normal hiring. Nearly all EEC countries are expanding state training establishments.

Other programs are aimed at saving or creating jobs. Britain has a Temporary Employment Subsidy program, which pays a flat sum each week for up to a year to companies that keep ten or more workers they would otherwise have fired; in less than a year, the program is estimated to have saved over 200,000 jobs. In France, the government is readying a plan whereby any company hiring youngsters within a year of school or university will be exempted from paying their Social Security contributions, which are around one-third of the total cost per worker. The Dutch government pays employers a premium for each youngster taken on who has been jobless for more than six months.

The Dutch and British lead the way in state subsidization of noncommercial job projects, such as clearing canals, conservation work, assistance to the handicapped, research, and so on. The British have also started a Work Experience Program, in which the government underwrites a low, tax-free salary for youngsters under nineteen who are taken on by industry. The work does not displace existing jobs.

But such palliatives, however effective, are unlikely to prove enough. More and more, Europe's economists, politicians and unionists are becoming convinced that they face a chronic, long-term job famine that could last until the mid-1980s. British economist Michael Shanks believes the number of unemployed in the EEC could almost double by 1982.

Shanks, former EEC director general of social affairs and currently serving on the Confederation of British Industry's employment committee, points out that as a result of capital-intensive investment, productivity in the EEC has increased at an accelerating rate to around 4 percent a year currently. "Therefore, economic growth substantially higher than 4 percent a year would be needed to reduce the present high level of unemployed and find jobs for new workers coming into the marketplace," he says.

Indeed, a major EEC study last year calculated that to cut Common Market unemployment as a whole to 3 percent by 1980 would require an average annual economic growth of close to 6 percent. But that kind of growth is not feasible, the study warned, since it would be inflationary and would cause balance-of-payments problems. Nor are such levels of growth anywhere evident. The EEC's overall Gross Domestic Product expanded 4.3 percent last year, and a rate of only 3.5 percent is forecast for this year. Germany has just revised its official growth rate forecast for 1977 downward from 5 percent to 4.7 percent, but the more skeptical OECD believes 4 percent is the most Germany can hope for. And French industry ridicules the government forecasts of 4.1 percent growth this year; 3.2 percent is nearer the mark, the Paris Chamber of Commerce insists.

So poor is the outlook, there is a growing acceptance that, as a new OECD study puts it, "Job creation may become a major policy instrument." Actually, the trend to long-range job-creating programs has already started. In April, Germany announced a massive four-year, $6.7 billion plan to cut unemployment by attacking structural imbalances in the economy. And Britain is expected to set up a $350-million-a-year program that will draw together and make permanent the dozen or so temporary programs that exist today.

Not surprisingly, the belief that Western Europe must find ways of parceling out the available work more evenly is moving to center stage. The idea of shortening the work week is getting a big play, particularly from labor leaders. In April, the European Trade Union Confederation launched a concerted drive to cut the work week from 40 hours to 35 hours. It is also recommending six-week vacations, voluntary early retirement at age 60 (it is currently 65 for men) and shorter, more flexible hours for older workers. General Secretary Jack Jones of Britain's big Transport and General Workers Union is pressing hard for a 35-hour week. Heinz-Oskar Vetter, chairman of Germany's Trade Union Confederation, also believes that a shorter work week may be the only answer. Vetter says: "I am convinced economic growth on its own is not enough to beat unemployment. At some point or other, working hours will have to be cut."

Economist Michael Shanks suggests that the most realistic way of introducing the shorter work week would be for all the EEC countries, perhaps in tandem with the U.S., to phase it in over several years so that no country would weaken itself by acting alone. The shorter week is certainly the toughest nut to crack. Workers would hardly be willing to accept lower pay—and less work for the same pay would be inflationary and hurt production.

RETIREMENT AND VACATIONS

In fact, what the Europeans call work-sharing is already implicit in many ongoing programs. Early retirement, the easiest method, is spreading fast. Belgium and Britain now both offer plans whereby if a worker retires early and the company takes on a jobless young worker as a replacement, the government will fund the retiree until his regular pension starts.

There is already a trend to longer vacations. Germans, for instance, work one week less each year than they did in 1970, with an average of almost five weeks of vacation days. Meanwhile, the Dutch have pioneered a radical job-sharing plan called "duo-job." Two workers (they could be husband and wife) share one job, splitting the salary and the unemployment pay rights. Launched last year, the plan was halted by technical problems but may be started up again next year.

There is no doubt that the prospect of 2 million or more of the next generation of workers remaining perhaps permanently jobless is beginning to frighten Europeans. They already see a rising tide of rioting and crime, as more and more alienated youngsters who despair of finding work drop out of the system. They know it could get worse. The alternative to a crash drive to create jobs, they fear, could well be an era of escalating social turmoil throughout Western Europe.

ORDER FOR RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 9:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

TRANSFER OF MEASURE TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there is a measure on the calendar which has been cleared for action by unanimous consent, Calendar Order 337. I ask that the clerk transfer that measure to the Consent Calendar.

The PRESIDING OFFICER. The measure will be so transferred.

AUTHORIZATION FOR RECEIPT OF MESSAGES FROM THE HOUSE OF REPRESENTATIVES

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to receive messages from the House of Representatives during the recess of the Senate over until 9:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR CERTAIN ACTION DURING RECESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Vice President of the United States, the President of the Senate pro tempore, the Acting President pro tempore, and the Deputy President pro tempore be authorized to sign all duly enrolled bills and joint resolutions during the recess of the Senate overnight.

The PRESIDING OFFICER. Without objection, it is so ordered.

SPECIAL ORDER ON THURSDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. JAVITS be recognized for not to exceed 15 minutes on Thursday of this week, after the two leaders have been recognized under the standing order.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, are there any orders for the recognition of Senators tomorrow?

THE PRESIDING OFFICER. There are not.

Mr. ROBERT C. BYRD. I thank the Chair.

ORDER FOR CONSIDERATION OF TREATY TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after the two leaders have been recognized under the standing order tomorrow, the Senate go into executive session to consider the treaty on the calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene tomorrow morning at 9:30.

After the two leaders or their designees have been recognized under the standing order, the Senate will go into executive session to consider the treaty, the agreement with Canada concerning transit pipelines. There is a time limitation on that treaty.

Upon the disposition of the treaty, the Senate will resume legislative session, and at that time the Senate will resume, by unanimous consent, the consideration of S. 926.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. There will be rollcall votes throughout the day on amendments and motions and points of order in relation to S. 926. It is very likely to be a long day tomorrow. Tomorrow is Wednesday, and it is hoped that the Senate will complete action on S. 926 tomorrow.

So I hope that all Senators will be duly apprised of the intention of the leadership to finish action on S. 926 tomorrow, if at all possible. It may be a late day, and votes can run into the evening.

RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there is no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9:30 a.m. tomorrow.

The motion was agreed to; and at 7:50 p.m. the Senate recessed until tomorrow, Wednesday, August 3, 1977, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate August 2, 1977:

DEPARTMENT OF STATE

Edward Marks, of California, a Foreign Service officer of class 3, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Guinea-Bissau.

Edward Marks, of California, a Foreign Service officer of class 3, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Cape Verde.

NATIONAL ENDOWMENT FOR THE HUMANITIES

Joseph D. Duffey, of the District of Columbia, to be Chairman of the National Endowment for the Humanities for a term of 4 years, vice Ronald S. Berman, term expired.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 2, 1977:

DEPARTMENT OF JUSTICE

Wesley David Lane, of Minnesota, to be U.S. marshal for the district of Minnesota for the term of 4 years.

DEPARTMENT OF THE TREASURY

Azie Taylor Morton, of Virginia, to be Treasurer of the United States.

Robert H. Mundheim, of Pennsylvania, to be General Counsel for the Department of the Treasury.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Blandina Cardenas, of Texas, to be Chief of the Children's Bureau, Department of Health, Education, and Welfare.

FEDERAL MARITIME COMMISSION

Richard J. Daschbach, of New Hampshire, to be a Federal Maritime Commissioner for the term expiring June 30, 1982.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

HOUSE OF REPRESENTATIVES—*Tuesday, August 2, 1977*

The House met at 10 o'clock a.m.

The Reverend Gregory J. Wismar, pastor, St. Paul's Lutheran Church, Naugatuck, Conn., offered the following prayer:

This is the day which the Lord has made; let us rejoice and be glad in it.—Psalms 118: 24.

Heavenly Father, as we praise Thee for having brought us this singular morning, with all its promise and possibilities, we ask that Thou wouldst be present not only in this moment of reflection and prayer, but throughout the day.

May we show our humble gratitude for the abilities and responsibilities Thou hast given us by thoughtfully attending to the demands of our callings, keeping intact both our honor and our credibility. May all involved with the directing of our Nation manifest wisdom and understanding, that our Nation may be ruled with quiet grace. And may each of us be glad, when this evening comes, that we have spoken words and done deeds befitting Thy children. We ask this in Jesus' name. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate insists upon its amendments to the bill (H.R. 6415) entitled "An act to extend and amend the Export-Import Bank Act of 1945," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. PROXMIRE, Mr. STEVENSON, and Mr. HEINZ to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 1678. An act to amend the Federal Insecticide, Fungicide, and Rodenticide Act, as amended.

REV. GREGORY J. WISMAR

(Mr. SARASIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SARASIN. Mr. Speaker, I am very proud and honored that our prayer at the beginning of today's House session was offered by the Reverend Gregory Just Wismar, a pastor from Naugatuck, Conn. Reverend Wismar serves the congregation of St. Paul's Lutheran Church as their spiritual leader, as well as their counselor and friend.

His service to his congregation is only part of his overall contribution to his community. Reverend Wismar is a tutor for the special education department of the Naugatuck public school system. He serves on Naugatuck's charter revision committee and is also the institutional representative of troop 115 of the Boy Scouts of America. He is of invaluable assistance to me as a community representative to my bipartisan Fifth District advisory board.

In addition to the respect he commands from his congregants, Reverend Wismar is also a leader among his fellow clergy. He is a member of the National Convention Format Committee for the Lutheran Church Missouri Synod Youth Board.

Reverend Wismar was born in Jersey City, N.J., and graduated cum laude from Concordia Senior College in Fort Wayne, Ind. He received his master of divinity from Concordia Seminary in St. Louis, Mo., and his master of education from Southern Connecticut State College. He is married to the former Priscilla Ames of Akron, Ohio, and they have three children; Eric, Sarah, and Elizabeth.

Reverend Wismar is a former jazz musician, a nationally published composer of church music, and a member of the Connecticut Association for the Gifted. It is indeed an honor, Mr. Speaker, to have such an accomplished and distinguished member of the clergy here with us today.

PRIVATE CALENDAR

The SPEAKER. This is the day for the call of the Private Calendar. The Clerk will call the first individual bill on the Private Calendar.

JENNET JUANITA MILLER

The Clerk called the bill (H.R. 1405) for the relief of Jennet Juanita Miller.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

CHRISTOPHER ROBERT WEST

The Clerk called the bill (H.R. 2662) for the relief of Christopher Robert West.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MILOS FORMAN

The Clerk called the bill (H.R. 3085) for the relief of Milos Forman.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

FIDEL GROSSO-PADILLA

The Clerk called the bill (H.R. 3090) for the relief of Fidel Grosso-Padilla.

Mr. BAUMAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

CATHY GEE YUEN

The Clerk called the bill (H.R. 1777) for the relief of Cathy Gee Yuen.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PAZ A. NORONA

The Clerk called the bill (H.R. 1787) for the relief of Paz A. Norona.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MEDA ABILAY FLORIN

The Clerk called the bill (H.R. 1939) for the relief of Meda Abilay Florin.

There being no objection, the Clerk read the bill as follows:

H.R. 1939

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Meda Abilay Florin may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Aurora A. and Jose R. Florin, permanent resident aliens of the United States: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

On page 1, line 5, strike out "section 101(b)(1)(F)" and substitute in lieu thereof "section 101(b)(1)(E)".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CARMEN PRUDENCE HERNANDEZ

The clerk called the bill (H.R. 2758) for the relief of Carmen Prudence Hernandez.

There being no objection, the Clerk read the bill, as follows:

H.R. 2758

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Carmen Prudence Hernandez may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mrs. Carmine Hernandez, a citizen of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

On page 1, line 7, strike out the name "Carmine" and substitute in lieu thereof the name "Carmen".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SEALIE VON KLEIST HERNANDEZ

The Clerk called the bill (H.R. 2759) for the relief of Sealie Von Kleist Hernandez.

There being no objection, the Clerk read the bill as follows:

H.R. 2759

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Sealie Von Kleist Hernandez may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mrs. Carmine Hernandez, a citizen of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

On page 1, line 7, strike out the name "Carmine" and substitute the name "Carmen".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ADELIDA REA BERRY

The Clerk called the bill (H.R. 5555) for the relief of Adelida Rea Berry.

There being no objection, the Clerk read the bill, as follows:

H.R. 5555

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Adelida Rea Berry may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mr. and Mrs. Raymond Berry, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARTHA CASTRO FITZ MAURICE

The Clerk called the bill (H.R. 3618) for the relief of Martha Castro Fitz Maurice.

There being no objection, the Clerk read the bill, as follows:

H.R. 3618

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Martha Castro Maurice may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mr. and Mrs. W. A. Fitz Maurice, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MISS CORALIA RAPOSO

The Clerk called the bill (H.R. 5928) for the relief of Miss Coralia Raposo.

There being no objection, the Clerk read the bill, as follows:

H.R. 5928

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of sections 203(a)(1) and 204 of the Immigration and Nationality Act, Coralia Maria Pimentel Raposo shall be held and considered to be the natural born alien daughter of Mr. and Mrs. Richard G. Carnright, citizens of the United States: *Provided, however,* That the natural parents or brothers or sisters of the beneficiary of this Act shall not, by virtue of their relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

On page 1, line 7, after *"Provided,"* strike out *"however,"*.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GEOFFREY PARNHAM

The Clerk called the bill (H.R. 1449) for the relief of Geoffrey Parnham.

There being no objection, the Clerk read the bill, as follows:

H.R. 1449

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(23) of the Immigration and Nationality Act, Geoffrey Parnham may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DR. LAWRENCE C. B. CHAN

The Clerk called the bill (H.R. 1934) for the relief of Dr. Lawrence C. B. Chan.

There being no objection, the Clerk read the bill as follows:

H.R. 1934

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Lawrence C. B. Chan

shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

KWI SOK BUCKINGHAM (NEE KIM)

The Clerk called the bill (H.R. 4401) for the relief of Kwi Sok Buckingham (nee Kim).

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the House dispense with the further call of the Private Calendar.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

DEMOCRATS LOSE TO REPUBLICANS, 7–6

(Mr. DAVIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DAVIS. Mr. Speaker, it is with deep regret that I take this moment to announce that last night, before a standing-room-only crowd at Langley High School Field, McLean, Va., the fog rolled in, just as it would in a mystery, and today it remains a mystery as to how the Republicans won the ball game, but they did, 7 to 6.

Mr. Speaker, we from the Democratic side apologize for not having brought home the trophy for the third consecutive year, but we do appreciate the cooperation of the leadership in helping us arrange this game after it was rained out.

It was a close game, as shown by the score of 7 to 6, and maybe the other side just "won one for The Gipper," because Coach CONTE announced his retirement last night.

There were several outstanding players, and the most valuable players from the two sides were Representative MCCLOSKEY for the Republicans and Representative DOWNEY of New York for the Democrats.

Mr. Speaker, maybe what happened again foretells the future of the elections. In the past we used to lose the ball games and win the elections, and at least as it applies to the elections, perhaps we will continue on that note in the future.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. DAVIS. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, the gentleman from South Carolina (Mr. DAVIS) is not saying that the gentleman from Massachusetts (Mr. CONTE) is going to retire, is he?

Mr. DAVIS. He has retired as a baseball coach.

Mr. ASHBROOK. Mr. Speaker, tell us it is not so.

Mr. DAVIS. Mr. Speaker, I yield back the balance of my time.

PERMISSION FOR THE COMMITTEE ON MERCHANT MARINE AND FISHERIES TO SIT ON H.R. 1037 UNDER 5-MINUTE RULE TODAY

Mr. DE LA GARZA. Mr. Speaker, I ask unanimous consent that the Committee on Merchant Marine and Fisheries may be permitted to sit for consideration of the bill H.R. 1037 during amendments under the 5-minute rule today.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. ROUSSELOT. Reserving the right to object, Mr. Speaker, does the gentleman know whether there will be a markup of a bill? Does he assure us that there will only be a hearing?

Mr. DE LA GARZA. If the gentleman will yield, Mr. Speaker, the hearing will be today. Most of the witnesses have been heard, but there is a possibility that the committee will continue into markup.

Mr. ROUSSELOT. The gentleman cannot give us an assurance that there will be no markup; is that correct?

The reason I ask is that, as the gentleman knows, there are a lot of amendments on the "crucial" energy legislation before us, as the President calls it.

Mr. DE LA GARZA. I understand that. This bill is an energy bill also. The problem is that in adhering to the 7-day notice, the hearing was set for 10 o'clock this morning before we knew what the schedule would be this week, and it has put us in a situation where it would be difficult not to continue.

Mr. ROUSSELOT. Further reserving the right to object, Mr. Speaker, does the gentleman know of the many Members from his own side of the aisle who come to us all the time and say that we should not be having these meetings while there is important legislation before us?

Can the gentleman assure us that there will be no markup of the bill?

Mr. DE LA GARZA. No, I cannot.

Mr. ROUSSELOT. Mr. Speaker, I am constrained to object.

The SPEAKER. The gentleman from California (Mr. ROUSSELOT) objects.

Are there other Members who wish to object?

The required amount has not risen. Therefore, the objection is not sustained and the request of the gentleman from Texas is granted.

GRANTING THE GENTLEMAN FROM MASSACHUSETTS, MR. CONTE, A 1-YEAR EXTENSION AS BASEBALL COACH

(Mr. CEDERBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CEDERBERG. Mr. Speaker, as president of the Republican Baseball Club, I am happy to announce that we have had a meeting of the board of directors and we have decided to grant our manager, the gentleman from Massachusetts (Mr. CONTE), a 1-year extension on his contract.

I have to confess that he has been on probation, and we had warned him that unless we had received better results, we were going to have to take some action.

Mr. Speaker, I wanted to make the contract a multiyear contract. However, the board decided that would not be a good idea. Therefore, we have just made it a 1-year extension of the gentleman's current contract.

I also felt that we should double the gentleman's salary. However, the board of directors concluded that doubling nothing would still be nothing, so we decided we would do nothing in the salary area.

Nevertheless, Mr. Speaker, we are delighted that the Republicans did win last night's baseball game and that, as a result of that, we have been able to extend the contract of our manager for 1 more year.

PROVIDING FOR CONSIDERATION OF CONFERENCE REPORT ON S. 826, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 731 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 731

Resolved, That immediately upon the adoption of this resolution it shall be in order to consider the conference report on the bill (S. 826) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, said conference report shall be considered as having been read, and all points of order against said conference report for failure to comply with the provisions of clause 3, rule XXVIII are hereby waived.

The SPEAKER. The gentleman from Missouri (Mr. BOLLING) is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi (Mr. LOTT), pending which I yield myself such time as I may consume.

Mr. Speaker, there was no controversy over this matter in the Committee on Rules yesterday.

The chairman of the House conferees, the gentleman from Texas (Mr. BROOKS), and the ranking minority Member, the gentleman from New York (Mr. HORTON), appeared. They agreed on the request for this rule. There was no opposition to it in the Committee on Rules, and the Committee on Rules granted the rule unanimously.

It provides that the conference report shall be considered as read and all points of order against the rule that deals with scope be waived.

I see no reason for me to pursue the matter further at this time and I reserve the balance of my time.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this rule waives points of order against the conference report to accompany S. 826, the Department of Energy Organization Act, for failure to comply with clause 3 of rule XXVIII. The waiver is necessary because title X is a variation of the House sunset provision for which the Senate had no comparable language.

The House version states that the act will expire on December 31, 1982. The Senate version is silent on this matter. So the conferees substituted a requirement that the President submit to Congress a comprehensive review of each program in the Department by January 15, 1982. This report is to be made available to the House and Senate committees having jurisdiction over annual authorizations for such programs for fiscal year 1983.

Since there is no similar Senate provision and since the House's version is different, title X of the conference report appears to be beyond the scope of the conference. Hence, the waiver of rule XXVIII, clause 3.

No objection was raised by the minority to the granting of this rule in the Rules Committee.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield such time as he may consume to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker, I think it is highly unfortunate that there was no controversy regarding this rule because the conference report, which it makes in order and waives points of order against, would have been subjected to at least one or perhaps more valid points of order.

I think it is worth noting for the record how these things are done around here.

This particular conference report exceeds in its final terms the scope of both the other body's provision and the provision of the House regarding supergrade civil service positions in the new Department of Energy.

Mr. Speaker, we hear all of these complaints about larding the Government with highly paid officials who are unneeded. Yet if you vote for this rule you will allow the conferees to disregard the positions of both Houses of the Congress and go beyond that to create more than 600 possible supergrades, more than 1 for every 10 employees.

Mr. Speaker, S. 826, as approved by this House on June 13, effectively authorized 350 supergrade positions for the proposed Department of Energy. The House passed substitute authorizes the supergrade positions in question by raising the allotted number of such positions under section 5108 of title 5, United States Code, from "an aggregate of 2,754" to "an aggregate of 3,104". The corresponding provision passed by the other body on May 18 authorized no more than 150 positions in the supergrades to carry out the functions of the Department of Energy. The conference report modified this in section 714(a), by raising the allotment of supergrade positions from "an aggregate of 2,754" to "an aggregate of 3,243", or an effective increase of 489 supergrade positions. This certainly is beyond the scope of the specific disagreement of either House. I think it is a shame that no one did complain from either the minority or from the majority side regarding waiving points of order against this provision. I think it is typical of many of the times when our rights are not protected and it is very unfortunate for the taxpayers. I see no reason why this department should not exercise the same restraints as all other departments in the creation of top grade positions which I believe are totally unnecessary. The rule should be defeated.

Mr. HORTON. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield 5 minutes to the gentleman from New York (Mr. HORTON).

Mr. HORTON. Mr. Speaker, let me say that three representatives of the House Committee on Post Office and Civil Service, participated in the conference.

The gentleman from Maryland (Mr. BAUMAN) has used some figures that I do not believe accurately reflect the facts. The number of supergrades provided in the report is the same number of supergrades as are now authorized for the agencies transferred.

We finally agreed in the conference that 689 would be authorized. That is less than the Senate, because the Senate had authorized about 150 extra to bring it up to 750. The House passed bill authorized 550. The total number that we agreed on was 689. Of those, 178 would be under civil service; 311 would be under civil service in 4 years; and the rest, 200 would be totally exempt. My understanding is that there is no increase in supergrades as far as the Department force is concerned.

Mr. LOTT. Mr. Speaker, I yield 5 minutes to the gentleman from North Carolina (Mr. BROYHILL).

Mr. BROYHILL. I thank the gentleman for yielding.

Mr. Speaker, I would like to ask the gentleman some questions, if he would respond at this time. I am curious about this rule. I had no idea that the committee had gone to the Committee on Rules to request a rule waiving all points of order on this particular conference report. As many Members know, I have had a considerable interest in this legislation because the amendment that apparently is in some controversy is the amendment that I offered on the floor of the House. The amendment carried by a considerable margin. At a later time I offered a motion which would instruct the conferees to insist upon this amendment which has come to be called the sunset provisions in the bill.

Now to my surprise I see that the committee has gone to the Committee on Rules to get a rule to waive points of order that might lie on this particular amendment as it has come out of the conference committee.

The question I ask is exactly what are the points of order that might lie on the conference report if the rule were not passed?

Mr. LOTT. In the statement by the chairman of the committee, the gentleman from Texas (Mr. BROOKS), it was stated that in his view nothing in the conference report beyond the scope of matters committed to conference, except for this one section, title X, the sunset provision terminating the Department of Energy in 5 years. That was the only point that was discussed in the Committee on Rules with regard to the conference report. If it goes beyond that, that was not the discussion in the Committee on Rules.

Mr. BROYHILL. I regret that I was not notified that the committee was going to the Committee on Rules about this particular matter so that I could have been heard before the Committee on Rules at the time. I have been tied up, as the gentleman knows, in a conference with the Senate on the Clean Air Act which we must get out of here before we adjourn on Friday night. But I very much regret—I will put it that way—that the conference committee has seen fit to drop my amendment, which I think is very important. With all of the words that we hear from back home about the number of agencies that are being created up here, and we do a good job of creating agencies, but do a very poor job of exercising congressional oversight, I think it makes it more important that we have a sunset provision in legislation creating this particular new department. This is a department that will start out with a budget of some $10 billion and that will start out with over 20,000 employees. If there is any department that I know of that should be looked at carefully and have its actions checked almost on a day-to-day basis, it is this one.

I very much regret that the conference has dropped my sunset provision. It is my understanding also that the conference has dropped another amendment that has been offered by the gentleman from Georgia (Mr. LEVITAS). He, of course, may want to speak on that, but it is another amendment that I had some considerable interest in. These agencies and departments are writing rules and regulations in the thousands. The rules and regulations have the force and effect of law. The people back home are not necessarily living under the laws that we write, but under the rules and regulations that are issued by these departments and agencies.

It is only right that Congress should have some procedure to review those rules and regulations which have the force and effect of law. I very much regret that amendment was rejected.

Another question I would like to ask is this. It is my understanding that the resolution that we are bringing to the floor would waive the actual reading of the conference report itself. Is that correct?

Mr. LOTT. It is that the conference report shall be considered as having been read. That is correct.

Mr. BROYHILL. I would like to ask the gentleman from Mississippi or the gentleman from Missouri if there will be any opportunity at all for some debate on the conference report itself or shall we have to find some time here during consideration of this rule for any debate on the conference report? It is my un-

derstanding that the managers on the part of the House on both sides were opposed to these two amendments and I am not sure we will have any opportunity to debate this conference report.

Mr. HORTON. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from New York.

Mr. HORTON. Mr. Speaker, I will be the manager of the bill for the minority and I will be glad to give the gentleman an opportunity to be heard. The time will be under the control of the gentleman from Texas (Mr. BROOKS) and I am sure he, too, will be glad to yield time to the gentleman.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, all the time in the world will not give us an opportunity to change the way the rules have been waived. The managers have been very slick in bringing this to the floor in this manner and making it very difficult for any Member to question items on which points of order could be made.

We have had all this great conversation from downtown about how we want to keep Government limited and reserved. This bill does just the opposite.

Mr. Speaker, if the gentleman will yield further, not only are we denied full discussion of the sunset provisions but also a review of the new level of supergrades which are substantial.

This is going to be just another gigantic agency with lots of supergrade bureaucrats running around interfering necessarily in the distribution of energy supplies.

I think the point of the gentleman from North Carolina is well taken and the remarks of my colleague, the gentleman from New York, that we will have all the time in the world to debate this means not very much. There is no time to correct what was done in the Rules Committee. I must say to the advocates of this bill a slick job was done in preventing this House from addressing several deleted important elements.

Mr. BROYHILL. They also dropped the amendment offered by the gentleman from Georgia (Mr. LEVITAS) which provides for review and possible veto of rules and regulations which come from this agency.

Mr. ROUSSELOT. Yes, I know. The point is they do not want review of this agency. They want lots of supergrade bureaucrats. It is totally opposite to what is being said downtown by the President and others. This very limited rule should be voted down.

Mr. LOTT. Mr. Speaker, I yield myself additional time to comment on the remarks by the gentleman from North Carolina.

First of all I think he is very much aware that I do support the sunset provisions, but I want to point out to him this rule waives points of order against the conference report "for failure to comply with the provisions of clause 3, rule XXVIII," which is the scope.

It is my understanding that the supergrade provision is within the scope of the conference report and it does not deal with the facet that the gentleman from Georgia (Mr. LEVITAS) is concerned about.

The Rules Committee did have notice that we were going to have this meeting yesterday at 2 o'clock. We did have a representative from the majority and the minority. I regret that the gentleman from North Carolina was not also given notice because I know of his interest, but it was done strictly within all the rules regarding compliance with notice.

Mr. LOTT. Mr. Speaker, I yield 3 minutes to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Speaker, I would like to point out that during the conference the gentleman from Arizona (Mr. UDALL) and the gentlewoman from Colorado (Mrs. SCHROEDER) and myself did raise objections to that portion of the report that dealt with the appointment of supergrades, section 608. Our reservations are set forth on page 93 of the conference report, in that we felt that the creation of this new department was one of the first steps of reorganization in the Government and that the administration was not adhering to our civil service laws and was abrogating our civil service laws by requesting permanent exemption of these additional 200 supergrades. I point out to my colleagues that the total number of supergrades under this bill amounts to approximately 1 supergrade position for every 10 employees.

Mr. Speaker, I object to any limited rule on this measure.

Mr. BOLLING. Mr. Speaker, I yield 3 minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Speaker, I thank the gentleman from Missouri for yielding me this opportunity to address this rule.

I think one of the reasons there was no more discussion of it before the Committee on Rules is that some of us who did have objections or points of order to raise were unaware that a rule was being sought.

Let me explain to some of the Members of the House just exactly what the rule is that we are waiving. I realize that rules are made to be broken, but let us talk about this particular rule. Clause 3 of this rule provides that a conference committee cannot go beyond the scope of the provisions put in the legislation by the House or by the other body. In this case, obviously, that was done, or else there would not be a rule coming before us today in order to waive this particular provision.

I had a point of order which I had intended to offer on the basis of violation of this rule relating to the rulemaking or legislative veto provision.

This House by a recorded vote adopted a provision giving the Congress the right to review and veto rules and regulations of this new agency. The other body put in a provision providing for a limited rulemaking veto relative to the Interstate Commerce Commission transfers; so to that extent, the two bodies were not in conflict, and yet what happened in the conference committee is that all provisions relating to administrative rulemaking review and veto were dropped and that, I submit, was beyond the scope of the conference.

I hope there will be an opportunity for discussing this matter and that the gentleman from Texas, the distinguished chairman of the committee, who has worked as hard as I know the gentleman has worked in bringing this conference to the floor will permit Members to have an opportunity to discuss this matter and contemplate that a motion to recommit will be offered that will permit this report to be sent back to the conference committee to provide for a sunset provision and provide for a legislative veto.

Mr. Speaker, I would like to inquire of the gentleman from Texas if there would be any opportunity for us to discuss this matter when the conference report is being considered?

Mr. BROOKS. Mr. Speaker, if the gentleman will yield, surely, the gentleman will have the time.

Mr. LEVITAS. Mr. Speaker, I thank the gentleman from Texas for affording us that opportunity.

Mr. Speaker, I ask the gentleman from Missouri if the gentleman will yield for the purpose of my making a parliamentary inquiry.

Mr. BOLLING. Certainly.

PARLIAMENTARY INQUIRY

Mr. LEVITAS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state the parliamentary inquiry.

Mr. LEVITAS. Mr. Speaker, will it be in order, since the rule waives a reading of the conference report, will it be in order to offer a motion to recommit and, if so, at what point would it be in order?

The SPEAKER. It would be in order after the debate on the conference report. A motion to recommit is in order after the previous question is ordered.

Mr. LEVITAS. Mr. Speaker, I thank the Chair.

Mr. BROYHILL. Mr. Speaker, will the gentleman yield?

Mr. BOLLING. I am delighted to yield to the gentleman from North Carolina.

Mr. BROYHILL. Mr. Speaker, I did not hear the response of the chairman of the committee in answer to whether the gentleman would yield some time during consideration of the conference report and how much time is the gentleman talking about yielding?

Mr. BOLLING. Mr. Speaker, I yield to the gentleman from Texas.

Mr. BROOKS. Mr. Speaker, I did not discuss the amount of time. I said to the gentleman from Georgia (Mr. LEVITAS) that the gentleman would be recognized to discuss the so-called self-destruct provision, which the gentleman calls the sunset provision.

Mr. BROOKS. Mr. Speaker, I want to express my appreciation to the Rules Committee for their expeditious action on granting a rule to clear the way for the House to proceed with the consideration of the conference report on the Department of Energy Organization Act without any procedural delays. We requested that a rule be granted waiving points of order with regard to clause 3, rule XXVIII, in an effort to assure that this bill can be acted upon before the Congress recesses at the end of this week.

In my view, there is nothing in the conference report beyond the scope of the matters committed to the conference. However, in attempting to include in the conference report a provision that was acceptable to the Senate conferees, that will accomplish much of what the sunset termination provision of the House bill was intended to accomplish, we provided for a report that was not technically required by either the House or the Senate bills. The sunset provision in the conference report is clearly somewhere between the self-destruct provision of the House and the Senate's silence on the sunset issue. The conference report requires a comprehensive sunset-type review of every program of the Department prior to January 15, 1982. This, coupled with the annual authorization required in the conference report, should go a long way toward meeting the objectives of the sunset provision. The rule waiving points of order was requested to avoid the technical problem of requiring a new report being used as a means of delaying expeditious consideration of the substance of the conference report.

Mr. BOLLING. Mr. Speaker, does the gentleman from Mississippi have further requests?

Mr. LOTT. Mr. Speaker, I have no further requests for time.

Mr. BOLLING. Mr. Speaker, notice was given of this meeting on Friday. The gentleman from Georgia made a statement that I do not think is necessarily accurate.

He said the fact that the rule was granted proves that the conference report goes beyond the scope of the conferees. My understanding is that the request was made despite the fact that the chairman of the committee does not think it goes beyond the scope at all, but to assure that it would not be possible to knock this very important matter off the floor by a point of order as the House proceeds toward a recess. I have no opinion on that. I have not studied it, but it seems to me that the rule is not the least bit unusual, and should be supported.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 294, nays 115, answered "present" 1, not voting 23, as follows:

The Clerk announced the following pairs:

Mr. Burke of Massachusetts with Mr. Teague.

Mr. Murtha with Mr. Flippo.

Mr. Ambro with Mr. Charles Wilson of Texas.

Mr. Dent with Mr. Badillo.

Mr. Mikva with Mr. Koch.

Mr. Giaimo with Mr. Cornwell.

Mr. Burlison of Missouri with Mr. Derrick.

Mr. Eckhardt with Mr. Udall.

Mr. RHODES and Mr. HILLIS changed their vote from "yea" to "nay."

Mr. EMERY and Mr. FOUNTAIN changed their vote from "nay" to "yea."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR SUBCOMMITTEE ON SPECIAL SMALL BUSINESS PROBLEMS OF COMMITTEE ON SMALL BUSINESS TO SIT DURING 5-MINUTE RULE ON TOMORROW

Mr. RUSSO. Mr. Speaker, I ask unanimous consent that the Subcommittee on Special Small Business Problems of the full Committee on Small Business be permitted to sit on tomorrow, August 3, 1977, during the 5-minute rule. The purpose is for hearings and no legislative business will be taken up.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, can the gentleman from Illinois assure us that there will be absolutely no markup on any bill?

Mr. RUSSO. That is correct.

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to

the request of the gentleman from Illinois?

There was no objection.

CONFERENCE REPORT ON S. 826, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. BROOKS. Mr. Speaker, I call up the conference report on the Senate bill (S. 826) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, and ask for its immediate consideration.

The Clerk read the title of the Senate bill.

The SPEAKER. Pursuant to House Resolution 731, the conference report is considered as having been read.

The gentleman from Texas (Mr. BROOKS) and the gentleman from New York (Mr. HORTON) will be recognized for 30 minutes each.

The Chair now recognizes the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report before the House represents a carefully constructed effort worked out between the two Houses to establish a Department of Energy that will enable us to deal in an efficient and unified manner with the energy problems of this Nation.

Transferred to the Department of Energy will be all functions of the Energy Research and Development Administration, the Federal Energy Administration, and the Federal Power Commission. The Department will also be given jurisdiction over the economic aspects of Federal mineral leasing and power marketing functions of the Department of the Interior, certain informational, and research and development functions from the Bureau of Mines, the regulation of oil pipeline transportation from the ICC, authority to develop and promulgate energy conservation standards for new buildings from HUD, authority over industrial energy conservation programs from the Commerce Department, and, finally, jurisdiction over petroleum, and oil shale reserves from the Navy.

The conference report also creates the Federal Energy Regulatory Commission to handle most of the regulatory activities transferred to the Department, particularly those from the Federal Power Commission and the ICC. The Commission created by the conference report closely parallels that contained in the House bill.

Of particular importance, the Commission would have jurisdiction over setting rates and charges for the transportation and sale of natural gas, sale and transmission of electrical energy, the issuance of hydroelectric licenses and permits including projects in public lands and reservations, establishment of rates and charges for transportation of oil by pipeline, certain oil pricing provisions, and other matters.

The Secretary will have responsibility for general management of the Department, including the vast energy research and development efforts assumed from ERDA and FEA.

The conference report represents a reasonable split in the functions between the Secretary and the Commission that should give the Secretary adequate powers to carry out his responsibilities while keeping most adjudicatory and ratemaking activities in a multimember, independent body within the Department.

In establishing the above structure, the conferees also endeavored to construct necessary procedural safeguards and protections relating to operations by the Commission and the Secretary. Since both will be dealing with many important individual rights of persons and businesses, we have built into the bill detailed rights concerning such matters as hearings, right of appearance, trade secret protections, and judicial review.

The conferees also preserved exacting conflict-of-interest provisions regarding departmental employees.

The conferees further preserved the House requirement that all DOE programs and activities be subject to annual authorization and that all contracts must be supported by appropriations enacted in advance. Finally, the conferees retained the House provision establishing an Inspector General of DOE who is charged with auditing and investigating DOE activities in order to prevent fraud and abuse and to promote efficiency.

This brings me, Mr. Speaker, to the sunset provision. As Members will recall, the House provided that DOE would terminate in 5 years unless renewed. The Senate conferees adamantly refused to agree to this provision, including some leading proponents of sunset legislation. The Senate conferees based their refusal on the fact that the sunset provision could impair the effectiveness of DOE before it ever got off the ground.

DOE will assume major long-term research and development programs. It will administer several large contractor-operated nuclear energy plants—some for national security purposes. It must engage the services of competent personnel. Yet, any contract entered into which might extend beyond the fifth year of DOE life could be void. There was also concern about where any activity or program that extended beyond the fifth year would revert if the DOE terminated.

In short, the Senate conferees found the sunset provision to be unacceptable in this form.

In its place, the conferees have sought to fashion an effective sunset package. In addition to requiring authorization and appropriations on an annual basis, the President is directed to submit to Congress no later than January 15, 1982, a comprehensive review of each DOE program. An examination of the conference report will show that the detailed requirements of that report—coupled with the other protections cited above—will provide adequate sunset action without creating the legal problems of the self-destruct mechanism.

Mr. Speaker, the House conferees preserved the House's interests; they have brought back a good bill. I urge adoption of the conference report.

Mr. FINDLEY. Mr. Speaker, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from Illinois.

Mr. FINDLEY. I thank the gentleman for yielding.

Mr. Speaker, the conference report on the bill to establish the Department of Energy contains a well-hidden and never-discussed but very important provision which repeals the only protection small petroleum marketers have against the Federal Energy Administration's pernicious practice of applying its rules retroactively and fining these small businessmen for practices which were not regarded as improper at the time of the transaction. The portion of the law which is being repealed today is so simple and fair that it defies credulity that anyone would want to strike it from the statute books. Identified as section 7(k) of the FEA Act, and originally offered as an amendment by myself, it reads:

(k) the Administrator or any officer or employee of the Federal Energy Administration may not exercise his discretion to maintain a civil action or issue a remedial order against any person whose sole petroleum industry operation relates to the marketing of petroleum products, for any violation of any rules or regulations if—

(1) such civil action or order is based upon such rules, regulations or rulings interpreing such rules or regulations which are being applied retroactively; and

(2) the Administrator determines that such persons relied in good faith upon rules, regulations or rulings interpreting such rules or regulations in effect on the date of the alleged violation.

I have been assured by the chairman of the committee that elimination of section 7(k) was not intentional and that it continues to be the policy of the Congress. Moreover, I understand that Mr. Schlesinger has also agreed to continue enforcement of section 7(k) as if it were still in the law.

Mr. BROOKS. Let me respond. I am concerned about the matter which the gentleman brought to my attention. I supported the Findley amendment, and the House supported it. It was not by any special intent that it was omitted from the conference report but it was by special intent that we have tried to work out a solution. I have been in touch with the administration. Mr. James Schlesinger has written me a letter dated August 2 from the White House that says, and I will read it:

DEAR CHAIRMAN BROOKS: It has come to my attention that a provision of the Department of Energy Organization Act repeals section 7(k) of the Federal Energy Administration Act. This subsection limits enforcement actions against independent marketers based on changes in rules or regulations, or interpretations thereof, applied retroactively.

It is the full intention of the Administration and of the Department of Energy to carry out its regulatory responsibilities as they relate to the subject matter of section 7(k) of the Federal Energy Administration Act as if that subsection were still in force and had not been repealed. In this regard, it is our intent to assure procedural fairness to independent marketers by carrying out a Department of Energy enforcement program consistent with section 7(k) of the FEA Act.

Thank you for bringing this matter to my attention.

Sincerely,

JAMES R. SCHLESINGER,
Assistant to the President.

Mr. FINDLEY. I thank the gentleman for that assurance. I want the gentleman, and the entire House to know just how far the Federal Energy Administration has gone in trying to subvert section 7(k). Ever since my amendment was made a part of the law, FEA has studiously ignored it. On more than one occasion, I have pointed out to FEA that certain of its employees are violating the spirit and letter of my amendment. A typical response is, "No Congressman FINDLEY, we are not violating your amendment, we do not enforce our regulations retroactively." The facts, however, are otherwise.

For example, Mr. Speaker, earlier this year I wrote to Administrator O'Leary pointing out that FEA's Deputy Administrator, Charles Owens, in a press conference on December 31, 1973, publicly stated for the record:

I am not saying that the retailer, the independent businessman who is a retailer, has to provide cost justification in order to put this penny for nonproduct costs through.

The impact of that statement, widely reported in the trade publications, was that independent businessmen did not feel required to keep records to prove their added costs which justified the penny increase allowed by FEA. However, on September 4, 1975, FEA changed its mind and decided that small businessmen must indeed prove their nonproduct increases. Moreover, FEA decided to apply that requirement retroactive to November of 1973, raising the spectre of tremendous fines and penalties for those who followed Deputy Administrator Owens' advice.

When I asked FEA if this, at least, was not a clear violation of my amendment, Deputy Administrator Gorman Smith replied on June 3, 1977:

The statement to which you referred in your letter made by Charles Owens at a press conference is not an official position taken by FEA on a rule, regulation or ruling upon which a marketer could in good faith rely.

This is an absolutely ludicrous reply. It just goes to show how power hungry this agency has become and how callously it has elected to treat some of our most basic constitutional rights. There are other examples of FEA's imperiousness, and I ask that the full text of my exchange of letters be printed at the conclusion of my remarks. Suffice it to say, Mr. Speaker, I am convinced that so long as the Federal Energy Administration is in charge of the Nation's energy crisis, the energy crisis will always be with us. But the crisis will be of FEA's making.

Text of letters follows:

MAY 13, 1977.

Hon. JOHN O'LEARY,
Administrator, Federal Energy Administration, Washington, D.C.

DEAR MR. O'LEARY: The Federal Energy Administration is engaging in a practice which seems to be directly contrary to the mandate of the amendment I offered to the authorization act for FEA, now section 7(k). By this amendment, FEA may not apply a ruling retroactively to hold a marketer in violation of the regulations if the marketer in good faith relied on agency decisions applicable at the time. Despite this mandate, FEA is now applying a ruling it issued on September 4, 1975, retroactively to transactions which occurred prior to that time as far back as November 1, 1973.

The ruling, 1975–14, states that marketers may take only that part of the nonproduct cost allowance allowed by the regulations in section 212.93(b) that they can show they have incurred since May 15, 1973. The allowance provided by the regulations is thus made into a ceiling, not a right. Whatever may be said concerning the validity of this ruling on the date it was issued, it is a complete change from the practice and understanding of all interested parties, including FEA officials, until the date it appeared. Prior to its publication, all marketers and auditors of FEA assumed that the nonproduct cost allowance could be taken whether it could be justified or not. Indeed, this assumption was based on the official position of the Federal Energy Office itself.

When the first nonproduct cost allowance was announced, it was discussed in a press conference held on December 31, 1973, by Charles Owens, Deputy Administrator for Pricing and Taxation of the FEO. In the course of that conference, in response to a question, Mr. Owens stated:

"I think we have a little confusion. I am not saying that the retailer, the independent businessman who is a retailer, has to provide cost justification in order to put this penny (nonproduct cost allowance for retail sales of gasoline and No. 2 oils) through. Only the refiner who owns and operates valid retail and wholesale operations will have to prenotify (showing its nonproduct costs have risen)."

What Mr. Owens says of the penny allowed for retail sales would presumably apply to the half-penny allowed at the same time for wholesale sales. Enclosed is a copy of the actual transcription of Mr. Owens' statement.

Similarly, the preamble to the regulations allowing an additional two cents for the retail sales of gasoline, 212.93(b)(1)(ii)(A), reveals a like understanding. In one paragraph it states that retailers may take the two-cent increase; in the next paragraph it states that refiners may take it only if they can justify it (prenotify). The absence of the express requirement for resellers adjoining the express statement of such a requirement for refiners can only be interpreted to mean that Mr. Owens' statement regarding the first penny applies to the additional two cents as well—reseller-retailers were not to be required to justify this allowance either. Indeed at no time in a preamble or any other way did the FEO or FEA contradict what Mr. Owens stated on December 31, 1973, with regard to any other nonproduct cost allowance—until the appearance of Ruling 1975–14. Enclosed is a copy of the preamble with which I assume you are familiar.

Despite this overwhelming and conclusive evidence to the contrary, in applying the new ruling FEA's auditors have been allowing marketers only the nonproduct costs they can justify for the period before September 1, 1975. This is especially true of Region IX, which includes the states of California, Nevada, Arizona and Hawaii. This practice by the auditors is the most flagrant contravention of my amendment. It plainly contravenes even the FEA's own narrow interpretation of this amendment. In a letter to me dated January 18, 1977, the General Counsel of FEA stated that in his view the amendment barred retroactive application of a ruling when the ruling "clearly and significantly changes on a retroactive basis a preexisting official ruling or regulation . . ." Ruling 1975–14 has been interpreted to do just this—retroactively change the regulation concerning nonproduct costs allowances as that regulation had been officially understood by FEA itself. Indeed, even Region IX had formerly understood the nonproduct cost allowance this way. In a form it distributed to retail gasoline dealers before September 4, 1975, to inform them how to calculate their maximum allowance selling prices, Region IX printed in the 3-cent nonproduct cost allowance for them to show that that allowance was automatically theirs and need not be justified. Enclosed is a copy of that form with the "0.3" printed in.

It seems abundantly clear that at least some FEA auditors are applying this particular ruling retroactively in derogation of my amendment and I am certain that you will wish to so inform them immediately.

Beyond this, the fact that it is occurring makes me wonder whether FEA's auditors nationwide have been informed of the important substantive change in the law brought about by my amendment. I had assumed that this had been done by means of some official notice from your office to each of your regions directing that each auditor be made aware of the specific language of my amendment. If that has been done, please send me a copy of the memorandum or other document which orders the regions to so notify their auditors. If on the other hand, the auditors have not been so notified, it would seem that the specific example of misunderstanding and misapplication of the law which I have cited in this letter proves the urgent need for explaining my amendment to your auditors nationwide. Unless this step is taken, this ruling and others will no doubt continue to be misapplied so as to deny some of the basic tenets which underpin our system of government.

I shall look forward to your early response.

Sincerely,

PAUL FINDLEY,
Representative in Congress.

FEDERAL ENERGY ADMINISTRATION,
Washington, D.C., June 3, 1977.

Hon. PAUL FINDLEY,
House of Representatives,
Washington, D.C.

DEAR MR. FINDLEY: On May 13, 1977, you forwarded a letter to the Administrator of the Federal Energy Administration (FEA) concerning Ruling 1975–14 in which FEA clarified Section 212.93(b) of its regulations. In that Ruling, FEA made it clear that resellers, resellers-retailers and retailers cannot pass through to their customers increases in non-product costs unless these increased costs are actually incurred. Your letter expresses concern that FEA auditors are applying this Ruling retroactively in apparent contradiction to the amendment you introduced which is incorporated into Section 7(k) of the FEA Act.

Section 7(k) of the FEA Act prohibits FEA from issuing a remedial order or maintaining a civil action against a marketer of petroleum products for a violation of a rule or regulation if:

(1) such civil action or order is based upon a retroactive application of such rule or regulation or is based upon a retroactive interpretation of such rule or regulation; and

(2) such person relied in good faith upon rules, regulations, or rulings interpreting such rules or regulations, in effect on the date of the violation.

The conference report accompanying the amendment further clarifies the application of Section 7(k):

The conferees do not mean for this subsection to provide marketers with the means to challenge all enforcement actions based upon arguably ambiguous rules, regulations or rulings or upon clarifying amendments thereto. It is intended to apply where the agency has officially taken one position then changes its mind and takes another.

Section 7(k) and the conference report cited above clearly bar FEA from issuing a

remedial order or maintaining a civil action against a marketer in those cases where the marketer in good faith relied upon an official position stated by the FEA in a rule, regulation or ruling, which position is subsequently changed by the agency. This provision reflects the reasonable notion that a marketer be required to comply only with rules, regulations or rulings that were in existence at the time specific action was taken. To the extent that FEA amends or otherwise changes its rules, regulations or rulings, it should not be permitted to enforce such an amendment retroactively. However, nothing in Section 7(k) or in the conference report prohibits FEA from taking enforcement action against a marketer based upon a clarification of a previously ambiguous rule, regulation, or ruling. Indeed, the conference report specifically encourages FEA to perfect its rules and regulations.

It was precisely such an ambiguity in the regulations that prompted FEA to issue Ruling 1975–14 in September, 1975. Since refiners were originally required to prenotify, it was clear that a refiner had to justify non-product cost increase. Resellers, reseller-retailers and retailers, on the other hand, were permitted under 10 C.F.R. § 212.93(b) to pass through specified per unit amounts "to deflect non-product cost increases which the seller incurred after May 15, 1973. . . ." Although the language in Section 212.93(b) requiries that non-product cost increases be "incurred," the fixed per unit increment set forth in that section may possibly have suggested to some marketers that cost justification of non-product cost increases was unnecessary. Thus, to clarify that marketers, life refiners, may pass through only those increased non-product costs actually incurred, FEA issued Ruling 1975–14.

The Ruling, therefore, clarifies the arguably ambiguous language of Section 212.93(b). It is not an instance where FEA changed a previously formulated official agency position. As indicated in Section 7(k)(2), a marketer is protected from retroactive application of a ruling if he in good faith relied upon prior rules, regulations or rulings in effect on the date of the violation. At no time prior to September 1975 when Ruling 1975–14 was issued (nor at any time since that date) has FEA taken an official position in a rule, regulation or ruling which is contradictory to Section 212.93(b) as it existed in the months preceding September 1975. The statement to which you referred in your letter made by Charles Owens at a press conference is not an official position taken by FEA on a rule, regulation or ruling upon which a marketer could in good faith rely. Therefore, FEA believes that it is not inconsistent with Section 7(k) of the FEA Act to require marketers (both prior to and after Ruling 1975–14) to pass through only those non-product costs actually incurred up to the per unit amounts specified in 10 C.F.R. § 212.93(b).

As Mr. Owens indicated, however, FEA would probably not issue a remedial order or maintain civil action against a small marketer for failure to cost justify non-product costs. Mr. Owens indicated during the press conference that the independent businessman who is a retailer would not be required to provide cost justification of his non-product costs. That position was carried forward in Ruling 1975–14 in which FEA noted the following:

"The FEA is also aware that many of the hundreds of thousands of small retail firms subject to Subpart F do not have elaborate accounting procedures capable of yielding precise non-product cost figures, and the increments permitted to be added to selling prices to reflect increased non-product costs pursuant to § 212.93(b) were adopted by FEA with a view toward approximating the average actual non-product cost increases being experienced by the various segments of the petroleum industry concerned. For the most part, the FEA believes, based on information submitted in various rulemaking proceedings that have been held to consider revising § 212.93(b), that the maximum non-product cost increments set forth in § 212.93(b) generally are representative of the relevant overall non-product cost increases that have been experienced in the industry. . . .

"Accordingly, the FEA does not anticipate that this ruling will have any wide-spread effects with respect to the majority of firms subject to Subpart F, even if they might erroneously have regarded the price increments specified by § 212.93(b) as not having to be justified by actual non-product cost increases, since most firms have in fact incurred non-product cost increases equal to, if not more than, those specified in § 212.93(b)."

In a memorandum sent to the Regional Administrators on October 25, 1975 (a copy of which is enclosed), FEA articulated an enforcement policy consistent with Ruling 1975–14. That memorandum advised that there is a rebuttable assumption that non-product costs increments provided by Section 212.93(b) have been incurred:

"In those cases where the firm involved is relatively small and is in the category of firms taken into account in formulating the non-product cost rules, the presumption shall in most instances be virtually conclusive. With respect to certain other types of firms, however, particularly those that are relatively large and—most importantly—that sell in such large volumes and provide so few services that increases in per-unit non-product costs of the same magnitudes experienced by smaller sellers and highly unlikely, the presumption that non-product cost increases were as high as the amounts provided for in § 212.93(b) can and should be rebutted by the FEA."

In view of this policy, it is unlikely as a practical matter that FEA would actually issue a remedial order or maintain a civil action against a small retailer who is unable to demonstrate that it actually incurred the non-product cost increases it passed through to its customers. FEA will, however, continue to audit marketers, both large and small, to determine if a firm's prices reflect non-product cost increases that are in excess of the maximum amounts allowed by Section 212.93(b) as clarified by Ruling 1975–14. Your amendment in no way bars FEA from conducting such audits. As noted above, it only bars FEA from issuing remedial orders or maintaining civil actions based upon a rule, regulation, or ruling that changes a prior official agency position. Thus, FEA believes that its audits, including those in Region IX to which you referred in your letter, do not in any way contravene Section 7(k) of the FEA Act. If an audit should disclose that a particular marketer, acting in good faith, actually relied upon a prior position, taken by FEA in a rule, regulation or ruling, which position differed from that now adopted by the agency, FEA would decline to take any enforcement action against that marketer, as required by your amendment.

I trust that the explanation above will clarify FEA's position regarding the application of Section 7(k) of the FEA Act to our compliance efforts. The Regional Administrators and the Directors of Compliance have been informed of the contents of your amendment (see enclosed memorandum), and are sensitive to the responsibilities imposed by Section 7(k) of the FEA Act. We appreciate your concern with respect to Ruling 1975–14 and assure you that FEA will determine on a case-by-case basis whether a particular enforcement action can be taken in a manner consistent with the requirements of the amendment which you sponsored.

Please let me know if I may be of further assistance in this matter.

Sincerely,

GORMAN C. SMITH,
Acting Deputy Administrator.

Mr. HORTON. Mr. Speaker, I yield myself 5 minutes.

Mr. Speaker, I rise in support of the conference report on S. 826, a bill to create a Department of Energy. When this legislation was before the House of Representatives in June, I expressed the belief that we were at a critical juncture in our deliberations about the future of the energy policy of this country. Recent history has shown us that embargoes, congressional inaction, and uncontrollable weather can devastate the economy and well-being of this Nation.

The Department of Energy established by this conference report is a beginning of the long process of providing both the structure and the policy direction to make the United States energy self-sufficient in the future.

The conference report seeks to provide administrative unity to 261 programs administered by more than 40 executive departments.

The report establishes a Secretary, a Deputy Secretary, an Under Secretary, eight Assistant Secretaries, an Energy Information, Administration, and an Office of Energy Research.

Functions from the Federal Energy Administration; the Energy Research and Development Administration; the Federal Power Commission and the Department of Interior are the major sources of authority for the new Department.

Activities from HUD, the Interstate Commerce Commission, the Department of Navy and the Department of Commerce complete the transfer of authority.

During House consideration of this legislation, no other issue received more attention than the question of what office or agency would have regulatory authority vested in it. The conferees adopted almost the entire House provision. Virtually all authority presently vested in the Federal Power Commission will be transferred to the new Commission. The Secretary receives the authority which the Moss-Brown amendment delegated to that position. That includes regulation of the import and export of natural gas; the import and export of electricity; emergency interconnections; and the right to set priorities on curtailments.

The Secretary is also given residual power not specifically delegated to the Commission.

However, given the nature of the definition of the Commission's authority, there is very little, if any, new power in the Secretary which is not specifically outlined in the conference report.

Mr. Speaker, when this House considered the Department of Energy legislation in June, a sunset provision was added to it. A substantial majority of the House voted for the provision.

Prior to going into conference, the gentleman from North Carolina (Mr. BROYHILL) succeeded in a motion to instruct the conferees to keep the provision.

Because of the obvious sentiment of the House on this matter, we endeavored to work within the limits which these two votes placed on us.

However, the original sunset provision appended to the Department of Energy legislation was faulty in the manner in which it was drafted. Because it could have conceivably terminated the Department, legal experts informed the conferees that this would place extremely heavy burdens on the ability of the new Department to contract for any long term research and development work. As we are all aware, the Energy Research and Development Administration will become a part of this Department.

As a consequence of that recommendation from the American Law Division of the Library of Congress, the conference sought to reach agreement on a sunset provision which would provide the necessary congressional oversight of its operations, but at the same time not so restrict the agency that it could not perform its very vital mission.

I would submit to my colleagues who supported the original sunset provision, that such amendments should be the means by which the Congress establishes tighter oversight on the agencies and programs of the executive branch. Sunset provisions, if they have any merit whatsoever, should help to improve the performance of the executive branch, not impede it.

The provision which the conference recommends would provide the type of congressional review which the supporters of sunset are seeking. Under title X of the conference report, the President must submit to the Congress no later than January 15, 1982, a comprehensive review of each program of the Department.

The evaluation of those programs should be based on the 15 elements defined in title X. When that report is submitted, it will provide the basis for the most comprehensive review of a department's operations that has ever been undertaken.

If programs should be eliminated, the report will provide the impetus for demonstrating that.

If certain operations should be continued, then the report should indicate that.

I believe that title X of the conference report is a sound provision and should be the basis of support for those who have made sunset legislation their cause.

To insist on the original House provision will only lay the foundation for a self-fulfilling prophecy and doom the Department to failure.

Mr. Speaker, many people have referred to this legislation as creating an energy czar. I did not think the original committee bill established such an office and I assure the Members of this House, that the conference report takes many steps to insure that the leadership of the Department of Energy will not operate in an unbridled fashion.

During the conference, Senator JOHN GLENN provided the conferees with a list which outlined the extent of the authority given to the Secretary for various functions. What is most illuminating about that listing, is the authority not given to the Secretary.

For example, this administration is placing great emphasis on the future development of coal as an alternative source of energy. But under this proposal, the Secretary of Energy will have no authority over stationary source pollution from coal; no authority over coal slurry pipelines; and no authority over rail transport of coal.

Another example is since most of the pricing mechanisms are in the commission, the Secretary will have only limited opportunity to impact on the vital questions of costs of basic energy resources.

Despite these limitations, the new Department of Energy will improve the implementation of policy if for no other reason than the Department will be the focus of all energy matters.

Through this conference report, we have attempted to create a viable new Department to meet one of our most crucial domestic needs. It is a step in the right direction.

I am confident the Congress will cooperate with the administration in attempting to improve the effectiveness of this agency. I urge my colleagues to demonstrate their concern for the energy problem by casting an affirmative vote for the report.

Mr. BROOKS. Mr. Speaker, I yield 3 minutes to the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Speaker, I want to rise in support of this conference report and to commend the gentleman from Texas, the chairman of the committee, and the gentleman from New York, the ranking minority member, for the fine work that they did in bringing this about.

I think with the complexity of the situation and the enormous magnitude of the bill that the conferees met in a very amicable situation and came up with a good conference report. I am sure there is not everything in this bill that I wanted. We named in the House bill the Assistant Secretaries and spelled out their functions. This part was modified in the conference.

There are several other provisions that were not workable, such as the sunset provision offered by the gentleman from North Carolina (Mr. BROYHILL), that I supported on the floor; but we realized it was not possible to have a department that had a destruct date to enter into contracts beyond that date; so it presented some very extreme difficulties; but I think we worked out a compromise.

The gentleman from Georgia offered a veto provision which I supported, but it left some questions on what would happen if Congress went on a recess and that had to be made and should Congress be called back into special session just to act or not act on the provisions they had acted on.

Mr. Speaker, at this time I would like to engage the chairman of the committee, if I could have the attention of the gentleman from Texas, in a brief colloquy concerning the functions of the Assistant Secretaries of the new Department of Energy. As the chairman knows, the Committee on Government Operations report—report No. 95-346, part 1—set forth in the discussion of the Energy Department's organization a clear, yet brief, description of the concept of demonstration.

In the House bill, the functions of the Assistant Secretaries were written in and it was clear where the responsibility for research and development, including demonstration, was placed. I think it is important today to be equally clear about the way we think demonstrations should be considered in the new responsibilities of the Assistant Secretaries which are set forth in the conference report that accompanies H.R. 6804.

Is it the opinion of the chairman that the term "research and development" includes the demonstration of technologies?

Mr. BROOKS. Mr. Speaker, if the gentleman will yield, I would say yes. My understanding of research and development includes demonstration.

As the gentleman is well aware, there are several studies which include the phrase "research and development and demonstration." Some of these programs refer to commercial demonstrations which may be closely alined with research and development.

I would add, it was quite clear that demonstrations overcoming technological risks can be associated with research and development.

It was the intention of the conferees to permit the Secretary a measure of flexibility in this area and the term "demonstration" is not to be the exclusive property of any one segment of the Department.

Mr. FUQUA. Mr. Speaker, I thank the gentleman.

Mr. HORTON. Mr. Speaker, I yield 5 minutes to the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Speaker, on Friday, May 6, when the Department of Energy Organization Act was favorably reported by the Government Operations Committee, I cast one of only two dissenting votes in the committee. I cast that vote because I felt the bill as reported gave inordinate powers to the Secretary of the new Department with respect to pricing of natural gas and the interconnection of power generating and transmission facilities.

Fortunately, an amendment sponsored by Congressman Moss and myself was adopted when this legislation was before the full House. Our amendment gave the Federal Energy Regulatory Commission, the independent regulatory body within the Department of Energy, the authority to set natural gas prices and authority with regard to the interconnection of power generating and transmission facilities. With the adoption of that amendment, I was able to support final passage of the bill. I am pleased to report to you that the House substantially prevailed in the conference committee.

The conferees decided that pricing and licensing matters should be determined by a five-member independent regulatory commission whose members would be appointed for a fixed term. I feel this provision is necessary if we are to establish the public credibility of the new Department.

The decreasing availability of natural gas coupled with increasing demand for this premium fuel, has created serious

localized shortages in the past few years. These shortages and the allegations surrounding them have made natural gas pricing into one of the most hotly debated policy issues Congress has considered in recent years. We will be hearing more on that issue later today. It is particularly important that natural gas pricing decisions be made in an environment well insulated from this political debate and free from the unbalanced influence of special interests.

The same independence is necessary in areas relating to electric power and other energy matters under Federal jurisdiction. Consideration of all the facts and all the arguments and all the views must be assured. A five-member independent commission whose members serve fixed and staggered terms is a far better method of obtaining this assurance of diverse consideration of views than would have been the case by giving all this authority to a single political appointee, the Secretary. Although I am aware that there has been criticism directed toward the alleged lack of Federal Power Commission independence in the past, I feel strongly that a commission is much more likely to retain its objectivity and independence than is a single Secretary or his delegate.

While title III of the conference report gives the Secretary any authority not specifically delegated to the Commission, the provisions of title IV carefully preserve for the Commission all the responsibilities and duties that are currently within the jurisdiction of the FPC. Additionally, there is a provision which would keep in effect the administrative procedures of the Federal Power Commission for those matters in dispute which are within the FPC's present jurisdiction and which are transferred to the Federal Energy Regulatory Commission.

Another provision which caused me concern related to the confusing arrangement between the Secretary of the Interior and the Secretary of Energy over the question of Federal leasing policy. The conference report addresses this problem by creating a Leasing Liaison Committee between the Department of Energy and the Department of Interior. The committee will be composed of an equal number of representatives of the two Departments and its responsibilities will be determined by the two Secretaries involved.

Mr. Speaker, while this legislation is not in the form that it would have been had I been privileged to write it singlehandedly, few of us, especially those of us in the minority, ever have that luxury. However, I am satisfied on those issues that I felt most important, that is, the authority of an independent Commission to set natural gas prices and order interconnections, the retention of just and fair FPC administrative procedures within the new Federal Energy Regulatory Commission, and the establishment of a reasonable mechanism to better coordinate and establish Federal leasing policies.

While I am disappointed that Mr. BROYHILL's sunset provision was unduly modified, I sympathize with the contracting problem, so I support the conference report now before us and urge my colleagues to do likewise.

Mr. BROOKS. Mr. Speaker, I yield 3 minutes to the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Speaker, I first of all want to compliment the chairman, the gentleman from Texas (Mr. BROOKS), who has done such a marvelous job of trying to put together all of the varying differences between the House and the Senate. I must say, as a member of the Committee on Post Office and Civil Service, that the gentleman did a marvelous job of holding to our committee's position, especially on two points. The first point was that we retained the House position and there will be no more new supergrades in the new agency than there are in all agencies that are consolidated into the Department of Energy. I think that is very good, and it was very hard to get the Senate to yield to the House position of no new additional supergrades. So I again want to compliment the gentleman from Texas for being so firm on that point.

The other part which was very, very important was that under the original bill the administrative hearing officers were not coming out of the civil service administrative hearing officer pool but were, rather, coming under the Department of Energy pool. If the hearing officers were under the Secretary of Energy there would be great questions, under the Administrative Procedures Act, as to whether or not these hearing officers would truly be independent. We were able to hold the House position and insist that all of the hearing officers stay under the civil service pool, therefore remaining much more independent than if they were all answerable to the Secretary of Energy. I think that is very good, and I commend the House conferees for sticking with our position.

The only portion where we had some disagreement was where the Senate insisted upon exempting 200 supergrades from all qualifications whatsoever. The House position had been that at least the Secretary of Energy had to report for them under the scientific exclusion set out in section 3313 of title 5. Under that section the Secretary would have to put down the different grades and the different requirements that they were to have to obtain the job. The problem was that we all understand there was a great need for the Secretary to have flexibility in selecting the people who would be running these very complex programs, and the Senate insisted that they have absolute total flexibility whereas the House position was they should be exempt from the civil service system but have some accountability by having the Secretary report under section 3313. Even though we did not believe this Secretary would do it, there would be the possibility of any future secretary, if he wanted, to hire 3-year-olds and say they were competent. We now wind up with about one-fourth of the supergrades being accountable to the Secretary and only the Secretary. I am sorry we were not able to get the Senate to agree with the House on the point of accountability, but, as I say, the other two points were probably even more important than this, and the Senate absolutely refused to yield to our House provision.

So again, Mr. Speaker, I compliment the gentleman from Texas (Mr. BROOKS) and the conferees. I hope that the House will consider this very, very important piece of energy legislation, because I think we need to get the Department in operation and at least have a consolidated profit.

Mr. HORTON. Mr. Speaker, I yield 5 minutes to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Speaker, I rise to commend the very able chairman of the House Government Operations Committee, Mr. BROOKS, for his diligence and the manner in which he chaired the conference committee, as well as the splendid effort by the ranking member of the House Government Operations Committee, Mr. HORTON, and of all conferees in reaching on balance an acceptable conference report to accompany S. 826, the Department of Energy Organization Act.

While I signed the conference report, as noted on page 93 of House Report No. 93–539, I joined with my colleagues, Mrs. SCHROEDER and Mr. UDALL, members of the House Post Office and Civil Service Committee, to strenuously object to section 621 which authorizes a permanent exemption of 200 supergrade employees within the Department of Energy from civil service law and regulations.

For those Members who may not have had the opportunity to read our reservation on section 621, I quote from page 93 of the conference report:

They—

Meaning Representatives SCHROEDER, UDALL, and myself—

believe that such an exemption, with the unimpeded power it gives the Secretary, goes far beyond any need for flexibility in employment of personnel the Department might require, and that ample flexibility with appropriate accountability, is available within existing Civil Service laws.

The conferees appointed from the House Post Office and Civil Service Committee initially sought and were given assurance that the House conferees would stand by the House position on section 621. The House position on that particular section, as you may recall, authorized the Secretary of Energy to appoint and fix the compensation of 423 supergrade employees in accordance with civil service laws. Additionally, the Secretary was authorized to appoint 200 Public Law 313 positions—scientific and technical personnel—to supergrade positions, subject only to the Civil Service Commission's approval of the salary and qualifications of the appointees. Turnaround time for such CSC approval is generally 3 days.

When the Senate conferees refused to recede from the Senate position, the House conferees agreed to a compromise, increasing the authorization for supergrade positions to 689, which represents the same number of positions as are presently authorized for functions to be transferred to the new Department of Energy. Of this number, 178 will be new "quota" positions—from the civil serv-

ice pool; 311 positions will be excepted for a period of 4 years, then revert back to the civil service pool of supergrades; and the remaining 200 scientific and technical personnel would be exempted from the civil service laws and regulations forever.

The disagreement pertains, as previously stated, to those remaining 200 scientific and technical personnel positions. I believe that it is ominous to say the least that the very first reorganization plan submitted to the Congress should sanction to the degree that is has exemptions from the accountability that our merit system laws were meant to ensure.

If the goal of reorganization is truly to be increased efficiency and accountability, then how can the administration in good conscience request, and we approve without qualms, such a perversion of our civil service law and regulations?

By accepting the language of section 621, we are granting the first Secretary of Energy, as well as future Secretaries, carte blanche to appoint whomever he pleases to these 200 positions. For those of my colleagues who fear wholesale politicalization of the executive branch, consider what we will have wrought today if we accept the conference report without dissent. What, may I ask, prevents the Secretary of Energy, if S. 826 is enacted, from naming 200 friends or politicos to those slots authorized by section 621?

Mr. Speaker, I most strenuously urge my colleagues to reject the language of section 621 and demand that the House refuse to recede from its position on that section.

Mr. BROOKS. Mr. Speaker, I yield 5 minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Speaker, first of all, I would like to express my gratitude to the gentleman from Texas (Mr. BROOKS), the distinguished chairman of our committee, for yielding this time to me.

I would like to join with my colleagues in praising the work of the conference committee under the leadership of the chairman of the committee, the gentleman from Texas. The establishment of the Department of Energy is one of the most important actions which we will take during this Congress. It is essential that we have a coordinated single agency dealing with the energy needs of this Nation now and into the future. This undertaking is an extremely complex and difficult problem on which the chairman of the committee and the other conferees have worked hard, and they have for the most part come up with an excellent result.

It is my intention to support the conference report at the proper time and to urge my colleagues to do likewise because I think we must do that.

However, I would urge that prior to taking final action on this conference report, the House adopt a motion to recommit with instructions and return this report of the committee of conference with three instructional provisions:

First, the reestablishment of the legislative veto over rules and regulations; second, the sunset provision; and, third, the provision relating to supergrades, as discussed by the gentleman from New York (Mr. GILMAN).

Mr. Speaker, I will primarily discuss the matter of legislative veto. This House, by a recorded vote, overwhelmingly put that provision in the bill. What does that provision do? It simply says that when this new agency, with all of its vast powers, issues rules and regulations which will affect the lives of every American, those of us elected by and responsible to the American people would have the opportunity to say yes or no on these rules or regulations.

Mr. Speaker, is it too much to ask that elected representatives rather than unelected bureaucrats make these decisions that will affect all of our lives? I think not. That is not asking too much.

There are a lot of Members of this House on both sides of the aisle who have talked loud and often about regaining control over the bureaucracy and restoring to the public their right to govern themselves.

Mr. Speaker, I say to the Members, "This is your opportunity; this is an opportunity to put your vote where your rhetoric is."

I say that this is our opportunity, Mr. Speaker, to say that if we create this all-powerful new agency, we will retain to the people, through their elected representatives, the decisionmaking process. The vote that the Members cast on this motion to recommit will be a test of whether we are willing today to begin in earnest in regaining control over the bureaucracy and putting control into the hands of elected officials and making them accountable to the people of America. We will decide today whether we want responsive government, or whether we want to perpetuate bigger government and less responsive government and the type of bureaucratic government problems we have had in the past.

Mr. Speaker, I urge the Members to support the motion to recommit.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I want to congratulate the gentleman from Georgia (Mr. LEVITAS).

In the years I have been on the floor, I do not think I have ever heard a more succinct, profound statement of the problem before us than that which the gentleman from Georgia has just delivered.

I certainly thank him for his alertness and for the way he delivered that statement to us.

Mr. LEVITAS. Mr. Speaker, I thank the gentleman for his generous comments and congratulate him on his leadership in this area.

The vote we cast on this motion to recommit will not be a vote against the conference report or against the Department of Energy, which I intend to support; but this vote will allow this House to go on record as saying that we believe in the United States of America, and in the fact that the people of this country, through their elected representatives, shall make the laws, and that as we establish this great new agency, we will start off on the right foot and make it accountable to the American people and thereby restore public confidence in our entire governmental process.

Mr. HORTON. Mr. Speaker, I thank the gentleman for his remarks.

I want to indicate to the gentleman that when his amendment was offered on the floor, I voted for that amendment.

I am very much concerned about the numerous rules and regulations that are issued and now they affect the general public.

I happen to serve as the Chairman of the Paperwork Commission, and am aware that most of the paperwork that is generated by the Federal Government, other than with respect to the tax structure, is the rules and regulations that are issued.

The SPEAKER pro tempore (Mr. TRAXLER). The time of the gentleman from Georgia (Mr. LEVITAS) has expired.

Mr. HORTON. Mr. Speaker, I yield 2 additional minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. Speaker, will the gentleman yield further?

Mr. LEVITAS. I yield to the gentleman from New York.

Mr. HORTON. To continue, Mr. Speaker, I speak from the standpoint of one who is very much interested in trying to eliminate these unnecessary rules and regulations.

The gentleman's amendment, I think, is one way of attempting to limit the number of rules and regulations. However, I was convinced in conference, after having conferred with the staff who did a lot of work on this and after conferring with other conferees in addition to doing my own independent research, that it was really impractical to require that all the rules and regulations be acted upon by the Congress in this fashion.

I do not want to take the time of the gentleman from Georgia (Mr. LEVITAS) nor the time of the House to go into all of the details, but we are so busy here, now, with all of the work that we have to do that we just cannot perform the oversight functions that we should. I think we ought to have one session of this Congress where we do not pass any new laws but only perform our oversight functions. But we cannot, in my judgment, require this new department to submit all of its rules and regulations to the House and to the Senate and have them passed on before they are issued. I thank the gentleman from Georgia for presenting his amendment, and I believe by this colloquy we are indicating to the department, and to the executive branch that we want to cut down on rules and regulations and we want to make them clear so that the people can understand them. We really want to stop this strangulation by regulation. I agree with the gentleman on that, but I would have to oppose what the gentleman is trying to do now because I think it would make it extremely difficult for this department to operate. I say that with the greatest respect for the gentleman from Georgia (Mr. LEVITAS), for whom I have the greatest personal regard. I know the gentleman is trying to cut back on paperwork.

Mr. LEVITAS. Mr. Speaker, I thank the gentleman from New York (Mr. HOR-

TON) for his comments and, if I may, I would like to make one or two observations. I know of the leadership of the gentleman from New York concerning excessive paperwork and overburdening the public as well as the Government with such paperwork and aggressive regulations.

The SPEAKER. The time of the gentleman has expired.

Mr. HORTON. Mr. Speaker, I yield 2 additional minutes to the gentleman from Georgia.

Mr. LEVITAS. Mr. Speaker, I thank the gentleman for yielding me the additional time.

Mr. Speaker, what concerns me is that we always seem to be talking about this, and about what we are going to do, but we do not seem to be able to do it. This is an opportunity for us to do something. I know the gentleman from Texas (Mr. BROOKS) and the gentleman from New York (Mr. HORTON) have worked very hard to impress the conferees from the other body with the position of the House on this matter. I think the adoption of a motion to recommit with instructions is the way we will be able to convince the Members in the other body that we mean to get a hold on Government by regulation and that it is time for the other body to come around. It is not an impractical approach. There are around approximately 125 similar provisions in the law right now.

The gentleman says we have too much work to do now, and that may be so, but when we are talking about regulations which affect the personal lives and business of the American public, when we are talking about regulations that can cause people to go to jail if they violate them, it can be very far reaching, then I believe we have a responsibility to deal with this enormous power. We just cannot simply pass the buck downtown and say it was their responsibility and not ours.

Of course we are not going to deal with every rule and regulation, just as we do not deal with every bill that is introduced in Congress, but where it is something that will affect the life and livelihood and the opportunities of the people of this country, then I do not think it is right for the Congress to say that we do not have time because that is what we are here for, to protect the citizens of the United States.

So, Mr. Speaker, I say with all due respect to the gentleman from New York (Mr. HORTON) that this is the way we can do it, this is the way to back up with the power we need, the rhetoric which we have otherwise delivered.

Mr. HORTON. Mr. Speaker, if the gentleman will yield, I would just add this one further comment, and that is that I am sure that if the gentleman from Georgia (Mr. LEVITAS) had been a member of this conference that he would have come to the same conclusion that I came to. I do not think that, given the same information that the conferees had and with the gentleman's knowledge of the functions of government and the inability of the House and the Senate to deal with all minutiae that come before us that the gentleman would have done any differently than we did.

I hope the gentleman will not pursue the matter in the way he indicates.

The SPEAKER. The time of the gentleman has again expired.

Mr. HORTON. I yield 1 additional minute to the gentleman from Georgia.

Mr. BROWN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. Mr. Speaker, I appreciate the remarks of the gentleman from Georgia (Mr. LEVITAS) very much because—and I do not know if the gentleman was on the floor yesterday, or not, but I pointed out, in going through the energy bill that we will be considering later on today, we have found over 100 areas where very broad discretion is given to either the FEA, or another agency, whose functions will be merged into the Department of Energy. So I would state to the gentleman from Georgia that I think we are making the Secretary of Energy really a czar of energy. And that if we are going to be so liberal and so generous in granting this discretion to these officials, we ought to at least retain some supervisory control so that we can have the opportunity to say halt.

Mr. LEVITAS. Mr. Speaker, I think the gentleman from Michigan (Mr. BROWN) is absolutely right. I will say to the Members of this House that we will rue the day we created that ball game without some control over those rules because, just as the Magna Carta that sat out there in the Rotunda of this Capitol was all about, limited Government, that is what we are talking about.

Mr. BROOKS. Mr. Speaker, I yield 2 minutes to the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. Mr. Speaker, I rise in support of the July 26, 1977 Conference Report on the Department of Energy bill (H. Rept. 95–539). I particularly want to commend the able and distinguished chairman of the conference, JACK BROOKS, for his leadership in bringing the idea of a Cabinet-level Energy Department into fruition. I know it was a long and difficult conference.

I am particularly pleased that the conferees adopted, with very few modifications, the House provisions calling for an independent, multimember Commission, and giving the Commission nearly all of the functions of the Federal Power and Natural Gas Acts.

Mr. Speaker, I am also pleased to see that the Senate would not agree to the legislative veto provisions and the sunset provisions adopted in the House. Both of these provisions would frustrate the Nation's efforts to establish and maintain a wise and effective national energy policy. Indeed, our energy programs would soon be in chaos if these provisions were adopted.

The provision known as the sunset provision is quite onerous. It does not attempt to deal with the problems of what happens to programs established by Congress at the time of the sunset. For example, the Emergency Petroleum Allocation Act, the appliance program of FEA, the Natural Gas Act and the Federal Power Act all are going to be vested and delegated to the Secretary of the Department of Energy. Under this sunset provision, those statutes and programs would terminate at the same time that the Department terminates. No provision is made for them to be continued to be administered by someone—even the President. Are we ready in Congress to do away with these statutes at this time in such a broad and sweeping effort? I think not. The conferees were wise in their decision to deal with this matter in the way they have.

In the case of the provisions relating to legislative veto, I can assure you that there are thousands of regulations issued each year by the agencies that would be affected by this bill. Many of those regulations are purely technical in nature. If they were to be reviewed by the Congress, we would have to increase our committee staff manyfold at great cost to the taxpayer. If we fail to review and act on each regulation, Congress would be giving, by its inaction, assent to some very crucial regulations that we decided at the time did not need our full review and formal action. Clearly, I, as a Member of Congress, do not want to be charged with having approved something by inaction. I am sure that most Members share that same view.

I urge the Members to support the DOE bill and to adopt the conference report at this present moment, today.

Again, I want to commend Chairman BROOKS and the House and Senate conferees, They had a difficult task.

I particularly want to commend Congressman JOHN MOSS and Senator LEE METCALF for their leadership and support in making the new Commission independent and effective and giving it the broad powers and functions it needs. I am sure they share my view that President Carter now has an important opportunity to appoint able and competent people as Commissioners. Suggestions that he retain the current Federal Power Commission Commissioners or some of them merely means a continuation of the status quo and this I would consider to be entirely unacceptable. Clearly, a clean sweep at the FPC is needed.

Over the past several months, I expressed concern in testimony before, and correspondence with, the House Committee on Government Operations about this legislation. I also wrote to the conferees about it. I felt that if the Federal Power Commission was to be abolished, a new and truly independent Commission must be established to take over the functions of the FPC. Most importantly, I urge that the conferees avoid making substantive changes in existing law. In short, I urged adoption of the House-passed bill, H.R. 6804. Indeed, in a July 22, 1977 letter to Chairman BROOKS, I said:

> The proposals by the Senate Conferees to vest in the Secretary large blocks of defined and undefined authority under the Federal Power and Natural Gas Acts is not, in any way, consistent with the House bill, as amended by Moss-Brown by an overwhelming margin. Our Committee has just reported the National Energy Bill which amends both of these Acts and specifically, vests all of this authority in a multi-member Commission, not in the Secretary. The Senate proposal would affect the recent actions by our

Committee and place even this amended authority in the Secretary. This is unacceptable to our Committee.

The Senate proposal (Sec. 402) lists several functions to be vested in the Commission, but they are vaguely drafted and, in some cases, qualified by the word "directly" or "direct" which leaves uncertainty and future litigation as to what, in fact, is vested in the Commission. Moreover, the Senate proposal does not appear to vest in the Commission matters relating to interconnection, construction work in progress, interlocking directorates, mergers, securities, and curtailments (other than the priorities for curtailments). The law must be clear and include these matters, as a minimum.

Mr. Speaker, Chairman BROOKS and the House conferees were also similarly concerned and obtained agreement with the Senate on adoption of the House approach in most of the significant areas of this legislation. The conference report:

Establishes a five-member Commission within the DOE;

Specifies that this new Commission shall be independent of the Secretary and other DOE officials;

Gives the Commission complete authority to hire and fire personnel, including authority to retain all persons now working at the FPC who are qualified and competent and to retain the structure of the FPC if it deems it appropriate;

Gives the new Commission control over the preparation of any request for authorization and appropriation of funds and insures that changes therein by the Secretary and OMB will be made known to Congress; and

Transfers to the new Commission nearly all of the functions of the Federal Power Commission under the Federal Power and Natural Gas Acts, including all authority over electric rates and charges, interconnection, construction work in progress, accounting and related procedures, natural gas pricing, curtailments, except the establishment and review of priorities for curtailments, securities and mergers, the licensing and approval of hydroelectric power and water resources projects located on public lands, reservations, and navigable waterways, and authority to issue rules, regulations, and statements of policy of general applicability. Most importantly, the word "directly" was deleted from these functions, as I urged—see statement of managers, pages 75 and 76.

I commend the House conferees for their effective efforts in this regard.

I think it important to stress that the conference report also vests in the Secretary some authority under these two laws. In some matters, there may be some overlap of functions between the Secretary and the Commission. As chairman of the House Energy and Power Subcommittee, I intend to insure that this overlap be minimized and that there be no disputes between the Secretary and the Commission over their respective functions.

There remain some areas of concern, such as the actions taken in connection with the Emergency Petroleum Allocation Act of 1973. My subcommittee will want to examine these areas in the very near future. I am particularly concerned that there is no provision for resolving a stalemate between the Secretary and the Commission, unless an emergency exists, in the issuance of amendments to the regulations under the EPAA.

Another area of concern to me is the conflict-of-interest provisions of the conference report. During the conference, I wrote to Dr. Schlesinger—on July 8, 1977—about these provisions in both bills; I observed that I thought that they went too far and felt that the administration should comment on them. The administration's July 12 reply agreed with me. As a result, the conferees made some important modifications in the two areas I commented on to Dr. Schlesinger. But there are still some conflict-of-interest provisions that concern me.

I strongly believe in disclosure. Indeed, several recent laws administered by the Interior Department, FEA, EPA, and ERDA include broad financial disclosure provisions sponsored by myself and our former colleague, Representative, Ken Hechler of West Virginia. I also support restrictions on financial holdings by Federal policymakers and regulators.

However, the conference report contains requirements: First, for reporting one's relationship and duties with an energy concern prior to working for the new Department; second, prohibiting a person hired by the DOE from working for 1 year on matters pending before the DOE in which his former employee was involved; third, after terminating employment with the DOE, filing reports for 2 years about a person's employment with an energy concern; and fourth, prohibiting postemployment participation in any matter before the DOE, even a matter in which the former employee never participated while a DOE employee. I think these provisions may go too far. They appear onerous. They may even be of questionable legality if they are construed as infringing on a person's constitutional rights, such as the right "to petition the Government for a redress of grievances."

I am also concerned about the definitions of a "supervisory employee" which includes "experts or consultants employed" for more than 90 days, as well as many other individuals at the lower end of the pay scale. This may result in the DOE being unable to hire experts or consultants for more than 90 days. While this might be a blessing, it may also result in adversely affecting our energy effort and increasing substantially the number of Federal employees. It is potentially onerous on people who are not supergrades or above.

Actually, the term "supervisory employee" is misleading. Many who may be included in the definition do not supervise anyone.

The definition of an "energy concern" is also quite sweeping and may be difficult to apply because it is somewhat vague.

These definitions may be appropriate insofar as they apply only to reporting requirements. But they are not so limited. They apply to the divestiture provisions, postemployment, and participation provisions and violations could result in significant penalties.

Because many of these provisions were quite similar in both versions, the conferees, unfortunately, could not overcome many of these problems. I know they tried.

Our subcommittee intends to review these provisions and their administration with the new Secretary, the Attorney General and others in the very near future.

The correspondence to which I referred follows:

SUBCOMMITTEE ON ENERGY
AND POWER,
Washington, D.C., July 8, 1977.

Hon. JAMES R. SCHLESINGER,
Assistant to the President,
The White House,
Washington, D.C.

DEAR JIM: Several days ago, Representative John E. Moss gave me a copy of a June 28, 1977 letter from Mr. Stanley Sporkin who chairs an FEA task force on compliance and enforcement. In that letter, Mr. Sporkin expressed concern about the DOE legislation, particularly the so-called conflict of interest provisions.

Since then, I have reviewed these provisions. I share his concern, particularly since I find no evidence that the Administration has expressed any official comment on these provisions. I believe that some of these provisions will have a chilling effect on the new Department and may even result in a significant number of highly qualified people leaving the FPC, FEA, and ERDA prior to the DOE establishment. I am concerned about that possibility and the effect it might have on programs under our Subcommittee's jurisdiction.

I request that you and the Attorney General review these provisions and provide to me, as well as Chairman Jack Brooks and Congressman Moss, the Administration's views thereon by noon on Wednesday, July 13, 1977. That is a short time, but I believe the Administration is, by now, fully cognizant of these provisions in the Senate and House bills and should be able to respond quickly. In particular, I request your response to the following:

1. *Reporting:* Section 602 of the House bill requires every officer and employee of the DOE to file annual statements of known financial interest, as defined by the Secretary, unless such persons are in nonregulatory or nonpolicymaking positions. The pay scale of the official or employee is not the determining factor. The duties and responsibilities are. This provision is identical to one recommended by the Administration in its original DOE bill. It also is identical to existing provisions of law applicable to FEA, Interior, and ERDA.

Section 603 of the Senate bill, however, is a weaker provision in that it only applies to GS–13 to 18 employees and not to executive pay level employees. It also requires that the individual make reports in accordance with House and Senate rules on the listing of income or holdings of a spouse or dependent without any reference to the specific rules it expects the employee to follow. It is possible that some of those rules may not be appropriate in the Executive Branch.

The Senate version does not repeal the provisions in existing law cited above. Thus, these people would be required to file two reports.

(a) Does the Administration continue to support the House version which follows existing law and which was enacted after several investigations by the GAO at the request of Representative Moss (which showed that the GS–13 threshold is not adequate) or does the Administration support the weaker Senate version?

I note that Section 602 of the Senate bill requires "supervisory employees" to file a Public Financial Disclosure Report disclosing the information "required to be dis-

closed by Members or employees of Congress", pursuant to House or Senate rules. These employees are not required to file the report referred to in Section 603 which means there will not be uniformity in reporting. It also provides for GAO audit of 602 reports but not 603 reports under regulations issued by GAO, but the regulations must be approved by the Secretary.

(b) Under the broad definition of "supervisory employee", is it not likely that those, at FEA, FPC and ERDA, who are at a GS–13 to 18 pay scale would be covered by Section 602? If so, why are both provisions needed?

(c) Is it desirable to have two different reporting systems? Why?

(d) Are the House and Senate disclosure rules identical? If not, which rules apply? Can the supervisory employee make this choice or does the Secretary do it and, if so, under what criteria?

(e) The GAO is an arm of Congress. It has adequate authority to review all financial disclosure reports or statements.

(i) Why should the statute require a GAO review?

(ii) Does this provision, in effect, relieve the Secretary of that duty?

(iii) If the Secretary does not approve the GAO regulations, does this mean that the GAO cannot review these reports?

Why should Interior have, in effect, a veto over GAO audit regulations?

(iv) What is the logic of a GAO review of 602 reports, but not 603 reports?

(v) What is the cost of this permanent provision for GAO audit?

2. Postemployment Contact: Section 601 (d) (2) of the House bill prohibits any supervisory employee of the DOE, for a period of two years after ceasing to be a DOE employee, from appearing before or making any oral or written communication in any professional capacity for anyone other than the United States, to the DOE "in connection with any Department proceeding". For a period of five years, such employee may not appear before, or make any oral or written communication to, the DOE "in connection with any Department proceeding in which he participated substantially or personally while a supervisory employee".

Section 604 of the Senate bill prohibits such employee from appearing before or making any oral or written communication to, the DOE for one year after DOE employment "if such appearance or communication relates to the affairs of the Department".

In commenting on the House version, Mr. Sporkin said:

"These provisions reflect a deep concern with the integrity, in fact and appearance, of the Department's proceedings, and with the nature of public service. I share these concerns. But I have an additional concern as well. I believe that the government is best served by officers and employees who do not feel bound to the government; by men and women who manage to retain at one and the same time a sense of independence from bureaucracy and a commitment to its public purposes. It is from such people that the government is most likely to receive the benefit of judgments and decisions not affected by career considerations. It is my best judgment that such independence requires a belief that the option of leaving the government is a real option, available at considerable but tolerable personal and professional cost.

"On balance, I believe that Section 601(d) (2) (A) of the House amendment, with its apparent two-year prohibition on any communications in connection with any Department proceeding, may well make the cost of leaving too high for a sufficient sense of independence to be maintained."

I share Mr. Sporkin's concern. Both versions affect not only the career public official who might leave in mid-career, but also those who retire after 20 to 30 years and who still would like to work on a part-time basis in the only field in which they have a training, background, and expertise. It applies to persons who leave Government to work, not only for the energy industry, but for consumer or environmental groups, such as the League of Women Voters, or for a college or university. It affects Cabinet and sub-Cabinet officials whose term is coterminous with that of the President and who will likely return to the private sector when the President leaves office.

I, too, am concerned about the so-called "revolving door" problem, particularly when I read that an EPA official heading up the kepone investigation reportedly is leaving EPA to work for Allied Chemical which is one of the subjects of the inquiry. But I am also concerned that the DOE not be populated solely by political appointees and persons who are not highly qualified or who do not exercise "a sense of independence from bureaucracy and a commitment to its public purposes". I fear that if the option to leave government becomes financially intolerable to a person like Mr. Ernest Fitzgerald, the "whistle blowers" will become scarce and the concept of open government will diminish.

These provisions in the DOE bill must be carefully crafted to avoid these onerous consequences, while reaching specifically at the problem. If that is not possible, then the Administration and Congress should have the political courage to admit this and abandon them until a later date.

Let me point out some of my problems:

SENATE VERSION

(a) Article I of the Constitution guarantees everyone the right "to petition the Government for a redress of grievances". That right extends to the entire Government, not just part of it. To the extent that Section 604 of the Senate bill applies to an individual, it appears to restrict this constitutional right, particularly since it applies to any matter within the broad purview of the DOE. Do you agree?

(b) It appears to prevent such employee from objecting to any action of the DOE which may affect the employee or his or her family directly. Do you agree?

(c) It appears to go beyond 18 U.S.C. 207 (b), which applies only when the employee acts "as an agent or attorney" for someone else in a matter "which was under his official responsibility". Do you agree?

(d) The prohibition against any communication which "relates to the affairs of the Department" would apply even to gossip that is unrelated to any application or proceeding. Do you agree?

HOUSE VERSION

(a) The two and five year prohibition on communication "in any professional capacity" fails to define this term. Does it apply only when that person represents someone else, or does it include the individual also? Does the term "professional" refer to the individual's occupation while a DOE employee or his subsequent occupation? For example, a supervisory employee who awards contracts may hold a DOE position as a contracting officer and may also be a lawyer or scientist. When he leaves the DOE he may never deal in contracts but open an office as a scientist or lawyer.

(b) The two-year prohibition "in connection with any Department proceeding" goes beyond 18 U.S.C. 207(b) which is for one year as to a matter "under his official responsibility." Does this provision make Section 207(b) moot as to DOE? What is the rationale for two years?

(c) The words "substantially *or* personally" in Section 601(2)(A) seem inappropriate. It is hard to imagine how a person could be substantially involved in a matter without being personally involved. In 18 U.S.C. 207(a), the term is "personally and substantially." Which is correct?

(d) Is not the five-year period a weakening of 18 U.S.C. 207(a), which is a perpetual prohibition?

BOTH BILLS

(a) Both Senate and House versions apply only to "supervisory employees" whereas 18 U.S.C. 207 applies to any employee. Hence, they are less comprehensive than existing law. The House bill, unlike the Senate bill, contains a disclaimer that it does not "limit the operation of Section 207 or 208" of Title 18. But is the disclaimer really adequate, since, in fact, these specific provisions for the DOE are different than Sections 207 and 208? Could these specific provisions make it more difficult for the Attorney General to prosecute violations of Section 207 if the employee complies fully with either the House or Senate provisions?

(b) Both bills appear also to be inconsistent with President Carter's proposal of May 3, 1977 to amend Section 18 U.S.C. 207. Does the Administration support such inconsistent provisions?

With every good wish,

Very truly yours,

JOHN D. DINGELL,
Chairman.

THE WHITE HOUSE,
Washington, July 12, 1977.

Hon. JOHN D. DINGELL,
Chairman, Subcommittee on Energy and Power, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D.C.

DEAR JOHN: Thank you for your letter of July 8 regarding the conflict of interest provisions of the Department of Energy Organization Act now being considered by House and Senate conferees.

I share many of the concerns suggested by your letter that the provisions governing employees of the Department of Energy in this regard be effective, yet fair. As the President has indicated, I believe we should assure to the maximum extent possible that public employees in responsible positions are free from the appearance or reality of conflicts of interest. At the same time, of course, we must be concerned that employees can be attracted to Federal service under terms that will not discourage either the retention of outstanding present employees or the recruitment of new personnel capable of contributing to the solution of our nation's energy problems.

Your questions relate specifically to two major sections of the DoE bill, those dealing with financial reporting requirements of Departmental employees and post-employment activities of such employees.

Reporting: Your specific concern in the area of reporting requirements was the presence of a House provision applying reporting of energy assets by all Departmental employees whose responsibilities involve regulatory or policymaking functions. The Administration has no objection to applying to all such employees the type of reporting requirement currently contained in section 602 of the House bill, as is the case in current law. With regard to broader disclosure of the type required by section 602 of the Senate bill, we believe that these provisions should conform to the spirit and intent of the President's proposals of May 3. It is our understanding that a staff proposal in this regard is now being developed.

It should be noted, of course, that the Senate has passed government-wide reporting requirements applicable to employees in grades GS–16 and above as part of S. 555. Should such legislation be enacted by the Congress, we would hope and expect that any interim system now applied to the Department of Energy would then be supplanted by the government-wide provisions.

The problems which you raise in questions 1(b) and (c) regarding use of the House and Senate disclosure rules and the provisions regarding GAO audits are of concern to us as well. Again, it is our understanding that

a staff revision of these provisions is in process which makes clearer the criteria for disclosure for senior supervisory personnel, and modifies the audit requirements to remove many of the reservations which we share.

Post-employment Contact: On the question of a blanket post-employment contact bar, the Administration supports the provision contained in Title V of S. 555, as passed by the Senate, which requires a one-year ban on contact with the agency of former employment, but does provide an exemption relating to matters of personal nature.

I believe that this exemption likely would apply to many types of Departmental actions which may affect the employee or his family directly, the issue about which you are concerned in question 2(b) relating to the Senate bill. The provision does go beyond the present constraints of 18 U.S.C. 207(b), but the President believes that broadening this provision is necessary to provide the proper balancing of interests when dealing with this question. The Administration, however, would strongly oppose making this particular ban apply for more than one year, and believes that the problems of the type you raise in question 2(d) relating to the Senate bill can be resolved by following the more precise language of S. 555 dealing with "intent to influence" a "particular matter which is pending before" the Department.

We further believe that inclusion of this type of provision, in conjunction with 18 U.S.C. 207 in existing law would, provide sufficient protection against conflicts of interest in the post-employment context pending Congressional action on government-wide legislation. Accordingly, we are in agreement with you in the reservations with respect to provisions of the current House bill suggested in questions 2(a) through (d) of your letter.

In sum, the Administration believes that the provisions relating to reporting and post-employment activities should not impair the ability of the Department to attract capable, highly-motivated individuals, while at the same time preventing either the appearance or the fact of a conflict of interest.

I hope these comments are of help to you, and I thank you for your interest in these important provisions of this legislation.

Sincerely,

JAMES R. SCHLESINGER,
Assistant to the President.

Mr. Speaker, section 403(c) of the conference report specifies that the Commission in its discretion may use rulemaking procedures in establishing rates and charges under the Federal Power and the Natural Gas Acts. Except in the case of wellhead pricing, this provision requires that such procedures "assure full consideration of the issues" and an opportunity for nearly anyone to present their views. The exception is made because section 403(d) authorizes the Commission, in its discretion, to permit nearly anyone to submit written interrogatories concerning any disputed issues of facts to others who may be participants in these proceedings. The idea being that such interrogatories will assure "full consideration of the issues" and an opportunity to present one's views. But, of course, if interrogatories are not utilized, this admonition in the second sentence of section 403(c) is intended to apply to wellhead pricing matters as well.

Part E of the national energy bill now pending on the House floor today provides that ratemaking and related matters under the Federal Power Act shall be by an evidentiary proceeding. Thus, I would caution the new Commission to use the section 403(c) authority with some care. It obviously is not available where the law requires more than a 5 U.S.C. 533 procedure. Indeed, the establishment of rates and charges under either Act is a very important function that affects many, many consumers, including industrial and commercial consumers, as well as individuals and families. Simple rulemaking may be useful from the standpoint of serving a policy objective of seeking higher prices to encourage production of gas or aid a utility, but it may also fail to produce an adequate record to show that such rates and charges are in accord with the law and will not play havoc on consumers. The Commission should not be hasty in exercising this authority.

Mr. Speaker, the conferees also adopted the Dingell-Brown amendment to title V of the House bill. This title establishes uniform administrative procedures and judicial review for the DOE other than the Commission. I am particularly pleased to see that the conferees retained the last sentence of section 501(a)(1) of the bill regarding procedures established in other laws, such as EPCA. In the national energy bill, we have specified that the procedures established in that bill, which include many safeguards, shall apply, rather than those in title V of the DOE conference report. We intend to continue to so specify in that bill.

The conferees did not limit the title V procedures to two years as the House proposed, but the title does require a study which will insure a further review of these procedures in a short period of time.

In a July 8, 1977 letter to Chairman BROOKS on the conference, I provided a copy of a letter Congressman JOHN MOSS received from the FEA and provided to me concerning provisions in both bills relative to FEA's enforcement proceedings. The letter, signed by Mr. Stanley Sporkin, said:

I am concerned about the provisions of the pending legislation which may be read to require a much more formal hearing procedure than is presently required for administrative appeals of remedial orders. If these provisions are interpreted to apply to cases in which a Notice of Probable Violation has been issued on the effective date of the legislation, it will impede the ability of the agency to deal with the current backlog of enforcement cases. Section 804(b) of the Senate bill (Section 708(a) of the House bill) provides that the bill will not affect proceedings pending on the effective date of the FEA transfers to the Department. I would recommend that the Statement of Managers make it clear that this provision is intended to make these new procedures inapplicable to any case in which a Notice of Probable Violation has been issued before the effective date of transfers.

Since then, Mr. Sporkin's task force has issued its report which shows that this backlog represents nearly $2 billion in overcharges, etc. I am pleased to note that the conferees adopted Mr. Sporkin's recommendations which I believe were sound.

Clearly, this backlog of cases which includes some overcharges by major oil companies, as well as independents and retailers, must be eliminated rapidly. Changing the procedures for any case where a notice of probable violation is issued before the effective date of this bill would not be in the public interest. Our committee has urged that the FEA move more quickly on this backlog and issue these notices. The Sporkin report gives added impetus to this matter and I expect that more of these notices will be issued prior to establishment of the DOE.

I note functions of the Department in the conference report do not include provisions concerning the commercialization of technology that were in the Senate bill. This is proper because the DOE does not have any specific commercialization authority, although it has clear authority to conduct demonstrations of technology leading to commercialization of that technology.

I urge adoption of the conference report.

Mr. HORTON. Mr. Speaker, I yield 5 minutes to the gentleman from North Carolina (Mr. BROYHILL).

Mr. BROYHILL. Mr. Speaker, I want to join with the others who have spoken here in this well and expressed dissatisfaction with the way this conference report has come to us, and to state that these disagreements in no way are a reflection on the good work and the abilities of the gentleman from Texas and the gentleman from New York and other members of the conference.

I have supported the creation of this new Department, but I do feel that we need to put some safeguards into this bill to make sure that this new agency, this new Department, is responsive to what we in the Congress feel should be a proper administration of the programs over which they have some control.

In recent years we have seen a tremendous proliferation in Government agencies and programs, and along with this proliferation a growing public disenchantment with the lack of responsiveness even the administrative ability and expense of Government at all levels. This new Department is going to start out with a $10 billion budget and 20,000 employees. It will have awesome new powers over the production, pricing, and supply of energy. If any department needs built-in safeguards, this one does.

The tremendous growth in new programs has prompted widespread interest in improving legislative oversight in an effort to increase Government accountability and increase economy in Government.

One of the procedures that has been brought forward in recent years is the sunset concept, a concept whereby programs and agenieces would automatically terminate on a periodic basis unless they are renewed by law.

Legislative oversight is not new. It has been mandated by statutes that have been passed by this Congress, but the actual performance has fallen far short of expectations. The Legislative Reorganization Act of 1946 directed the congressional committees to exercise continuous watchfulness over agencies. The Budget and Impoundment Control Act of 1974, which has been the most comprehensive congressional mandate in recent years, requires the overview of the total budget and requires the committees to choose between and among competing priorities.

Nevertheless, these mechanisms have not been thoroughly effective in review-

ing and analyzing the proficiency of Government programs or agencies. The authorization process has not really afforded the Congress with a basic framework or guidelines for systematic review and evaluation of past performance. This is a key component to sunset and one which is not incorporated into the conference language.

Mr. HORTON. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from New York.

Mr. HORTON. Mr. Speaker, I would just like to say this to the gentleman. I understand the gentleman's concern and the gentleman's interest in the sunset provisions. As members of the conference we were confronted with a problem of the legality of this agency to enter into contracts over a long term when there was existing a law that said it would go out of existence on a certain date.

When the gentleman presented his amendment originally back in June he indicated what he wanted to do was to have an oversight of the program. I do not think that the gentleman intended that the agency would go out of existence. I think his initial remarks were that he did not intend the agency to go out of existence. He merely wanted to look at the program.

That is what we tried to do. To satisfy the gentleman, this amendment or compromise that we adopted as far as I know has never been done as far as the Federal Government is concerned. This compromise says that this agency in January 1982 has got to submit all of its programs for a review by the Congress. There is no other agency so far as I know that has that same mandate, so the gentleman has succeeded in what he proposed to do; namely, to have sunset as far as the programs of this agency are concerned.

Mr. BROYHILL. Mr. Speaker, I must most respectfully disagree with the gentleman from New York. My reading of what they have included in the conference report is that any committee chairman that has jurisdiction over the department itself or any programs administered by the department can call up the secretary or assistant secretaries and get this information almost any day of the week.

Mr. HORTON. But if the gentleman will read further, it is not required by statute setting up any other agency that it be done.

We also included, which was argued during the debate, that there be annual authorizations and annual appropriations so that this department would come before the Congress annually.

Mr. BROYHILL. Let me respond to that. I see this happening every week around here. Just in the past few weeks we passed appropriation bills without first acting on the appropriate authorization measures. They are either passed in the other body or they are continued through what is called the continuing resolutions. In my view, this is not responsible congressional oversight.

Mr. Speaker, over 50 versions of sunset legislation with almost 200 cosponsors have been introduced in the 95th Congress. In the Senate over half the Members have cosponsored sunset bills. The purpose of this legislation, and my sunset amendment, is to strengthen the congressional capacity for comprehensive policymaking by requiring the Congress to assess the desirability of the continuation of this department or any other agency, and thereby to assure more efficient administration of certain programs. There is increasing concern on the part of the American public to insure that Government is more responsive to public needs. The only way we can do that is to insure better congressional oversight. I believe this can be achieved only through the adoption of my amendment.

As I have stated, I support the creation of this department. I think that it should include these amendments, the sunset amendment, and the provision for congressional veto as well as the insistence of the House amendment on supergrades. There will be a motion to recommit to insist on these provisions, and I urge my colleagues to support that motion.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Speaker, I appreciate the gentleman yielding.

I would just like to answer and respond to my good friend, the gentleman from North Carolina.

Let me say, I voted for the gentleman's amendment. I think the concept is sound. I hope we get some type of sunset legislation enacted in this Congress, and it will be broad and comprehensive, but when we have a destruct system for a Department, in the Organic Act, it does create certain problems, as already mentioned by the gentleman from New York. The Department cannot enter into long-term contracts and many times they enter into contracts extending for several years. This would go to the legality of those contracts.

We took the gentleman's position seriously in the conference. We tried to come up with an alternative. We have enumerated some 14 specific items that must be reported back in January of 1982, the justification for certain programs, who is benefiting from these programs, how does it affect the economy, how does it affect the health and welfare of the people; in all these things we tried to accommodate the gentleman's fears.

Mr. BROOKS. Mr. Speaker, I yield 1 minute to the gentleman from Michigan (Mr. BLANCHARD).

Mr. BLANCHARD. Mr. Speaker, I thank the gentleman.

Mr. Speaker, I want to commend the gentleman from North Carolina (Mr. BROYHILL) for having pursued the sunset issue as diligently as the gentleman has.

I reluctantly oppose, or will oppose, a motion to recommit, because I think what has already been accomplished along the lines of sunset is significant. This conference committee, of which I am not a member, brought back a comprehensive review mechanism. The only thing missing in it is a termination clause to force the review, although the law will require the review if enacted. Fourteen different review criteria are required for each program administered by the new Department of Energy. This is a major step.

I introduced in July of 1975 and later in February 1976, along with Senator MUSKIE, the first sunset bill here in Congress. We conceived it as a mechanism, using termination as a trigger, to force a comprehensive review of each and every Federal spending program. A timetable for review of each Federal spending program is set forth. Programs in related functional categories are required to be reviewed at the same time. A termination clause is put on each program to force that review. I am concerned when we simply slap a termination clause on a whole Department. We lose credibility on the sunset issue. First of all, I do not think we would put a termination clause on the Defense Department or the Justice Department or the State Department. Why should we do it on the Energy Department? I do, however, believe we ought to put termination clauses on spending programs. Unfortunately, the language in the original House bill does not do that. A comprehensive review program for all spending categories with a termination clause to force that review is the way to apply sunset. The conference report therefore is a good step in the right direction. It, at least, requires a comprehensive review on all programs within the domain of the new Department of Energy.

The SPEAKER pro tempore. The time of the gentleman from Michigan has expired.

Mr. BROOKS. Mr. Speaker, I yield 1 additional minute to the gentleman from Michigan.

Mr. BLANCHARD. Mr. Speaker, I think it is really unrealistic to put a termination clause on a major Department. Everyone knows we will not use it.

We also lose credibility in the sunset movement to stick a flat-out termination clause on a Department. This may be a question of tactics, but it is important to treat sunset as a serious structural reform and not a superficial gimmick. As a gimmick, it defeats the purpose of this bill, which is energy reorganization. If we were dealing with a Federal advisory commission on automobile bumpers or a soybean commission, I would agree with the termination clause; but I do not see it as advancing the whole concept of sunset here. I know on my particular bills, H.R. 85 and H.R. 1756 and other numbered but identical versions, we have 150 Members here as cosponsors. We expect hearings on that bill this year. I see the new provision by the conferees as going a long way in advancing the cause of sunset. I think it ought to be approved. Mr. BROYHILL ought to be commended for bringing this improvement about and the conferees applauded for their work in accommodating us on this most important issue.

Mr. HORTON. Mr. Speaker, I yield 2 minutes to the gentleman from Michigan (Mr. BROWN).

Mr. BROWN of Michigan. Mr. Speaker, assuming the passage of the energy bill that is before us this week and assuming passage of this conference report, does President Carter know that he will have to go hat in hand to the czar or Secretary of Energy, if he should de-

cide to take Air Force I to Yazoo, Miss., again?

Mr. HORTON. Mr. Speaker, we did not work that out in conference.

I thank the gentleman for his contribution.

Mr. Speaker, I would like to address myself to the questions which have been raised with regard to the supergrades and personnel authorized. Very quickly, this conference report does not increase the number of supergrades that are now in existence. It does not increase the number of personnel. As a matter of fact, what we did when we got to the conference was to determine that there are now 689 authorized supergrades. Not all of these positions were filled when the House considered this legislation.

For all practical purposes, those supergrades are now exempt from civil service coverage. What we did do, acting upon the suggestions of the conferees who are on the Post Office and Civil Service Committee, was to make some of these subject to civil service.

We provided that 178 supergrades would be subject to civil service; that 311 would be subject to civil service in 4 years, and that the 200 which we had agreed to would continue to be exempt.

Mr. BROOKS. Mr. Speaker, I yield 2 minutes to the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I rise in strong support of the conference report and commend both the chairman and the ranking minority member for the bipartisan way in which they attempted to uphold the House position.

Mr. Speaker, enactment of this legislation, adoption of this conference report, is an essential part of any solution of our energy crisis. I do not mean that alone it will solve our energy problems, but without the department there is no hope for a solution. So, I strongly urge the adoption of the conference report.

I also rise, Mr. Speaker, in opposition to the proposed motion to recommit, and particularly direct my remarks to the matter of sunset. There seems to be a feeling that there is no sunset provision in the conference report. I would direct the Members' attention to page 53 of the conference report, in which there is a page and a quarter dealing with this subject.

But, what does it do? Instead of having departmental destruction, it has sunset programmatically. This is what we should do. Imagine what would happen if we applied sunset to the Department of Defense. It would make it impossible for DOD to enter into long-term, lead-time contracts, and the defense of this Nation would be impaired. The solution of energy requires just that kind of long-term contracting.

Let us take some of the other departments. If we applied sunset to the Department of Agriculture, it would mean no future certainty for farmers. Now, I believe that in the Department of Agriculture, for example, we should have programmatic sunset.

The SPEAKER pro tempore. The time of the gentleman from Pennsylvania has expired.

Mr. BROOKS. Mr. Speaker, I yield 1 additional minute to the gentleman from Pennsylvania.

Mr. MOORHEAD of Pennsylvania. Take the Department of Housing and Urban Development. I am on the Housing Subcommittee. I do not believe we should have sunset for the entire Department, but any one of those programs that this Congress has enacted and that the Department is carrying out, I think we can have sunset programmatically. The conference report, page 53, is a programmatic sunset provision.

I urge the defeat of the motion to recommit and then adoption of the conference report.

Mr. BROOKS. Mr. Speaker, the sunset provision in the House bill was one of the most difficult issues the House conferees had to deal with. It had been adopted by the House by a rather substantial margin, but the Senate conferees were adamantly opposed to it.

During the discussion it was established that a sunset provision would cause serious problems for the Department of Energy in entering into long-term contracts. A number of legal experts advised that any contract that might extend beyond the termination date set by the sunset provision, which was December 31, 1982 could be void.

The Department of Energy, particularly in its research and development activities, will rely heavily on long-term contracts. But after 2 or 3 years, as that termination date approached, for all practical purposes, it would be precluded from entering into necessary contracts. This could have a crippling effect on the Department, and it proved to be a compelling argument with the Senate conferees, who absolutely refused to accept a termination date in the legislation.

But the House conferees did not want simply to abandon the issue, and after a lot more discussion and persuasion, we succeeded in getting the Senate to agree to a provision that I think preserves the intent of the sunset provision.

The conference report now provides that not later than January 15, 1982, which is nearly a year earlier than the termination date set by the sunset provision, the President must submit to Congress a comprehensive review of each program of the Department of Energy.

The conference report spells out in detail just what this review must include. It is in title X, and as you can see, it is comprehensive. There are 14 specific points of information that must be provided for each program, including an identification of its goals, an assessment of whether those goals have been reached, a justification of any new budget authority, and a determination that there are no conflicts or duplications between programs.

This is exactly the kind of a review that would be required under a sunset provision in order to have a department or program continued, and we have preserved it in the conference report.

In addition, the conference report provides for annual authorizations for the Department of Energy, as well as annual appropriations. So there are two more opportunities for Congress to assure itself that the Department is functioning in accordance with the intent of Congress.

We do not like to give up any House provision when we go into conference, and we fought hard to retain the sunset provision. But it came down to a choice between no provision and the one we have brought back to the House, and I hope the conference report will be accepted.

Mr. MOSS. Mr. Speaker, I rise to address the many Members who supported my amendments to the bill H.R. 6804 redesignated S. 826, the Department of Energy Organization Act. As Members may recall, I offered two principal amendments to that legislation. One created an Office of Energy Research to coordinate the research responsibilities of the new Department. The other provided that the major regulatory functions now vested in the Federal Power Commission would continue to be exercised within the protective structure of an independent, collegial body.

I am very pleased to report to my colleagues that under the able leadership of Chairman BROOKS the House position on these two issues was effectively preserved. His actions in concert with those of Chairman RIBICOFF and Senators JACKSON and METCALF will help assure that the Department effectively and responsibly carries out its important mission.

With respect to the Office of Energy Research, the conferees are reporting a bill which largely incorporates the amendment which was approved by the House. As so clearly stated by Mr. HORTON and Mr. PICKLE, strong supporters of this proposal in debate, such an office will insure that the Secretary of Energy receives the best possible advice on the most effective ways to address our complex energy-related research problems. Headed by a person of high scientific stature and demonstrated managerial ability, this office will assure a balanced coordinated research effort.

As agreed upon by the conference, the Office of Energy Research will have the following specific functions:

First, the director will advise the Secretary with regard to the administration of the very important physical research program, which until now has been administrated by ERDA. While the Office is not assigned administrative responsibility for the physical research program, as the House bill provided, the conferees intend the Office to monitor closely the development of the program and to advise the Secretary on the nature and scope of that vital basic and applied research activity.

Second, the Office will monitor the Department's R. & D. programs to assure that undesirable duplication or gaps in programs are identified and minimized. Our scarce resources require that all of the Department's research programs be well coordinated. By reviewing and commenting upon budget and other management information related to such programs, I expect this office to not only help weed out duplication but assure that necessary research projects are not overlooked. This latter function is particularly important with respect to fundamental, basic research.

Third, the new Department will receive several multipurpose national lab-

oratories. The Office will advise the Secretary with respect to the proper maintenance of these important assets. The division of missions among these laboratories, industrial laboratories and universities is a policy question of high significance which the Office will need to address.

Fourth, the Office will consider and advise the Secretary with respect to the full range of approaches toward meeting energy-related manpower objectives. Such reviews should take into account the need for adequate student support, new and improved curricula, organizational structures and innovation in undergraduate and graduate programs, and to professional retraining activities.

Fifth, the Office will advise the Secretary with respect to the award of financial assistance to carry out basic and applied research activities. The kind of mechanisms chosen to provide short- and long-term research support can have important effects on the quality and productivity of the research program. The Office will advise the Secretary with respect to the proper balance and use of such varied funding arrangements.

Finally, the Office has broad authority to carry out such additional research duties as may be desired by the Secretary. These include the supervision and support of research activities carried out by any of the assistant secretaries. For example, it may be desirable for the Secretary to require the Office to provide seed money for selected kinds of research generally assigned to one or more assistant secretaries. The Office also should stimulate research projects which cut across the functional responsibilities of two or more assistant secretaries. By coordinating, stimulating, and providing support for the full range of research activities the Office will insure balanced, coordinated growth throughout the Department's research program. Together these activities will provide a base of strong, healthy scientific advice on which the Secretary will have to rely.

With respect to the jurisdiction of the independent regulatory commission within the Department over regulatory functions now exercised by the Federal Power Commission, the House position also largely prevailed. Under the language reported by the conferees, the Federal Energy Regulatory Commission will exercise all but a very small portion of the functions now vested in the Federal Power Commission. These include the principal economic regulatory authorities arising from the Natural Gas and Federal Power Acts. Among the responsibilities of the Federal Energy Regulatory Commission shall be:

The issuance of licenses and the granting of permits under Part I of the Federal Power Act (including the regulation of facilities on public lands and reservations);

The establishment of rates and charges for the transmission or sale of electricity (including indirect determinations of such rates through rules with respect to construction work in progress);

The regulation of nonemergency interconnections;

The establishment of rates and charges for the production and transportation of natural gas;

The issuance of certificates of public convenience and necessity;

The establishment and enforcement of curtailments (other than the establishment of priorities for such curtailments); and

The regulation of mergers and securities acquisition.

While the Commission has final responsibility for these functions, the Secretary is assured a major role in the policy formulation process through his opportunity to propose rules with respect to these issues and his right to intervene in Commission proceedings. The public is guaranteed that if the Secretary seeks to overstep the bounds of his authority at some future time, the Commission may consider and ultimately veto a proposed secretarial rule which significantly affects any function within its jurisdiction.

This resolution of the differences between the House and the Senate effectively addresses the concerns of those of us who felt that major economic regulatory authorities under the present Federal Power and Natural Gas Acts should not be exercised by an individual Secretary of Energy, no matter what his or her party affiliation. This resolution approximates what Mr. BROWN of Ohio and I were seeking when we offered our amendment. This also meets the concerns of those like Mr. DINGELL of Michigan who vigorously and artfully advocated this cause.

In addition to these matters, there are several provisions of the conference report that I want to comment on.

The report establishes the Secretary, and Under Secretary and Deputy Secretary and eight Assistant Secretaries. As noted, in the managers' statement, the conferees decided not to designate the areas of responsibilities for each Assistant Secretary, but listed a number of functional areas that one or more of these Assistant Secretaries would carry out.

The 11 listed functions are not intended to provide any additional authority or responsibility to the DOE or these Assistant Secretaries, nor are these functions to be construed as a directive by Congress to perform one or all of them. They are merely a statement of the board program areas that should be carried out by these Assistant Secretaries "in accordance with applicable law".

These lists of functions stemmed from the Senate bill. Some revisions were made in them by the Conferees. For example, the first and seventh functions of the Senate bill were as follows:

(1) Energy resource applications, including functions dealing with management of all forms of energy production and utilization, such as the fuel allocation and distribution functions, energy technology demonstration and commercialization programs, and management of energy resource leasing procedures on Federal lands.

(7) Competition and consumer affairs responsibilities for the promotion of competition in the energy industry and for the protection of the consuming public in the energy regulatory and policymaking process, including but not limited to assisting the Secretary in the formulation and review of policies, rules, regulations, leases and enforcement actions, acquiring, analyzing and disseminating information relating to competition and consumer affairs.

As one can readily see, some changes were made by the Conferees in there provisions in recognition of the fact that the Economic Regulatory Administration and the Federal Energy Regulatory Commission established by the bill, and not the Assistant Secretaries will be responsible for carrying out fuel allocation and distribution and enforcement actions. The ERA reports directly to the Secretary under the chart shown Congress by the White House when the President proposed this legislation. The Assistant Secretaries should have input, but the responsibility is the ERA's. The Commission is independent of the Assistant Secretaries.

This bill establishes the ERA. It is our understanding that all of the regulatory and enforcement functions now carried out by the Federal Energy Administration would be transferred to, and vested in, the ERA.

The bill further includes the Moss-Brooks amendment adopted in the House Committee on Government Operations that the Secretary shall "by rule provide for a separation of regulatory and enforcement functions" of the ERA. This provision carries out a similar recommendation by the House Committee on Interstate and Foreign Commerce in its May 16, 1977, report (H. Rept. 95–323) on H.R. 6794 (p. 9). This recommendation was made after extensive investigation by its Subcommittee on Energy and Power and a subcommittee I chair.

It is also important to note that the conferees expect the ERA to have its own legal staff to carry out its enforcement functions. The bill establishes a General Counsel in DOE. But the General Counsel should not supervise lawyers in the ERA involved in the enforcement process.

On July 14, 1976, the Chairman of an FEA Task Force on Compliance and Enforcement stated in his report to the FEA Administrator as follows:

Organizational problems have been further aggravated by an inappropriate definition of the role of counsel in the enforcement process. Rather than entering an enforcement matter at an early stage, counsel often first sees results of an audit after a Notice of Probable Violation has been drafted. Attorneys generally perceive their role as that of impartial evaluators of the legal sufficiency of the case.

No realistic time limits are set for counsel's review or, where deadlines have been established they often cannot be met. On those occasions where counsel feels pressed because a matter has lingered too long in his office, files are often returned to the auditors with a request that supplemental information be supplied. While this temporarily relieves counsel of responsibility for the matter, and the Agency's case tracking records show prompt turnaround times, effective law enforcement is no longer the objective. Auditors too have learned the game well—when the additional information requested is obtained, the case is once again sent to counsel who may, in turn, return it to the auditors for yet another round of review. This exercise in administrative "ping pong" ultimately paralyzes not only the enforcement process but also those who are charged with its administration.

To make the enforcement program effective, counsel must abandon its detached role

and be afforded an opportunity to participate in the creative pride associated with developing and presenting a case. This can be best accomplished by having attorneys play integral roles in the development of individual enforcement actions at their incipient stages.

I strongly urge that qualified investigative and litigative attorneys, hired under Schedule A appointing authority of the Civil Service Commission, be immediately assigned to, and placed under the supervision of, the Compliance Office at the National and Regional levels. General Counsel and its counterpart in the Regions should continue to serve as the legal adviser to the Administrator on the enforcement program and have a full opportunity to review all enforcement actions on a timely basis on behalf of the Administrator.

This recommendation appears sound. It is consistent with the comments expressed by the House Committee on Interstate and Foreign Commerce. It should be carried out.

The statement of the managers in commenting on the liaison committee states:

The conference substitute establishes a Leasing Liaison Committee composed of an equal number of members from among the relevant employees of the Department of Energy and the Department of the Interior. The conference substitute deletes the rest of the Senate language which specifies the purposes and responsibilities of the committee. The deletion resulted from recognition by the conferees that many avenues exist for coordination and cooperation between the Secretaries of Energy and Interior and that inclusion of specific purposes and responsibilities could be too limiting in nature. On the other hand, the conferees recognized that separation of responsibilities over energy mineral leasing is somewhat unique and determined that it would be helpful to provide the Departments with an institutional coordinating mechanism to supplement and to assist in alternative interdepartmental coordination efforts. Among the activities which may take place under the committee are consultants on leasing matters, establishment of long-term energy leasing goals, energy resources on the public lands, and other information relevant to leasing decisions and procedures.

Many in the House have doubts about the wisdom of this committee and about the workability of splitting the leasing functions between two departments. Clearly, this committee should not be assigned any actual leasing functions.

The committee should be advisory only. It should draw what staff support it needs from the departments and not build up its own independent staff. The members of this committee should have clear policymaking roles. They should attend all meetings of the committee and not delegate this responsibility.

Most importantly, there must be advance notice of each committee meeting and its agenda. Each meeting should be open to the public, even if not required by law. Frankly, I can foresee no circumstance where closed-door meetings would be warranted, because it is not intended that this committee consider particular lease sales or leases. Openness should be the clear policy.

The bill abolishes the Federal Power Commission. Many in Congress believe such abolishment is a mistake. Clearly, the FPC needs revision, starting with a clean out of the Commissioners and top personnel who appear to bow too low to those they are supposed to regulate, but we questioned the wisdom of this drastic action of abolishment.

The administration proposed to establish a three-member Board within the DOE that would have little independence. Indeed, the Board's functions would have been determined by the Secretary, not Congress. The Natural Gas and Federal Power Acts which are longstanding FPC authorities would have been entirely vested in the Secretary, not the Board. Also, under that proposal, the Board would not have clear and complete authority to hire and fire its personnel.

For these reasons, the Moss-Brooks amendment was adopted in the House Committee on Government Operations which established a five-member, independent regulatory Commission within the DOE, with all powers and responsibilities necessary to make it completely and unequivocally independent of the Secretary. The FPC would be abolished as proposed, but a new Commission, identical in all respects with the FPC insofar as independence is concerned, was established in its place.

Later, this amendment was further strengthened on the House floor, by the Moss-Brown-Dingell amendment adopted by an overwhelming majority. The conference report states:

In light of the high importance, great sensitivity, and large volume of work the body will be responsible for, the House provisions on the size and independence of the Commission was agreed upon.

The new Commission has complete authority to hire and fire its employees, including the retention of all persons now at the FPC whom it considers to be qualified and competent, and there are many.

A recent rumor, heard by this Congressman, is that some FPC Commissioner reportedly said that the staff of FPC was all going to the Secretary and that the new Commission would have but a few people—that is, 50 people. That is not the intention of the conferees. The FPC staff are not transferred to the Secretary, although some may voluntarily transfer to him. The new Commission must have a complete and competent staff to carry out all its functions effectively and expeditiously.

In addition, the conference-reported bill, like the Moss-Brooks amendment, as amended on the House floor, makes it abundantly clear that:

In the performance of their functions, the members, employees, or other personnel of the Commission shall not be responsible to or subject to the supervision or direction of any officer, employee, or agent of any other part of the Department.

The chairman of the new Commission is responsible for the selection, et cetera of personnel and many other functions. But, of course, he must do so with some guidance by the other members of the Commission. It should, however, be emphasized that the use and expenditure of funds appropriated or made available to the new Commission is a matter that is to be decided by the Commission, and not just the Chairman.

The new Commission will also have control over the preparation and submission to Congress of its budget and over legislation affecting the Commission. The conferees, in adopting this House provision said:

The Conferees agreed to the House amendment. For the Commission to play the effective role intended for it, it must receive all the budgetary resources it needs to carry out its responsibilities. This provision will assure Congress an opportunity to obtain the Commission's own assessment of its budgetary needs. At the same time, the procedure provided will assure the Secretary and the President an adequate time to evaluate the Commission's request and to place it in the context of the Department's overall budgetary needs before forwarding the Department's entire proposed budget, along with the Commission's original request, to Congress.

I want to emphasize again that, under this provision, the Commission, not the Secretary, prepares its budget authorization and appropriation requests, including support data and justifications. As noted by the conference report, the Commission's budget is subject to secretarial and OMB review, but any changes made in the Department or OMB must be provided to the Congress for evaluation.

Similarly, the conferees adopted the House provision relating to legislation affecting the Commission. The conferees said:

The House amendment also contained an additional sentence providing that whenever the Commission submits any legislative recommendations or testimony or comments on legislation to the Secretary, the President or OMB, the Commission shall at the same time provide appropriate Members of Congress with the comments or testimony.

The Senate Conferees receded with an amendment to provide that the provision is only applicable to such legislative recommendations, testimony or comments that are actually prepared for submission to Congress. If the Secretary requests advice from the Commission on a legislative question for his own use, the advice the Commission provides in response would not actually be prepared for submission to Congress and would not be subject to this section. However, if Congress asks the Commission directly for such legislative recommendations, comments, or testimony, or if the Commission prepares such material on its initiative, the provision applies. It would apply when the document is submitted to the Secretary, the President or the OMB even if it is not the actual final document which the Commission intends to submit to Congress.

I think it important to stress that section 552(c) of the Freedom of Information Act applies also whereby the Congress and its committees and subcommittees are entitled even to data exempted by section 552(b) of the FOIA.

The conference report and the statement of the managers make it clear that the FPC's current rules of procedure will continue to apply to the Commission until changed by it, including the various interpretations of law adopted by the courts and the FPC over time. In short, the precedents and custom of the FPC will carry over to the new Commission.

Section 402(a) of the conference report is extremely important. It establishes a very broad jurisdictional basis for the Commission. It fully carries out, and is intended to conform with, the action taken by the House in adopting the Moss-Brown-Dingell amendment earlier this year to what was then sec-

tion 301(b) of H.R. 6804. As the conferees note, the conference report seeks to delineate functions in the manner suggested by the Senate, but this delineation of Commission authority was not, as the conference report states, an attempt to reduce or modify the Commission's jurisdiction to any lesser degree or scope than was provided in the House bill. Thus, it is clear, for example, that the Commission continues to have all the authority the FPC has today under part I of the Federal Power Act concerning the regulation of the development of water power and resources (16 U.S.C. 797–822), including projects located on public lands and reservations. The conferees intend that the Commission clearly has under the conference report the exclusive jurisdiction of all functions under the Federal Power Act relating to the "establishment, review, and enforcement" of rates and charges for the sale and transmission of electric energy, including the very important function of accounting and depreciation and "construction work in progress" under subpart II of the act (16 U.S.C. 824, 824b, 824d to 824h); under section 202(b) of the Federal Power Act relating to interconnection, other than emergency interconnection (16 U.S.C. 824a(b)); and under the Federal Power Act relating to securities and mergers.

Thus, just as the House bill provided, the Secretary will carry out functions concerning emergency interconnections, the exportation of electric energy to a foreign country—subject to rates and charges jurisdiction of the Commission—the establishment of regional districts, and matters relating to interlocking directorates, under the act (16 U.S.C. 824a (a), (c), (d) and (e)).

I think it important to stress here and now that we do not want to see constant squabbling or "turf fights" between the Secretary and the Commission over jurisdiction, nor do we want to see litigation arising because they cannot work out their differences. Clearly, I believe that all functions should be vested in the Commission. But others did not share my view and wanted to give some functions to the Secretary. But all want to see the law work effectively. A delineation of each provision of the law as a means of trying to settle potential differences now is not practicable or desirable. Any such delineation would undoubtedly result in some mistakes. Thus, we devised a general statement of the functions in section 402(a) with the admonition that it is not intended by the conferees to be limiting.

In the case of the Natural Gas Act, the conference report provides that the new Commission will have broad authority under the Natural Gas Act to establish, review, and enforce rates and charges, including wellhead prices—which are made, demanded or received by any natural gas company as defined in the Natural Gas Act—relating to the transportation and sale of natural gas in interstate commerce. The new Commission will also issue and enforce certificates of public convenience and necessity, including any exemption or exemption therefrom, required by the act; establishing, review, and enforce curtailments (other than priorities for curtailment); and regulate mergers and securities.

In commenting on these provisions, the managers' statement provides:

In addition, section 402(a) is worded to make it clear that the Commission will have exclusive jurisdiction over related matters necessary to carry out the Commission's responsibilities, even where they are not referred to specifically in the section.

For example, section 402(a)(1)(B) and, (C) gives the Commission jurisdiction over the establishment of rates and charges for natural gas and wholesale electricity. The Conferees intentionally deleted the wording contained in the Senate bill, giving the Commission jurisdiction in the area of rates and charges only where the Commission action *directly* established the rates or charges. At the same time it specified that the Commission should have jurisdiction over rules governing construction work in progress, as well as the powers to enforce and review rates and charges established by it. *The proposed action, therefore, need not directly establish rates or charges, or directly issue permits or licenses, to be within the exclusive jurisdiction of the Board.* Emphasis supplied.

I cannot emphasize too strongly the importance of this change to insure that the Commission has the broad authority I have mentioned. In addition, that statement comments on a number of other provisions of the Natural Gas and Federal Power Acts as follows:

Similarly, section 402(a)(2) provides a broad list of authorities contained in the Natural Gas Act or the Federal Power Act which the Commission may rely upon in carrying out the Natural Gas Act and Federal Power Act functions within the Commission's exclusive jurisdiction. It is the intent of the Conference that this provision confer upon the Commission the rights to take on its own, without review by the Secretary, rulemaking or other actions under these authorities, even though not specifically referred to in Section 402(a)(1), where the Commission determines such action should be taken in order to carry out the Commission's responsibility over the licensing and pricing and other regulatory matters described in Section 402(a)(1).

As a result, the Commission, under Section 402, will perform the functions now carried out by the FPC in establishing, reviewing and enforcing rates and charges for the transmission or sale of electric energy. The Commission's authority will include but not be limited to suspending rate changes, initiating investigations of rates and charges, including conducting audits of utilities and establishing accounting procedures, holding hearings, and establishing rates after hearing. All rates and charges will be filed with the Commission.

As noted in the managers' statement, the Secretary must also use these functions.

Section 402(f) of the conference report makes it clear that the regulation of exports and imports of natural gas or electricity will be carried out by the Secretary. While the Secretary is authorized to regulate the importation of natural gas, his authority would not preclude the Commission under sections 4, 5, and 7 from refusing to permit a full pass through of an excessive purchase price by an interstate pipeline. With respect to exports, the authority of the Secretary does not include authority to provide an exemption or exception for the seller of exported gas from application of Commission-established wellhead ceiling prices or Commission-approved transportation charges. Because the export sale is a sale in interstate commerce for resale—although the resale will be outside of interstate commerce—the jurisdiction of the Commission under the Natural Gas Act regarding price of this sale is in no way affected by the Secretary's approval of the export.

There are many other matters in this very complex legislation that deserve additional comment, but time does not permit. I think the conferees have done an excellent job in devising a workable division of responsibility between the Commission and the Secretary. I commend my colleagues.

Mr. BROOKS. Mr. Speaker, I have no further requests for time, and I move the previous question on the conference report.

The previous question was ordered.

MOTION TO RECOMMIT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore (Mr. TRAXLER). Is the gentleman opposed to the conference report?

Mr. KINDNESS. I am, Mr. Speaker.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. KINDNESS moves to recommit the conference report to accompany the Senate bill S. 826 to the committee of conference.

The SPEAKER pro tempore. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER pro tempore. The question is on the motion to recommit.

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. ASHBROOK. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 157, nays 257, answered "present" 1, not voting 18, as follows:

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Burke of Massachusetts against.

Until further notice:

Mr. Dent with Mr. Carter.
Mr. Giaimo with Mr. Derrick.
Mr. Murtha with Mr. Diggs.
Mr. Badillo with Mr. Thone.
Mr. Koch with Mr. Ruppe.
Mr. Beard of Rhode Island with Mr. Dornan.
Mr. Mikva with Mr. McKinney.
Mr. Young of Alaska with Mr. Flippo.

Mrs. BOGGS and Mr. JOHN L. BURTON changed their vote from "yea" to "nay."

Mr. DE LA GARZA and Mr. ABDNOR changed their vote from "nay" to "yea."

So the motion to recommit was rejected.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. HORTON. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 353, nays 57, answered "present" 1, not voting 22, as follows:

Carter	Jones, Okla.	Ruppe
Corman	Jones, Tenn.	Stockman
Dent	Koch	Teague
Derrick	Long, Md.	Wilson, C. H.
Diggs	McKinney	
Flippo	Mikva	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Until further notice:

Mr. Dent with Mr. Ruppe.
Mr. Minish with Mr. McKinney.
Mr. Giaimo with Mr. Flippo.
Mr. Badillo with Mr. Carter.
Mr. Mikva with Mr. Diggs.
Mr. Derrick with Mr. Jones of Oklahoma.
Mr. Jones of Tennessee with Mr. Stockman.
Mr. Koch with Mr. Charles H. Wilson of California.
Mr. Ford of Michigan with Mr. Long of Maryland.
Mr. Corman with Mr. Rhodes.

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AUTHORIZING SECRETARY OF THE SENATE TO MAKE CORRECTIONS IN THE ENROLLMENT OF S. 826, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. BROOKS. Mr. Speaker, I send to the desk a concurrent resolution (H. Con. Res. 320) authorizing the Secretary of the Senate to make corrections in the enrollment of the Senate bill (S. 826), to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, and ask unanimous consent for its immediate consideration.

The Clerk read the title of the concurrent resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 320

Resolved by the House of Representatives (the Senate concurring), That in the enrollment of the bill (S. 826), to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, the Secretary of the Senate shall make the following corrections:

(1) In the table of contents of such bill make necessary technical and conforming changes to conform such table to the text of the bill.

(2) In section 102(2) of the bill strike out "jurisdiction" and insert in lieu thereof "jurisdictions".

(3) In section 102(7) of the bill insert "a" immediately before "central".

(4) In section 203(a)(8) of the bill strike out "additional powers" and insert in lieu thereof "additional functions".

(5) In section 204 of the bill strike out "experience, individuals who" and insert in lieu thereof "experience,".

(6) In section 208(g)(3) of the bill, strike out "and responsibilities".

(7) In section 209 of the bill (A) strike out "nuclear weapon" in subsection (b)(3) and insert in lieu thereof "nuclear weapons"; and (B) strike out "202" in subsection (b)(6) and insert in lieu thereof "203".

(8) In section 302(a)(2) of the bill strike out "paragraphs (1)(A), (1)(B), (1)(C), and (1)(C)" and insert in lieu thereof "by paragraphs (1)(A), (1)(B), (1)(C), and (1)(D)".

(9) In section 302(a)(3) of the bill strike out "and authority".

(10) In section 302(b) of the bill strike out "prescribe" and insert in lieu thereof "promulgate".

(11) In section 302(d) of the bill strike out "mining, which shall remain in the Department of the Intrior" and insert in lieu thereof "mining (which shall remain in the Department of the Interior)".

(12) In section 303 of the bill (A) strike out "issued" in subsection (a) and insert in lieu thereof "promulgated"; and (B) strike out "issue" in subsections (b) and (c) and insert in lieu thereof "promulgate".

(13) In section 401 of the bill (A) strike out "this term" in subsection (b) and insert in lieu thereof "his term"; and (B) insert "Act" immediately after "pursuant to this" in subsection (i).

(14) In section 402 of the bill (A) strike out "any regulation" in subsection (c)(1) and insert in lieu thereof "the regulation"; and (B) insert "policy of" immediately after "statements of" in subsection (h).

(15) In section 403(a) of the bill insert "policy of" immediately after "statements of".

(16) In section 405 of the bill (A) strike out "actively" and insert in lieu thereof "activity"; and (B) strike out "intervening or participation" and insert in lieu thereof "intervening or participating".

(17) In section 501 of the bill (A) strike out "403(e)" in subsection (a)(2) and insert in lieu thereof "402(e)"; (B) strike out "the proposed rule" in subsection (c)(1) and insert in lieu thereof "such proposed rule"; and (C) strike out "the rule" in subsection (e) and insert in lieu thereof "such rule".

(18) In section 502(a) of the bill strike out "resting" and insert in lieu thereof "vesting".

(19) In the heading of part A of title VI of the bill strike out "Provision" and insert in lieu thereof "Provisions".

(20) In section 601(a)(2) of the bill strike out "609" and insert in lieu thereof "650".

(21) In section 648(c) of the bill strike out "laws" and insert in lieu thereof "law".

(22) In section 649(b) of the bill strike out "as amended".

(23) In section 709 of the bill (A) redesignate the subsections following subsection (c) as subsections (d), (e), (f), and (g), respectively; and (B) in the matter designated as subsection (d) strike out "(c)(1), (c)(6)," and insert in lieu thereof "(c)(6)".

(24) In section 710 of the bill redesignate subsections (c) through (h) as subsections (b) through (g), respectively.

(25) In section 801(b)(2) of the bill insert a comma after "objectives".

(26) In section 1001 of the bill strike out "623" and insert in lieu thereof "660".

(27) In section 307(6) of the bill strike out "1974" and insert in lieu thereof "1924".

(28) In section 404(a) of the bill strike out "section 301" and insert in lieu thereof "section 301 or 306".

(29) In section 601 (d) of the bill strike out "606 (a)" and insert in lieu thereof "606".

Mr. BROOKS (during the reading). Mr. Speaker, I ask unanimous consent that the concurrent resolution be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, can the gentleman tell us what this does?

Mr. BROOKS. Yes. I will say to my distinguished friend that these are the technical amendments worked out to correct such things as typographical errors in the conference report.

Mr. ROUSSELOT. What kind of technical amendments?

Mr. BROOKS. Typographical.

Mr. ROUSSELOT. Do they change the substance of the bill?

Mr. BROOKS. No substantive change whatsoever, absolutely none. It just does such things as change the section numbers to make the numbers all correspond.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. BROOKS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report on the Senate bill S. 826.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, can the gentleman assure us that we will not have any substantive legislation other than the energy bill and conference reports?

Mr. WRIGHT. It is not the intention of the leadership to bring up additional major legislation. There are, however, quite a number of bills pending such as the Earthquake Hazards Act and a bill to create a Committee on Population.

In addition, there are conference reports, and if time permits it will be hoped that we might bring up some of them.

Mr. ROUSSELOT. The Committee on World Population, is that major legislation?

Mr. WRIGHT. Major only in the sense, I think, that it has a long range importance. I do not perceive creation of this committee to be a very controversial matter.

Mr. ROUSSELOT. It is controversial, I can assure the gentleman.

Mr. WRIGHT. Well, it is not the intention of the leadership to bring up any additional major legislation.

Mr. ROUSSELOT. I thank the gentleman for his substantial assurances, and withdraw my reservation of objection.

Mr. WRIGHT. The gentleman understands, of course, that conference committee reports, if they become ready for action by the House, would be considered if there is time.

Mr. ROUSSELOT. And require no special rules?

Mr. WRIGHT. That is correct.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERMISSION FOR SUBCOMMITTEE ON IMMIGRATION, CITIZENSHIP, AND INTERNATIONAL LAW OF COMMITTEE ON THE JUDICIARY TO SIT TOMORROW DURING 5-MINUTE RULE

Mr. EILBERG. Mr. Speaker, I ask unanimous consent that the Subcommittee on Immigration, Citizenship, and International Law of the Committee on the Judiciary may be permitted to sit tomorrow, Wednesday, August 3, during the 5-minute rule.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

NATIONAL ENERGY ACT

Mr. ASHLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 8444) to establish a comprehensive national energy policy.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Ohio (Mr. ASHLEY).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 8444, with Mr. BOLAND in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Monday, August 1, 1977, all time for general debate had expired.

Pursuant to the rule, the bill is considered by parts and each part is considered as having been read for amendment. No amendment shall be in order except pro forma amendments and amendments made in order pursuant to House Resolution 727, which will not be subject to amendment, except amendments recommended by the ad hoc Committee on Energy and amendments made in order under House Resolution 727.

Mr. ASHLEY. Mr. Chairman, I ask unanimous consent that the Committee amendments to the table of contents and the table of contents be passed over and considered after all other amendments have been considered, in order that they can be correctly disposed of.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The CHAIRMAN. The Clerk will designate the part of the bill now pending for consideration.

The Clerk read as follows:

Page 9, line 1, section 2. (Section 2 reads as follows:)

SEC. 2. FINDINGS AND STATEMENT OF PURPOSES.

(a) FINDINGS.—The Congress finds that—

(1) the United States faces an energy shortage arising from increasing demand for energy, particularly for oil and natural gas, and insufficient domestic supplies of oil and natural gas to satisfy that demand;

(2) unless effective measures are promptly taken by the Federal Government and other users of energy to reduce the rate of growth of demand for energy, the United States will become increasingly dependent on the world oil market, increasingly vulnerable to interruptions of foreign oil supplies, and unable to provide the energy to meet future needs;

(3) all sectors of our Nation's economy must begin immediately to significantly reduce the demand for exhaustible energy resources of oil and natural gas by implementing and maintaining effective conservation measures for the efficient use of these and other energy sources; and

(4) consistent with all Federal, State, and local environmental requirements, the United States must promptly develop renewable and essentially inexhaustible energy sources and convert the Nation's economy to greater utilization of coal, biomass, and other domestic alternative fuel resources in order to ensure sustained, long-term economic growth, protect the public health and welfare, and preserve national security.

(b) STATEMENT OF PURPOSES.—The purposes of this Act are—

(1) to reduce the growth in demand for energy in the United States through carefully considered institutional and technological changes to conserve exhaustible energy resources produced in this Nation and elsewhere, while not significantly inhibiting beneficial economic growth;

(2) to reduce significantly this Nation's demand for oil (particularly imported oil) and natural gas, to discourage the use of oil and natural gas while assuring, to the greatest extent possible, that such fuels will be available for essential needs, and to encourage the use of coal and other fuels and renewable energy sources to the greatest extent possible, for the benefit of present and future generations;

(3) to establish, through regulation of interstate commerce, taxation, reform of electric utility rate structure, and other measures, a comprehensive energy conservation program applicable to all persons, including Federal and State agencies and local governments, and a program to develop this Nation's indigenous energy resources to achieve the national energy goals established by this Act;

(4) to ensure that all actions taken under or pursuant to this Act are carried out in accordance with applicable environmental requirements;

(5) to ensure that all Federal agencies fully utilize their authorities in furtherance of the purposes of this Act by carrying out programs designed to prohibit or discourage the use of natural gas and oil as a primary energy source and by maximizing the efficient use of energy and conserve natural gas and petroleum of all forms in programs funded or administered by such agencies;

(6) to educate all users of energy to insist that all goods and services are energy efficient and to consider lifetime costs in purchasing decisions respecting goods and services of every kind and description;

(7) to prevent unemployment due to temporary or long-term shortages in supplies of natural gas and oil; and

(8) to protect the security of the United States.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and line number of the first ad hoc committee amendment.

The Clerk read as follows:

Ad hoc committee amendment: Page 12, strike line 9, and insert the matter printed on lines 11 through 14. (The ad hoc committee amendment reads as follows:)

and

(9) to provide incentives to increase the amount of domestically produced energy in the United States for the benefit and security of present and future generations.

Mr. ASHLEY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, this amendment simply adds an additional purpose to the statement of purposes of the bill before us, H.R. 8444. Specifically, the new purpose is as follows: To provide an incentive to increase the amount of domestically produced energy in the United States for the benefit and security of present and future generations.

Mr. Chairman, this purpose was intended to be covered by the bill, and explicit inclusion of this purpose in the statement of purposes was supported by the ad hoc committee as a conforming amendment. My impression, Mr. Chairman, is that there is no controversy over this amendment, which was offered by the gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. I thank the gentleman for yielding.

Mr. Chairman, the amendment does, I think, express very well one of the purposes that the members of the ad hoc committee on both sides of the aisle supported. The amendment was offered by myself and includes an amendment to it offered by the gentleman from Michigan (Mr. DINGELL). I thank the gentleman for his support of it.

Mr. ASHLEY. Mr. Chairman, it is a good amendment.

The ad hoc committee amendment was agreed to.

The CHAIRMAN. The Clerk will designate the next part for consideration.

The Clerk read as follows:

Page 12, line 15, section 3. (Section 3 reads as follows:)

SEC. 3. NATIONAL ENERGY GOALS.

The Congress hereby establishes the following national energy goals for 1985:

(1) Reduction of the compounded average rate of energy growth in the United States to not more than 2 percent annually and maintenance of that rate thereafter.

(2) Reduction of the level of oil imports to less than six million barrels per day.

(3) Achievement of a 10 percent reduction in gasoline consumption from the 1977 level.

(4) Improvement of the efficiency in the energy use of heating and cooling systems in 90 percent of residential buildings, schools, and hospitals.

(5) An increase in annual coal production to at least 400 million tons above 1976 production levels.

(6, Use of solar energy in more than 2½ million homes.

Mr. ASHLEY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, this amendment blends the provisions of the Committee on Interstate and Foreign Commerce reported version of the bill with that of the Committee on Banking, Finance and Urban Affairs version, with respect to the utility program for existing residential buildings.

Specifically, Mr. Chairman, this amendment provides that the Governor of a State prepare a list of contractors, lending institutions and utilities, and inform customers, those persons on this list, to the extent that the Governor determines practicable.

The amendment provides that beginning 2 years after the date of the enactment, the utility could be prohibited from making loans if, after notice and an opportunity for a hearing, the administrator determined that the rates, terms and conditions of such terms are unreasonable, or the financing of that utility has a substantial adverse effect on competition.

I might just add, Mr. Chairman, that this amendment reflects a compromise that was arrived at between the Committee on Interstate and Foreign Commerce and the Committee on Banking, Finance and Urban Affairs.

The role of utilities with respect to residential weatherization was jointly referred to these two committees. The amendment, as I say, does reflect an accommodation between the positions of these two committees, which were not really in wide disagreement on the purpose, although it was necessary to have a reconciliation of the provisions.

What is called for here is a striking of the various provisions of the version of the Committee on Banking, Finance and Urban Affairs, as reflected in the amendment.

Mr. Chairman, I will be happy to yield at this juncture to the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I believe that we are addressing the amendment which was offered jointly by my good friend, the gentleman from Ohio (Mr. ASHLEY), and myself, which is an amendment in two parts. The first part concerns information sent to residential customers concerning suppliers, contractors, and financing arrangements for the purchase and installation of residential energy conservation items.

The CHAIRMAN. The Chair will inform the gentleman from Michigan (Mr. DINGELL) that the Clerk has not read that title.

Mr. DINGELL. Then, Mr. Chairman, I shall await the pleasure of the Chair on that particular point and will address the Chair on that matter later.

The CHAIRMAN. The Clerk will designate the next part of the bill for consideration.

The Clerk read as follows:

Page 13, line 6, section 4, (section 4 reads as follows:)

SEC. 4. REFERENCES TO FEDERAL POWER COMMISSION AND FEDERAL ENERGY ADMINISTRATION.

If the Federal Power Commission or the Federal Energy Administration is terminated, any reference in this Act (or any amendment made thereby) to the Federal Power Commission or the Federal Energy Administration shall be deemed to be a reference to the officer, department, agency, or commission in which the principal functions of such Commission or Administration (as the case may be) are vested, transferred, or delegated pursuant to law.

PARLIAMENTARY INQUIRY

Mr. ANDERSON of Illinois. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. ANDERSON of Illinois. Mr. Chairman, I am uncertain as to why we have just had the Clerk read another section of the bill.

Are we not still dealing with the second committee amendment that was offered by the chairman of the committee, the gentleman from Ohio (Mr. ASHLEY)?

The CHAIRMAN. The Chair will inform the gentleman that the part now pending is section 4 on page 13 of the bill.

Does the gentleman wish to debate that part at this time?

Mr. ANDERSON of Illinois. Mr. Chairman, I merely want to protect my right to rise in opposition to this particular committee amendment, and I am concerned that in the reading of the next part I may not be accorded that right.

The CHAIRMAN. The Chair will inform the gentleman there is no amendment now pending.

Mr. ANDERSON of Illinois. I am sorry, but I did not hear the Chair's statement.

The CHAIRMAN. The Chair will inform the gentleman that there is not now pending a committee amendment.

PARLIAMENTARY INQUIRY

Mr. VOLKMER. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. VOLKMER. Mr. Chairman, so I will know how we are going to proceed, are we going to go through the bill section by section, with the reading of each section?

The CHAIRMAN. The Chair will inform the gentleman that the bill will be considered part by part with each part considered as read. The bill will not be read section by section.

Mr. VOLKMER. So we will continue, Mr. Chairman, with the reading of each section or part, then, and the title of the section?

The CHAIRMAN. The Chair will further inform the gentleman that section 4 precedes part I, and after that section has been disposed of, we will move to part I of the bill. We have been considering the preliminary four sections as separate parts.

Mr. VOLKMER. I thank the Chair.

The CHAIRMAN. The Clerk will designate the next part of the bill for consideration.

The Clerk read as follows:

Page 13, line 16, Title I, Part 1 (Title I, Part 1 reads as follows):

TITLE I—PRICING, REGULATORY, AND OTHER NONTAX PROVISIONS

PART I—ENERGY CONSERVATION PROGRAMS FOR EXISTING RESIDENTIAL BUILDINGS

Subpart A—Utility Program

SEC. 101. DEFINITIONS.

As used in this subpart—

(1) The term "Administrator" means the Administrator of the Federal Energy Administration.

(2) The term "natural gas" means natural gas as such term is defined in the Natural Gas Act.

(3) The term "public utility" means any person, State agency, or Federal agency which is engaged in the business of selling natural gas or electric energy, or both, for purposes other than resale.

(4) The term "regulated utility" means a public utility with respect to whose rates a State regulatory authority exercises ratemaking authority.

(5) The term "nonregulated utility" means a public utility which is not a regulated utility.

(6) The term "rate" means any price, rate, charge, or classification made, demanded, observed, or received with respect to sales of electric energy or natural gas, any rule, regulation, or practice respecting any such rate, charge, or classification, and any contract pertaining to the sale of electric energy or natural gas.

(7) The term "ratemaking authority" means authority to fix, modify, approve, or disapprove rates.

(8) The term "residential building" means any building used for residential occupancy which is not a new building to which the final standards under section 304(a) of the Energy Conservation and Production Act apply and which has a mechanical or electrical system for heating or cooling, or both.

(9) The term "residential customer" means any person to whom a public utility sells natural gas or electric energy for consumption in a residential building.

(10) The term "residential energy conservation measure" means—

(A) caulking and weatherstripping of exterior doors and windows;

(B) furnance efficiency modifications including—

(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

(ii) devices for modifying flue openings which will increase the efficiency of the heating system, and

(iii) electrical or mechanical furnace ignition systems which replace standing gas pilot lights;

(C) clock thermostats;

(D) ceiling, attic, wall, and floor insulation;

(E) hot water heater insulation;

(F) storm windows and doors, multiglazed windows and doors, heat absorbing or heat reflective glazed windows and doors;

(G) replacement furnaces which exceed the energy efficiency standards promulgated under section 325 of the Energy Policy and Conservation Act by not less than an amount determined by the Administrator to provide substantial energy conservation benefits;

(H) devices associated with load management techniques as defined in section 521 (b);

(I) devices to utilize solar energy or windpower for any residential energy conservation purpose, including (but not limited to) heating of water, space heating or cooling; and

(J) such other measures as the Administrator may by rule identify for purposes of this subpart.

No measure referred to in subparagraphs (B) through (I) shall be treated as a residential energy conservation measure for purposes of this subpart unless such measure is warranted to meet a specified level of performance over a period of not less than three years.

(11) The term "residential energy conservation plan" means a plan approved by the Administrator pursuant to section 103(c) which is developed by a State regulatory authority or by a nonregulated utility.

(12) The term "State" means a State, the District of Columbia, and, at the discretion of the Administrator, Puerto Rico.

(13) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electric energy or natural gas by any public utility (other than by such State agency); except that in the case of a public utility with respect to which the Tennessee Valley Authority has ratemaking authority such term means the Tennessee Valley Authority.

(14) The term "State agency" means a State, a political subdivision thereof, or any agency or instrumentality of either.

(15) The term "suggested measures" means, with respect to a particular residential building, the residential energy conservation measures which the Administrator, in the rules prescribed pursuant to section 103(a), determines to be appropriate for the location and the category of residential buildings which includes such building.

(16) The term "utility program" means a program meeting the requirements of section 104 carried out by—

(A) a regulated utility pursuant to a residential energy conservation plan developed by a state regulatory authority;

(B) a nonregulated utility pursuant to a residential energy conservation plan developed by such utility; or

(C) a regulated or nonregulated utility pursuant to an order of the Administrator issued under section 106.

SEC. 102. COVERAGE.

This subpart shall apply in any calendar year to a public utility only if during the second preceding calendar year either (1) sales of natural gas by such utility exceeded 10 billion cubic feet or (2) sales of electric energy by such utility for purposes other than resale exceeded 200 million kilowatt hours.

SEC. 103. RESIDENTIAL ENERGY CONSERVATION PLANS.

(a) PROMULGATION OF RULES BY ADMINISTRATOR.—The Administrator shall, not later than 120 days after enactment of this Act, publish an advanced notice of proposed rulemaking with respect to rules on the content and implementation of residential energy conservation plans. Not later than 60 days after the date of publication of the advanced notice of proposed rulemaking, and after consultation with the Secretary of Housing and Urban Development, the Secretary of Commerce, acting through the National Bureau of Standards, the Consumer Product Safety Commission, and the heads of such other agencies as he deems appropriate, the Administrator shall publish a proposed rule on content and implementation of such plans. After publication of such proposed rule, the Administrator shall afford interested persons an opportunity to present oral and written comments on matters relating to such proposed rule. A rule prescribing the content and implementation of residential energy conservation plans shall be published not earlier than 45 days after publication of the proposed rule.

(b) CONTENT OF RULES.—The rules promulgated under subsection (a)—

(1) shall identify the suggested measures for residential buildings, by climatic region and by categories determined by the Administrator on the basis of type of construction or any other factors which the Administrator may deem appropriate;

(2) shall include

(A) standards which the Administrator determines necessary for general safety and effectiveness of any residential energy conservation measure;

(B) standards which the Administrator determines necessary for installation of any residential energy conservation measure; and

(C) standards for the programs and procedures required under subsections (d)(4) and (e)(3) and standards, developed in close consultation with the Federal Trade Commission, for the programs and procedures required under subsection (d)(2) and (e)(2); and

(3) may include such other requirements as the Administrator may determine to be necessary to carry out this subpart.

(c) SUBMISSION AND APPROVAL OF STATE RESIDENTIAL ENERGY CONSERVATION PLANS.—(1) Not later than 180 days after promulgation of rules under subsection (a), each State regulatory authority may submit, and each nonregulated utility shall submit a proposed residential energy conservation plan to the Administrator. The Administrator may, upon request of a State regulatory authority or nonregulated utility, extend for good cause shown the time period for submission of a plan by such authority or utility. Each such plan shall be reviewed and approved or disapproved by the Administrator not later than 90 days after submission. If the Administrator disapproves a plan, the State regulatory authority or nonregulated utility may submit a new or amended plan not later than 60 days after the date of such disapproval, or such longer period as the Administrator may, for good cause, allow. The Administrator shall review and approve any such new or amended plan not later than 90 days after submission. After approval of a plan, a State regulatory authority or nonregulated utility may submit an amended plan and such plan shall be approved or disapproved in the same manner as the original plan.

(2) In the case of a State which is receiving funds under part C of title III of the Energy Policy and Conservation Act for purposes of carrying out a State energy conservation plan under such part, if the Governor of such State notifies the Administrator and the State regulatory authority not later than 30 days after promulgation of rules under subsection (a), the department or agency of such State may, in lieu of the State regulatory authority, submit a proposed residential energy conservation plan to the Administrator for the utilities regulated by such State regulatory authority. In any case where such plan has been submitted by such department or agency, the references in this subpart (other than in section 101(13)) to the State regulatory authority shall be treated as references to such department or agency, with respect to each utility over which such State regulatory authority exercises ratemaking authority.

(d) REQUIREMENTS FOR PLANS FOR REGULATED UTILITIES.—No residential energy conservation plan submitted by a State regulatory authority shall be approved by the Administrator unless such plan—

(1) requires each regulated utility over which such State regulatory authority exercises ratemaking authority to implement a utility program which meets the requirements of section 104;

(2) contains an adequate program for preventing unfair, deceptive, or anticompetitive acts or practices affecting commerce which relate to the implementation of utility programs within such State, including—

(A) provisions to assure that the lists required to be prepared and sent to residential customers under such program are prepared in a fair, open, and nondiscriminatory manner,

(B) provisions to assure that, in carrying out procedures under section 104(a)(1)(B) respecting financing of suggested measures (including the rates, terms, and procedures used in connection with such financing and the inspection referred to in section 104(a)(1)(B)), the utility will not unfairly discriminate among—

(i) residential customers,

(ii) suppliers and contractors of such measures, or

(iii) lending institutions in the utility's service area which offer loans for the purchase and installation of residential energy conservation measures, and

will not discriminate between measures which are purchased from, or installed by, the utility and measures which are purchased from, or installed by, other persons under such program,

(C) provisions to assure that any person who alleges any injury resulting from a violation of any plan provision required under subparagraph (A) or (B) shall be entitled to redress under procedures established by the State regulatory authority or an appropriate State agency designated by such authority, and

(D) provisions to assure that in the case of a furnace which uses as its primary source of energy any fuel or source of energy other than the fuel or source of energy sold by a utility, such utility will not inspect such furnace, install any replacement furnace referred to in section 101(10)(G), or make or inspect any furnace modification referred to in section 101(10)(B);

(3) contains adequate procedures to assure that each regulated utility will carry out such utility program;

(4) contains adequate procedures to assure that each regulated utility will, in connection with such program, charge fair and reasonable prices and charge rates of interest for loans which generally reflect prevailing rates of interest for similar loans in the State in which the borrower is located; and

(5) is adopted after notice and public hearing; and

(6) meets such other requirements as may be contained in the rules promulgated under subsection (a).

(e) REQUIREMENTS FOR PLANS FOR NONREGULATED UTILITIES.—No residential energy conservation plan proposed by a nonregulated utility shall be approved by the Administrator unless such plan—

(1) provides for the implementation by such utility of a utility program which meets the requirements of section 104;

(2) contains adequate procedures for preventing unfair, deceptive, or anticompetitive acts or practices by such utility which relate to the implementation of such utility program including—

(A) provisions to assure that the lists required to be prepared and sent to residential customers under such program are pre-

pared in a fair, open, and nondiscriminatory manner,

(B) provisions to assure that, in carrying out procedures under section 104(a)(1)(B) respecting financing of suggested measures (including the rates, terms, and procedures used in connection with such financing and the inspection referred to in section 104(a)(1)(B)), the utility will not unfairly discriminate among—

(i) residential customers,

(ii) suppliers and contractors of such measures, or

(iii) lending institutions in the utility's service area which offer loans for the purchase and installation of residential energy conservation measures, and

will not discriminate between measures which are purchased from, or installed by, the utility and measures which are purchased from, or installed by, other persons under such program,

(C) provisions to assure that any person who alleges any injury resulting from a violation of any plan provision required under subparagraph (A) or (B) shall be entitled to redress under procedures established by the Administrator or an appropriate agency or authority designated by the Administrator, and

(D) provisions to assure that in the case of a furnace which uses as its primary source of energy any fuel or source of energy other than the fuel or source of energy sold by a utility, such utility will not inspect such furnace, install any replacement furnace referred to in section 101(10)(G), or make or inspect any furnace modification referred to in section 101(10)(B);

(3) contains adequate procedures to assure that such utility will, in connection with such program, charge fair and reasonable prices and charge rates of interest for loans which generally reflect prevailing rates of interest for similar loans in the State in which the borrower is located;

(4) contains procedures pursuant to which such utility will submit a written report to the Administrator not later than one year after approval of such plan, and biennially thereafter, regarding the implementation of such utility program and containing such information as may be prescribed by the Administrator in the rules promulgated under subsection (a); and

(5) meets such other requirements as may be contained in the rules promulgated pursuant to subsection (a).

SEC. 104. UTILITY PROGRAMS.

(a) REQUIREMENTS FOR UTILITY PROGRAMS.—(1) Except as provided in subsection (b) and section 105, each utility program shall include—

(A) procedures designed to inform, no later than January 1, 1980, and each two years thereafter before January 1, 1985, each of its residential customers who owns or occupies a residential building, of—

(i) the suggested measures for the category of buildings which includes such residential building;

(ii) the savings in energy costs that are likely to result from installation of the suggested measures in typical residential buildings in such category; and

(iii) the availability of the arrangements described in subparagraph (B), the inspectors, suppliers, and contractors described in subparagraph (C), and the public and private lending institutions described in subparagraph (D);

(B) procedures whereby the public utility, no later than January 1, 1980, will, for each such residential customer, offer to—

(i) inspect the residential building to determine and inform the residential customer of the estimated cost of purchasing and installing each suggested measure and keep a copy of the inspection report on file which shall be available to any subsequent owner without charge, except that a utility shall be required to make only one inspection of a residence unless a new owner requests and offers to pay for a subsequent inspection;

(ii) have the suggested measures (other than replacement furnaces described in section 101(10)(G)) installed if this clause applies as provided in subsection (b);

(iii) assist such residential customer in securing a loan to finance the purchase and installation costs of suggested measures;

(C) procedures whereby the public utility prepares and sends to each of its residential customers a list of suppliers and contractors in its service area who sell and install residential energy conservation measures and are willing to perform a residential inspection and give an estimate of costs, which procedures are designed to encourage participation by such contractors and suppliers in a nondiscriminatory manner in the activities to be carried out under subparagraph (B);

(D) procedures whereby the public utility prepares and sends to each of its residential customers a list of banks, savings and loan associations, credit unions, and other public and private lending institutions in its service area which offer loans for the purchase and installation of residential energy conservation measures; and

(E) procedures to assure that all amounts expended or received by the utility which are attributable to the utility program (including any penalties paid by such utility under section 106) are accounted for on the books and records of the utility separately from amounts attributable to all other activities of the utility and are not charged to customers of the utility as part of any rate charged for electric power or natural gas, except that any amounts expended by the utility to provide information under provisions referred to in subparagraph (A) shall be treated for such purposes as a current expense of providing utility service and charged to all customers of such utility in the same manner as current operating expenses of providing such utility service.

(2) The costs of carrying out any activity as part of a utility program under this section (other than the costs of providing information under the provisions referred to in paragraph (1)) shall be charged to the person for whom such activity is performed. Such costs shall be stated separately from the cost of providing utility service on any billing submitted by the utility to such person.

(3) In the case of any person who becomes a residential customer of a utility carrying out a utility program under this section after January 1, 1980, and before January 1, 1985, not later than 60 days after such person becomes a residential customer of such utility, such utility shall inform such person of the items listed in subparagraph (A) of paragraph (1) and offer such person the opportunity to enter into arrangements referred to in subparagraph (B) of paragraph (1).

(b) SUPPLY AND INSTALLATIONS BY UTILITIES.—(1) After the date 2 years after the date of enactment of this Act, any public utility which directly or indirectly supplies or installs any residential energy conservation measure (other than a measure referred to in subsection 101(10)(H)) shall be treated for purposes of this subpart as supplying or installing such measure under a program under this section. After such date 2 years after the date of enactment of this Act, the provisions of subsection (a)(1)(B)(ii) shall apply and public utilities shall be required to offer to have suggested measures installed under programs under such provisions, if the Administrator determines that—

(A) the supplying or installing of such measures by utilities would not have a substantial anticompetitive effect, and—

(B) the supplying or installing of such measures would result in a substantial increase in the number of residential customers likely to install suggested measures, and would not result in excessive prices for residential conservation measures by reason of increased demand for such measures.

Before making his determination under subparagraph (A), the Administrator shall take into account a report by the Federal Trade Commission respecting such determination. Such report shall be undertaken by the Federal Trade Commission and submitted to the Administrator within 18 months after the date of enactment of this Act and shall include a study of the effect on competition of requiring utilities to supply or install such measures under the program under this subpart.

(2) Subsection (a)(1)(B)(ii) shall not apply and a public utility may not directly or indirectly supply or install any residential energy conservation measure after the date 2 years after the date of the enactment of this Act if—

(A) the State regulatory authority or the Administrator determines that there are available sufficient numbers of suppliers or installers of suggested measures in the area to be served by the utility,

(B) the State regulatory authority, the Administrator, or the Federal Trade Commission determines that the supplying or installing of such measures by such utility would have a substantial anticompetitive effect, or

(C) the State regulatory authority or the Administrator determines that prohibiting utilities from supplying or installing such measures will not result in a substantial reduction of the number of residential customers likely to install suggested measures.

(3) Subparagraphs (A) and (C) of paragraph (2) shall not apply to any public utility which directly or indirectly supplied or installed any such measure during the period from April 20, 1974, to and including April 20, 1977.

(4) For purposes of section 106(d), any violation of the prohibition contained in this section shall be treated as a violation of a plan promulgated under section 106(a).

(c) TERMINATION OF SERVICE.—No utility implementing any program under this section may terminate or threaten to terminate utility service to any customer by reason of any default of such customer with respect to payments due for energy conservation measures installed pursuant to such program.

(d) LOANS BY UTILITIES.—Nothing in this section shall be construed as prohibiting any public utility from making loans to residential customers for the purpose of financing the purchase and installation of residential energy conservation measures. In the case of any such loan made by a public utility to a residential customer for such purpose, the public utility shall permit the residential customer to repay the principal and interest of such loan as a part of his periodic bill (over a period of not less than 3 years unless he otherwise elects) except that—

(1) a lump sum payment of outstanding principal and interest may be required upon default in payment by the residential customer (other than a late payment by such customer), and

(2) no penalty shall be imposed for payment of all or any portion of the outstanding loan amount prior to the date such payment would otherwise be due.

SEC. 105. TEMPORARY PROGRAMS.

Any State regulatory authority or public utility may apply for a temporary exemption prior to the promulgation of rules pursuant to section 103. A temporary exemption may be granted from the requirements of section 104 for a period not to exceed 3 years after the date of enactment of this Act, if such authority or utility demonstrates to the satisfaction of the Administrator that it has implemented or proposes to implement an energy conservation program for residential

customers which is likely to result in the installation of suggested measures in a substantial proportion of residential buildings in its service area.

SEC. 106. FEDERAL STANDBY AUTHORITY.

(a) STANDBY AUTHORITY FOR STATE REGULATED UTILITIES.—If a State regulatory authority does not have a plan approved under section 103(c) within 270 days after promulgation of rules under section 103(a), or within such additional period as the Administrator may allow pursuant to section 103(c)(1), or if the Administrator determines that such State regulatory authority has not adequately implemented an approved plan, the Administrator shall—

(1) promulgate a plan which meets the requirements of section 103 and which applies to the residential buildings which would have been covered had such plan been so approved or implemented, and

(2) under such plan, by order, require each public utility in the State to offer, not later than 90 days following the date of issuance of such order, to its residential customers a utility program prescribed in such order which meets the requirements specified in subsection (a) of section 104.

(b) NONREGULATED UTILITIES.—If a nonregulated utility does not have a plan approved under section 103(c) within 270 days after promulgation of rules under section 103(a) or within such additional period as the Administrator may allow pursuant to section 103(c), or if the Administrator determines that such nonregulated utility has not adequately implemented an approved plan, the Administrator shall, by order, require such nonregulated utility to promulgate a plan which meets the requirement specified in subsection (e) of section 103.

(c) FAILURE TO COMPLY WITH ORDERS.—If the Administrator determines that any public utility to which an order has been issued pursuant to subsection (a) or (b) has failed to comply with such order, he may file a petition in the appropriate United States district court to enjoin such utility from violating such order.

(d) CIVIL PENALTY.—(1) Any public utility which violates any requirement of a plan promulgated under subsection (a) or which fails to comply with an order under subsection (a) or (b) within 90 days from the issuance of such order shall be subject to a civil penalty of not more than $25,000 for each violation. Each day that such violation continues shall be considered a separate violation.

(2) A civil penalty under this subsection shall be assessed by an order of the Administrator made on the record after notice and opportunity for a hearing.

(3) Any person who requested a hearing in accordance with paragraph (2) regarding the assessment of a civil penalty and who is aggrieved by an order assessing a civil penalty may file a petition for judicial review of such order with the appropriate United States Court of Appeals. Such a petition may only be filed within the 30-day period beginning on the date the order making such assessment was issued.

(4) If any person fails to pay an assessment of a civil penalty—

(A) after the order making the assessment has become a final order and if such person does not file a petition for judicial review of the order in accordance with paragraph (3), or

(B) after the court in an action brought under paragraph (3) has entered a final judgment requiring such payment,

the Attorney General shall recover the amount assessed (plus interest at currently prevailing rates from the date of the expiration of the 30-day period referred to in paragraph (3) or the date of such final judgment, as the case may be) in an action brought in such court. In such an action, the validity, amount, and appropriateness of such penalty shall not be subject to review.

SEC. 107. RELATIONSHIP TO OTHER LAWS.

(a) STATE AND LOCAL LAW.—Nothing in this subpart shall supersede any law or regulation of any State or political subdivision thereof, except to the extent that the Administrator, upon petition of a public utility and for good cause, determines that such law or regulation prohibits a public utility from taking any action required to be taken under this subpart.

(b) LAWS RELATING TO UNFAIR COMPENSATION AND DECEPTIVE ACTS.—Nothing in this subpart shall be construed as restricting the authority of any agency or authority of the United States or of any State under any provision of law to prevent unfair methods of competition and unfair or deceptive acts or practices by public utilities.

(c) TRUTH IN LENDING.—Nothing contained in section 104(4) of the Truth in Lending Act (15 U.S.C. 1603(4)) or the regulations issued pursuant thereto shall be deemed to exempt sales or credit extensions by public utilities under this subpart.

(d) PUBLIC UTILITY HOLDING COMPANY ACT OF 1935.—No loan made by a utility under a utility program under this subpart shall be treated as the acquisition of any security, asset, or other interest in any business for purposes of section 9 of the Public Utility Holding Company Act of 1935.

SEC. 108. CONTRACT PROVISIONS.

No public utility shall be subject to any liability under any provision in any contract which restricts any public utility from lending, borrowing, or entering a new line of business, if such lending, borrowing, or entering a new line of business is required under this subpart.

SEC. 109. RULES.

The Administrator is authorized to promulgate such rules as he determines may be necessary to carry out this subpart.

SEC. 110. PRODUCT STANDARDS.

The Administrator shall consult with the Secretary of Commerce, acting through the National Bureau of Standards, with regard to any product or material standard which is relied on in implementing this subpart as a basis for judging the efficacy, energy efficiency, safety, or other attributes of energy conservation materials, products, or devices, and with the Federal Trade Commission for the purpose of in suring that such standards do not operate to deceive consumers or unreasonably restrict consumer or producer options, and that such standards (when applicable) are suitable as a basis for making truthful and reliable disclosures to consumers regarding performance and safety attributes of energy conservation products, materials, and devices.

SEC. 111. AUTHORIZATION OF APPROPRIATIONS.

There are hereby authorized to be appropriated to the Administrator for each of the first three fiscal yaers beginning after the date of the enactment of this Act $5,000,000 to carry out his responsibilities under this subpart.

SEC. 112. STUDY RESPECTING ENERGY EFFICIENCY STANDARDS.

(a) STUDY (1) The Administrator shall undertake a study and submit recommendations (including recommendations for legislative action) to the President and Congress respecting the application of energy conservation standards to existing residential buildings. Such study shall include an analysis of, and recommendations respecting

(A) the type and coverage of residential energy conservation standards, if any, which are necessary and desirable to carry out the purposes of this Act, and

(B) any measures necessary to insure compliance with such standards.

(2) The study and recommendations referred to in paragraph (1) shall include an analysis of

(A) whether or not Federal financial assistance (within the meaning of title III of the Energy Conservation and Production Act) should be withheld or conditioned in the case of existing residential buildings which do not meet energy conservation standards and whether or not some other means of insuring compliance with such standards should be implemented, and

(B) the classes or categories of existing residential buildings and building owners which should be exempted from any mandatory program which may be recommended under paragraph (1).

(b) CONSULTATION.—In carrying out his functions under subsection (a), the Administrator shall consult with appropriate representatives of the building community (including representatives of labor and the construction industry, engineers, and architects), with appropriate public officials and organizations of public officials, and with representatives of consumer groups. For purposes of such consultation, the Administrator shall, to the extent practicable, make use of the National Institute of Building Sciences.

(c) CONSIDERATION OF FACTORS.—In making any recommendations under subsection (a) of this section, the Administrator shall consider—

(1) the economic imoact of the measures recommended on the property owners,

(2) the savings in energy costs resulting from measures recommended throughout the estimated remaining useful life of the existing residential buildings to which such recommendation applies,

(3) the cost of complying with such measures,

(4) the cost of administering any such measures recommended under subsection (a)(1)(B),

(5) the total cost, per Btu, in obtaining the energy savings likely to result from such recommended measures, computed for each class of existing residential building to which such recommendation applies, and

(6) any other factors the Administrator considers relevant.

(b) SUBMISSION.—The recommendations developed by the Administrator under subsection (a) shall be submitted to the President and the Congress not later than 18 months after the date of the enactment of this Act.

SEC. 101B. SUPPLEMENTAL STATE ENERGY CONSERVATION PLANS.

(a) Section 367 of the Energy Policy and Conservation Act is amended to read as follows:

"SUPPLEMENTAL STATE ENERGY CONSERVATION PLANS

"SEC. 367. (a)(1) The Administrator shall, within 6 months after the date of enactment of the Energy Conservation and Production Act, prescribe guidelines with respect to measures required to be included in, and guidelines for the development, modification, and funding of, supplemental State energy conservation plans. Such guidelines may include the provisions of one or more model supplemental State energy conservation plans with respect to any requirements of this section.

"(2) In prescribing such guidelines, the Administrator shall solicit and consider the recommendations of, and be available to consult with, the Governors of the States as to such guidelines. At least 60 days prior to the date of final publication of such guidelines, the Administrator shall publish proposed guidelines in the Federal Register and invite public comments thereon.

"(3) The Administrator shall invite the Governor of each State to submit to the Administrator a proposed supplemental State energy conservation plan which meets the requirements of subsection (b) and any guidelines applicable thereto.

"(4) The Administrator may prescribe rules applicable to supplemental State energy conservation plans under this section pursuant to which—

"(A) a State may apply for and receive assistance for a supplemental State energy conservation plan under this section; and

"(B) such plan under this section may be administered;

as if such plan was a part of the State energy conservation plan program under section 362. Such rules shall not have the effect of delaying funding of the program under section 362.

"(5) Section 363(b)(2)(A), the last sentence of section 363(b)(2), section 363(b)(3), and section 363(c) shall apply to the supplemental State energy conservation plans to the same extent as such provisions apply to State energy conservation plans.

"(6) The Administrator may grant Federal financial assistance pursuant to this section for the purpose of assisting any State in the development of any supplemental State energy conservation plan or in the implementation or modification of such a plan or part thereof which has been submitted to and approved by the Administrator pursuant to this section.

"(b)(1) Each proposed supplemental State energy conservation plan to be eligible for Federal financial assistance under this section shall include—

"(A) procedures for carrying out a continuing public education effort to increase significantly public awareness of—

"(i) the energy and cost savings which are likely to result from the implementation (including implementation through group efforts) of energy conservation measures and renewable resource energy measures;

"(ii) information and other assistance (including information as to available technical assistance) which is or may be available with respect to the planning, financing, installing, and with respect to monitoring the effectiveness of measures likely to conserve, or improve efficiency in the use of, energy, including energy conservation measures and renewable resource energy measures; and

"(iii) in support of utility programs being carried out pursuant to section 368, convenient sources of comprehensive information concerning materials, contractors, financing, and consumer protection resources;

"(B) procedures for insuring that effective coordination exists among various local, State, and Federal energy conservation programs within and affecting such State, including any energy extension service program administered by the Energy Research and Development Administration, and any utilities program carried out by the Farmers Home Administration and the Rural Electrification Administration;

"(C) procedures for encouraging and for carrying out energy audits with respect to buildings and industrial plants within such State, in accordance with and supplementary to energy audies carried out under section 368;

"(D) an adequate program within such State for the purpose of preventing any unfair or deceptive acts or practices affecting commerce which relate to the implementation of energy conservation measures, residential energy conservation measures, and renewable resource energy measures, and may include procedures (by use of inspection or other techniques) to determine the quality of materials and installation techniques being employed with respect to such measures; and

"(E) any procedures, programs, or other actions required by the Administrator pursuant to paragraph (2).

"(2) The Administrator may promulgate guidelines under this section to provide that, in order to be eligible for Federal assistance under this section, a supplemental State energy conservation plan shall include, in addition to the requirements of paragraph (1) of this subsection, one or more of the following:

"(A) the formation of, and appointment of qualified individuals to be members of, a State energy conservation advisory committee. Such a committee shall have continuing authority to advise and assist such State and its political subdivisions, with respect to matters relating to energy conservation in such State, including the carrying out of such State's energy conservation plan, the development and formulation of any improvements or amendments to such plan, and the development and formulation of procedures which meet the requirements of subparagraphs (A), (B) (C) and (D) of subsection (b)(1). The applicable guidelines shall be designed to assure that each such committee carefully considers the views of the various energy-consuming sectors within the State and of public and private groups concerned with energy conservation;

"(B) assistance for individuals and other persons to undertake cooperative action to implement energy conservation measures and renewable-resource energy measures;

"(C) procedures for the periodic verification (by use of sampling or other techniques), at reasonable times, and under reasonable conditions, by qualified officials designated by such State of the purchase and installation and actual cost of energy conservation measures and renewable-resource energy measures for which financial assistance was obtained under section 509 of the Housing and Urban Development Act of 1970, or section 451 of the Energy Conservation and Production Act.

"(c) Any State receiving assistance under this section shall, in such form and on such date as specified by the Administrator, make annual reports to the Administrator with respect to activities conducted (in the year preceding the one in which the report is submitted) wihin such State pursuant to the plan developed, implemented, or modified with such assistance.

"(d) There are authorized to be appropriated for supplemental State energy conservation plans which are approved under this section $25,000,000 for fiscal year 1977, $40,000,000 for fiscal year 1978, and $40,000,000 for fiscal year 1979.".

(b) The Administrator of the Federal Energy Administration shall, within 6 months after the date of enactment of this Act, prescribe amended guidelines for the purpose of carrying out the changes in section 367 of the Energy Policy and Conservation Act which result from the amendment made by subsection (a) of this section. At least 60 days prior to the date of publication of final amended guidelines, the Administrator shall publish proposed amended guidelines in the Federal Register and invite public comments thereon.

SEC. 102B. UTILITY PROGRAMS.

(a) Part C of title III of the Energy Policy and Conservation Act is amended by adding the following new section at the end thereof:

"UTILITY PROGRAMS

"SEC. 368. (a) The Administrator shall, not later than 120 days after the date of enactment of this section and after consultation with the Secretary of Housing and Urban Development, the Administrator of the Farmers' Home Administration, and the heads of such other agencies as the Administrator deems appropriate, promulgate rules for the content and implementation of residential energy conservation plans. The rules prescribed pursuant to this subsection shall identify the approved measures for residential buildings, by climatic region and by categories determined by the Administrator on the basis of type of construction or any other factors which the Administrator may deem appropriate; and may include standards for general safety for the protection of health and on the effectiveness of any approved measure; standards for installation of any residential energy conservation measure; and such other requirements as the Administrator may determine to be necessary to carry out this section.

"(b) Not later than 180 days after promulgation of the rules described in subsection (a), the Governor of a State or his designee may submit for regulated and nonregulated utilities in the State a proposed residential energy conservation plan to the Administrator. The Administrator may, upon request of a Governor of a State or his designee, extend the time period for submission of a plan. Each such plan shall be reviewed and approved or disapproved by the Administrator not later than 90 days after submission. If the Administrator disapproves a plan, the Governor of a State or his designee may submit a new or amended plan not later than 60 days after the date of such disapproval, or such longer period as the Administrator may, for good cause, allow. The Administrator shall review and approve or disapprove any such new or amended plan not later than 90 days after submission. After approval of a plan, a Governor of a State or his designee may submit an amended plan with the consent of the Administrator.

"(c) No residential energy conservation plan submitted by the Governor of a State or his designee shall be aproved by the Administrator unless such plan, (1) requires each regulated utility to implement a utility program described in subsection (d); (2) provides for the implementation by nonregulated utilities of a utility program described in subsection (d); (3) contains an adequate program for preventing unfair, deceptive, or anticompetitive acts or practices affecting commerce which relate to the implementation of utility programs within the State; (4) contains adequate procedures to assure that each regulated utility will carry out a utility program; (5) contains procedures pursuant to which each nonregulated utility will submit a written report to the Administrator through the State, not later than one year after approval of such plan and biennially thereafter, regarding the implementation of such utility program and containing such information as may be prescribed by the Administrator in the rules promulgated pursuant to subsection (a); (6) is certified by the Governor of the State to be consistent with any plan submitted under section 362 or 367 of this Act; and (7) meets such other requirements as may be prescribed in the rules promulgated pursuant to subsection (a).

"(d) Each utility program shall include procedures designed to inform, no later than January 1, 1980, each of its residential customers who owns or occupies a residential building of (1) the approved measures for the category of buildings which includes such residential building; (2) the savings in costs of home heating and cooling that are likely to result from installation of the suggested measures in typical residential buildings in such category; (3) the availability of procedures whereby the public utility will offer each such residential customer the opportunity to enter into arrangements with the public utility under which the public utility, directly or through one or more contractors, will, at the cost of the customer, inspect the residential building for purposes of conducting an energy audit and determin-

ing and apprising the residential customer of the estimated cost and savings of purchasing and installing appropriate approved energy conservation measures; and (4) sources for information concerning materials, contractors, financing, and consumer protection resources by furnishing to residential customers such publications as have been provided pursuant to section 367(b)(1)(A)(iii) of this Act.

"(c)(1) Except for utilities established pursuant to the Rural Electrification Act, no utility may, except pursuant to the procedures established by this subsection—

"(A) offer to have approved residential energy conservation measures installed, or

"(B) make, or arrange for another lender to make, a loan to any residential customer to finance the purchase and installation costs of approved measures purchased from or installed by the public utility, the public utility and one or more contractors, or one or more contractors.

"(2) Prior to January 1, 1980, the prohibitions contained in paragraph (1) of this subsection shall not apply to the continuation by a utility of activities described in subparagraphs (A) and (B) of paragraph (1) which were being conducted by that utility on October 31, 1977.

"(3) The Administrator may, upon petition of a public utility, supported in the case of a regulated utility by the State regulatory authority, waive in whole or in part the prohibitions contained in paragraph (1) of this subsection with respect to the utility program of such utility if such utility demonstrates to the satisfaction of the Administrator that, in carrying out such activities fair and reasonable prices and rates of interest would be charged and the Administrator finds, after consultation with the Federal Trade Commission, that such activities would not be inconsistent with respect to the prevention of unfair methods of competition and unfair or deceptive acts or practices.

"(f) If a Governor of a State or his designee has not had a plan approved under subsection (b) within 270 days after promulgation of rules under subsection (a), or within such additional period as the Administrator has allowed pursuant to subsection (b), or if the Administrator determines that such Governor of a State or his designee has not adequately implemented an approved plan, or if the Administrator determines that a nonregulated utility has not adequately implemented an approved plan, the Administrator shall, by order, require each regulated utility in the State or such nonregulated utility to offer its customers a utility program which meets the requirements specified in subsections (c) and (d). If the Administrator determines that any public utility to which an order has been issued pursuant to this subsection has failed to comply with such order, he may petition the district courts of the United States to enjoin such utility from violating an order issued pursuant to this subsection. Any public utility which violates an order under this subsection shall be subject to a civil penalty of not more than $1,000 for each violation. Each day that such violation continues shall be considered a separate violation, and any penalty paid pursuant to this subsection may not be, directly or indirectly, charged to or collected from residential customers of such utility.

"(g) The Administrator may, by order upon petition by a public utility and for good cause, supersede any law or regulation of any State or political subdivision thereof to the extent that such law or regulation prohibits a public utility from taking any action required to be taken under this section.

"(h) Nothing in this Act shall be construed as restricting the jurisdiction of the Federal Trade Commission under any provision of law, including this Act, to prevent unfair or deceptive acts or practices by public utilities in connection with utility programs under this section, including jurisdiction to enforce all applicable trade regulation rules issued under the Federal Trade Commission Act and all applicable provisions of the Consumer Credit Protection Act.

"(i) Nothing contained in section 104(4) of the Truth in Lending Act, Public Law 90–321 or the regulations issued pursuant thereto shall be deemed to exempt sales or credit extensions by public utilities under this section.

"(j) The Administrator is authorized to promulgate such rules as may be necessary to carry out this section.

"(k) For purposes of this section and, in the case of the term defined in paragraph (9), section 367:

"(1) The term 'Administrator' means the Administrator of the Federal Energy Administration.

"(2) The term 'nonregulated utility' means a public utility which is not a regulated utility.

"(3) The term 'public utility' means any person, Federal agency, State agency, and any agency of any political subdivision of a State which is engaged in the business of selling natural gas or electric energy for purposes other than resale: except that such term shall be deemed not to include any such person or agency in any calendar year unless during the second preceding calendar year either (A) sales of natural gas by such person or agency exceeded ten billion cubic feet, or (B) sales of electric energy by such person or agency exceeded two hundred million kilowatt-hours.

(4) The term 'rate' means any price, rate, charge, or classification made, demanded, observed, or received with respect to sales of electric energy or natural gas, any rule, regulation, or practice respecting any such rate, charge, or classification, and any contract pertaining to the sale of electric energy or natural gas.

"(5) The term 'ratemaking authority' means authority to fix, modify, approve, or disapprove rates.

"(6) The term 'regulated utility' means a public utility with respect to whose rates a State regulatory authority exercises ratemaking authority.

"(7) The term 'residential building' means any building developed for residential occupancy, which has a mechanical or electrical system for heating or cooling, or both, and which contains no more than four dwelling units.

"(8) The term 'residential customer' means any person to whom a public utility sells natural gas or electric energy for consumption in a residential building.

"(9) The term 'residential energy conservation measure' means—

"(A) caulking and weatherstripping of all exterior doors and windows;

"(B) furnace efficiency modifications limited to—

"(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

"(ii) devices for modifying flue openings which will increase the efficiency of the heating system, and

"(iii) electrical or mechanical furnace ignition systems which replace standing gas pilot lights;

"(C) clock thermostats;

"(D) ceiling, attic, wall, floor, and duct insulation;

"(E) hot water heater insulation;

"(F) storm windows and doors, multiglazed windows and doors, heat-absorbing or heat-reflective window and door materials; and

"(G) such other insulating or energy conserving devices or technologies as the Administrator may determine, after consulting with the Secretary of Housing and Urban Development, the Secretary of Agriculture, and the Director of the Community Services Administration.

"(10) The term 'residential energy conservation plan' means a plan approved by the Administrator pursuant to this section which is developed by the Governor of a State or his designee.

"(11) The term 'State' means a State, the District of Columbia, Puerto Rico, and, at the discretion of the Administrator, any territory or possession of the United States.

"(12) The term 'State regulatory authority' means any State agency which has ratemaking authority with respect to the sale of electric energy or natural gas by any public utility (other than by such State agency).

"(13) The term 'approved measures' means, with respect to a particular residential building, the residential energy conservation measures which the Administrator, in the rules prescribed pursuant to this section, determines to be appropriate for the location and the category of residential buildings which includes such building. In determining which of the residential energy conservation measures shall be designated as approved measures, the Administrator shall consider the resulting cost of the energy audit to be conducted and its effect on the willingness of residential customers to participate in the utility program.

"(14) The term 'utility program' means a program meeting the requirements of this section carried out by—

"(A) a regulated or nonregulated utility pursuant to a residential energy conservation plan developed by the Governor of a State or his designee; or

"(B) a regulated or nonregulated utility pursuant to an order of the Administrator issued pursuant to this section.".

(b) Section 366(3)(B)(ii) of such Act is amended by inserting the following before the period: ", or in the case of a utility program described in section 368".

Subpart B—Weatherization Grants for the Benefit of Low-Income Families

SEC. 121. FEDERAL ENERGY ADMINISTRATION WEATHERIZATION GRANT PROGRAM.

(a)(1) Section 412(7)(A) of the Energy Conservation in Existing Buildings Act of 1976 is amended—

(A) by inserting "125 percent of" after "is at or below"; and

(B) by inserting the following after "Budget,": "except that the Administrator may establish a higher level if the Administrator, after consulting with the Secretary of Agriculture and the Director of the Community Services Administration, determines that such a higher level is necessary to carry out the purposes of this part and is consistent with the eligibility criteria established for the weatherization program under section 222(a)(12) of the Economic Opportunity Act of 1964,".

(2) The last sentence of section 413(a) of such Act is amended by striking out "in which the head of the household is a low-income person." and inserting in lieu thereof "occupied by low-income families.".

(b)(1) Section 413(b) of such Act is amended by inserting the following new paragraph at the end thereof:

"(3) The Administrator, in coordination with the Secretaries and Director described in paragraph (2)(A) and with the Director of the Community Services Administration and the Secretary of Agriculture, shall develop and publish in the Federal Register for public comment, not later than 60 days after the date of enactment of this paragraph, proposed amendments to the regulations prescribed under paragraph (1). Such amendments shall provide that the standards described in paragraph (2)(A) shall

include a set of procedures to be applied to each dwelling unit to determine the optimum set of cost-effective measures, within the cost guidelines set for the program, to be installed in such dwelling unit. Such standards shall, in order to achieve such optimum savings of energy, take into consideration the following factors—

"(A) the cost of the weatherization material;

"(B) variation in climate; and

"(C) the value of energy saved by the application of weatherization material.

Such standards shall be utilized by the Administrator in carrying out this part, the Secretary of Agriculture in carrying out the weatherization program under section 504 (c) of the Housing Act of 1949, and the Director of the Community Services Administration in carrying out weatherization programs under section 222(a)(12) of the Economic Opportunity Act of 1964. The Administrator shall take into consideration comments submitted regarding such proposed amendments and shall promulgate and publish final amended regulations not later than 120 days after the date of enactment of this paragraph.".

(2) Section 412(9) of such Act is amended to read as follows:

"(9) The term 'weatherization materials' means—

"(A) caulking and weatherstripping of all exterior doors and windows:

"(B) furnace efficiency modifications limited to—

"(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

"(ii) devices for modifying flue openings which will increase the efficiency of the heating system, and

"(iii) electrical or mechanical furnace ignition systems which replace standing gas pilot lights;

"(C) clock thermostats;

"(D) ceiling, attic, wall, floor, and duct insulation;

"(E) hot water heater insulation;

"(F) storm windows and doors, multiglazed windows and doors, heat, absorbing or heat-reflective windows and door materials; and

"(G) such other insulating or energy conserving devices or technologies as the Administrator may determine, after consulting with the Secretary of Housing and Urban Development, the Secretary of Agriculture, and the Director of the Community Services Administration.".

(c) Section 415 of such Act is amended—

(1) by striking out "weatherization materials, except that" in subsection (a) and all that follows through the period at the end of such subsection and inserting in lieu thereof the following: "weatherization materials and related matter described in subsection (c), except that not to exceed 5 percent of any grant made pursuant to section 413(a) and not more than 5 percent of any amount allocated under this section may be used for administration in carrying out duties under this part."; and

(2) by striking out subsection (c) and inserting in lieu thereof the following:

"(c)(1) Except as provided in paragraph (2), not more than $800 of any financial assistance provided under this part may be expended with respect to weatherization materials and the following related matters for any dwelling unit—

"(A) the appropriate portion of the cost of tools and equipment used to install such materials for such unit;

"(B) the cost of transporting labor, tools, and material to such unit;

"(C) the cost of having onsite supervisory personnel; and

"(D) the cost (not to exceed $100) of making incidental repairs to such unit if such repairs are necessary to make the installation of weatherization materials effective.

"(2) The limitation of $800 described in paragraph (1) shall not apply if the State policy advisory council, established pursuant to section 414 (b)(1), requests the Administrator to provide for a greater amount with respect to specific categories of units or materials in the State, and the Administrator approves such request.".

(d) Section 422 of such Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 422. There are authorized to be appropriated for purposes of carrying out the weatherization program under this part, not to exceed $55,000,000 for the fiscal year ending September 30, 1977, not to exceed $130,000,000 for the fiscal year ending September 30, 1978, not to exceed $200,000,000 for the fiscal year ending September 30, 1979, and not to exceed $200,000,000 for the fiscal year ending September 30, 1980, such sums to remain available until expended.".

SEC. 122. FARMERS HOME ADMINISTRATION WEATHERIZATION GRANT PROGRAM.

(a) Section 504 of the Housing Act of 1949 is amended by adding the following new subsection at the end thereof:

"(c)(1) In addition to other duties specified in this section, the Secretary shall develop and conduct a weatherization program for the purpose of making grants to finance the purchase or installation, or both, of weatherization materials in dwelling units occupied by low-income families. Such grants shall be made to low-income families who own dwelling units or, subject to the provisions of paragraph (2), to owners of such units for the benefit of the low-income tenants residing therein. In making grants under this subsection, the Secretary shall give priority to the weatherization of dwelling units occupied by low-income elderly or handicapped persons. The Secretary shall, in carrying out this section, consult with the Director of the Community Services Administration and the Administrator of the Federal Energy Administration for the purpose of coordinating the weatherization programs under this subsection, section 222(a)(12) of the Economic Opportunity Act of 1964, and part A of the Energy Conservation in Existing Buildings Act of 1976.

"(2) In the case of any grant made under this subsection to an owner of a rental dwelling unit, the Secretary shall provide that (A) the benefits of weatherization assistance in connection with such unit will accrue primarily to the low-income family residing therein, (B) the rents on such dwelling unit will not be raised because of any increase in value thereof due solely to weatherization assistance provided under this subsection, and (C) no undue or excessive enhancement will occur to the value of such unit.

"(3) In carrying out this subsection, the Secretary shall (A) implement the weatherization standards described in paragraphs (2)(A) and (3) of section 413(b) of the Energy Conservation in Existing Buildings Act of 1976, and (B) provide that not more than $800 of any grant made under this section be expended, with respect to any dwelling unit, on weatherization materials and related matters described in section 415(c) of the Energy Conservation in Existing Buildings Act of 1976, except that the Secretary shall increase such amount to $1,500 to cover labor costs in areas where the Secretary, in consultation with the Secretary of Labor, determines there is an insufficient number of volunteers and training participants and public service employment workers, assisted pursuant to the Comprehensive Employment and Training Act of 1973, available to work on weatherization projects under the supervision of qualified superivsors.

"(4) For purposes for this subsection, the terms 'elderly', 'handicapped', 'low income' and 'weatherization materials' shall have the same meanings given such terms in paragraphs (3), (5), (7), and (9), respectively, of section 412 of the Energy Conservation in Existing Buildings Act of 1976.".

(b) Section 513(b) of such Act is amended by inserting the following before the semicolon at the end thereof: ", except that not less than $25,000,000 of such amount is authorized to be appropriated for making grants pursuant to section 504(c)".

SEC. 123. AVAILABILITY OF LABOR.

The following actions shall be taken in order to assure that there is a sufficient number of volunteers and training participants and public service employment workers, assisted pursuant to the Comprehensive Employment and Training Act of 1973, available to work in support of weatherization programs conducted under part A of the Energy Conservation in Existing Buildings Act of 1976, section 222(a)(12) of the Economic Opportunity Act of 1964, and section 504(c) of the Housing Act of 1949:

(1) First, the Administrator of the Federal Energy Administration (in consultation with the Director of the Community Services Administration, the Secretary of Agriculture, and the Secretary of Labor) shall determine the number of individuals needed to supply sufficient labor to carry out such weatherization programs in the various areas of the country.

(2) After the determination in paragraph (1) is made, the Secretary of Labor shall identify the areas of the country in which there is an insufficient number of such volunteers and training participants and public service employment workers.

(3) After such areas are identified, the Secretary of Labor shall take steps to assure that such weatherization programs are supported to the maximum extent practicable in such areas by such volunteers and training participants and public service employment workers.

Subpart C—Secondary Financing and Loan Insurance for Energy Conserving Improvements

SEC. 141. PURCHASE BY GOVERNMENT NATIONAL MORTGAGE ASSOCIATION OF LOANS TO LOW- AND MODERATE-INCOME FAMILIES FOR ENERGY CONSERVING IMPROVEMENTS.

The Federal National Mortgage Association Charter Act is amended by adding the following new section at the end thereof:

"PURCHASE OF ENERGY CONSERVING IMPROVEMENT LOANS TO LOW- AND MODERATE-INCOME FAMILIES

"SEC. 314. (a) As soon as practicable after the date of enactment of the National Energy Act, the Secretary shall direct the Association to begin making commitments to purchase, and to purchase, loans and advances of credits (and related purchase certificates and other related instruments) in accordance with this section.

"(b) In accordance with the directive issued by the Secretary under subsection (a), the Association shall make commitments to purchase and purchase, and may service, sell (with or without recourse), or otherwise deal in, loans and advances of credit (and related purchase certificates and other related instruments) which are insured under title I of the National Housing Act and which are made to low- and moderate-income families for the purpose of purchasing and installing energy conserving improvements in one- to four-family dwelling units owned by such families. A loan or advance of credit may be purchased under this section only if—

"(1) the term of repayment does not exceed 15 years and is not less than 5 years, except that there shall be no penalty imposed if the borrower repays such loan or

advance of credit at any time before the term of repayment expires:

"(2) such loan or advance of credit involves an interest rate which the Secretary establishes (after consulting with the Secretary of Agriculture and the Administrator of the Federal Energy Administration), taking into account the probable scope of the program at such rate and the impact a program at such rate may have on credit markets, the Federal budget, and on inflation, for the purpose of encouraging the making of loans and advances of credit to be purchased under this section, at or below the maximum interest rate permissible for such a loan or advance of credit insured under title I of the National Housing Act, but in no event shall such rate be below that which the Association is required to pay under subsection (d); and

"(3) the amount of any such loan or advance of credit does not exceed $2,200.

"(c) The Secretary shall direct the Association to give priority to purchasing loans and advances of credit under this section which are made to low- and moderate-income elderly or handicapped persons or to families with which such persons reside.

"(d) The Association may issue, at the extent and in such amounts as may be approved in appropriation Acts, to the Secretary of the Treasury its obligations in an amount outstanding at any one time sufficient to enable the Association to carry out its functions under this section. Each such obligation shall mature at such time and be redeemable at the option of the Association in such manner as may be determined by the Association, and shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the obligation of the Association. The Secretary of the Treasury is authorized and directed to purchase any obligations of the Association issued under this section, and for such purposes the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as now or hereafter in force, and the purposes of which securities may be issued under the Second Liberty Bond Act, as now or hereafter in force, are extended to include any purchase of the Association's obligations hereunder.

"(e) No State or local usury law or comparable law establishing interest rates or prohibiting or limiting the collection or amount of discount points or other charges in connection with loan transactions or any State law prohibiting coverage of loan insurance required by the Association shall apply to transactions under this section.

"(f) The Association is authorized to—

"(1) sell loans and advances of credit purchased under this section at prices which it determines will help promote the objectives of assuring that operations under this section are, to the extent feasible, fully self-supporting; and

"(2) pay for services performed in carrying out its functions under this section without regard to any limitation on administrative expenses heretofore enacted.

"(g) The total amount of outstanding purchases and commitments authorized by the Secretary to be made pursuant to this section shall not exceed amounts approved in appropriations Acts, but in no case may such amount exceed $2,000,000,000 at any one time.

"(h) The Secretary shall establish a purchase price to be paid by the Association for loans and advances of credit under this section which shall be adequate to compensate the lender for a reasonable return on such loan or advance, plus such reasonable costs as are normally incurred in originating, servicing, and otherwise processing such loans and advances.

"(i) Any loan or advance of credit purchased under this section shall be purchased with recourse to the originator.

"(j) For purposes of this section—

"(1) the term 'low- and moderate-income family' means a family, including a single individual, whose income does not exceed 90 per centum of the median income for the area, as determined by the Secretary with adjustments for smaller and larger families, except that the Secretary may establish income ceilings higher or lower than 90 per centum of the median for the area on the basis of his findings that such variations are necessary because of prevailing levels of construction costs, unusually high- or low-median family incomes, or other factors;

"(2) the term 'energy conserving improvements' shall have the same meaning given such term in subparagraph (2) of the last paragraph of section 2(a) of the National Housing Act; and

"(3) the terms 'elderly' and 'handicapped person' shall have the meaning given such terms by paragraphs (3) and (5), respectively, of section 412 of the Energy Conservation in Existing Buildings Act of 1976.".

SEC. 142. LOAN INSURANCE FOR ENERGY CONSERVING IMPROVEMENTS UNDER TITLE I OF THE NATIONAL HOUSING ACT.

Subparagraph (2) of the last paragraph of section 2(a) of the National Housing Act is amended to read as follows:

"(2) the term 'energy conserving improvements' shall mean the purchase and installation of weatherization materials as defined in section 412(9) of the Energy Conservation in Existing Buildings Act of 1976; and".

SEC. 143. LOAN INSURANCE FOR ENERGY CONSERVING IMPROVEMENTS IN MULTIFAMILY PROJECTS UNDER SECTION 241 OF NATIONAL HOUSING ACT.

Section 241 of the National Housing Act is amended by adding the following new subsection at the end thereof:

"(e)(1) Notwithstanding any other provision of this section, the Secretary may insure a loan for purchasing and installing energy conserving improvements (as defined in subparagraph (2) of the last paragraph of section 2(a) of this Act) and for purchasing or installing (or both) individual utility meters in a multifamily housing project without regard to whether the project is covered by a mortgage insured under this Act.

"(2) Notwithstanding the provisions of subsection (b), a loan insured under this subsection shall—

"(A) not exceed an amount which the Secretary determines is necessary for the purchase and installation of individual utility meters plus an amount which the Secretary deems appropriate taking into account amounts which will be saved in operation costs over the period of repayment of the loan by reducing the energy requirements of the project as a result of the installation of energy conserving improvements therein;

"(B) be insured for 90 percent of any loss incurred by the person holding the note for the loan; except that, for cooperative multifamily projects receiving assistance under section 236 or financed with a below market interest rate mortgage insured under section 221(d)(3) of this Act, 100 percent of any such loss may be insured;

"(C) bear an interest rate not to exceed an amount which the Secretary determines, after consulting with the Administrator of the Federal Energy Administration, to be necessary to meet market demands;

"(D) have a maturity satisfactory to the Secretary;

"(E) be insured pursuant to a premium rate established on a sound actuarial basis to the extent practicable;

"(F) be secured in such manner as the Secretary may require;

"(G) be an acceptable risk in that energy conservation benefits to be derived outweigh the risks of possible loss to the Federal Government; and

"(H) contain such other terms, conditions, and restrictions as the Secretary may prescribe.

"(3) The provisions of subsection (c) shall apply to loans insured under this subsection.

"(4) The Secretary shall provide that any person obligated on the note for any loan insured under this section be regulated or restricted, until the termination of all obligations of the Secretary under the insurance, by the Secretary as to rents or sales, charges, capital structure, rate of return, and methods of operation of the multifamily project to such extent and in such manner as to provide reasonable rentals to tenants and a reasonable return on the investment."

SEC. 144. STANDBY AUTHORITY OF GOVERNMENT NATIONAL MORTGAGE ASSOCIATION TO PURCHASE LOANS FOR ENERGY CONSERVING IMPROVEMENTS.

The Federal National Mortgage Association Charter Act is amended by adding the following new section at the end thereof:

"STANDBY AUTHORITY TO PURCHASE LOANS FOR ENERGY CONSERVING IMPROVEMENTS

"SEC. 315. (a)(1) Whenever the Secretary finds that insufficient credit is available to finance the purchase and installation of energy conserving improvements (as defined in subparagraph (2) of the last paragraph of section 2(a) of the National Housing Act), the Secretary shall direct the Association to begin making commitments to purchase, and to purchase, loans and advances of credit (and related purchase certificates and other related instruments) in accordance with this section.

"(2) The Secretary may direct the Association to terminate its activities under this section whenever he or she determines that the conditions which gave rise to the determination under paragraph (1) are no longer present.

"(b) In accordance with the directive issued by the Secretary under subsection (a), the Association shall make commitments to purchase and purchase, and may service, sell (with or without recourse), or otherwise deal in, loans and advances of credit (and related purchase certificates and other related instruments) which are insured under title I or section 241 of the National Housing Act and which are made for the purpose of purchasing and installing energy conserving improvements in dwelling units.

"(c) The Association may issue, to the extent and in such amounts as may be approved in appropriation Acts, to the Secretary of the Treasury its obligations in an amount outstanding at any one time sufficient to enable the Association to carry out its functions under this section. Each such obligation shall mature at such time and be redeemable at the option of the Association in such manner as may be determined by the Association, and shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the obligation of the Association. The Secretary of the Treasury is authorized and directed to purchase any obligations of the Association issued under this section, and for such purposes the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as now hereafter in force, and the

purposes for which securities may be issued under the Second Liberty Bond Act, as now or hereafter in force, are extended to include any purchase of the Association's obligations hereunder.

"(d) No State or local usury law or comparable law establishing interest rates or prohibiting or limiting the collection or amount of discount points or other charges in connection with loan transactions or any State law prohibiting the coverage of loan insurance required by the Association shall apply to transactions under this section.

"(e) The Association is authorized to—

"(1) sell loans and advances of credit purchased under this section at prices which it determines will help promote the objective of assuring that operations under this section are, to the extent feasible, fully self-supporting; and

"(2) pay for services performed in carrying out its functions under this section without regard to any limitation on administrative expenses heretofore enacted.

"(f) The total amount of outstanding purchases and commitments authorized by the Secretary to be made pursuant to this section shall not exceed amounts approved in appropriation Acts, but in no case may such amount exceed $3,000,000,000 at any one time.".

Subpart D—Miscellaneous

SEC. 161. ENERGY-CONSERVING IMPROVEMENTS FOR PUBLIC HOUSING.

Section 5(c) of the United States Housing Act of 1937 is amended by adding the following new sentence at the end thereof: "In addition to any other authority to enter into annual contribution contracts under this subsection, the Secretary may, subject to the approval in appropriation Acts, enter into such contracts aggregating not more than $10,000,000 per annum for financing the purchase and installation of energy conserving improvements (as defined in subparagraph (2) of the last paragraph of section 2(a) of the National Housing Act) in existing low-income housing projects, other than projects assisted under section 8, which the Secretary determines have the greatest need for such improvements based on the energy consumption of the projects and the amount of such consumption which can be reduced by such improvements.".

SEC. 162. ENERGY-CONSERVING STANDARDS FOR NEWLY CONSTRUCTED RESIDENTIAL HOUSING INSURED BY FEDERAL HOUSING ADMINISTRATION OR ASSISTED BY FARMERS HOME ADMINISTRATION.

(a) Section 526 of the National Housing Act is amended by inserting the following new sentence at the end thereof: "Such standards shall establish energy performance requirements that will achieve a significant increase in the energy efficiency of new construction, until such time as the energy conservation performance standards required under the Energy Conservation Standards for New Buildings Act of 1976 become effective. Such requirements shall be implemented as soon as practicable after the date of enactment of the National Energy Act.".

(b) Title V of the Housing Act of 1949 is amended by adding the following new section at the end thereof:

"MINIMUM PROPERTY STANDARDS FOR ENERGY CONSERVATION

"SEC. 528. To the maximum extent feasible, the Secretary of Agriculture shall promote the use of energy saving techniques through minimum property standards established by him for newly constructed residential housing assisted under this title. Such property standards shall, insofar as is practicable, be consistent with the standards established pursuant to section 526 of the National Housing Act and shall incorporate the energy performance requirements developed pursuant to such section. Such property standards shall be implemented as soon as practicable after the date of enactment of this section.".

SEC. 163. SOLAR ENERGY SYSTEMS.

(a) Subparagraph (3) of the last paragraph of section 2(a) of the National Housing Act is amended to read as follows:

"(3) the term 'solar energy system' means any addition, alteration, or improvement to an existing or new structure which is designed to utilize solar, wind, or other solar-derived energy to reduce the energy requirements of that structure from other energy sources, and which is in conformity with such criteria and standards as shall be prescribed by the Secretary in consultation with the Administrator of the Federal Energy Administration.".

(b) Section 203(b)(2) of such Act is amended by adding the following new sentence at the end thereof: "Notwithstanding any other provision of this paragraph, the amount which may be insured under this section may be increased by up to 20 percent if such increase is necessary to account for the increased cost of the residence due to the installation of a solar energy system (as defined in subparagraph (3) of the last paragraph of section 2(a) of this Act) therein.".

(c) Section 207(c)(3) of such Act is amended by adding the following new sentence at the end thereof: Notwithstanding any other provision of this paragraph, the amount which may be insured under this section may be increased by up to 20 percent if such increase is necessary to account for the increased cost of the project due to the installation of a solar energy system (as defined in subparagraph (3) of the last paragraph of section 2(a) of this Act) therein.".

(d) Section 501 of the Housing Act of 1949 is amended by adding the following new subsection at the end thereof:

"(f) With respect to any limitation on the amount of any loan which may be made, insured, or guaranteed under this Act for the purchase of a dwelling unit, the Secretary may increase such amount by up to 20 percent if such increase is necessary to account for the increased cost of the dwelling unit due to the installation of a solar energy system (as defined in subparagraph (3) of the last paragraph of section 2(a) of the National Housing Act) therein.".

SEC. 164. STUDIES.

(a) The Secretary of Housing and Urban Development (hereinafter in this section referred to as the "Secretary") shall, in coordination with the Secretary of Agriculture, the Secretary of the Treasury, the Administrator of Veterans' Affairs, the Administrator of the Federal Energy Administration, and such other representatives of Federal, State, and local governments as the Secretary shall designate, conduct a study for the purpose of determining the need for, the feasibility of, the problems of requiring, by mandatory Federal action, that all residential dwelling units meet applicable energy efficient standards. The subjects to be examined shall include, but not be limited to, mandatory notification to purchasers, and policies to prohibit exchange or sale, of properties which do not conform to such standards.

(b) in conducting such study, the Secretary shall consider at least the following factors—

(1) the extent to which such requirement would protect a prospective purchaser;

(2) the extent to which such requirement would contribute to the Nation's energy conservation goals;

(3) the extent to which such a requirement would affect the real estate, home building, and mortgage banking industries;

(4) the difficulties of administering such a requirement and the sanctions required to make such a requirement effective;

(5) the likely problems and disruptions for sellers and purchasers as a result of the implementation of mandatory Federal actions, taking into account the experience of the Department of Housing and Urban Development under the Real Estate Settlement Procedures Act of 1974 and the Federal Disaster Protection Act of 1973;

(6) the extent to which the available supply of residential dwellings could be reduced at the time of application of such mandatory Federal actions, and the resulting effect on the price of those remaining dwelling units eligible for sale; and

(7) the impact on major housing rehabilitation efforts and voluntary efforts for energy conservation, during the period of the development of the standards, as a result of the uncertainty with respect to what standards might be imposed.

(c) The Secretary shall report, no later than 1 year after the date of enactment of this section, to both Houses of the Congress with regard to the findings made as a result of such study along with any recommendations for legislative proposals which the Secretary determines should be enacted with respect to the subject of such study.

(d) In addition to the study described in subsections (a) through (c), the Secretary shall conduct a study of the feasibility of underground construction of residential housing and changes in housing codes and financing which may be necessary as the result of the adoption of this construction method. The Secretary shall transmit a preliminary report at the end of the first year after the date of enactment of this Act and a final report no later than 3 years after such date to both Houses of the Congress with regard to the findings made as a result of such study along with any recommendations made for legislative purposes which the Secretary determines should be enacted with respect to the subject of such study.

SEC. 165. AUTHORIZATION FOR APPROPRIATIONS FOR NEW BUILDING PERFORMANCE STANDARDS GRANTS

Section 307(b) of the Energy Conservation Standards for New Buildings Act of 1976 is amended to read as follows:

"(b) There is authorized to be appropriated for the purpose of carrying out this section, the following amounts—

"(1) for the fiscal year ending September 30, 1977, not to exceed $5,000,000;

"(2) in the fiscal year ending September 30, 1978, not to exceed $10,000,000; and

"(3) in the fiscal year ending September 30, 1979, not to exceed $10,000,000.

Any amount appropriated pursuant to this subsection shall remain available until expended.".

SEC. 166. SECONDARY FINANCING BY FEDERAL HOME LOAN MORTGAGE CORPORATION OF SOLAR ENERGY AND ENERGY CONSERVING IMPROVEMENT LOANS

Section 302(h) of the Federal Home Loan Mortgage Corporation Act is amended by adding at the end thereof a new sentence, to read as follows: "The term 'residential mortgage' also includes a loan or advance of credit insured under title I of the National Housing Act whose original proceeds are applied for in order to finance energy conserving improvements, or the addition of a solar energy system, to residential real estate. The term 'residential mortgage' is also deemed to include a loan or advance of credit for such purposes not having the benefit of such insurance and to include loans made where the lender relies for purposes of repayment primarily on the borrower's general credit standing and forecast of income, with or without other security.".

SEC. 167. SECONDARY FINANCING BY FEDERAL NATIONAL MORTGAGE ASSOCIATION OF SOLAR ENERGY AND ENERGY CONSERVING IMPROVEMENT LOANS.

Section 302(b) of the Federal National

Mortgage Association Charter Act is amended by adding at the end thereof the following new paragraph:

"(3) The corporation is authorized to purchase, service, sell, lend on the security of, and otherwise deal in loans or advances of credit made for energy conserving improvements and solar energy systems described in the last paragraph of section 2(a) of the National Housing Act, whether or not insured under such section. To be eligible for purchase, any such loan not so insured may be secured as required by the corporation.".

SEC. 168. WEATHERIZATION STUDY.

The Administrator of the Federal Energy Administration, the Secretary of Housing and Urban Development, the Secretary of Agriculture, and the Administrator of the Community Services Administration shall conduct a joint study which shall monitor, in a coordinated manner, the weatherization activities authorized by this Act and amendments made thereby and those weatherization activities undertaken independently of this Act and such amendments. Such officials shall report to the Congress within one year from the date of enactment of this Act, and annually thereafter, concerning—

(1) the extent of progress being made through weatherization activities toward the achievement of national energy conservation goals;

(2) adequacy and costs of materials necessary for weatherization activities; and

(3) the need for and desirability of modifying weatherization activities authorized by this Act, and amendments made thereby, and of extending such activities to a broader range of income groups than are being assisted under this Act and such amendments.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and line number of the ad hoc committee amendment to title 1, part 1, of the bill.

The Clerk read as follows:

Ad hoc committee amendment: Page 13, line 20, strike out the matter beginning on page 13, line 20, through page 58, line 18, and insert the matter beginning on page 58, line 19, through page 88, line 9 (the ad hoc committee amendment reads as follows:

Subpart A—Utility Program

SEC. 101. DEFINITIONS.

As used in this subpart—

(1) The term "Administrator" means the Administrator of the Federal Energy Administration.

(2) The term "natural gas" means natural gas as such term is defined in the Natural Gas Act.

(3) The term "public utility" means any person, State agency, or Federal agency which is engaged in the business of selling natural gas or electric energy, or both, for purposes other than resale.

(4) The term "regulated utility" means a public utility with respect to whose rates a State regulatory authority exercises ratemaking authority.

(5) The term "nonregulated utility" means a public utility which is not a regulated utility.

(6) The term "rate" means any price, rate, charge, or classification made, demanded, observed, or received with respect to sales of electric energy or natural gas, any rule, regulation, or practice respecting any such rate, charge, or classification, and any contract pertaining to the sale of electric energy or natural gas.

(7) The term "ratemaking authority" means authority to fix, modify, approve, or disapprove rates.

(8) The term "residential building" means any building used for residential occupancy which is not a new building to which the final standards under section 304(a) of the Energy Conservation and Production Act apply and which has a mechanical or electrical system for heating or cooling, or both.

(9) The term "residential customer" means any person to whom a public utility sells natural gas or electric energy for consumption in a residential building.

(10) The term "residential energy conservation measure" means—

(A) caulking and weatherstripping of exterior doors and windows;

(B) furnace efficiency modifications including—

(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

(ii) devices for modifying flue openings which will increase the efficiency of the heating system, and

(iii) electrical or mechanical furnace ignition systems which replace standing gas pilot lights;

(C) clock thermostats;

(D) ceiling, attic, wall, and floor insulation;

(E) hot water heater insulation;

(F) storm windows and doors, multiglazed windows and doors, heat-absorbing or heat-reflective glazed windows and doors;

(G) replacement furnaces which exceed the energy efficiency standards promulgated under section 325 of the Energy Policy and Conservation Act by not less than an amount determined by the Administrator to provide substantial energy conservation benefits;

(H) devices associated with load management techniques as defined in section 521 (b);

(I) devices to utilize solar energy or windpower for any residential energy conservation purpose, including (but not limited to) heating of water, space heating or cooling; and

(J) such other measures as the Administrator may by rule identify for purposes of this subpart.

No measure referred to in subparagraphs (B) through (I) shall be treated as a residential energy conservation measure for purposes of this subpart unless such measure is warranted to meet a specified level of performance over a period of not less than three years.

(11) The term "residential energy conservation plan" means a plan approved by the Administrator pursuant to section 103 (c) which is developed by a State regulatory authority or by a nonregulated utility.

(12) The term "State" means a State, the District of Columbia, and, at the discretion of the Administrator, Puerto Rico.

(13) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electric energy or natural gas by any public utility (other than by such State agency); except that in the case of a public utility with respect to which the Tennessee Valley Authority has ratemaking authority such term means the Tennessee Valley Authority.

(14) The term "State agency" means a State, a political subdivision thereof, or any agency or instrumentality of either.

(15) The term "suggested measures" means, with respect to a particular residential building, the residential energy conservation measures which the Administrator, in the rules prescribed pursuant to section 103 (a), determines to be appropriate for the location and the category of residential buildings which includes such building. In determining which of the residential energy conservation measures shall be suggested measures for a location and category of residential building, the Administrator shall consider the resulting cost of the inspection required to be conducted under section 104 (a)(1)(B)(i) and its effect on the willingness of residential customers to participate in the utility program.

(16) The term "utility program" means a program meeting the requirements of section 104 carried out by—

(A) a regulated utility pursuant to a residential energy conservation plan developed by a State regulatory authority;

(B) a nonregulated utility pursuant to a residential energy conservation plan developed by such utility; or

(C) a regulated or nonregulated utility pursuant to an order of the Administrator issued under section 106.

SEC 102. COVERAGE.

This subpart shall apply in any calendar year to a public utility only if during the second preceding calendar year either (1) sales of natural gas by such utility for purposes other than resale exceeded 10 billion cubic feet or (2) sales of electric energy by such utility for purposes other than resale exceeded 200 million kilowatt-hours.

SEC. 103. RESIDENTIAL ENERGY CONSERVATION PLANS.

(a) PROMULGATION OF RULES BY ADMINISTRATOR.—The Administrator shall, not later than 120 days after enactment of this Act, publish an advanced notice of proposed rulemaking with respect to rules on the content and implementation of residential energy conservation plans. No later than 60 days after the date of publication of the advanced notice of proposed rulemaking, and after consultation with the Secretary of Housing and Urban Development, the Secretary of Commerce, acting through the National Bureau of Standards, the Consumer Product Safety Commission, and the heads of such other agencies as he deems appropriate, the Administrator shall publish a proposed rule on content and implementation of such plans. After publication of such proposed rule, the Administrator shall afford interested persons an opportunity to present oral and written comments on matters relating to such proposed rule. A rule prescribing the content and implementation of residential energy conservation plans shall be published not earlier than 45 days after publication of the proposed rule.

(b) CONTENT OF RULES.—The rules promulgated under subsection (a)—

(1) shall identify the suggested measures for residential buildings, by climatic region and by categories determined by the Administrator on the basis of type of construction or any other factors which the Administrator may deem appropriate;

(2) shall include—

(A) standards which the Administrator determines necessary for general safety and effectiveness of any residential energy conservation measure;

(B) standards which the Administrator determines necessary for installation of any residential energy conservation measure; and

(C) standards for the programs and procedures required under subsections (d)(4) and (e)(3) and standards, developed in close consultation with the Federal Trade Commission, for the programs and procedures required under subsections (d)(2) and (e)(2); and

(3) may include such other requirements as the Administrator may determine to be necessary to carry out this subpart.

(c) SUBMISSION AND APPROVAL OF STATE RESIDENTIAL ENERGY CONSERVATION PLANS.—(1) Not later than 180 days after promulgation of rules under subsection (a), each State regulatory authority may submit and each nonregulated utility shall submit a proposed residential energy conservation plan to the Administrator. The Administrator may, upon request of a State regulatory authority or nonregulated utility, extend for good cause shown the time period for submission of a plan by such authority or utility. Each such

plan shall be reviewed and approved or disapproved by the Administrator not later than 90 days after submission. If the Administrator disapproves a plan, the State regulatory authority or nonregulated utility may submit a new or amended plan not later than 60 days after the date of such disapproval, or such longer period as the Administrator may, for good cause, allow. The Administrator shall review and approve or disapprove any such new or amended plan not later than 90 days after submission. After approval of a plan, a State regulatory authority or nonregulated utility may submit an amended plan and such plan shall be approved or disapproved in the same manner as the original plan.

(2) If the Governor of any State notifies the Administrator and the State regulatory authority not later than 30 days after promulgation of rules under subsection (a), the department or agency of such State, which is receiving funds under part C of title III of the Energy Policy and Conservation Act for purposes of carrying out a State energy conservation plan under such part, may (in lieu of the State regulatory authority) submit a proposed residential energy conservation plan to the Administrator for the utilities regulated by such State regulatory authority. In any case where such plan has been submitted by such department or agency, the references in this subpart (other than in section 101(13)) to the State regulatory authority shall be treated as references to such department or agency, with respect to each utility over which such State regulatory authority exercises ratemaking authority. Any such plan may, in the discretion of the Governor, apply to nonregulated utilities in the State in the same manner as to regulated utilities. In any such case references in this subpart to regulated utilities (including references to regulated utilities with respect to which a State regulatory authority exercises ratemaking authority) shall, with respect to such State, be treated as references also to nonregulated utilities and references to nonregulated utilities shall not apply.

(3) Paragraph (2) shall not apply in the case of the Tennessee Valley Authority or to any public utility with respect to which the Tennessee Valley Authority has ratemaking authority.

(3)(A) The Governor of each State (or his designee) shall, not later than 270 days after the date of the enactment of this Act, prepare with respect to the service area of each utility in such State—

(i) a list of suppliers and contractors who sell and install residential energy conservation measures, and

(ii) a list of banks, savings and loan associations, credit unions, and other public and private lending institutions which offer loans for the purchase and installation of residential energy conservation measures.

The Governor (or his designee) shall make such lists available to the utilities in such State and to other persons. In the case of any utility's service area for which the Governor or his designee has not prepared and made available any such list within such 270-day period, the Administrator shall prepare and make available such list, as soon as practicable after such period.

(B) The lists required under subparagraph (A) shall be prepared in a fair, open, and nondiscriminatory manner, and in preparing and making available such lists, the Governor or his designee (or the Administrator) shall take such steps as may be necessary to—

(i) prevent unfair, deceptive, or anticompetitive acts or practices by persons selling or installing residential energy conservation measures and institutions offering loans for the purchase and installation of such measures, and

(ii) assure that any person who alleges any injury resulting from a violation of the requirements of this subparagraph shall be entitled to redress under procedures established by the Governor or his designee (or the Administrator).

(d) REQUIREMENTS FOR PLANS FOR REGULATED UTILITIES.—No residential energy conservation plan submitted by a State regulatory authority shall be approved by the Administrator unless such plan—

(1) requires each regulated utility over which such State regulatory authority exercises ratemaking authority to implement a utility program which meets the requirements of section 104;

(2) contains an adequate program for preventing unfair, deceptive, or anticompetitive acts or practices affecting commerce which relate to the implementation of utility programs within such State, including—

(A) provisions to assure that the lists made available under section 103(c)(3) are prepared and sent as provided in section 104(a)(1)(C),

(B) provisions to assure that, in carrying out procedures under section 104(a)(1)(B) respecting financing of suggested measures (including the rates, terms, and procedures used in connection with such financing and the inspection referred to in section 104(a)(1)(B)), the utility will not unfairly discriminate among—

(i) residential customers,

(ii) suppliers and contractors of such measures, or

(iii) lending institutions in the utility's service area which offer loans for the purchase and installation of residential energy conservation measuers, and

will not discriminate between measures which are purchased from, or installed by, the utility and measures which are purchased from, or installed by, other persons under such program,

(C) provisions to assure that any person who alleges any injury resulting from a violation of any plan provision required under subparagraph (A) or (B) shall be entitled to redress under procedures established by the State regulatory authority or an appropriate State agency designated by such authority, and

(D) provisions to assure that in the case of a furnace which uses as its primary source of energy any fuel or source of energy other than the fuel or source of energy sold by a utility, such utility will not inspect such furnace, install any replacement furnace referred to in section 101(10)(G), or make or inspect any furnace modification referred to in section 101(10)(B);

(3) contains adequate procedures to assure that each regulated utility will carry out such utility program;

(4) contains adequate procedures to assure that each regulated utility will, in connection with such program, charge fair and reasonable prices and charge rates of interest for loans which generally reflect prevailing rates of interest for similar loans in the State in which the borrower is located; and

(5) is adopted after notice and public hearing; and

(6) meets such other requirements as may be contained in the rules promulgated under subsection (a).

(e) REQUIREMENTS FOR PLANS FOR NONREGULATED UTILITIES.—No residential energy conservation plan proposed by a nonregulated utility shall be approved by the Administrator unless such plan—

(1) provides for the implementation by such utility of a utility program which meets the requirements of section 104;

(2) contains adequate procedures for preventing unfair, deceptive, or anticompetitive acts or practices by such utility which relate to the implementation of such utility program including—

(A) provisions to assure that the lists made available under section 103(c)(3) are prepared and sent as provided in section 104(a)(1)(C),

(B) provisions to assure that, in carrying out procedures under section 104(a)(1)(B) respecting financing of suggested measures (including the rates, terms, and procedures used in connection with such financing and the inspection referred to in section 104(a)(1)(B)), the utility will not unfairly discriminate among—

(i) residential customers,

(ii) suppliers and contractors of such measures, or

(iii) lending institutions in the utility's service area which offer loans for the purchase and installation of residential energy conservation measures, and

will not discriminate between measures which are purchased from, or installed by, the utility and measures which are purchased from, or installed by, other persons under such program,

(C) provisions to assure that any person who alleges any injury resulting from a violation of any plan provision required under subparagraph (A) or (B) shall be entitled to redress under procedures established by the Administrator or an appropriate agency or authority designated by the Administrator, and

(D) provisions to assure that in the case of a furnace which uses as its primary source of energy any fuel or source of energy other than the fuel or source of energy sold by a utility, such utility will not inspect such furnace, install any replacement furnace referred to in section 101(10)(G), or make or inspect any furnace modification referred to in section 101(10)(B);

(3) contains adequate procedures to assure that such utility will, in connection with such program, charge fair and reasonable prices and charge rates of interest for loans which generally reflect prevailing rates of interest for similar loans in the State in which the borrower is located;

(4) contains procedures pursuant to which such utility will submit a written report to the Administrator not later than one year after approval of such plan, and biennially thereafter, regarding the implementation of such utility program and containing such information as may be prescribed by the Administrator in the rules promulgated under subsection (a); and

(5) meets such other requirements as may be contained in the rules promulgated pursuant to subsection (a).

SEC. 104. UTILITY PROGRAMS.

(a) REQUIREMENTS FOR UTILITY PROGRAMS.—(1) Except as provided in subsection (b) and section 105, each utility program shall include—

(A) procedures designed to inform, no later than January 1, 1980, and each two years thereafter before January 1, 1985, each of its residential customers who owns or occupies a residential building, of—

(i) the suggested measures for the category of buildings which includes such residential building;

(ii) the savings in energy costs that are likely to result from installation of the suggested measures in typical residential buildings in such category;

(iii) the availability of the arrangements described in subparagraph (B) and the lists made available under section 103(c)(3);

(iv) suggestions of energy conservation techniques, developed by the Administrator, such as adjustments in energy use patterns and modifications of household activities which can be employed by the residential customer to save energy and which do not require the installation of energy conservation measures (including the potential savings in energy costs that are likely to result from the adoption of the Administrator's suggestions);

(B) procedures whereby the public utility, no later than January 1, 1980, will, for each residential customer, offer to—

(i) inspect the residential building to determine and inform the residential customer of the estimated cost of purchasing and installing each suggested measure and keep a copy of the inspection report on file which shall be available to any subsequent owner without charge, except that a utility shall be required to make only one inspection of a residence unless a new owner requests and offers to pay for a subsequent inspection;

(ii) have the suggested measures (other than replacement furnaces described in section 101(10)(G)) installed if this clause applies as provided in subsection (b);

(iii) assist such residential customer in securing a loan to finance the purchase and installation costs of suggested measures;

(C) procedures whereby the public utility prepares and sends to each of its residential customers the lists made available pursuant to section 103(c)(3) to the extent that the sending of such lists is practicable, as determined by the Governor or his designee (or the Administrator in any case in which the Administrator prepared such list); and

(D) procedures to assure that all amounts expended or received by the utility which are attributable to the utility program (including any penalties paid by such utility under section 106) are accounted for on the books and records of the utility separately from amounts attributable to all other activities of the utility and are not charged to customers of the utility as part of any rate charged for electric power or natural gas, except that any amounts expended by the utility to provide information under provisions referred to in subparagraph (A) shall be treated for such purposes as a current expense of providing utility service and charged to all customers of such utility in the same manner as current operating expenses of providing such utility service.

(2) The costs of carrying out any activity as part of a utility program under this section (other than the costs of providing information under the provisions referred to in paragraph (1)(A)) shall be charged to the person for whom such activity is performed. Such costs shall be stated separately from the cost of providing utility service on any billing submitted by the utility to such person.

(3) In the case of any person who becomes a residential customer of a utility carrying out a utility program under this section after January 1, 1980, and before January 1, 1985, not later than 60 days after such person becomes a residential customer of such utility, such utility shall inform such person of the items listed in subparagraph (A) of paragraph (1) and offer such person the opportunity to enter into arrangements referred to in subparagraph (B) of paragraph (1).

(b) SUPPLY AND INSTALLATION BY UTILITIES.—(1) After the date 2 years after the date of enactment of this Act, any public utility which directly or indirectly supplies or installs any residential energy conservation measure (other than a measure referred to in subsection 101(10)(H)) shall be treated for purposes of this subpart as supplying or installing such measure under a program under this section. After such date 2 years after the date of enactment of this Act, the provisions of subsection (a)(1)(B)(ii) shall apply and public utilities shall be required to offer to have suggested measures installed under programs under such provisions, if the Administrator determines that—

(A) the supplying or installing of such measures by utilities would not have a substantial anticompetitive effect, and

(B) the supplying or installing of such measures would result in a substantial increase in the number of residential customers likely to install suggested measures, and would not result in excessive prices for residential energy conservation measures.

Before making his determination under subparagraph (A), the Administrator shall take into account a report by the Federal Trade Commission respecting such determination. Such report shall be undertaken by the Federal Trade Commission and submitted to the Administrator within 18 months after the date of enactment of this Act and shall include a study of the effect on competition of requiring utilities to supply or install such measures under the program under this subpart.

(2) Subsection (a)(1)(B)(ii) shall not apply and a public utility may not directly or indirectly supply or install any residential energy conservation measure (other than a measure referred to in subsection 101(10)(H)) after the date 2 years after the date of the enactment of this Act if—

(A) the State regulatory authority or the Administrator determines that there are available sufficient numbers of suppliers or installers of suggested measures in the area to be served by the utility.

(B) the State regulatory authority, the Administrator, or the Federal Trade Commission determines that the supplying or installing of such measures by such utility would have a substantial anticompetitive effect, or

(C) the State regulatory authority or the Administrator determines that prohibiting utilities from supplying or installing such measures will not result in a substantial reduction of residential customers likely to install suggested measures.

(3) Subparagraphs (A) and (C) of paragraph (2) shall not apply to any public utility which directly or indirectly supplied or installed any such measure prior to April 20, 1977.

(4) For purposes of section 106(d), any violation of the prohibition contained in this section shall be treated as a violation of a plan promulgated under section 106(a).

(c) TERMINATION OF SERVICE.—No utility implementing any program under this section may terminate or threaten to terminate utility service to any customer by reason of any default of such customer with respect to payments due for energy conservation measures installed pursuant to such program.

(d) LOANS BY UTILITIES.—(1) Except as provided in paragraph (2), nothing in this section shall be construed as prohibiting any public utility from making loans to residential customers for the purpose of financing the purchase and installation of residential energy conservation measures. In the case of any such loan made by a public utility to a residential customer for such purpose, the public utility shall permit the residential customer to repay the principal and interest of such loan as a part of his periodic bill (over a period of not less than 3 years unless he otherwise elects) except that—

(A) a lump-sum payment of outstanding principal and interest may be required upon default in payment by the residential customer (other than a late payment by such customer), and

(B) no penalty shall be imposed for payment of all or any portion of the outstanding loan amount prior to the date such payment would otherwise be due.

(2) After the date 2 years after the date of the enactment of this Act, no public utility subject to a plan under this subpart may make any loan to finance the purchase or installation of any residential energy conservation measure if the Administrator has determined, after notice and opportunity for public hearing, that—

(A) such loans are being made by such utility at unreasonable rates or on unreasonable terms and conditions, or

(B) such loans made by such utility have a substantial adverse effect upon competition.

(3) For purposes of section 106(d), any violation of the prohibition contained in this section shall be treated as a violation of a plan promulgated under section 106(a).

SEC. 105. TEMPORARY PROGRAMS.

Any State regulatory authority or public utility may apply for a temporary exemption prior to the promulgation of rules pursuant to section 103. A temporary exemption may be granted from the requirements of section 104 for a period not to exceed 3 years after the date of enactment of this Act, if such authority or utility demonstrates to the satisfaction of the Administrator that it has implemented or proposes to implement an energy conservation program for residential customers which is likely to result in the installation of suggested measures in a substantial proportion of residential buildings in its service area.

SEC. 106. FEDERAL STANDBY AUTHORITY.

(a) STANDBY AUTHORITY FOR STATE REGULATED UTILITIES.—If a State regulatory authority does not have a plan approved under section 103(c) within 270 days after promulgation of rules under section 103(a), or within such additional period as the Administrator may allow pursuant to section 103(c)(1), or if the Administrator determines that such State regulatory authority has not adequately implemented an approved plan, the Administrator shall—

(1) promulgate a plan which meets the requirements of section 103 and which applies to the residential buildings which would have been covered had such plan been so approved or implemented, and

(2) under such plan, by order, require each public utility in the State to offer, not later than 90 days following the date of issuance of such order, to its residential customers a utility program prescribed in such order which meets the requirements specified in subsection (a) of section 104.

(b) NONREGULATED UTILITIES.—If a nonregulated utility does not have a plan approved under section 103(c) within 270 days after promulgation of rules under section 103(a) or within such additional period as the Administrator may allow pursuant to section 103(c), or if the Administrator determines that such nonregulated utility has not adequately implemented an approved plan, the Administrator shall, by order, require such nonregulated utility to promulgate a plan which meets the requirements specified in subsection (e) of section 103.

(c) FAILURE TO COMPLY WITH ORDERS.—If the Administrator determines that any public utility to which an order has been issued pursuant to subsection (a) or (b) has failed to comply with such order, he may file a petition in the appropriate United States district court to enjoin such utility from violating such order.

(d) CIVIL PENALTY.—(1) Any public utility which violates any requirement of a plan promulgated under subsection (a) or which fails to comply with an order under subsection (a) or (b) within 90 days from the issuance of such order shall be subject to a civil penalty of not more than $25,000 for each violation. Each day that such violation continues shall be considered a separate violation.

(2) A civil penalty under this subsection shall be assessed by an order of the Administrator made on the record after notice and opportunity of a hearing.

(3) Any person who requested a hearing in accordance with paragraph (2) regarding the assessment of a civil penalty and who is aggrieved by an order assessing a civil penalty may file a petition for judicial review of such order with the appropriate United States

Court of Appeals. Such a petition may only be filed within the 30-day period beginning on the date the order making such assessment was issued.

(4) If any person fails to pay an assessment of a civil penalty—

(A) after the order making the assessment has become a final order and if such person does not file a petition for judicial review of the order in accordance with paragraph (3), or

(B) after the court in an action brought under paragraph (3) has entered a final judgment requiring such payment,

the Attorney General shall recover the amount assessed (plus interest at currently prevailing rates from the date of the expiration of the 30-day period referred to in paragraph (3) or the date of such final judgment as the case may be) in an action brought in such court. In such an action, the validity, amount, and appropriateness of such penalty shall not be subject to review.

SEC. 107. RELATIONSHIP TO OTHER LAWS.

(a) STATE AND LOCAL LAW.—Nothing in this subpart shall supersede any law or regulation of any State or political subdivision thereof, except to the extent that the Administrator, upon petition of a public utility and for good cause, determines that such law or regulation prohibits a public utility from taking any action required to be taken under this subpart.

(b) LAWS RELATING TO UNFAIR COMPETITION AND DECEPTIVE ACTS.—Nothing in this subpart shall be construed as restricting the authority of any agency or authority of the United States or of any State under any provision of law to prevent unfair methods of competition and unfair or deceptive acts or practices by public utilities.

(c) TRUTH IN LENDING.—Nothing contained in section 104(4) of the Truth in Lending Act (15 U.S.C. 1603(4)) or the regulations issued pursuant thereto shall be deemed to exempt sales or credit extensions by public utilities under this subpart.

(d) PUBLIC UTILITY HOLDING COMPANY ACT OF 1935.—No loan made by a utility under a utility program under this subpart shall be treated as the acquisition of any security, asset, or other interest in any business for purposes of section 9 of the Public Utility Holding Company Act of 1935.

SEC. 108. CONTRACT PROVISIONS.

No public utility shall be subject to any liability under any provision in any contract which restricts any public utility from lending, borrowing, or entering a new line of business, if such lending, borrowing, or entering a new line of business is required under this subpart.

SEC. 110. PRODUCT STANDARDS.

The Administrator shall consult with the Secretary of Commerce, acting through the National Bureau of Standards, with regard to any product or material standard which is relied on in implementing this subpart as a basis for judging the efficacy, energy efficiency, safety, or other attributes of energy conservation materials, products, or devices, and with the Federal Trade Commission for the purpose of insuring that such standards do not operate to deceive consumers or unreasonably restrict consumer or producer options, and that such standards (when applicable) are suitable as a basis for making truthful and reliable disclosures to consumers regarding performance and safety attributes of energy conservation products, materials, and devices.

SEC. 111. AUTHORIZATION OF APPROPRIATIONS.

There are hereby authorized to be appropriated to the Administrator for each of the first three fiscal years beginning after the date of the enactment of this Act $5,000,000 to carry out his responsibilities under this subpart.

SEC. 112. STUDY RESPECTING ENERGY EFFICIENCY STANDARDS.

(a) STUDY.—(1) The Administrator shall undertake a study and submit recommendations (including recommendations for legislative action) to the President and Congress respecting the application of energy conservation standards to existing residential buildings. Such study shall include an analysis of, and recommendations respecting—

(A) the type and coverage of residential energy conservation standards, if any, which are necessary and desirable to carry out the purposes of this Act, and

(B) any measures necessary to insure compliance with such standards.

(2) The study and recommendations referred to in paragraph (1) shall include an analysis of—

(A) whether or not Federal financial assistance (within the meaning of title III of the Energy Conservation and Production Act) should be withheld or conditioned in the case of existing residential buildings which do not meet energy conservation standards and whether or not some other means of insuring compliance with such standards should be implemented, and

(B) the classes or categories of existing residential buildings and building owners which should be exempted from any mandatory program which may be recommended under paragraph (1).

SEC. 109. RULES.

The Administrator is authorized to promulgate such rules as he determines may be necessary to carry out this subpart.

(b) CONSULTATION.—In carrying out his functions under subsection (a), the Administrator shall consult with appropriate representatives of the building community (including representatives of labor and the construction industry, engineers, and architects), with appropriate public officials and organizations of public officials, and with representatives of consumer groups. For purposes of such consultation, the Administrator shall, to the extent practicable, make use of the National Institute of Building Sciences.

(c) CONSIDERATION OF FACTORS.—In making any recommendations under subsection (a) of this section, the Administrator shall consider—

(1) the economic impact of the measures recommended on the property owners,

(2) the savings in energy costs resulting from measures recommended throughout the estimated remaining useful life of the existing residential buildings to which such recommendation applies,

(3) the cost of complying with such measures,

(4) the cost of administering any such measures recommended under subsection (a)(1)(B),

(5) the total cost, per Btu, in obtaining the energy savings likely to result from such recommended measures, computed for each class of existing residential building to which such recommendation applies, and

(6) any other factors the Administrator considers relevant.

(d) SUBMISSION.—The recommendations developed by the Administrator under subsection (a) shall be submitted to the President and the Congress not later than 18 months after the date of the enactment of this Act.

The CHAIRMAN. The gentleman from Ohio (Mr. ASHLEY) is recognized for 5 minutes.

Mr. ASHLEY. Mr. Chairman, this procedure is somewhat unusual, and I think that is the reason that there has been some monetary confusion.

The explanation which I offered a few moments ago with respect to this amendment does apply at this time, which is to say that the Subcommittee on Energy and Power of the Committee on Interstate and Foreign Commerce and the Subcommittee on Housing and Community Development of the Committee on Banking, Finance and Urban Affairs, to which were referred jointly the subject matter relating to residential insulation, have pursued somewhat different courses.

Their amendment was adopted by the ad hoc committee which sought and succeeded, I believe, in reconciling these differences.

At this juncture, Mr. Chairman, I would yield to the gentleman from Michigan (Mr. DINGELL), the distinguished chairman of the subcommittee, for a more detailed explanation.

Mr. DINGELL. Mr. Chairman, I thank my good friend, the gentleman from Ohio (Mr. ASHLEY), for yielding to me.

PARLIAMENTARY INQUIRY

Mr. BROWN of Michigan. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. BROWN of Michigan. Mr. Chairman, I do not have the rule in front of me, but does the rule waive the reading of amendments? I understand that each part is considered as having been read for amendment.

The CHAIRMAN. The Chair will state that the rule waives the reading of ad hoc committee amendments.

The Chair recognizes the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. Mr. Chairman, I yield to the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. Mr. Chairman, I thank my good friend, the gentleman from Ohio (Mr. ASHLEY), the chairman of the ad hoc committee, for yielding to me.

This is an amendment which was worked out between the chairman of the Committee on Banking, Finance and Urban Affairs, the Committee on Interstate and Foreign Commerce, and the Subcommittee on Energy and Power of the Commtitee on Interstate and Foreign Commerce.

The amendment represents a compromise of the difference between the two committees with regard to insulation and how that should be accomplished under the purposes of the bill.

Originally there were two conflicting sections. This resulted in the action taken by my distinguished friend, the gentleman from Ohio (Mr. ASHLEY), and I want to commend him for that. The compromises which we have worked out result in being able to bring to the House one single proposal under which the two committees are in substantial agreement.

The amendment is of two parts. The first contains the information to be sent to the residential customers concerning suppliers, contractors, and financing arrangements for the purchase and installation of residential energy conservation measures. The language provides that the Governor or his designee shall draw up a list of suppliers, contractors,

and lenders within 270 days after rules are promulgated. This will permit input by the appropriate State agencies charged with regulating these businesses.

The lists must be drawn in a fair, open, and nondiscriminatory manner so as to provide customer protection, insuring the customer against any violation of the provision.

If the State agency fails to do this, the FEA shall then do so. The public utilities will send this information to their residential customers so far as is practicable. If the lists are too long to be sent through the mail, then the customer will be advised where the list can be obtained.

The second part of the amendment concerns the financing and purchase and installation of the residential energy conservation measures by the public utility.

The compromise maintains the voluntary aspect of utility financing as contained in the bill ordered reported by the Committee on Interstate and Foreign Commerce.

However, the compromise provides that the utility may be prohibited from financing if the administrator determines, after notice and an opportunity for a hearing, that utility financing would have an adverse effect upon competition or that utility loans are being made at unreasonable rates or on unreasonable terms and conditions.

Mr. Chairman, the amendment is a fair one. It harmonizes the previously conflicting provisions of the two committee actions.

Again, I want to commend and congratulate my good friend and colleague, the gentleman from Ohio (Mr. ASHLEY), for his fine cooperation in this matter; and I urge that the House adopt the amendment.

Mr. ANDERSON of Illinois. Mr. Chairman, I move to strike the last word, and I rise in opposition to the committee amendment.

Mr. Chairman, we have heard repeatedly from both the distinguished chairman of the committee, the gentleman from Ohio (Mr. ASHLEY), and from the gentleman from Michigan (Mr. DINGELL), that this committee amendment represents a compromise on the conflicting views that have been offered on this particular point by the Committee on Banking, Finance and Urban Affairs and by the Committee on Interstate and Foreign Commerce. I think it should be made very clear to all members of the committee that this was a "compromise" that was arrived at in a partisan majority party caucus which met behind closed doors. It was not a compromise that was arrived at in cooperation with or in consultation with the minority. The minority happens to believe that the version of the Committee on Banking, Finance and Urban Affairs which incidentally and importantly was arrived at when hearings were held before that committee and was drafted subsequent to the action that had been taken in the Committee on Interstate and Foreign Commerce.

Let me point out why I personally think this is a faulty provision.

Mr. Chairman, it provides that within 270 days the Governor or his designee shall prepare lists of suppliers and contractors who are qualified installers of insulation material for residential energy conservation measures. This is being peddled to the Congress as a consumer protection measure and that somehow we need big brother in the form of the Governor of a State to tell individual private property owners and utilities that here is an approved list of suppliers and contractors.

Can you see the abuse? I repeat, can you see the abuses? This is not just implicit but explicit. By a provision of this kind can we not but wonder how many dinner ticket contributors are going to and will be appearing on the selected list of contractors and suppliers that would be provided by this provision?

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, I think the gentleman from Illinois (Mr. ANDERSON) raises a point that has to disturb every Member of the House from the State of Maryland. I can imagine what would happen if the Governor of the State of Maryland ever got his hands on this kind of a provision.

Mr. ANDERSON of Illinois. Mr. Chairman, I thank the gentleman from Maryland (Mr. BAUMAN) for his usually very cogent contribution and observation. In his case I can see why he might have even more concern than some of the rest of us. But, Mr. Chairman, it is a bad provision. The provision provided by the Committee on Banking, Finance and Urban Affairs provides that the utility will make available to the customer or the user the specification on insulation materials and supplies, and a general list of information, a general source of information, about where it can be obtained, and so forth. There is not any reason why we have to take the customer hand in hand and lead him down the primrose path to a particular supplier who happens to be or who has been approved by the Governor of his State.

Incidentally, you should also note from this provision that if the Governor fails within the 270-day period that is provided for to prepare the list either in a timely fashion or in a manner that is fair and equitable, then you have a Washington bureaucrat from the Federal Energy Administration preparing a list of contractors and suppliers who are ready, willing, and able to furnish insulation services.

Mr. Chairman, I repeat that the committee amendment should be defeated. We should go back to the version provided by the Committee on Banking, Finance and Urban Affairs which is, I believe, far preferable.

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. Of course I yield to the chairman.

Mr. ASHLEY. Mr. Chairman, I believe that in both the Committee on Banking, Finance and Urban Affairs and the Committee on Interstate and Foreign Commerce versions there was the understanding that there was need for protection of the public from unscrupulous, fly-by-night types of contractors that would beset us, and beset the consumers year in and year out.

The gentleman knows that from experience in his own district that aluminum siding contractors, and other examples, could be cited. This is not a unique approach, that is to say that States have been taking an interest in protecting the consumers from these kind of unscrupulous operations. The State of California, I believe, and perhaps the gentleman from California (Mr. ROUSSELOT) could correct me on this—and there are a number of other States, that already compile such lists. They license as a matter of fact contractors of all types including insulation contractors, such as in California and in a number of other States.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. ASHLEY, and by unanimous consent, Mr. ANDERSON of Illinois was allowed to proceed for 2 additional minutes.)

Mr. ASHLEY. We know that plumbers are licensed. We know that electricians are licensed. This is in the public interest. That is why we should engage in this activity. All I am trying to suggest to the gentleman is that we are not really on divergent courses here. We have a common goal I am sure on that. It is a question of how to get there. We have a common goal, I am sure. The question is how to get there.

Mr. ANDERSON of Illinois. If the gentleman will yield further, certainly I share the notion expressed by the gentleman from Ohio that there ought to be adequate protection for the consumer. Of course, I think in his statement he is accepting the idea—and I believe it is a fallacious notion—that there are no protections already available under State law.

I am a former prosecuting attorney. I used to take into court some of those unscrupulous siding dealers to whom the gentleman refers. I am sure any good, competent local law-enforcement official is going to be prepared to enforce the antifraud statutes of a jurisdiction in a locality against those kinds of profiteers under this section.

Mr. ASHLEY. I will say to the gentleman from Illinois that is after the fact, and certainly he knows from his experience as a prosecuting attorney that for everybody who was called before him, there were 10 who fled the State and who simply were not available for prosecution. What we are trying to do is protect the consumer and make it such that this type of criminal—and if not criminal, civil—misbehavior simply will not take place. That is how we protect the consumer.

Mr. ANDERSON of Illinois. If the gentleman will yield further, it just seems to me that to put the Governor of a State in the role of licensing and in effect qualifying those who are going to be eligible to provide services of this kind is going far beyond my concept of what is needed to protect the consumer. I think, and I repeat, there is room for abuse of an entirely different and pat-

ently particular character implicit in this kind of provision.

Mr. DINGELL. Mr. Chairman, I rise in support of the amendment.

With all due respect for my good friend, the gentleman from Illinois, who rises in opposition and asserts great concerns about the amendment, it strikes me that he has overlooked a number of things which are present in the amendment which meet all of the complaints which he has set forth. The first point is that the program must be conducted in a fair and nondiscriminatory manner with full due care and attention for the requirements and the principles of the antitrust laws. There, furthermore, is a requirement for a continuing presence and supervision with regard to these practices by the Administrator of FEA. The list which is compiled by the governor under the amendment must be compiled in a fair, open, and nondiscriminatory manner, and this last must provide protections for consumers in the fashion that it is crafted and in the fashion that the State program is crafted to insure that consumers are protected against monopolistic practices and things of this kind.

The principles of the antitrust laws with regard to restraints and monopolies are very clearly applied because, I will say to my good friend, the gentleman from Illinois, some years ago I chaired a subcommittee that investigated exactly the kind of practices that cause the gentleman apprehension, and we have written substantively into the legislation prohibitions against those kinds of practices and requirements, and that the Administrator of FEA shall give careful attention to seeing to it that those abuses no longer obtain. Those are important points and important points of difference. Furthermore, we give only a limited grandfather clause to permit up to 3 years programs by utilities which are now engaged in this practice. We require that they may be removed by action of either the Administrator of FEA or the State regulatory agency, when they find that there is misbehavior by these people in terms of either making the loans or in terms of carrying forward the program of insulation or retrofit of homes for the purpose of saving energy, a highly desirable goal which I share with my good friend, the gentleman from Illinois.

As a result, I would point out that even though I have great respect for my friend, the gentleman from Illinois, I think he sees something here which in fact is not here. His concerns have well been met, and I do not want the legislative history on the matters in which we are now engaged to reflect that there is any reality, any substance to the concern the gentleman is expressing, because it was my goal that these precise evils about which the gentleman complains should be protected against.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I thank my colleague, the gentleman from Michigan, for yielding.

I know about the problems caused by some who install siding. As consumer director I became conversant with them. But there should be some provision here that those who wish to be entered on that list shall be listed unless there is some reason for not doing so.

Mr. DINGELL. The gentlewoman makes an excellent point. The list is to be made in a fair, open, and nondiscriminatory manner. Let me read the language of the bill.

Mrs. FENWICK. I read that.

Mr. DINGELL. It says:

. . . in preparing and making available such lists, the Governor or his designee (or the Administrator) shall take such steps as may be necessary to—

(i) prevent unfair, deceptive, or anticompetitive acts or practices by persons selling or installing residential energy conservation measures and institutions offering loans for the purchase and installation of such measures, . . .

Let me read line 8, because this is what the gentlewoman is concerned about.

Mrs. FENWICK. I read that.

Mr. DINGELL. It says:

(ii) assure that any person who alleges any injury resulting from a violation of the requirements of this subparagraph shall be entitled to redress under procedures established by the Governor or his designee (or the Administrator).

Mrs. FENWICK. I read the bill. I am trying to say I read the bill.

Mr. DINGELL. I want to yield to the gentlewoman, Mr. Chairman, but may we have order please.

Now in order to have it clear, the minute these requirements are not met, that is something else.

Mrs. FENWICK. They do not cover what I am talking about.

Mr. DINGELL. But they most assuredly do.

Mrs. FENWICK. No, because what we are going to find is the small installer, the little businessman, will not get on that list, and there is nothing to say that the Governor shall list those who apply.

Mr. DINGELL. In this the gentlewoman is totally in error. I have tried to read the language which rebuts the point the gentlewoman made. I am the last man in this Chamber and maybe the gentlewoman is the last woman in this Chamber who would wish to have difficulty over that language we have discussed.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(On request of Mr. BROWN of Michigan, and by unanimous consent, Mr. DINGELL was allowed to proceed for 1 additional minute.)

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Michigan (Mr. BROWN).

Mr. BROWN of Michigan. Mr. Chairman, does the gentleman say that the language establishes qualifications for getting one's name on the list, whether he be a supplier, contractor, or lending institution?

Mr. DINGELL. Obviously State law governs on that as to whether or not a person is qualified. But what this does is assure access to the list shall be in a fair and not an arbitrary fashion.

Mr. BROWN of Michigan. The gentleman has not answered my question. Where in the bill does it establish qualifications for a person getting on the list?

Mr. DINGELL. The answer is that it is done under State law.

Mr. BROWN of Michigan. Where does it say State law in this act?

Mr. DINGELL. It is to assure this works fairly and in a nondiscriminatory fashion.

Mr. BROWN of Michigan. It says the Governor may pick and choose.

Mr. DINGELL. On the contrary I make no such statement and there is nothing in the legislation to allow the Governor to pick and choose.

Mr. BROWN of Michigan. What determines who gets on the list?

Mr. DINGELL. I have read to the gentleman and to the gentlewoman the language.

Mr. BROWN of Michigan. The amendment does not say what the gentleman is stating here on the floor.

Mr. DINGELL. I have read the language in some detail. I am sorry the gentleman was not giving me his full attention when I read it.

Mr. BROWN of Michigan. I have read the language time after time, and what the gentleman says and what the language of the bill says are not the same thing.

Mr. DINGELL. Either the gentleman does not understand or is quite determined not to understand.

Mr. BROWN of Michigan. The gentleman would like to understand. However what the gentleman is saying is not understandable when we look at the language of the bill.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. DINGELL) has expired.

Mr. BROWN of Michigan. Mr. Chairman, I rise in opposition to the amendment.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, in the language of the committee amendment beginning on line 8 on page 68 it says:

. . . Any person who alleges any injury resulting from a violation of the requirements of this subparagraph shall be entitled to redress under procedures established by the Governor . . .

In other words, a person who is not on the list and is injured as a result goes to the Governor and the Governor thereby establishes procedure whereby he is to be made whole for a violation of his rights?

If that makes sense as a procedure, prove it to me.

Mr. BROWN of Michigan. Mr. Chairman, I thank the gentleman for those comments.

Mr. Chairman, the gentleman from Ohio (Mr. ASHLEY) said that the ad hoc committee amendment is an accommodation. An accommodation it is, but not an accommodation of substance, but rather an accommodation of those who are involved in working in the Energy Committee, despite substance.

Mr. Chairman, I think it is absolutely ludicrous that the Committee on Rules did not see fit to at least permit this body to have an opportunity to select the original Commerce Committee provision, the original Banking Committee provision, or the ad hoc committee amendment. By not permitting a motion to strike either the Commerce Committee language or a motion to strike the Banking Committee language, should the ad hoc committee amendment fail, we have, in effect, diametrically opposed programs in this legislation.

Now, the gentleman from Michigan (Mr. DINGELL) has continually referred to and likes to remain ambiguous about what kind of list this will be, whether it will be a list of qualified contractors, suppliers and lending institutions, or whether anyone will have an opportunity who holds himself out to do this business to be on the list. Obviously, someone that is under sanctions by a State that has a licensure program would not be on the list, because he would not be authorized to do business; but what about all others? If all others can be on the list, why not merely furnish the yellow pages and tell customers where the yellow pages can be found?

The gentleman from Michigan (Mr. DINGELL) says, "Well, if the list is too long and it is impractical to send it out, why, then, we can tell them where the list is."

Like I suppose we could tell all those in the upper peninsula in Michigan that they can find the list in Lansing, and that is going to be one whale of a lot of help.

Rather, the Banking Committee provision basically provided that the consumer had to be provided with information relative to suppliers, to contractors, to lending institutions, that either do work or furnish financing in their area; where those people can be found, what they can expect in the way of consumer information; and, provide information relative to consumer protection.

I am just saying that the Banking Committee provision in this regard is so much better than the Commerce Committee provision or the ad hoc committee provision, that the ad hoc committee amendment should be defeated.

We will not be in great shape after that, but it will be better to send over the two diametrically opposed amendments than to send over the ad hoc committee amendment that is supposed to be an accommodation, an accommodation in form, but not in substance.

Not only are the lists a problem with this ad hoc committee amendment, but the ad hoc committee amendment continues the ridiculous provision of the Commerce Committee proposal that provides for the Administrator of the Federal Energy Administration to assess $25,000 in civil penalties against a public utility for violation of his rules or regulations, each day in violation, being a separate violation, otherwise $25,000 per day for the period of time in which the violation occurs, regardless of the extent and substance of that violation, with the discretion to assess or not assess being solely that of the FEA Administrator.

The language then provides that the person so charged by the Administrator has 30 days in which to go to the Federal Court of Appeals and seek to prove his innocence.

I respectfully suggest that this method of assessment does not provide as much due process or administrative procedure as does the procedure when the violation only amounts to a traffic violation.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(At the request of Mr. TSONGAS, and by unanimous consent, Mr. BROWN of Michigan was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Michigan. Mr. Chairman, before I yield, may I make one other point.

The lists do not have to be furnished, for all intents and purposes under this legislation; they can be made available some place. That is the way the legislative history reads now as established in his remarks by the gentleman from Michigan (Mr. DINGELL).

For the reasons I have stated, reasons, if no others, I would urge my colleagues to defeat the amendment.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. Mr. Chairman, is it not true there is nothing in the bill that would affect a homeowner who desires to contract with a local neighborhood installer?

Mr. BROWN of Michigan. No, there is nothing that prevents him.

Mr. TSONGAS. Is there anything that prevents a homeowner who wants to consult the yellow pages or a newspaper ad to obtain this help?

Mr. BROWN of Michigan. Nothing.

Mr. TSONGAS. Is there anything to prevent a chamber of commerce?

Mr. BROWN of Michigan. No.

Mr. TSONGAS. Or a better business bureau?

Mr. BROWN of Michigan. No; all those things are better provided for in the program reported out of the Banking Committee, than in the Commerce Committee proposal or even the ad hoc committee amendment.

Mr. TSONGAS. So to put it in perspective, the only person to whom the legislation would be relative would be a person that has a complaint of fraud and wants outside guidance, or the other things I have enumerated; is that true?

Mr. BROWN of Michigan. I would say the lists for those people would not be necessary, because the banking bill provides for sources of information to be furnished; and, consumer protection information must be provided under the Banking and Currency Committee proposal.

If I may respond to the gentleman's question with a question, does the gentleman know of anybody who is not in an area where he may know the contractor, the chamber of commerce or the lending institution, where putting those in a list and giving it to him is beneficial?

Mr. TSONGAS. That is my point. The percentage of people that will be affected by the concerns the gentleman is expressing is very small. It seems to me to make sense to have a list available to those people as well.

Mr. BROWN of Michigan. So, is the gentleman suggesting that since none of this is necessary, nevertheless it ought to go out and we ought to go to the expense, with Federal Government financing, go to the expense of making all these lists, all these directories, all these things, when they are really not needed? Is that the gentleman's point? If it is, I think he has made it.

Mr. TSONGAS. If I can respond, only to that part of the population which does not know how to consult the other sources and wishes to have a separate list. That would enforce the very real possibility of fraud that has taken place in many home improvement areas.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(On request of Mr. BROWN of Ohio and by unanimous consent Mr. BROWN of Michigan was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Michigan. I would just point out to the gentleman from Massachusetts that the law provides that the list must be sent to every consumer, whether he needs it or not. The gentleman says there are very few who will need it, but it must be sent to everyone unless it is determined to be impracticable. I would predict that either a list will be sent out to all customers or no list will be sent to anyone, because how are we going to determine whether Joe needs to get a list and Sam does not, or neither does?

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I think we are overlooking one other thing in this law; that is, a lot of the people who get that list and are going to have this work done may be thinking in terms of the Federal Government giving them an income tax credit for having the work done. When we combine the prospect of an income tax credit and an official list from the Governor of a State of those tradesmen who are approved for the work, and the bank that is approved for the financing, it occurs to me that the list from the Governor takes on a sort of additional aura of respectability, if you will, wherein the citizen may think, "Well now, wait a minute, if I don't use that list provided by the Governor and if I don't go to the bank that he says is okay to get my financing, will the Federal Government in fact honor my request for a tax credit?" I think we are being terribly destructive of the little businessman or the financial institution that may not qualify for the list. I happen to be interested in the territory of my State where a metropolitan community in another State serves the smaller community. Now, who qualifies on the Governor's list? Will he come up with somebody from the other State?

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

(On request of Mr. BROWN of Ohio and by unanimous consent Mr. BROWN of Michigan was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Ohio. Will the Governor include those contractors from other States, whether or not they give to his campaign chest?

Mr. BROWN of Michigan. I appreciate the gentleman's comments, but taking the program the way that some would have it taken, that is, that there is some kind of determination of qualification for one to get his name on the list, does the Governor of Virginia know the licensed contractors in the District of Columbia who are eligible and qualified and not under investigation? Does he know those in Maryland? Probably not, so I guess he can only put Virginia contractors and suppliers and financers on his list, even though probably contractors, financers, and suppliers are much more accessible from Maryland or the District of Columbia, or any kind of combination of jurisdictions we want to fix.

Mr. BROWN of Ohio. If the gentleman will yield further, could I ask the gentleman who is on the Banking and Currency Committee or perhaps I should ask the chairman of the ad hoc committee, this question:

The proposals which came out of the Committee on Banking, Finance and Urban Affairs, which did not include these rather specific lists from the Governor but, rather, general consumer advice, how were those proposals of the Committee on Banking, Finance and Urban Affairs passed out of that committee? Was it a close vote? What was the vote on the Banking, Finance and Urban Affairs Committee provisions of this section of the bill?

Mr. BROWN of Michigan. Mr. Chairman, I am happy to respond to the gentleman.

We acted after the subcommittee, the Commerce Subcommittee, had already put together its plan. We had the advantage of looking at the plan. We had the advantage of testimony from people who had looked at the commerce committee plan and who found objections and problems with it. We then acted upon our bill correcting all of the defects and omissions that were in the commerce proposal and passed it out of the subcommittee unanimously and I think from the full committee on a vote of 38 to 1.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. BROWN) has expired.

(On request of Mr. ALLEN and by unanimous consent, Mr. BROWN of Michigan was allowed to proceed for 2 additional minutes.)

Mr. ALLEN. Mr. Chairman, would the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Tennessee.

Mr. ALLEN. I thank the gentleman for yielding.

In the opinion of the gentleman, would not a list coming from an official agency, or from the Governor, indicate to the recipients that those are the firms which are approved to do the work. Furthermore if a firm is not on that list, would it not imply that such firm was not approved?

Mr. BROWN of Michigan. Absolutely.

Mr. ALLEN. And could this not be made into a political boondoggle by any Governor?

Mr. BROWN of Michigan. The gentleman said it, and I agree with him.

Mr. ALLEN. And would it not be well for any contractor to stay in the good graces of the Governor?

Mr. BROWN of Michigan. Yes. Political contributions would help, I am sure.

Mr. ALLEN. I thank the gentleman.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I thank the gentleman for yielding.

What happens to a new contractor, somebody who starts a business after this Governor's approved list goes out?

Mr. BROWN of Michigan. One of two things. Either you call the list back and revise it, or else he does not get on it, I would presume.

Mr. BROWN of Ohio. Of course, I guess under the provisions of the law he can always take some kind of legal action to get on the list if he wants to get the promotional value of being insulator to the crown, or whatever the title is going to be of these people who are on the list.

Mr. BROWN of Michigan. If he gets on the list he will not be isolated from the crown, the gentleman can be sure of that.

Mr. BROWN of Ohio. Insulator to the Governor, I guess.

Mr. BROWN of Michigan. Mr. Chairman, I urge my colleagues to defeat the ad hoc committee amendment.

Mr. ASHLEY. Mr. Chairman, I move to strike the requisite number of words.

Mr. VOLKMER. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Chairman, I would like to have a colloquy on the language which is found on page 75, on furnishing a list by utilities. It would be understood by the Governor's office and also by the utilities that, where feasible, where we have more than one utility, where within an area we have not only an electric utility but a gas utility, in some areas—in our State, we also have water utilities—that not all three of them be required to send out the list, but I am sure it is the intent of the committee that the Governor would have the authority to provide only one list be sent out and to designate the one utility which would have to do it or would do it, rather than have duplication of the various utilities sending the list out?

Mr. ASHLEY. I think it is quite clear that the Governor would have the discretion.

Mr. VOLKMER. He would have this authority or discretion?

Mr. ASHLEY. Yes. He would determine the practicality, and it would be abundantly clear that we would not have the kind of duplication that the gentleman suggested.

Mr. VOLKMER. Mr. Chairman, I thank the gentleman.

Mr. ASHLEY. Mr. Chairman, if I might conclude, I would like to do so on this basis: that perhaps we have lost our sense of perspective a little bit with regard to the section with which we are concerned.

The President some months ago articulated a goal with which, to the best of my knowledge, all of us agree, and that is to say that by the year 1985, 90 percent of our homes should be insulated and retrofitted to a thermal standard that will be conducive to energy savings.

In order to achieve this goal, a number of strategies have been put in place in the legislation before us. For those families, some 14 million of them, who are at or about the poverty level—that is to say, those whose incomes are less than 125 percent of the poverty level—we put in place a weatherization program whereby the cost of the insulation will be provided directly by the Federal Government so that the homes of these families can be insulated and so that they can, as well as others, benefit from energy savings that are implicit in the weatherization program.

For families of higher than 125 percent of the poverty level in a given area, up to 90 percent of median income, there is a low-interest-rate program so that these families can secure the credit that is necessary in order to undertake the weatherization and insulation services and activities that are obviously in their best interests.

For families above median income there is a standby program whereby the Secretary of HUD, upon a finding of insufficient credit for the financing of insulation services for these families, can trigger in a GNMA program so that those loans can be purchased from the lending institutions, providing those institutions with a liquidity that would otherwise not be available.

Then from another committee, Mr. Chairman, we have the provisions which make available a tax credit of up to 20 percent of the first $2,000 spent for the various forms and activities connected with weatherization.

So what we are talking about, Mr. Chairman, is a broadly faceted program, and the various parts do, of course, really fit well together. This is a broad overview of what has been achieved, and it is something about which we have heard nothing thus far in the debate because there is really no controversy with respect to these components.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. ASHLEY) has expired.

(On request of Mr. BROWN of Michigan and by unanimous consent, Mr. ASHLEY was allowed to proceed for 2 additional minutes.)

Mr. ASHLEY. Mr. Chairman, what we have been focusing on, instead, is the limited role of utilities in this insulation effort, and it was generally agreed between both committees that this should be a very limited role. Further, what we have been concentrating on is the informational service that both committees agree should be provided by the utilities.

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. Mr. Chairman, I appreciate the gentleman's yielding.

These are fine programs; they are new programs. As far as the weatherization program, the new revised program, and the new secondary mortgage programs are concerned, those are all new programs. I am sure the gentleman agrees.

Let me ask the gentleman this: Who had the jurisdiction over these proposals? Who had real jurisdiction over all this subject matter?

Mr. ASHLEY. It was the Committee on Banking, Finance and Urban Affairs.

Mr. BROWN of Michigan. Yes, the Committee on Banking, Finance and Urban Affairs, that is correct, and that is, of course, why the banking provision is a good provision, because we were the most proper forum and the committee with the jurisdiction to come out with such a program. It is only because of the contributions of the Committee on Interstate and Foreign Commerce that we have the problems.

I completely concur with the gentleman when he says that we did wonderful work in the Committee on Banking, Finance and Urban Affairs. All these things are good.

Mr. Chairman, let me ask the gentleman this: Did the President ask for a $25,000 civilly administered, assessable penalty?

Mr. ASHLEY Mr. Chairman, if the gentleman from Michigan (Mr. BROWN) will allow me, I will address myself first to another point.

Mr. BROWN of Michigan. I will ask the gentleman, can he answer that question?

Mr. ASHLEY. Mr. Chairman, I am first going to respond to the gentleman's previous question because I did not have time to expound on that fully.

It is quite true that we had the lead jurisdiction with respect to the loans and with respect to the weatherization program. That is absolutely true.

We did what we think was a fine job.

My question to the gentleman from Michigan (Mr. BROWN) is this: Who really has the lead jurisdiction with respect to utilities? Is it the Committee on Banking, Finance and Urban Affairs or is it the Committee on Interstate and Foreign Commerce?

Mr. BROWN of Michigan. Mr. Chairman, if the gentleman will yield, I would respectfully suggest that, comparatively speaking, the Committee on Interstate and Foreign Commerce has negligible jurisdiction and to that the Banking Committee possesses.

Mr. BAUMAN. Mr. Chairman, I rise in opposition to the amendment.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, I wonder whether some of the members of the committee are not a little bemused at the ferocity of the argument that is raging over this question of lists.

Some of the Members may be asking themselves, What is all the fuss about? How important is it really, and why are all these Republican minority members objecting to lists?

Listen to what the parameters of this insulation program are because I jotted down a few figures as the debate has been raging here on this proposition this afternoon.

There are about 75 million homes and dwellings in the United States. The administration has backed down from the 90-percent figure. It says, "Our aim now is to insulate 60 percent of these homes."

All right. That makes 45 million homes. The average insulation cost is about $500. It is $300 for an attic alone, so $500 is not an unreasonable figure as the cost for insulating a home. If we take 45 million homes at that rate, we have a total figure of $22 billion. We have not even mentioned storm doors and windows, costing about $1,000 a dwelling. Consequently, we have another $45 billion for storm doors and windows. With this, we are up to $77 billion.

Mr. Chairman, this is a pretty good sized pie that is going to be cut up here; and the people who are going to have the power to draw up and to send out lists of those who are eligible to share in the cutting up of that $77 billion pie are going to have something very, very valuable at their disposal.

Mr. Chairman, I thank the gentleman from Maryland for yielding.

Mr. BAUMAN. Mr. Chairman, it is precisely these kinds of multibillion-dollar statistics which should give pause to any Member of Congress from Maryland, because we know very well in our own State how matters of gubernatorial discretion are handled.

It is not only Maryland which has suffered from this kind of corruption in the past. If this amendment is adopted such veniality may become epidemic. Mr. Chairman, all across this country, the potential for graft, corruption, and fraud is immense in this amendment.

Mr. Chairman, I would like the Members to read page 67. It says the State governor can compile "* * * lists of suppliers and contractors who sell and install residential energy conservation measures."

Mr. Chairman, that covers virtually every plumber, insulation company, building contractor, aluminum-siding salesman, or nearly anyone.

That means that we are going to have in each State "the governor's seal of approval," similar to that of General Hugh Johnson and the NRA in the days of the old Blue Eagle. If you had the Blue Eagle on your door, you were patriotic. Those small businesses who do not get the governor's approval will be left out.

This gives political leverage to a State executive to exact tribute from businesses and many will not hesitate to do so. The contribution and the kickback will become the rule in order to obtain the governor's approbation. And this section also allows the governor to compile lists of approved banks and savings and loans who he says should finance these energy improvements.

Mr. Chairman, the gentleman from Ohio (Mr. ASHLEY), a moment ago said that this is a comprehensive energy bill, the component parts of which fit together well. That language also would describe a tinker toy set project built by a 5-year-old. This bill has just about the same degree of stability.

Mr. Chairman, we are only up to page 67 out of 580 pages of this bill. However, for the benefit of the American people, we should take each one of these propositions, one by one, and reshape or reject. This is one that should be rejected.

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. Mr. Chairman, the gentleman from Maryland (Mr. BAUMAN) has mentioned electricians, plumbers, et cetera. Are we also going to list every drugstore or supermarket which sells caulking and weatherstripping?

Mr. BAUMAN. If it is left to the devices of the chief executive that we have in our State, I am sure the Governor's power will be extended down to the level of anyone who sells newspapers which one can stuff in a crack against the cold night air.

Mr. BROWN of Michigan. All I would say is that that would make the contribution that much larger.

Mr. BAUMAN. Mr. Chairman, we have been told no Governor will abuse his power under this section; that he will exercise his listmaking in a fair, open, and nondiscriminatory matter. If we believe that such language is truly any protection, you probably believe we can pass a bill to repeal the energy crisis.

This is a collection of very well placed words, but they would do nothing to improve conditions which are prevalent in Maryland. They would give added authority to a great many people who serve as chief executives of various States at the expense of small businesses and consumers.

Mr. OTTINGER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the committee amendment.

Mr. Chairman, I rise in support of the ad hoc committee language. I think that what the gentlemen on the other side are doing is really engaging in some relatively picayune nitpicking on the provision.

The fact of the matter is that we are in a very serious situation indeed with regard to oil imports. I believe that this residential conservation, indeed this legislation as a whole, represents a first step and a good first step toward eliminating our dangerous dependence on oil imports.

At the present time we are importing almost half our supply of oil. That represents a grave national security risk.

We will be paying out this year some $43 billion to the OPEC countries on top of $150 billion previously transferred.

This is undermining our own financial institutions and the international financial institutions. It is resulting in treacherous balance of trade and payments deficits and is undermining the value of the dollar.

We simply have to get about ending the waste of energy resources in this country. Some of the measures that we will have to adopt will have to go much further than the provisions in this legislation.

One of our biggest users of energy, and one of the biggest areas in which we find waste, is in our buildings. We simply must end this waste by insulation and through the use of certain conservation devices which are already on the market. This legislation just makes available information and assistance to homeowners and to businesses, to voluntarilly take the needed conservation steps.

In my opinion the legislation does not go far enough. In the Energy and Power Subcommittee of the Committee on Interstate and Foreign Commerce I supported a mandatory requirement providing that a person could not sell his home unless it was brought up to the full conservation standards. I think we are going to have go to that kind of measure in the future. We will have to require every building in the country to be adequately insulated in order to be able to combat the oil import threat that confronts us.

The provision in this bill under consideration certainly is a mild step to assure help, and allow the utilities to help, in getting homeowners and businesses to insulate and install conservation devices in their buildings. It is a small start at getting on with the job of saving critical energy resources. I believe it should be strongly supported by the committee.

Mr. BROWN of Ohio. Mr. Chairman, I move to strike the requisite number of words and I rise in opposition to the committee amendment of the ad hoc committee.

Mr. Chairman, I would like to raise a point that has not been raised and which I believe has some signficance. One of the problems still remaining in this ad hoc committee proposal and in the proposal of the Committee on Interstate and Foreign Commerce is the question of installing and financing energy conservation measures.

As the bill is currently drafted, utilities are permitted to install energy conservation measures so long as certain tests have been met, that there are insufficient suppliers in the area served by the utility and that there are not any anticompetitive impacts of utilities being in the business of installing insulation.

One of the areas where a utility is now in the business of installing insulation is the Washington area. I am sure that some of you who try to get tradesmen feel that there are not sufficient people in the insulation business but, on the other hand, I doubt that in very many metropolitan areas the size of Washington there are insufficient installers and purveyors of materials for helping us insulate our homes.

Under the ad hoc bill, utilities are still permitted to get into the business of installing energy conservation measures and stay in the business as long as the general tests have been met.

In the Public Utility Holding Company Act passed back in the 1930's, they absolutely prohibited utilities from being in any business except the supplying of energy. It seems to me that that works pretty well. Each utility has a monopoly on trade in its service area.

For a utility to be in the business of putting in insulation or financing it, is adverse to the interests of the small business people in any community, and certainly it is adverse to the interests of the financial institutions. Under the Banking, Finance, and Urban Affairs bill, and the Republican substitute, I might add, no utility may offer to install approved energy conservation measures unless FEA grants a special exception to those requesting it. I would hope that FEA would never make that approval. This is a far preferable approach which will protect the small suppliers and contractors of energy conservation measures from competition by monopolistic utilities. The same thing would apply to the financing of home improvements. Why in the world should we get the public utilities in the business of financing insulation and other energy conservation measures in private homes? There are banks, savings and loans, credit unions, cooperative groups aplenty to provide the financing. Why do we want to give special opportunities to public utilities in this area? I, for one, do not, and under the law of Ohio there would be a conflict here in which the Congress would seem to be on the side of saying, "Let the public utilities get the business."

I raised this question all during the consideration of the issue in the Commerce Committee and was assured there would be no conflict with any Federal laws. Then later on we had to have an amendment in the full committee, which I voted against, offered by one of my colleagues on the other side of the aisle saying that where Federal law or State law would prohibit the utilities from being in the financing business of home improvements or in the actual business of doing the home improvement, we would abrogate those existing Federal or State laws.

Mr. Chairman, I would submit that those laws were put on the books for a very good reason and that we do not want the utility businesses of this country extending their operations into financing, into home improvements, into the other things that a monopoly can get into the home and say to the homeowner, "Now, I am your friendly neighborhood utility, and you ought to have this work done. We will do it for you. We will finance it for you, and if you do not do this, your utility bill will probably be higher. Therefore, we think that you certainly ought to listen to our advice."

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. I thank the gentleman for yielding.

I just want to take this opportunity to tell my colleagues that insofar as I know, the minority members who have criticized the ad hoc committee amendment are just as interested in energy conservation and energy-saving measures as is the gentleman from New York, or anyone on that side of the aisle. Our position basically is: Why accept an inferior program? We have a good program in the Banking Committees' provisions in H.R. 8444. It is here on the floor. Let us adopt it.

Mr. BROWN of Ohio. Mr. Chairman, I just say in conclusion let us let the utilities provide the energy. Let us let the individuals make their own decisions, but let us not let the Governor try to tell them who is to make the installation of insulation and other conservation materials, and who is approved as the financial lending institutions for financing such improvements.

Mr. CORCORAN of Illinois. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to strike the requisite number of words in order to ask a few questions of the distinguished gentleman from Michigan, the chairman of the Interstate and Foreign Commerce Subcommittee which was involved in the development of this legislation, H.R. 8444. Already in the debate this afternoon, as well as from previous reports, I think there is some confusion as to what is provided under title I, part I, subpart A, section 104, which deals with the public utility gas and electric programs which would be permitted to grant interest-free loans to finance the installation of insulation and furnace and flue devices in order to reduce consumption.

I might say, Mr. Chairman, that this was brought to my attention initially by the Honorable Wayne C. Wells, village president of Montgomery, Ill., which is in my district. As a matter of fact, the village has recently gone on record in support of these programs. The mayor tells me about a program that a utility company, which incidentally is in the State of the distinguished chairman of the Commerce Subcommittee, has tested and placed in operation for its customers. I am informed that this program could reduce natural gas consumption by as much as 45 percent. It involves simple devices that are attached to the furnaces. To quote a distinguished columnist from the Chicago Tribune, Jack Mabley:

> . . . it makes so much sense it's hard to believe it is happening.

So therefore I ask my first question: Will this bill as amended by the amendment now pending before the full committee encourage such programs by the gas and electric utility companies in this country?

Mr. DINGELL. The answer to the question is that the bill as amended will permit such programs by electric utilities and by gas utilities in this country subject to the 3-year temporary exemption which is set out in the legislation.

Mr. CORCORAN of Illinois. It is also my understanding, if the gentleman will yield further, that the Michigan Consol-

idated Gas Co. gives interest-free loans to its customers. Would such interest-free loans be permitted under this legislation as amended?

Mr. DINGELL. Again, if the gentleman will yield, the answer to the question is, yes, for the period of the 3-year exemption before the regulatory program goes into effect, with respect to those utilities now grandfathered in under this legislation.

Mr. CORCORAN of Illinois. My final question is: Would such programs be mandated under this legislation or would they be optional?

Mr. DINGELL. The answer to the question is they would be optional. The program is permissive and is not mandatory in character.

Mr. CORCORAN of Illinois. I thank the gentleman.

Mr. ALLEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I want to make one thing clear. I am for the weatherization and insulation program that has been advocated by President Carter. I am for the much better program that was carefully studied and promulgated by the committee of which I am a member. That is the Banking, Finance and Urban Affairs Committee.

I think the point that has been made in this debate cannot be overlooked. Indeed the fact sheet given us by the Democratic Study Group has as one of the arguments it says can be made against the ad hoc committee about the listing of lending card contractors. That is, these lists that would be sent out—those that a homeowner can borrow money from, or get to do the work. These lists would suggest that those firms on it were "Government approved." The list could be abused for the purpose of dispensing favors to various interests in the State.

This comes not from the Republican side. It comes from our own Democratic study group. It is the argument they indicate could be made against it. It is an argument that I think is a valid argument. I think that what we need to do is to stand by the energy conservation program recommended by the Committee on Banking, Finance and Urban Affairs.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from New York.

Mr. BINGHAM. Mr. Chairman, I thank the gentleman for yielding.

I am sure the gentleman did not mean to suggest that the Democratic study group took a position on this amendment. They were simply summarizing the arguments pro and con on the amendment, and the gentleman was simply quoting from the arguments on it.

Mr. ALLEN. What I am indicating is that the Democratic study group perceived this as a valid argument. It places a tremendous political burden on State governments. That is one of the arguments it says the opponents could make against it; and it has been made against it.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from New York.

Mr. BINGHAM. Mr Chairman, I simply wanted to point out that what the gentleman is reading from also contains the arguments of the other side. The Democratic Study Group does not take a position on this matter.

Mr. ALLEN. I did not say it did. I said these are some arguments it indicates that could validly be made against this amendment. It is an argument that I adopt as a sound argument.

Mr. BROWN of Michigan. Mr Chairman, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. Mr. Chairman, I thank the gentleman for yielding.

I do not care what the Democratic Study Group does or does not do; but since when has the Banking Committee been a Republican committee? In fact, the only vote against the proposal in the Banking Committee was a Repubican vote. The Democrats that voted, voted unanimously for it.

Mr CONTE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the ad hoc committee's recommended amendment to part I of title I of the National Energy Act which incorporates the commendable features of both the Commerce Committee's and Banking Committee's bills. The amendment would mandate that all State Governors compile a list of suppliers, contractors, and lenders of approved and qualified energy conservation materials. This list would then be distributed by the utilities to their customers. Mr. Chairman, I believe that this amendment, if adopted, will assist our small businesses engaged in contracting and subcontracting work on energy conservation measures. The competitive features of this amendment assure the utility consumer every opportunity to obtain the desired residential energy conservation measures and equipment at a reasonable cost. Through the provisions affecting the distribution by qualified suppliers and contractors, and assistance by qualified financial institutions to the resident in the purchase and installation, both the resident and the appropriate small business concern stand to benefit. Since this list will be compiled by either the Governor or the Administrator, in a fair and open manner, I am confident that all qualified small businesses will be included. The resident is further protected from unscrupulous business advice, since the public utility will be required to inform its residential customer of conservation measures which will result in a saving in total energy consumption and costs. Additionally, the utility is directed to offer the consumer the opportunity to have a representative of the utility company inspect the home and determine the type of conservation measures required and the cost of purchasing and installing them. Two years after the date of enactment, the public utility will also be required to offer to install the suggested measures, if the Administrator determines that this will not have a substantial anticompetitive effect. This will assure every locality in the country of the availability and installation of these energy saving measures.

The amendment allows the utility to choose whether to make loans itself to residential customers to finance the purchase and installaion of residential energy conservation measures.

Mr. Chairman, there are three additional parts of this attractive amendment which will benefit the consumer. First, the amendment directs the Administrator of the Federal Energy Administration to develop a list of suggestions for energy conservation techniques to be distributed by the public utilities. Second, the amendment directs the Administrator to maintain reasonable costs for utility inspections. It is estimated that the cost of such inspections will range from $40 to $60, charged to the customer. The third provision of this amendment will allow the continuation of ongoing utility installation programs. To date, these programs have benefited consumers who they serve. They should not be penalized.

Mr. Chairman, it is estimated that the current consumption for heating and cooling our residences amounts to 20 percent of our total energy consumption. Such programs as the one now before us aided by the committee amendment will assure the public of the availability of adequate energy conservation measures to reduce energy costs and assist in reducing national energy consumption rates. Finally, I commend the members of the committees involved for assuring the small business sector of its continued and increased participation in this illustrious and worthy program.

The CHAIRMAN. The question is on the amendment of the ad hoc committee to part I, title I.

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. ANDERSON of Illinois. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 217, noes 205, not voting 11, as follows:

[Roll No. 491]

NOT VOTING—11

AuCoin	Flippo	Mikva
Burke, Mass.	Giaimo	Teague
Dent	Koch	Weaver
Derrick	McKinney	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. Koch for, with Mr. McKinney against.

Messrs. GILMAN, CAPUTO, HOLLENBECK, and HUGHES changed their vote from "aye" to "no."

Mrs. HECKLER changed her vote from "no" to "aye."

So the ad hoc committee amendment was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The Clerk will designate the part of the bill now under consideration.

The Clerk read as follows:

Page 117, line 1, insert part II. (Part II of title I reads as follows:)

PART II—ENERGY EFFICIENCY OF CERTAIN PRODUCTS; USE OF RECOVERED MATERIALS

Subpart A—Energy Efficiency Standards for Consumer Products Other Than Automobiles

SEC. 201. TEST PROCEDURES.

(a) PUBLICATION OF TEST PROCEDURES.—Section 323(a)(3) of the Energy Policy and Conservation Act (42 U.S.C. 6293(a)(3)) is amended—

(1) by striking out "Except as provided in paragraph (6), the" and inserting in lieu thereof "The"; and

(2) by striking out the last sentence and inserting in lieu thereof the following: "Except as provided in paragraph (6), such proposed test procedures shall be published not later than August 31, 1977.".

(b) PRESCRIPTION OF TEST PROCEDURES.—Section 323(a)(4) of such Act (42 U.S.C. 6293(a)(4)) is amended—

(1) in subparagraph (A), by striking out "(A) Except as provided in paragraph (6), the" and inserting in lieu thereof "The";

(2) in subparagraph (A), by adding at the end thereof the following: "Except as provided in paragraph (6), such test procedures shall be prescribed not later than December 30, 1977."; and

(3) by striking out subparagraph (B).

(c) EXTENSIONS.—Section 323(a)(6) of such Act (42 U.S.C. 6293(a)(6)) is amended to read as follows:

"(6) The Administrator may delay the publication of proposed test procedures under paragraph (3) or the prescription of test procedures under paragraph (4) for a type of covered product (or class thereof) if he determines that he cannot, within the applicable time period, publish proposed test procedures or prescribe test procedures applicable to such type (or class) which meet the requirements of subsection (b), and he submits to the Congress a report of such determination together with the reasons therefor, and also publishes such determination (and reasons) in the Federal Register. In any such case, he shall publish such proposed test procedures or prescribe such test procedures as soon as practicable, but in no event later than 90 days after the date specified in paragraph (3) or (4), as the case may be.".

(d) REEVALUATIONS OF TEST PROCEDURES.—Section 323(a) (42 U.S.C. 6293(a)) is amended by adding at the end thereof the following:

"(7)(A) Not later than 3 years after prescribing a test procedure under this section (and from time to time thereafter), the Administrator shall—

"(i) conduct a reevaluation in order to determine whether such procedure should be amended, and

"(ii) make, and publish in the Federal Register, such determination.

In conducting such reevaluation, the Administrator shall take into account such information as he deems relevant, including technological developments relating to the energy efficiency of the type (or class) of covered product involved.

"(B) If the Administrator determines under subparagraph (A) that a test procedure should be amended, he shall promptly publish proposed test procedures incorporating such amendments and afford interested persons an opportunity to present oral and written data, views, and arguments. Such comment period shall not be less than 45 days.".

SEC. 202. ENERGY EFFICIENCY STANDARDS.

Section 325 of the Energy Policy and Conservation Act (42 U.S.C. 6295) is amended to read as follows:

"ENERGY EFFICIENCY STANDARDS

"SEC. 325. (a)(1)(A) The Administrator shall, by rule, prescribe an energy efficiency standard for each type (or class) of covered product specified in paragraphs (1) through (13) of section 322(a).

"(B) The Administrator may, by rule, prescribe an energy efficiency standard for any type (or class) of covered products of a type specified in paragraph (14) of section 322(a), if he determines, for the purposes of this section, that—

"(i) the average per household energy use within the United States by products of such type (or class) exceeds 150 kilowatt-hours per year for any 12-calendar-month period ending before such determination;

"(ii) the aggregate household energy use within the United States by products of such type (or class) exceeds 4,200,000,000 kilowatt-hours per year for any such 12-calendar-month period;

"(iii) substantial improvement in the energy efficiency of products of such type (or class) is technologically feasible; and

"(iv) the application of a labeling rule under section 324 to such type (or class) is not likely to be sufficient to induce manufacturers to produce, and consumers and other persons to purchase, covered products of such type (or class) which achieve the maximum energy efficiency which is technologically feasible to attain and is economically justified.

In the case of any type (or class) of covered product which uses a fuel other than electricity, the standards to be applied in clauses (i) and (ii) shall be the amount of Btu's of such fuel necessary to generate the kilowatt-hours of electricity referred to in clauses (i) and (ii), respectively.

"(C) Not later than 2 years after the date of the enactment of this subparagraph, the Administrator shall publish in the Federal Register a list of those types (and classes) of covered products which he considers may be subject to standards authorized to be prescribed under paragraph (B). The Administrator may revise such list from time to time thereafter.

"(2) No standard for a type (or class) of covered product shall be prescribed pursuant to paragraph (1) if—

"(A) a test procedure has not been prescribed pursuant to section 323 with respect to that type (or class) of product, or

"(B) the Administrator determines, by rule, that the establishment of such standard will not result in significant conservation of energy.

For purposes of section 327, a determination under subparagraph (B) with respect to any type (or class) of covered product shall have the same effect as a standard prescribed for such type (or class) under this section.

"(3) Energy efficiency standards for each type (or class) of covered product prescribed under this section shall be designed to achieve the maximum improvement in energy efficiency which the Administrator determines is technologically feasible and economically justified. Such standards may be phased in, over a period not in excess of 3 years, through the establishment of intermediate standards, as determined by the Administrator.

"(4) In determining whether a standard is economically justified under paragraph (3), the Administrator shall consider, after receiving any views and comments furnished with respect to the proposed standard under section 336—

"(A) the economic impact of the standard on the manufacturers and on the consumers of the products subject to such standard,

"(B) the savings in operating costs throughout the estimated average life of covered products in the type (or class) subject to such standard which are likely to result from the imposition of such standard,

"(C) the total energy savings likely to result directly from the imposition of the standard,

"(D) any increase in the initial charge for, and the expenses of maintenance, repair, or use of, such covered products which is likely to result from the imposition of the standard,

"(E) the total cost, per Btu, in obtaining the energy savings likely to result from imposing the standard, computed for such type (or class) of covered product by dividing the average charges and expenses referred to in subparagraph (D) by the energy savings (expressed in Btu's) referred to in subparagraph (C),

"(F) any lessening of the utility or the performance of the covered products likely to result from the imposition of the standard,

"(G) the impact of any lessening of competition determined in writing by the Attorney General that is likely to result from the imposition of the standard, and

"(H) any other factors the Administrator considers relevant.

For purposes of subparagraph (G), the Attorney General shall, not later than 60 days after the publication of a proposed rule prescribing an energy efficiency standard, make a determination of the impact, if any, from any lessening of competition likely to result from such standard and transmit such determination in writing to the Administrator, together with an analysis of the nature and extent of such impact. Any such determination and analysis shall be published in the Federal Register.

"(5)(A) Subject to subparagraph (B), the Administrator may, on application of any manufacturer, exempt such manufacturer from the application of all or part of the requirements of any rule prescribing an energy efficiency standard under this subsection for any period which does not extend beyond the date which is 24 months after the date such rule is prescribed, if the Administrator finds that the annual gross revenues to such manufacturer for the preceding 12-month period from all its operations (including the manufacture and sale of covered products) does not exceed $8,000,000. In making such finding in the case of any manufacturer, the Administrator shall take into account the annual gross revenues of any other person who controls, is controlled by, or is under common control with, such manufacturer.

"(B) The Administrator may not exercise the authority granted under subparagraph (A) with respect to any type (or class) of covered product subject to an energy efficiency standard established under this section unless he makes a finding, after obtaining the written views of the Attorney General, that a failure to allow such exemptions of manufacturers under subparagraph (A) would likely result in a substantial lessening of competition.

"(6)(A) A rule prescribing an energy efficiency standard for a type of covered product (or class) shall specify a level of energy efficiency higher or lower than that which otherwise applies (or would apply) for such type (or class) for any group of covered products which have the same function or intended use, if the Administrator, in his discretion, determines that products within such group—

"(i) consume a different kind of energy from that consumed by other covered products within such type (or class), or

"(ii) have a performance-related feature which is not part of other products within such type (or class), justifying a higher or lower standard from that which applies (or will apply) to other products within such type (or class). In determining under this subparagraph whether a performance-related feature justifies the establishment of a higher or lower standard, the Administrator shall consider such factors as the utility to the consumer of such a feature, the capacity of the product resulting from, or which constitutes, such feature, and may consider such other factors as he deems appropriate.

"(B) Any rule prescribing a higher or lower level of energy efficiency under subparagraph (A) shall include an explanation of the basis on which such higher or lower level was established.

"(7) In prescribing energy efficiency standards under this subsection, the Administrator shall give priority to the establishment of energy efficiency standards for types of products (or classes thereof) specified in paragraphs (1), (2), (5), (6), (9), (12), and (13) of section 322(a).

"(8)(A) Not later than 5 years after prescribing an energy efficiency standard under this section (and from time to time thereafter), the Administrator shall—

"(i) conduct a reevaluation in order to determine whether such standard should be amended in any manner, and

"(ii) make, and publish in the Federal Register, such determination.

In conducting such reevaluation, the Administrator shall take into account such information as he deems relevant, including technological developments with respect to the type (or class) of covered product involved, and the economic impact of the standard.

"(B) If the Administrator determines under subparagraph (A) that a standard should be amended, he shall promptly publish a proposed rule incorporating such amendments and afford interested persons an opportunity to present oral and written data, views, and arguments. Such comment period shall not be less than 45 days.

"(b) Any energy efficiency standard shall be prescribed in accordance with the following procedure:

"(1) The Administrator shall (A) publish an advance notice of proposed rulemaking which specifies the type (or class) of covered products to which the rule will apply, and (B) invite interested persons to submit, within 45 days after the date of publication of such advance notice, written presentations of data, views, and arguments relevant to establishing such an energy efficiency standard.

"(2) An advance notice of proposed rulemaking under paragraph (1) shall be published by the Administrator—

"(A) in the case of types of covered products (or classes thereof) of the types specified in paragraphs (1), (2), (5), (6), (9), (12), and (13) of section 322(a), not later than 30 days after a test procedure with respect to that type of covered product (or class thereof) has been prescribed, or 45 days after the date of the enactment of this subparagraph, whichever is later; and

"(B) in the case of types of covered products (or classes thereof) specified in paragraphs (3), (4), (7), (8), (10), and (11) of section 322(a), not later than 30 days after a test procedure with respect to that type (or class) of covered product has been prescribed, or one year after the date of the enactment of this subparagraph, whichever is later.

"(3) A proposed rule which prescribes an energy efficiency standard for a type (or class) of covered products may not be published earlier than 60 days after the date of publication of advance notice of proposed rulemaking for such type (or class). The Administrator shall determine the maximum improvement in energy efficiency that is technologically feasible for each type (or class) of covered products in prescribing such standard and if such standard is not designed to achieve such efficiency, the Administrator shall state in the proposed rule the reasons therefor. After the publication of such proposed rulemaking, the Administrator shall afford interested persons, in accordance with section 336, an opportunity to present oral and written comments (including an opportunity to question those who make such presentations, as provided in such section) on matters relating to such proposed rule, including—

"(A) whether the standard to be prescribed is economically justified (taking into account those factors which the Administrator must consider under subsection (a)(4)),

"(B) whether the standard will achieve the maximum improvement in energy efficiency which is technologically feasible,

"(C) if the standard will not achieve such improvement, whether the reasons for not achieving such improvement are adequate, and

"(D) whether such rule should prescribe a level of energy efficiency which is higher or lower than that which would otherwise apply in the case of any group of products within the type (or class) to be subject to such standard.

"(4) A rule prescribing an energy efficiency standard for a type (or class) of covered product may not be published earlier than 60 days after the date of publication of the proposed rule under this section for such type (or class). Such rule shall be published as soon as practicable after such 60-day period, but in no event later than 2 years after publication of the advance notice. Such rule shall take effect not earlier than 180 days after the date of its publication in the Federal Register. Such rule (or any amendment thereto) shall not apply to any covered product the manufacture of which was completed before the effective date of the rule or amendment as the case may be.

"(c) An energy efficiency standard prescribed under this section shall include test procedures prescribed in accordance with section 323, and may include any requirement which the Administrator determines is necessary to assure that each covered product to which such standard applies meets the required minimum level of energy efficiency specified in such standard.".

SEC. 203. EFFECT OF STANDARDS ON OTHER LAW.

Section 327(b) of the Energy Policy and Conservation Act (42 U.S.C. 6297(b)) is amended to read as follows:

"(b)(1) If a State regulation is prescribed on or before the date of the enactment of the National Energy Act which establishes an energy efficiency standard or similar requirement respecting energy use or energy efficiency of a type (or class) of a covered product and which is not superseded by subsection (a)(2), then any person subject to such regulation may file a petition with the Administrator requesting that the Administrator prescribe a rule under this subsection which supersedes such State regulation in whole or in part. The Administrator, after consideration of the petition, the views of the affected State, and the comments of any interested person, shall issue such requested rule only if the Administrator finds (and publishes such finding) that—

"(A) there is no significant State or local interest sufficient to justify such State regulation; and

"(B) such State regulation unduly burdens interstate commerce.

"(2) If a State regulation is prescribed after such date of enactment which establishes an energy efficiency standard or similar requirement respecting energy use or energy efficiency of a type (or class) of covered product and which is not superseded by subsection (a)(2), then such State regulation is superseded. Notwithstanding the requirement of the preceding sentence, such State may file a petition with the Administrator requesting a rule that such State regulation is not superseded pursuant to this paragraph. The Administrator, after consideration of the petition and the comments of interested persons, shall prescribe such rule only if he finds there is a significant State or local interest to justify such State regulation; except that the Administrator may not prescribe such rule if he finds that such State regulation would unduly burden interstate commerce.

"(3) Notwithstanding subsection (a)(2), any State prescribing a State regulation which provides an energy efficiency standard or similar requirement respecting energy use or energy efficiency for such type (or class) of a covered product may file a petition with the Administrator requesting a rule that such regulation not be superseded. The Administrator, after consideration of the petition and the comments of interested persons, shall prescribe such rule only if he finds (and publishes such finding) that—

"(A) there is a significant State or local interest to justify such State regulation; and

"(B) if there is a Federal energy efficiency standard applicable to such product, such State regulation contains a more stringent energy efficiency standard than such Federal standard;

except that the Administrator may not prescribe such rule if he finds that such State regulation would unduly burden interstate commerce.

"(4) The Administrator shall give notice of any petition filed under this subsection and afford interested persons a reasonable opportunity to make written comments thereon. The Administrator, within 6 months after the date any petition is filed, shall deny such petition or prescribe the requested rule, except that the Administrator may publish a notice in the Federal Register extending such period to a date certain. Such notice shall include the reasons for delay. In the case of any denial of a petition under this subsection, the Administrator shall publish in the Federal Register notice of such denial and the reasons for such denial.

"(5) The requirement of the first sentence of paragraph (2) shall not continue in effect—

"(A) after 3 years from the date of the enactment of this paragraph, in the case of any type (or class) of covered product specified in paragraph (1), (2), (5), (6), (9), (12), or (13) of section 322(a), and

"(B) after 5 years from the date of the enactment of this paragraph, in the case of any type (or class) of covered product specified in paragraph (3), (4), (7), (8), (10), or (11) of section 322(a).".

SEC. 204. TECHNICAL AND CONFORMING AMENDMENTS.

(a) AMENDMENTS TO SECTION 324(a).—Section 324(a) of the Energy Policy and Conservation Act (42 U.S.C. 6294(a)) is amended—

(1) in paragraph (1), by striking out "(or class thereof)" and all that follows and inserting in lieu thereof: "(or class thereof), the Commission determines under the second sentence of subsection (b)(5) that labeling in accordance with this section is not technologically or economically feasible."; and

(2) in paragraph (2), by striking out "(or class thereof)" and all that follows and inserting in lieu thereof: "(or class thereof), the Commission determines under the second sentence of subsection (b)(5) that labeling in accordance with this section is not technologically or economically feasible or is not likely to assist consumers in making purchasing decisions.".

(b) AMENDMENTS TO SECTION 324(c).—Section 324(c)(5) of such Act (42 U.S.C. 6294(c)(5)) is amended by inserting "including instructions for the maintenance, use, or repair of the covered product," after "energy consumption," in the matter following subparagraph (C).

(c) AMENDMENT TO SECTION 326.—Section 326 of such Act (42 U.S.C. 6296) is amended by adding at the end thereof the following:

"(d) For purposes of carrying out his responsibilities under this section, the Administrator may require, under authority otherwise available to him under this part or other provisions of law administered by him, each manufacturer of covered products to submit such information or reports of any kind or nature directly to the Administrator with respect to energy efficiency of such covered products, and with respect to the economic impact of any proposed energy efficiency standard, as the Administrator determines may be necessary to establish and revise test procedures and energy efficiency standards for such products and to insure compliance with the requirements of this part. The provisions of section 11(d) of the Energy Supply and Environmental Coordination Act of 1974 shall apply with respect to information obtained under this subsection to the same extent and in the same manner as it applies with respect to energy information obtained under section 11 of such Act.".

(d) AMENDMENT TO SECTION 333.—(1) Section 333 of such Act (42 U.S.C. 6303) is amended by adding at the end thereof the following new subsection:

"(d) Before assessing against any person any civil penalty under this section, the Administrator or the Commission, as the case may be, shall provide to such person notice of the proposed penalty. The determination to assess a civil penalty after such notice shall be made on the record after opportunity for an agency hearing pursuant to section 554 of title 5, United States Code. The order assessing such penalty shall state the findings and the basis for such assessment. If the person against whom a civil penalty is assessed fails to pay the penalty within the time prescribed in such order, the Administrator or the Commission, as the case may be, shall file a petition for enforcement of such order in any appropriate district court of the United States. A copy of the petition shall be promptly sent by registered or certified mail to the person against whom such order is sought to be enforced. At the time a petition for enforcement of such order is filed the Administrator or the Commission, as the case may be, shall certify and file in such court the record upon which such order was issued. The court shall have jurisdiction to enter a judgment enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, such order or the court may remand the proceeding for such further action as the court may direct.".

(2) Section 333(a) of such Act (42 U.S.C. 6303(a)) is amended by striking out "subsection (b)" and inserting in lieu thereof "subsection (c)".

(3) Section 333(c) of such Act (42 U.S.C. 6303(c)) is amended by striking out "section 323(d)(2)" and inserting in lieu thereof "section 323(c)".

(e) AMENDMENTS TO SECTION 335.—Section 335(a) of such Act (42 U.S.C. 6305(a)) is amended—

(A) by inserting after "or rule," in the last sentence thereof the following: "or order such Federal agency to perform such act or duty,", and

(B) by striking out the parenthetical clauses in paragraphs (1) and (2) thereof.

(f) AMENDMENTS TO SECTION 336.—(1) Section 336(a)(1) of such Act (42 U.S.C. 6306(a)(1)) is amended by striking out "(1)", and by striking out "325(a) (1), (2), or (3)" in the first sentence thereof and inserting "325(a)" in lieu thereof.

(2) Section 336(a)(1)(B) of such Act (42 U.S.C. 6306(a)(1)(B)) is amended by striking out "paragraph (1), (2), or (3) of" in the first sentence thereof.

(3) Section 336(a) of such Act (42 U.S.C. 6306(a)) is amended by striking out paragraph (2).

(4) Sections 336(b) (1) and (2) of such Act (42 U.S.C. 6306(b) (1) and (2)) are each amended by striking out "section 323 or 324" and inserting in lieu thereof "section 323, 324, or 325".

(5) Section 336(b) of such Act (42 U.S.C. 6306(b)) is amended by striking out paragraph (5).

(g) AMENDMENT TO SECTION 338.—Section 338 of such Act (42 U.S.C. 6308) is amended by adding at the end thereof the following new sentence: "Each such report shall specify the actions undertaken by the Administrator in carrying out this part during the period covered by such report and those actions which the Administrator was required to take under this part during such period but which were not taken, together with the reasons therefor.".

SEC. 205. APPROPRIATIONS AUTHORIZATION.

Section 339(a)(3) of such Act is amended to read as follows:

"(3) in addition to amounts authorized for such purposes under section 29(a) of the Federal Energy Administration Act of 1974, $3,300,000 for fiscal year 1978.".

SEC. 206. EFFECTS OF OTHER LAWS ON PROCEDURES.

The procedures applicable under part B of title III of the Energy Policy and Conservation Act (42 U.S.C. 6291 and following) shall not—

(1) be considered to be modified or affected by any other provision of law unless such other provision specifically amends such part (or provisions of law cited therein), or

(2) be considered to be superseded by any other provision of law unless such other provision does so in specific terms, referring to such part, and declaring that such provision supersedes the provisions of such part.

Subpart B—Disclosure of Automobile Fuel Inefficiency Tax

SEC. 221. DISCLOSURE IN LABELING.

(a) DISCLOSURE.—Section 506(a)(1) of the Motor Vehicle Information and Cost Savings Act (15 U.S.C. 2006(a)(1)) is amended by striking out "and" at the end of subparagraph (B), by redesignating subparagraph

(C) as subparagraph (D), and by inserting after subparagraph (B) the following new subparagraph:

"(C) containing in the case of any automobile the sale of which is subject to the tax imposed by section 4064 of the Internal Revenue Code of 1954, a statement indicating the amount of such tax, and".

(b) TIME AND MANNER OF DISCLOSURE.—Section 506(a)(3) of such Act (15 U.S.C. 2006(a)(3)) is amended by inserting after the first sentence thereof the following new sentence: "The time and manner by which the statement referred to in paragraph (1)(C) must be included on any label may be prescribed so as to take into account any special circumstances or characteristics.".

SEC. 222. DISCLOSURE IN ADVERTISING.

(a) DISCLOSURE.—The Federal Trade Commission may prescribe rules requiring disclosure of any tax imposed by section 4064 of the Internal Revenue Code of 1954 with respect to any automobile advertised in any television broadcast or advertisement in writing which states the price or fuel economy of an automobile or which advertises an identifiable model type of automobile. In prescribing any such rule, the Federal Trade Commission shall take into account any special circumstances or characteristics.

(b) ENFORCEMENT.—A violation of a rule under subsection (a) shall be deemed an unfair or deceptive act or practice in or affecting commerce, for purposes of the Federal Trade Commission Act.

(c) RULE OF CONSTRUCTION.—Nothing in this section shall be construed as restricting any authority of the Commission under any other law.

Subpart C—Use of Recovered Materials

SEC. 241. USE OF RECOVERED MATERIALS.

(a) FINDINGS.—The Congress finds that—

(1) significant amounts of industrial energy and other scarce natural resources are conserved in certain major energy-consuming industries where recovered materials are utilized in their manufacturing operations;

(2) substantial additional volumes of industrial energy and other scarce natural resources will be conserved in future years if such major energy-consuming industries increase to the maximum feasible extent utilization of recovered materials in their manufacturing operations;

(3) millions of tons of recoverable materials which could be used by such industries are needlessly wasted and buried each year at great cost to State and local governments, while technology and methods exist whereby those materials could readily be made available for utilization; and

(4) the recovery and utilization of such recovered materials can substantially reduce the dependence of the United States on foreign natural resources and reduce the growing deficit in its balance of payments.

(b) PURPOSES.—The purposes of this section are to conserve valuable energy and scarce natural resources, promote the national security, and protect the environment by—

(1) directing that targets for increased industrial utilization of recovered materials be established for certain major energy-consuming industries;

(2) creating procedures whereby such industries may cooperate with the Federal Government in the establishment and achievement of such targets; and

(3) providing incentives for increased industrial utilization of energy-saving recovered materials in such major energy-consuming industries.

(c) TARGETS FOR USE OF RECOVERED MATERIALS.—Part D of title III of the Energy Policy and Conservation Act is amended by inserting the following new section after section 374:

"TARGETS FOR USE OF RECOVERED MATERIALS

"SEC. 374A. (a) For purposes of this section, the term 'energy-saving recovered materials' means aluminum, copper, lead, zinc, iron, steel, paper and allied paper products, textiles, and rubber, recovered from solid waste, as defined in the Solid Waste Disposal Act.

"(b) Within one year after the date of enactment of this section, the Administrator shall set targets for increased utilization of energy-saving recovered materials for each of the following industries: The metals and metal products industries, the paper and allied products industries, the textile mill products industry, and the rubber industry. Such targets—

"(1) shall be based on the best available information,

"(2) shall be established at levels which represent the maximum feasible increase in utilization of energy-saving recovered materials each such industry can achieve progressively by January 1, 1987, and

"(3) shall be published in the Federal Register, together with a statement of the basis and justification for such targets.

"(c) In establishing targets under subsection (b), the Administrator shall consult with the Administrator of the Environmental Protection Agency and with each of the major industries subject to this section, and shall consider—

"(1) the technological and economic ability of each such industry progressively to increase its utilization of energy-saving recovered materials by January 1, 1987, and

"(2) all actions taken on which before such date could be taken by each such industry, or by Federal, State, or local governments to increase that industry's utilization of energy-saving recovered materials.

"(d) Any target established under subsection (b) may be modified if the Administrator—

"(1) determines that such target cannot reasonably be attained, or that it should require greater use of energy-saving recovered materials, and

"(2) publishes such determination in the Federal Register, together with a basis and justification for such modification.

"(e) Within each of the industries subject to this section, the Administrator shall notify each corporation which is a major energy consumer (within the meaning of section 373) of the requirements of this section. Not later than January 1, 1978, the chief executive officer of each such corporation (or individual designated by such officer) shall include in his report to the Administrator under section 375, or if section 376(g) applies, prepare and transmit a report which includes a statement of the volume of energy-saving recovered materials that such corporation is using in each of its manufacturing operations located in the United States and what plans, if any, the corporation has to increase the utilization of such materials in those operations in each of the next ten years. Not later than January 1, 1979, and annually thereafter, each such corporation shall include in such report a statement of the progress it has made to increase its utilization of energy-saving recovered materials to reach targets established under this section by the Administrator for its industry. Such reports shall contain such information as the Administrator determines is necessary to measure progress toward meeting the industry targets established under this section.

"(f) The Administrator shall include in his annual report under section 375(c) a report on the industrial energy and natural resource conservation and recovery program established under this section. Each such report shall include—

"(1) a summary of the progress made toward the achievement of targets set by the Administrator under this section; and

"(2) a summary of the programs made toward meeting such targets since the date of publication of the previous report, if any.".

(d) TECHNICAL AMENDMENTS.—Section 376 of such Act is amended by—

(1) inserting "or 374A" after "section 372" in subsection (b), and

(2) inserting "or any target under section 374A" after "374" in subsections (c) and (f).

Subpart D—Off-Highway Motor Vehicles and Bicycles

SEC. 261. OFF-HIGHWAY MOTOR VEHICLES.

(a) IN GENERAL.—Title III of the Energy Policy and Conservation Act is amended by adding the following new part at the end thereof:

"PART F—OFF-HIGHWAY MOTOR VEHICLES

"OFF-HIGHWAY MOTOR VEHICLE CONSERVATION STUDY

"SEC. 385. Not later than one year after the date of the enactment of this section, the Secretary of Transportation shall complete a study of the energy conservation potential of recreational motor vehicles, including, but not limited to, aircraft and motor boats which are designed for recreational use, and shall submit a report to the President and to the Congress containing the results of such study. Such report shall contain recommendations respecting the desirability and practicability of applying fuel efficiency standards or taxes on fuel use (or both) to such vehicles."

(b) CONFORMING AMENDMENTS.—The table of contents for such Act is amended by inserting after the item relating to part E the following:

"PART F—OFF-HIGHWAY MOTOR VEHICLES

"Sec. 385. Off-highway motor vehicle conservation study."

SEC. 262. BICYCLE STUDY.

(a) FINDINGS.—The Congress recognizes that bicycles are the most efficient means of transportation, represent a viable commuting alternative to many people, offer mobility at speeds as fast as that of cars in urban areas, provide health benefits through daily exercise, reduce noise and air pollution, are relatively inexpensive, and deserve consideration in a comprehensive national energy plan.

(b) STUDY.—Not more than one year after the date of enactment of this Act, the Secretary of Transportation shall complete a study of the energy conservation of potential bicycle transportation, determine institutional, legal, physical, and personal obstacles to increased bicycle use, establish a target for bicycle use in commuting, and develop a comprehensive program to meet these goals. In developing the program, consideration should be given to educational programs, Federal demonstrations, planning grants, and construction grants. The Secretary of Transportation shall submit a report to the President and to the Congress containing the results of such a study.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and line number of the first ad hoc committee amendment to this part.

The Clerk read as follows:

Ad hoc committee amendment: Page 132, line 21, insert: "of section 322(a).".

The ad hoc committee amendment was agreed to.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and line number of the next ad hoc committee amendment.

The Clerk read as follows:

Ad hoc committee amendment: Page 144, line 9, insert the matter printed on page 144, line 9, through page 145, line 3. (The ad hoc committee amendment reads as follows:)

Subpart D—Off-Highway Motor Vehicles and Bicycles

SEC. 261. OFF-HIGHWAY MOTOR VEHICLES.

(a) IN GENERAL.—Title III of the Energy Policy and Conservation Act is amended by adding the following new part at the end thereof:

"PART F—OFF-HIGHWAY MOTOR VEHICLES

"OFF-HIGHWAY MOTOR VEHICLE CONSERVATION STUDY

"SEC. 385. Not later than one year after the date of the enactment of this section, the Secretary of Transportation shall complete a study of the energy conservation potential of recreational motor vehicles, including, but not limited to, aircraft and motor boats which are designed for recreational use, and shall submit a report to the President and to the Congress containing the results of such study. Such report shall contain recommendations respecting the desirability and practicability of applying fuel efficiency standards or taxes on fuel use (or both) to such vehicles.

(b) CONFORMING AMENDMENTS.—The table of contents for such Act is amended by inserting after the item relating to part E the following:

Mr. ASHLEY. Mr. Chairman, I move to strike the last word.

The CHAIRMAN. The gentleman from Ohio (Mr. ASHLEY) is recognized for 5 minutes.

Mr. ASHLEY. Mr. Chairman, I rise in support of this amendment, which provides that the Secretary of Transportation be required to report within 1 year on the energy conservation potential of off-highway recreational motor vehicles, including aircraft, motorboats, and motor vehicles designed for recreational use, including recommendations with respect to the practicability of applying fuel-efficient standards for the use of fuel in these vehicles. This is simply a study, Mr. Chairman.

The purpose of the amendment speaks for itself. The effort, of course, is to bring about conservation of gasoline; that is to say, a reduction in overall consumption of gasoline by 1985 of some 10 percent.

What this study would do would be to provide for the Congress a better assessment of potential savings with respect to aircraft, motorboats, and other off-highway recreational motor vehicles.

During the deliberations of the ad hoc committee, Mr. Chairman, this was discussed; and my recollection is that it was agreed to without great controversy.

Mr. STEIGER. Mr. Chairman, I move to strike the requisite number of words.

There was some controversy may I say to the distinguished chairman of the ad hoc committee. With respect to that, I must say that I do not think this adds very much to our energy policy. I think it lacks substance; and worse than that, it gives more power to the Secretary of Transportation to work in conjunction with the Secretary of the Interior probably to prohibit off-highway vehicles, and that is one of my fears with regard to where all of this goes.

However, I would like to ask a question of the distinguished and able gentleman from Ohio (Mr. ASHLEY). With respect to the next section, the bicycle study, when the ad hoc committe voted on it, it was offered as title III to the bill. How did it get from title III of the bill to part F and section 262?

Mr. ASHLEY. Mr. Chairman, let me state that the chair was given implicit authority to make conforming and technical changes.

Mr. DINGELL. Mr. Chairman, if the gentleman will yield, the chair had achieved, by motion within the ad hoc committee, authority to make technical and conforming changes. It was pursuant to that motion that this change was made.

Mr. ASHLEY. That is what the response of the gentleman was.

Mr STEIGER. Mr. Chairman, I just find it difficult to understand. It seems to me that, potentially, it is something far more than just a technical change. A point of order was lodged against the amendment.

Mr. ASHLEY. Mr. Chairman, I am sorry, but I cannot hear the gentleman.

Mr. STEIGER. This is somewhat more than just a technical amendment, it would seem to me. The amendment was offered and a point of order was made against the amendment and the point of order was sustained by the chair against the amendment. Then it was offered as title III to escape the point of order. Now we find it is, despite this opposition, in this title. I think this raises, with all due respect, a serious question.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. The fact of the matter is that the original amendment we are offering now—section 262—was offered to title II, which was a tax provision section. It is now included in title I.

Mr. BROWN of Michigan. That does not cure a thing. It was nongermane, and we brought a point of order under title I. It would not have been eligible for consideration of the ad hoc committee. Now they are taking the position that is mighty confusing, putting it back in title I.

Mr. DINGELL. We are discussing here the amendment relating to off-highway motor vehicles. This is not the bicycle study amendment.

Mr. BROWN of Michigan. I started to say that they tried to correct the defect in the ad hoc committee by having a separate title. It was a combining of the studies together so as not to have this title standing out there by itself. It almost came to a vote when it was obvious there were all kinds of problems over it and the gentleman withdrew his amendment. I think for us to do this under a so-called pro forma amendment is ridiculous and an outrage.

Mr. TSONGAS. As a matter of fact that is not correct. The amendment was passed as a separate title first. The gentleman is given the impression that somehow the amendment was withdrawn.

Mr. STEIGER. The point the gentleman from Massachusetts (Mr. TSONGAS) is making is that that was first as to title III.

I did not mean to provoke this controversy about it.

Mr. TSONGAS. Nor did I.

Mr. STEIGER. I simply was "dumbstruck" as to how it got suddenly from where it was to somewhere else other than where it was when we adopted it.

Mr. ASHLEY. Mr. Chairman, if the gentleman will yield, I would say to the gentleman that the amendment, as the gentleman knows, relates to an off-highway motor vehicle study. It seemed to us that that properly fell, under the table of contents, under title I, part II, energy efficiency of certain products; use of recovered materials. The former part of that, energy efficiency of certain products, it appeared to us, without any mystery about it at all, that it was appropriate for us at this point in the bill, and I exercised the discretion that was vested in me by virtue of the motion regarding technical and conforming changes, to have it inserted at this juncture.

Mr. STEIGER. I appreciate the problems with which my chairman has had to deal, Mr. Chairman, but I do not think a study makes an awful lot of sense.

I yield back the remainder of my time.

Mr. TSONGAS. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, this is a relatively simple amendment. What it says basically is that as we seek to achieve some equity in the energy bill, we have got to think also of mandating efficiencies and providing taxes on vehicles, vehicles that are used to get to work, vehicles that are used to shop, and so forth. What the amendment does is say we want to extend that concern for conservation to vehicles that are used solely for pleasure. That is all the amendment does. If we are going to look at automobiles, we should also take a look at those consumers of gasoline whose only function is pleasure and ask the Secretary of Transportation to come back in a year with recommendations therefor. That is the amendment. I think it is simple; I think it is equitable; and I think it should be passed.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

Will the gentleman explain whether the amendment applies only to those vehicles and boats used solely for pleasure? I notice on page 144, line 20, it talks about motor boats designed for recreational use.

A great many fishermen, or watermen as we call them in Maryland, quite often have boats used for charter fishing parties in the summer, but for the balance of the year they are used as work boats, either oystering, clamming, crabbing, or fishing. Is there any contemplation that there is going to be imposed a tax on boats that could be used for both purposes? Is that implicit in the language?

Mr. TSONGAS. No, it is not. It is to

get at vehicles whose sole purpose is pleasure.

Mr. BAUMAN. Does the gentleman have any information about the amount of gasoline or oil consumed by vehicles and boats that would fall in this category? To my knowledge, it is one-tenth of 1 percent of all the energy consumed in the United States. Even if savings are effected, the savings would be like a sneeze in a hurricane.

Mr. TSONGAS. I do not understand the gentleman's concern.

Mr. BAUMAN. My question is, does the gentleman have any statistics about the amount of fossil fuels now used by the types of vehicles proposed to be covered by this study?

Mr. TSONGAS. The point I am trying to make is that if there is excess use of gasoline in a field solely related to pleasure—and I do not understand the gentleman's concern—we should have a study to try to deal with that problem.

Mr. BAUMAN. It seems to me if we are dealing with only one-tenth of 1 percent of the total usage of gasoline and oil in this country it is a waste of money to spend $100,000 or a million dollars on a needless study. We ought to be looking elsewhere for energy savings instead of trying to tax boaters and watermen—many of whom make their livelihood from the water.

Mr. DERWINSKI. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I hesitate to take the floor since I am one of the many Members who did not serve on the ad hoc committee and, therefore, is not expected to be knowledgeable about the details of this bill. We are in the situation where those of us who have been gagged by the rule and gagged by the procedure, and by the use of special committees, are just supposed to stand around and vote like sheep according to the dictates of our leaders, if we have any.

I would just like to point out to the Members that this is an interesting section. For example, it provides for a study for 1 year of the energy conservation potential of recreational motor vehicles, et cetera. Then if one reads on, it says:

> Such report shall contain recommendations respecting the desirability and practicality of applying fuel-efficiency standards or taxes on fuel use, or both, to such vehicles.

I read this to mean that this Commission is already mandated to recommend either fuel-efficiency standards or taxes, or both. In other words—the proponents of this amendment agree—with the end result of the year study as dictated. If someone is to be consistent—for example, I will assume the gentleman from Massachusetts to be consistent in his belief that we have to discipline nonessential users, then certainly aircraft, pleasure vehicles, and snowmobiles fall into that category.

What about the baseball fans in Boston who are using their autos to drive to the ballpark because there is a pennant race? Should we not have a restriction on fans using their vehicles for something so ridiculous as 40,000 flocking to the ball park in 20,000 cars?

If we are going to be logical and turn the bureaucrats loose to control every element of society, why not rule on precise limitations as to what the public will be allowed to use their cars for? When I think of 60,000 people who may drive to the Dodger stadium this fall to watch the Chicago White Sox beat the Dodgers, they should stay home or use public transportation and not their private cars, because if the "Great White Father" is going to rule on their vehicles and tax them and then restrict their use, why not apply it, logically, all across the country for all purposes?

I see this as another Pandora's box, as another great step toward paternalism in this country and as the kind of legislation we should not enact.

Mr. LLOYD of California. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from California.

Mr. LLOYD of California. Mr. Chairman, I would remind the gentleman the Dodgers come from Los Angeles.

Mr. DERWINSKI. That is one of the better exchanges of the day.

Mr. LLOYD of California. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I would ask the gentleman from Massachusetts (Mr. TSONGAS) if he could give us some estimate as to the cost of this study.

Mr. TSONGAS. Mr. Chairman, in relation to both this study and the next section, section 262, most of the information in terms of the fuel efficiency standards, et cetera, have already been done and the studies go back for many years. The Secretary of Transportation would simply bring these together, sift through them, and then come up with recommendations to the Congress. It is not going back to ground zero and beginning to do the research, which I think the gentleman is worried about.

Mr. LLOYD of California. That is well and good, but would the gentleman give us an estimate? I have an estimate.

Mr. TSONGAS. I would like to hear the estimate the gentleman has.

Mr. LLOYD of California. This is from the Office of Transportation and Technology, a division of the Department of Transportation. I asked for this cost and they made an estimate that it would be a minimum of $800,000 to $1.2 million. The gentleman can argue the cost, I am sure, but that is what they gave me.

Mr. TSONGAS. Where did the gentleman get that?

Mr. LLOYD of California. These cost figures were arrived at by computing the amount of money needed to provide sufficient man-hours of work for a 1-year study. The figure I have given you does not include the cost to print the study for use by Congress and the President. Furthermore the cost does not include the amounts needed to coordinate the study throughout the various branches of Government that deal with aviation and motorboats. This amendment specifically includes both aircraft and motorboats, and thereby necessitates substantial increases in the cost of this study.

Mr. TSONGAS. The study would have to be both authorized and appropriate. Supposing we have some control over the data. The gentleman is quite correct. If we go into areas of yachts and airplanes and things of that nature, there is a serious consumption pattern there which has to be addressed. What happens to them? An individual feels he is restricted in terms of the gasoline and he sees someone in a high income bracket who can go in pleasure aircraft or pleasure watercraft without restriction whatsoever. Is there not some inequity there?

Mr. LLOYD of California. Let me ask the gentleman this question. Is the gentleman under the assumption that aircraft are necessarily automatically pleasure vehicles or does he see them as a mode of transportation, a viable mode of transportation, and I am talking about general aviation aircraft at this point?

Mr. TSONGAS. If the gentleman asks in terms of his district, most of them are used for pleasure.

Mr. LLOYD of California. That is not true.

Mr TSONGAS. If the gentleman will yield, I was referring to my own district.

Mr. LLOYD of California. The gentleman was responding; after I point out what I believe an error of assumption I will let the gentleman go forward. In the State of California approximately 50 percent of the travel done by air is done by general aviation and that is not inclusive of pleasure. Maybe it is pleasure when they go from point to point or get on a commercial aircraft to go to Los Angeles or Las Vegas or wherever, maybe that is what the gentleman on the other side was talking about.

Mr. TSONGAS. That kind of travel, not for pleasure, is not included in the study.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. LLOYD of California. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Chairman, what has concerned me about this and the gentleman from Illinois and the gentleman from California both have hit on it, by the time we are through looking at the way this bill has developed, we are going to have a tax on gas guzzlers, we are going to raise the price to producers directly through a 4- or 5-cent gas tax or 7 cents indirectly by a wellhead tax and my constituent in Fond du Lac, Wis., who has a family of six or seven kids and who uses a motorboat for recreation is going to find himself paying, if the amendment goes through as is and if the study comes out where I think we already know it is going to come out, we are not only going to clobber him in terms of getting to work and clobber him in terms of heating his house and all of a sudden the only thing he has left to catch fish at Lake Winnebago, we are going to clobber him with a motorboat tax.

I do not know why we should disrupt everybody's fun. I could care less about

the yacht owners. I have no problem there; but I do care about that person who works in Fond du Lac or Sheboygan, who uses his boat or snowmobile to escape from the labors of work.

Mr. McCLORY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have the Johnson Outboard Motor Co. in my district. I recall during the embargo and following the period when the Arab embargo on oil products was imposed that there was an effort then made to bar the use of gasoline for use in motorboats and so-called recreational vehicles. That effort caused quite a reaction.

As a matter of fact, we are talking about a great many employees, a great many people who are engaged in the business of producing, marketing, and retailing watercraft, outboard motors and inboard-outboard motors, and so on.

Also, with respect to the use of motorboats, to which my colleague, the gentleman from Wisconsin (Mr. STEIGER) made reference, motorboats are used to a large extent for essential transportation purposes, too—in addition to purely recreational purposes.

I think it is extremely difficult to determine whether or not motorboats or other so-called recreational vehicles are used for pleasure, whether they are used for multiple purposes, for useful, healthful recreation, and other appropriate physical activities, or for essential and legitimate transportation.

I do not think this kind of study is essential at all. Everything about this subject is already known.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, I think we ought to consider the figures that have been rendered in this debate. It has been admitted the study will deal with less than one-tenth of 1 percent of all consumption of gasoline and oil. The gentleman from California has gathered the information from the people who will do this study that it will cost from $800,000 to $1.2 million. At some point the law of diminishing returns applies, even to studies made by this Congress.

Mr. McCLORY. Mr. Chairman, the gentleman from Maryland (Mr. BAUMAN) is quite correct. Also, I agree with the gentleman from Illinois (Mr. DERWINSKI) who has pointed out the mischievous effect of this amendment in mandating action against the motorboat industry and, in my case, I would say specifically against the outboard motor industry.

Mr. Chairman, I hope the amendment will be defeated.

Mr. OTTINGER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I yield to the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. Mr. Chairman, those in the gallery, if not those of us on the floor, must begin to wonder when such debate is generated over a provision that calls for a study with respect to the energy conservation potential of various vehicles. I must say that I begin to wonder, because when I look back at the vote that occurred on this proposed study in the ad hoc committee, what I find is that my friend, the gentleman from Wisconsin, who has been very eloquent in his opposition to it this afternoon, was recorded as being in favor of it on a rollcall vote.

The gentleman from Illinois (Mr. ANDERSON), my counterpart on that committee, voted aye on this study. One begins to wonder what is happening on the floor today.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. Indeed I will yield.

Mr. ANDERSON of Illinois. It is true that I did not oppose this amendment for a so-called study in the committee, and I have not said a word in opposition to it today. I would, however, offer to the gentleman from Ohio some word of explanation. He is, he says, concerned and maybe even, to some extent, confused about the fact that it has aroused some opposition. My own belief is that much of the opposition is probably simply generated by the fact that we have had so many studies on so many subjects, not only in this Congress but in past Congresses, all of which have really failed to generate any recommendations of particular value. I would assume that when somebody talks about a study that is going to cost $800,000 or, as the gentleman from California said, as much as $1,100,000, it is going to excite some opposition.

But, I did not oppose the amendment in committee, true, I think there is an explanation that can be suggested as to why we hear some of the sentiments expressed, as they are today, on the floor.

Mr. ASHLEY. I appreciate the gentleman's remarks.

Mr. PIKE. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from New York.

Mr. PIKE. Mr. Chairman, I would like to speak just briefly in support of the amendment. I think I probably represent as many boat owners as anybody in the country in this Chamber, and I take with a very large grain of salt all these allegations about how the boats and the planes are used for business purposes. Of course, they allege that they are used for business purposes because that is how they get to write them off as tax deductions. So, when we hear that all this use of these recreational vehicles is for business purposes, take it with a grain of salt.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from Wisconsin.

Mr. STEIGER. I thank the gentleman for yielding to me. I would simply ask my chairman to please read pages 219 and 220, in which my opposition to the amendment during the committee's deliberations is expressed. I am afraid our chief clerk did not understand my name correctly on the rollcall, but that is neither here nor there. I voted against the amendment, argued against the amendment, and I still think the amendment is a bad idea. I hope it is not adopted.

Mr. ASHLEY. If the gentleman will yield further, I think the gentleman would agree with me that this issue, which has really boggled the minds with its complexity, has been reasonably discussed, and I would hope we could vote on it.

Mr. OTTINGER. I would just like to say that if we are serious about saving fuel, certainly one area that has to be looked at is the use of purely recreational vehicles. That is all this amendment addresses itself to. I cannot understand the opposition.

Mr. STEIGER. I would hope the chairman could tell the committee how he had voted when this amendment was offered in the committee.

The CHAIRMAN. The question is on the amendment of the ad hoc committee to part II, title I.

The question was taken; and on a division (demanded by Mr. TSONGAS) there were—ayes 59; noes 44.

RECORDED VOTE

Mr. BAUMAN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 212, noes 210, not voting 11, as follows:

[Roll No. 492]

NOT VOTING—11

Burke, Mass.	Flippo	McKinney
Burton, John	Giaimo	Mikva
Dent	Heftel	Teague
Derrick	Koch	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. Koch for, with Mr. McKinney against.

Mr. McDADE changed his vote from "aye" to "no."

So the ad hoc committee amendment was agreed to.

The result of the vote was announced as above recorded.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and line number of the next ad hoc committee amendment.

The Clerk read as follows:

Ad hoc committee amendment: Page 145, insert the matter printed on page 145, lines 4 through 23. (The ad hoc committee amendment reads as follows:)

SEC. 262. BICYCLE STUDY.

(a) FINDINGS.—The Congress recognizes that bicycles are the most efficient means of transportation, represent a viable commuting alternative to many people, offer mobility at speeds as fast as that of cars in urban areas, provide health benefits through daily exercise, reduce noise and air pollution, are relatively inexpensive, and deserve consideration in a comprehensive national energy plan.

(b) STUDY.—Not more than one year after the date of enactment of this Act, the Secretary of Transportation shall complete a study of the energy conservation of potential bicycle transportation, determine institutional, legal, physical, and personal obstacles to increased bicycle use, establish a target for bicycle use in commuting, and develop a comprehensive program to meet these goals. In developing the program, consideration should be given to educational programs, Federal demonstrations, planning grants, and construction grants. The Secretary of Transportation shall submit a report to the President and to the Congress containing the results of such a study.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I move to strike the last word.

Mr. Chairman, a couple of moments ago the chairman of the ad hoc committee, the gentleman from Ohio (Mr. ASHLEY) urged that we get on with the business at hand and vote on the recreational vehicle amendment so we could get to the important matters that lie before us.

Well, "LUD," here it is, here is the important matter before us.

Mr. Chairman, I served on the ad hoc committee and during my service on that committee I offered a simple amendment to assert that it is one of our goals to increase the domestic production of oil and gas. The committee rejected that amendment, but it did vote for a study on bicycles.

Mr. Chairman, I suggest that if we pass this amendment, our constituents are going to regard it in much the same manner as Federal studies of frisbees and the mating calls of toads.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Oklahoma. As soon as I flinish my statement I will be glad to yield to the gentleman.

Mr. Chairman, the rule provides that the amendments before us are not to be read, but I think it might be interesting to the Members of this body to understand what we are voting on.

The amendment reads:

The Congress recognizes that bicycles are the most efficient means of transportation, . . .

That is an obvious slight to the manufacturers of roller skates and skateboards.

They offer mobility at speeds as fast as those of cars in urban areas and represent a viable commuting alternative for many people.

In our attempt to resolve the serious energy crisis that is before us with serious legislation, we have brought forth a bill that does not express a desire to increase energy production but does call for a study of the energy conservation potential of bicycle transportation to establish, mind you, a target, a Federal target, a national target for bicycle use in commuting, and to develop a comprehensive program to meet these goals, to be supported by educational programs, Federal demonstrations, planning grants, and construction grants.

Mr. Chairman, I fear that what we have come up with here is the Great Bicycle Act of 1977, and I strongly recommend that to save face back home we reject this amendment.

Mr. BROWN of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I am concerned that we are taking an approach to an important issue in this bill, this issue of bicycle use, which will belittle its potential and hold up to ridicule those who use bicycles as a mode of personal transportation.

Those who have studied the history of transportation in this country are well aware of the fact that the first road system in this country was developed for bicycles. As a matter of fact, the Bureau of Roads was established and received its first appropriation as a result of political pressure from bicycle riders in the late 1880's. Today bicycle riders look askance at that monstrosity which they helped to create more than three-quarters of a century ago. It would not be so bad if we had merely developed roads for automobiles, but what we have done in effect is to allow automobiles to monopolize all of the public spaces of this society and to preclude the use of other means of transportation such as bicycles, or even walking, to say nothing of other kinds of vehicular traffic or mass transit.

Mr. Chairman, I rise in support of the amendment calling for a study of the conservation potential of bicycles. Contrary to what some may think, bicycles can be an effective, efficient alternative to automobiles. They require little energy and few materials to produce and need only a small amount of prepared surface, if any, to operate.

Perhaps this is why some do not take bicycles seriously. If we could manufacture a 3,000 pound bicycle that consumed resources and needed tremendous construction effort in order to provide right-of-ways, then there would be no question of the need for this study. But bicycles silently slip around our modern transportation devices and attendant technology and remain a novelty to legislators and planners.

There are many who believe in using bicycles to save transportation costs, to keep air quality from degrading more than it has, and to keep themselves

physically fit. Nearly 50 percent of my office staff use bicycles as a primary means of commuting and together they log nearly 10,000 miles a year. To these people and the millions of others who criss-cross this country pedaling to work, to the store, and for recreation, the bicycle is not a novelty but a viable alternative to automobiles and buses.

The study of bicycles is germane to and necessary for any comprehensive evaluation of our energy problem and possible solutions. Bicycles are obviously energy efficient in their manufacture and use. Twenty to thirty pounds of steel, a narrow ribbon of space, and the bicycle becomes independent of oil cartels, parking problems, and fixed transit routes. One out of every two Americans owns a bicycle. If we can find ways to encourage and facilitate increased bicycle use, the energy saving potential is substantial. Is it energy efficient to use a 3,000 pound tangle of metal and plastic to transport a 150 pound person to a nearby supermarket for a sack of flour or can of soup?

A 1974 energy study done at Oak Ridge National Laboratories estimated the total energy use for bicycling—food, manufacture, repair, bikeway construction—at 1,300 Btu/mile or 100 miles per gallon. An automobile uses 11,000 Btu/mile or 11.4 miles per gallon. This study estimates that by substituting bicycle use for automobile use in 6 percent of trips of 0 to 5 miles the annual fuel savings would be 827 million gallons.

Bicycles are an untapped energy saving resource already available to over 100 million Americans. We need to develop this resource as vigorously as we develop other alternative energy sources.

Bicycles in urban areas can travel with the traffic flow, averaging 15 miles per hour or better, providing as swift a means of transportation as an automobile or bus. A case-in-point, one of the members of my staff who used to spend 45 minutes commuting from Virginia on a bus now spends 35 minutes commuting by bicycle. The same Oak Ridge study I just mentioned estimates that for trips shorter than 1 mile in urban areas the bicycle is faster than a car. Even with 5 mile trips, the average time penalty for bicycles is only 6 minutes.

The California Energy Resources Conservation and Development Commission in 1976 passed a resolution supporting efforts to encourage bicycle use for transportation and recreation given its energy efficiency, lack of air or noise pollution, and positive health benefits. They recognize what we need to recognize in our discussion of this issue. Bicycles can provide a way to reduce energy use, urban congestion,, and transportation costs. If this seems radical or novel or even whimsical to some of my colleagues, I encourage them to look at the positive results to be found in Europe and Asia.

This study will examine the legal, physical, and personal obstacles to be overcome in increasing bicycle use. Bicycles are simple devices that call for simple solutions in order to increase their use. There are over 6,000 miles of abandoned railroad rights-of-way that can be used for a system of bikepaths. Bikeways can be laid alongside highways during repair or reconstruction. Mass transit systems can set up more pedal and park facilities, such as the one Metro has, to expand their service areas. Transportation planners can be encouraged to recognize the needs of bicyclists and cut the Gordian knot of superhighways and cloverleafs that block access to cities from outlying areas. The possibilities are endless but need to be addressed in a comprehensive manner.

We become enamored with complex technological solutions to our problems, and tend to dismiss simple alternatives. Bicycles will not replace autos and buses, will not completely solve our energy problem. But their increased use will help work toward a savings of 827 million gallons of gas a year, a significant savings. Bicycles have a serious part to play in this comprehensive energy bill and I urge support of this amendment.

The CHAIRMAN. The time of the gentleman from California has expired.

(On request of Mr. BEARD of Tennessee, and by unanimous consent, Mr. BROWN of California was allowed to proceed for 4 additional minutes.)

Mr. BEARD of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from Tennessee.

Mr. BEARD of Tennessee. Mr. Chairman, I thank the gentleman for yielding.

It states in the bill:

> In developing the program, consideration should be given to educational programs, . . .

I am not sure what educational programs are given to bicycling. What I would like to know is if by all these different little programs, and we are talking about construction grants, and planning grants, and Federal demonstration and educational programs, what kind of price tag are we talking about? What is the price the committee came up with in studying this to present a request for an educational program?

Mr. BROWN of California. I was not a member of the ad hoc committee. I am not privy to that information. I would be glad to yield to a member of the committee who might have the information.

Mr. SIMON. Mr. Chairman, if the gentleman will yield, I am not a member of that committee either but if we spend for the bicycle paths 1 percent of what we spend on roads we would be a healthier nation and consume less energy.

Mr. BEARD of Tennessee. But that is not answering my question. I am asking as a responsible legislator how much money we are talking about. I am sure someone on the committee has studied this and not just come and asked for an open-ended account. How much are we talking about?

Mr. TSONGAS. Will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. Let me respond to both points. Studies have shown a good number of fatalities caused by the use of bicycles have been because of the lack of education for commuters, and so forth, on the various regulations, and so forth, involved with travel on the roads. That is why that particular section was included.

I indicated earlier on the question of cost that the Department of Transportation and the District of Columbia and the EPA all have done studies on the issue of bicycles and potential savings and so forth, and the Secretary will pull all that information together. All this was to do was to have it brought together by the Secretary of Transportation and have it brought to the Congress.

Mr. BEARD of Tennessee. Mr. Chairman, if the gentleman will yield further, I am sorry to have to pursue this point, but the gentleman made some points about these studies, and so forth, but the gentleman did not tell me, and I am sure the Members of this body would like to have it, some estimate as to the cost I think it is an insult to come here and request something like this if we do not have any kind of ballpark figure. I am amazed and shocked if that is the case. Is there anybody in this body that has any idea whether it will be $1 million or $1 billion or what?

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I will be happy to yield to the gentleman if he can provide a figure. If not, I will provide a guess.

Mr. TSONGAS. We appropriate the money for the studies and the Secretary comes back with the estimate and then we would go ahead and program something.

Mr. BEARD of Tennessee. Mr. Chairman, if the gentleman will yield further, what is the gentleman's guess?

Mr. BROWN of California. I would guess under a million dollars.

Mr. BEARD of Tennessee. That is the gentleman's guess?

Mr. BROWN of California. Yes.

Mr. BEARD of Tennessee. Does the gentleman have any kind of track record of guesses? I look at Congress guesses and I get somewhat skeptical.

I would like to say, I think it is kind of a sad state of affairs, we are asking Members of this body to vote and not having any idea what the cost will be.

Mr. TSONGAS. Mr. Chairman, I move to strike the requisite number of words. I rise to speak in favor of the amendment.

Mr. Chairman, I really regret that this issue has been treated the way it has been. In response to the gentleman from Oklahoma (Mr. EDWARDS) comment as to the ad hoc committee, it is, indeed, true that the gentleman voted against it; but seven or eight other Members of the minority voted in favor of it.

I might add, it was one of the few amendments that had support, one of the few Democratic initiated amendments, that had support on the other side of the aisle.

The second point is that I admit this amendment lends itself to humor, but it is only humor in the company of those who have taken advantage of the congressional system to go to China or other

places in Europe. As they can recall, bicycles are in great use. In fact, we are the only country in the world that finds the use of bicycles to be humorous. We are the only country in the world that last month had a trade deficit of $2.8 billion, most of it because of imports of oil. We are the only country that will be brought to its knees by another embargo or a shortage that we envision in the 1980's.

Let me give some real figures for the potential. There was a study done in the District of Columbia that said if appropriate measures were taken by 1978, there would be something like 7,500 persons using bicycles as a primary mode of transportation in commuting. By 1985, if these measures were taken, there would be 14,000 people commuting to the city and the environs by the use of bicycles; that something like 12,000 people that are now using gasoline to get into the city would not be doing so.

I wonder if that is a humorous step in terms of this country's energy situation.

The final point is that those people who desire when they commute to use no gasoline, not to pollute the air, not to do something that is heavily dependent on natural resources, use a bicycle to go to work, undertake a mode of transportation that is three times more dangerous because of the way we have structured our transportation system. I think they have a right to commute in a safe mode.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, as one who rides a bicycle regularly to work, I could point out some of the things that could be done to facilitate such activity. We could work out means by which a person could cross a bridge, a means by which one could go downtown to park a bicycle in safety. I have been run off from the front of hotels because they had no place to park. We could work it out so one could park in front of the Rayburn Building on an equal basis with a limousine. We could work out a system of traveling in a bus lane to have equal rights to travel along the curb lane, as a bus.

There are dozens of things that could be studied cheaply and a simple solution would cost virtually nothing and save a tremendous amount of energy.

Mr. CRANE. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Illinois.

Mr. CRANE. Mr. Chairman, in many respects this proposal comes up as a regular practice in terms of saving energy.

Could the gentleman give us some idea if it were implemented on a national basis how many jobs this would result in for the economy?

Mr. TSONGAS. In which respect, people working in hospitals in cardiac or respiratory units?

I am thinking in terms of, if there are 14,000 commuters here in the city of Washington, we would want to multiply that by at least four or five times in my hometown of Chicago, and we could do that around the country, obviously, in any conversion from present modes of transportation. This obviously is going to cost us jobs in our economy. I wonder if the gentleman could give any estimate or approximation as to how many jobs will be lost to the economy.

Mr. TSONGAS. Probably the same number of jobs gained by the moneys that do not go to OPEC, but will be reinvested into our economy.

Mr. PATTISON of New York. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from New York.

Mr. PATTISON of New York. I want to congratulate the gentleman on his statement. As another Member of this body who rides his bike to work every day, I find what the gentleman from Texas (Mr. ECKHARDT) said to be exactly true. It is almost impossible to park one's bicycle in many places. I can ride over to the White House because they will take care of me, but I cannot ride to Hecht's because there is no place to park there, and in other places.

So, I think the only dangerous thing I do when out riding a bike is to breathe the air caused by automobiles other people are driving. This is a serious thing. Bicycles are not just toys; they are a darn good means of commuting. All of us would be better off if we rode them.

Mr. COLLINS of Texas. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to the amendment. I opposed the amendment in committee; opposed it on a voice vote; opposed it on a rollcall vote. I want to discuss with you why I opposed it.

We have before us today the most serious issue that we have had confronting us in this session of Congress. It is this matter of energy, and what America is going to do about energy. In the course of evaluating this situation, we cannot cover everything in spite of the fact that this bill is a 580-page book. We have 10 different bills here. We already have more than we can take care of, and to stretch it to the point of going into bicycles is just going beyond the realm of reality.

I want to repeat again what this bicycle section says, because it overstates the case. Under the term "Findings" it says:

> The Congress recognizes that bicycles are the most efficient means of transportation, represent a viable commuting alternative to many people, offer mobility at speeds as fast as that of cars in urban areas . . .

Have the Members ever seen those cartoons of Superman which say, "He travels with the speed of a bullet"?

> . . . the Secretary of Transportation shall complete a study of energy conservation of potential bicycle transportation, determine institutional, legal, physical, and personal obstacles to increased bicycle use, establish a target for bicycle use in commuting, and develop a comprehensive program to meet these goals.

Now, when we talked about this bicycle study, the first thing that came to my mind was where was America 100 years ago. That is right, I will tell my friend, the gentleman from New Jersey, and I want to outline the history. One hundred years ago, only 1 percent of the energy in this country consisted of what we would call the raw minerals of oil or gas. Ninety-nine percent of the energy in America 100 years ago was either manpower energy or horses or mules, and perhaps they used some bicycles.

Now, the question is, is America ready to go back to that era of moving by the horses and mules and bicycles, or human muscle? The first thing that came to mind was, do we want to turn out the lights? Do we want to turn off television? Do we want to park our automobiles permanently? Do we want to close up the factories? I do not know whether the Members realize this or not, but 50 percent of the natural gas produced goes to keep factories running.

Do we want to turn off air-conditioning and heat? That is 20 percent of it of natural gas use. The whole question is, are we going to concentrate and come up with a real solution on energy for America, or are we going off on this sidetrack about a study of bicycles and have Americans all move back to the farm? I do not know how it is in your areas, but we are not quite ready to go back to the farm and move the clock back 100 years.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from New York.

Mr. OTTINGER. I was just speaking to the author of the amendment, and he tells me that it includes oil-run motor bicyles. That may make the gentleman feel better about the amendment.

Mr. EDWARDS of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Oklahoma.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I thank the gentleman for his statement.

I would like to reiterate what I said at the beginning, without the humor. Here we have come up with a bill, and we are talking about a very serious energy problem. It is ludicrous to present a bill which does not address itself to increasing energy production but does address itself to bicycles.

Mr. DOWNEY. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from New York.

Mr. DOWNEY. I thank the gentleman for yielding.

Do they have bicyles in Texas and Oklahoma?

Mr. COLLINS of Texas. We have two bicycles in my backyard. I will tell the gentleman that bicycling is recreation. What we have before us today is a 580-page book on the most serious problem in America. I think we ought to save bicycle studies for another time, and concentrate on this subject of industrial and residential energy for our country. Let us fully realize that today we live in the 20th century.

The CHAIRMAN. The question is on the amendment of the ad hoc committee to part II, title I.

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. COLLINS of Texas. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 252, noes 166, not voting 15, as follows:

[Roll No. 493]

NOT VOTING—15

Baucus	Derrick	McKinney
Benjamin	Diggs	Mikva
Brooks	Flippo	Moakley
Burke, Mass.	Flood	Stockman
Dent	Giaimo	Teague

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. ROBERTS and Mr. GEPHARDT changed their vote from "aye" to "no."

So the ad hoc committee amendment was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The Clerk will now designate the part of the bill now under consideration.

The Clerk read as follows: Page 146, line 1:

[Part III reads as follows:]

PART III—ENERGY CONSERVATION PROGRAM FOR SCHOOLS AND HEALTH CARE FACILITIES AND BUILDINGS OWNED BY UNITS OF LOCAL GOVERNMENT

Subpart A—Schools and Health Care Facilities

SEC. 301. STATEMENT OF FINDINGS AND PURPOSES.

(a) FINDINGS.—The Congress finds that—

(1) the Nation's nonrenewable energy resources are being rapidly depleted;

(2) schools and health care facilities are major consumers of energy, and have been especially burdened by rising energy prices and fuel shortages;

(3) substantial energy conservation can be achieved in schools and health care facilities through the implementation of energy conservation maintenance and operating procedures and the installation of energy conservation measures; and

(4) public and nonprofit schools and health care facilities in many instances need financial assistance in order to make the necessary improvements to achieve energy conservation.

(b) PURPOSE.—It is the purpose of this part to authorize grants to States and to public and nonprofit schools and health care facilities to assist in identifying and implementing energy conservation maintenance and operating procedures and in evaluating, acquiring, and installing energy conservation measures to reduce the energy use and anticipated energy costs of schools and health care facilities.

SEC. 302. AMENDMENT TO THE ENERGY POLICY AND CONSERVATION ACT.

(a) AMENDMENT TO TITLE III.—Title III of the Energy Policy and Conservation Act is amended by adding at the end thereof the following new part:

"PART G—ENERGY CONSERVATION PROGRAM FOR SCHOOLS AND HEALTH CARE FACILITIES

"DEFINITIONS

"SEC. 391. For the purposes of this part—

"(1) The term 'building' means any structure which includes a heating or cooling system, or both, the construction of which was completed on or before April 20, 1977.

"(2) The term 'energy conservation measure' means an installation or modification of an installation in a building which is primarily intended to reduce energy consumption or allow the use of a more desirable energy source, including, but not limited to—

"(A) insulation of mechanical systems and the building structure;

"(B) storm windows and doors, multiglazed windows and doors, heat absorbing or heat reflective glazed and coated windows and door systems, additional glazing, reductions in glass area, and other window and door system modifications;

"(C) automatic energy control systems;

"(D) equipment required to operate variable steam, hydraulic, and ventilating systems adjusted by automatic energy control systems;

"(E) solar space heating or cooling systems, solar electric generating systems, or any combination thereof;

"(F) solar water heating systems;

"(G) furnace or utility plant and distribution system modifications including—

"(i) replacement burners designed to reduce the firing rate or to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

"(ii) devices for modifying flue openings which will increase the efficiency of the heating system,

"(iii) electrical or mechanical furnace ignition systems modifications, including replacement of standing gas pilot lights, and

"(iv) utility plant system conversion measures including conversion of existing oil- and gas-fired boiler installations to alternative energy sources, including coal;

"(H) caulking and weatherstripping;

"(I) lighting fixture retrofits, to the extent that such retrofit reduces the watts per square foot level for illumination and conserves energy;

"(J) energy recovery systems;

"(K) cogeneration systems which produce steam, heat, or other forms of energy as well as electricity for use primarily within a building or a complex of buildings owned by a school or health care facility and which meet such fuel efficiency requirements as the Administrator may by rule prescribe; and

"(L) such measures as have been identified by an energy audit, carried out in accordance with rules promulgated by the Administrator under section 365(e)(2), for which it is shown that a substantial amount of energy will be saved, and such other energy conservation measures as the Administrator may determine appropriate under section 365(e)(1).

No lighting fixture retrofit which increases the general illumination level of a facility shall be treated as an energy conservation measure under this paragraph unless the Administrator finds that such increase is necessary to conform to any applicable State or local building code, or, if no such Code applies, such increase is deemed desirable by the Administrator.

"(3) The term 'health care facility' means a public or nonprofit institution which is a medical facility as defined in section 1633 of the Public Health Service Act, as in effect on the date of the enactment of this part.

"(4) The term 'public or nonprofit institution' means an institution owned and operated by—

"(A) a State, a political subdivision of a State or an agency or instrumentality of either, or

"(B) an organization exempt from income tax under section 501(c)(3) or 501(c)(4) of the Internal Revenue Code of 1954.

"(5) The term 'school' means a public or nonprofit institution which—

"(A) provides, and is legally authorized to provide, elementary education or secondary education, or both, on a day or residential basis;

"(B)(i) provides, and is legally authorized to provide, a program of education beyond secondary education, on a day or residential basis;

"(ii) admits as students only persons having a certificate of graduation from a school providing secondary education, or the recognized equivalent of such certificate;

"(iii) is accredited by a nationally recognized accrediting agency or association; and

"(iv) provides an educational program for which it awards a bachelor's degree or higher degree or provides not less than a two-year program which is acceptable for full credit toward such a degree at any institution which meets the requirements of clauses (i), (ii), and (iii) and which provides such a program;

"(C) provides not less than a one-year program of training to prepare students for gainful employment in a recognized occupation and which meets the provisions of clauses (i), (ii), and (iii) of subparagraph (B); or

"(D) is a residential child care institution.

"(6) The term 'school facilities' means buildings housing classrooms, laboratories, dormitories, athletic facilities, or related facilities operated in connection with a school.

"(7) The term 'State' means a State, the District of Columbia, Puerto Rico and, at the discretion of the Administrator, any territory or possession of the United States.

"(8) The term 'State energy agency' means the State agency responsible for developing State energy plans pursuant to section 362 of this Act, or, if no such agency exists, a State agency designated by the Governor of such State to prepare and submit the State plan required under section 394 of this part.

"(9) The term 'State school facilities agency' means an existing agency which is broadly representative of public institutions of higher education, private nonprofit institutions of higher education, public elementary and secondary schools, private nonprofit elementary and secondary schools, public residential child care institutions and private nonprofit residential child care institutions, public vocational educational institutions, private nonprofit vocational institutions, and the interests of handicapped persons, in a State or, if no such agency exists, an agency which is designated by the Governor of such State which conforms to the requirements of this paragraph.

"(10) The term 'State health care facilities agency' means an existing agency which is broadly representative of the public hospitals, the private nonprofit hospitals, public facilities for long-term care, and private nonprofit facilities for long-term care in a State, or, if no such agency exists, an agency designated by the Governor of such State which conforms to the requirements of this paragraph.

"(11) The term 'preliminary energy audit' means any survey of a building that is conducted in accordance with rules issued by the Administrator and—

"(A) identifies the type, size, and energy use level of such building and the major energy using systems of such building;

"(B) determines appropriate energy conservation maintenance and operating procedures, and

"(C) indicates the need, if any, for the acquisition and installation of energy conservation measures,

except that for the purposes of section 393(a)(1), such term shall mean a survey which identifies the type, size, and energy use level of such building and the major energy-using systems of such building.

"(12) The term 'energy conservation project' means an undertaking to acquire and to install one or more energy conservation measures in a building which is a school or health care facility.

"(13) The term 'energy conservation project costs' includes only costs incurred in the design, acquisition, construction, and installation of energy conservation measures.

"(14) The term 'technical assistance program' means a program carried out in accordance with rules issued by the Administrator which provides assistance to schools and health care facilities—

"(A) to conduct specialized studies identifying and specifying energy savings and related cost savings that are likely to be realized as a result of modification of maintenance and operating procedures in a building, or as a result of the acquisition and installation of one or more specified energy conservation measures in such building, or as a result of both, and

"(B) the planning of specific remodeling, renovation, repair, replacement, or insulation projects related to the installation of energy conservation measures in such building.

"(15) The term 'technical assistance program costs' means costs incurred for the use of existing personnel or the temporary employment of other qualified personnel (or both such types of personnel) necessary for a technical assistance program.

"(16) The term 'energy conservation maintenance and operating procedure' means modification or modifications in the maintenance and operations of a building, and any installations therein, which are designed to reduce energy consumption in such building and which require no significant expenditure of funds.

"GRANT AUTHORIZATION

"SEC. 392. (a) The Administrator is authorized to make grants to—

"(1) States to assist in conducting preliminary energy audits pursuant to section 393,

"(2) States, schools, and health care facilities in payment of technical assistance program costs, and

"(3) schools and health care facilities in payment of energy conservation project costs incurred in connection with energy conservation projects.

"(b)(1) Except as provided in paragraph (2), the Federal share of the costs incurred in connection with any preliminary energy audit, any technical assistance program, or any energy conservation project shall not exceed 50 percent thereof and the remainder of the costs shall be provided from sources other than Federal funds.

"(2) Funds available to the Administrator under section 396(a)(3) may be used to pay up to 90 percent of the program or project costs for technical assistance programs or energy conservation projects if the Administrator determines that such programs or projects meet the criteria of a class of severe hardship as such class is determined, by rule, by the Administrator, taking into account climate, fuel costs, or fuel availability, ability to provide the required matching non-Federal funds, and such other factors that he deems appropriate.

"PRELIMINARY ENERGY AUDITS

"SEC. 393. (a) The Administrator shall, by rule, not later than 60 days after the date of enactment of this part—

"(1) prescribe guidelines for the conduct of the preliminary energy audits required for the development of State energy plans, including a description of the type, number, and distribution of preliminary energy audits of schools and health care facilities that will be required to provide a reasonably accurate evaluation of the energy conservation needs of all such facilities in each State,

"(2) prescribe guidelines for the conduct of preliminary energy audits that may be required in determining which schools and health care facilities qualify for grants for technical assistance programs and energy conservation projects under a State plan, and

"(3) prescribe rules governing the allocation among the several States of funds for grants for preliminary energy audits, taking into account the population and climate of such States and such other factors as he may deem appropriate.

In the case of States which, without the use of financial assistance under this part, conduct preliminary energy audits which fulfill the terms of the guidelines issued by the Administrator and which are approved by the Administrator as a part of the State energy plan of such State pursuant to section 394(c), the funds allocated for purposes of this subsection shall be added to the funds available for technical assistance programs or energy conservation projects for such State and shall be in addition to amounts otherwise available under the allocation for such purposes pursuant to paragraph (1) of section 396(a).

"(b) In any case in which a State does not conduct the preliminary energy audits required under subsection (a)(1) of this section within two years after the date of the enactment of this part, the Administrator may conduct such audits within such State.

"STATE PLANS

"SEC. 394. (a) The Administrator shall, by rule, not later than one hundred and twenty days after the date of enactment of this part, prescribe guidelines for the development of State plans for the implementation of technical assistance programs for, and the implementation of energy conservation projects in, schools and health care facilities in such State. The guidelines may be amended from time to time by the Administrator after due notice and shall include—

"(1) a description of the factors to be considered by the State energy agency in determining which technical assistance programs and energy conservation projects will be given priority in making grants pursuant to this part, including such factors as climate, fuel availability and fuel cost, and energy conservation goals,

"(2) a description of the criteria to be used in establishing a State program to identify persons qualified to conduct preliminary energy audits, and carry out technical assistance programs and implement energy conservation projects, and

"(3) a description of the types of energy conservation measures deemed appropriate for each region of the Nation.

"(b) The Administrator shall invite the State energy agency of each State to submit, within one hundred and twenty days after the effective date of the guidelines prescribed pursuant to section 394(a), or such longer period as the Administrator may, for good cause, allow, a proposed State plan under this section for such State. Such plan shall include—

"(1) a statistical survey of schools and health care facilities identifying the type, size, and energy use levels of such buildings and their major energy using systems, and an estimate of the energy savings that may result from the modification of maintenance and operating procedures and installation of energy conservation measures in such facilities,

"(2) a description of the number and type of school and health care facilities in such State that may qualify for financial assistance for technical assistance programs and energy conservation projects under the Administrator's guidelines,

"(3) a description of the energy conservation needs of the schools and health care facilities of such State,

"(4) a recommendation as to the types of technical assistance programs and energy conservation measures considered appropriate for schools and health care facilities in such State, together with an estimate of the costs of carrying out such programs and acquiring and installing such measures in each year for which funds are appropriated,

"(5) a program for identifying persons qualified to conduct preliminary energy audits, carry out technical assistance programs, and install energy conservation projects,

"(6) a description of the policies and procedures to be followed in the allocation of funds among eligible technical assistance programs and energy conservation projects within such State, including recommendations as to how priorities should be established between schools and health care facilities, and among competing proposals taking into account such factors as cost, energy consumption, and energy savings (except that schools in any State shall not be allocated less than 30 percent of the funds for technical assistance programs and for energy conservation projects within such State and health care facilities in any State shall not be allocated less than 30 percent of such funds within such State),

"(7) a description of procedures for assuring that certifications will be obtained from the appropriate State health facilities agency and State school facilities agency, respectively, that the proposed State plan is consistent with existing programs for health and education facilities, respectively, in such State pursuant to subsection (b) of section 395, and

"(8) a statement of the extent to which, and by which methods, such State will encourage utilization of solar space heating, cooling, and electric systems and solar water heating systems where appropriate.

"(c) Each State plan submitted under this section shall be reviewed and approved or disapproved by the Administrator not later than ninety days after receipt by the Administrator. If such plan meets the requirements of subsection (b), the Administrator shall approve the plan. A State energy agency may submit a new or amended plan at any time after the submission of the original plan if the agency obtains the consent of the Administrator.

"(d)(1) If a State plan has not been approved under this section within two years and ninety days after the enactment of this part, or within ninety days after completion of the preliminary audits under section 393(a)(1), whichever is later, the Administrator may take such action as necessary to develop and implemented without regard to subsection (b)(7), such a State plan and to carry out the functions which would otherwise be carried out under this part by the State energy agency, in order that the energy conservation program for schools and health care facilities may be implemented in such State.

"(2) Notwithstanding any other provision contained in this section, a State may, at any time, submit a proposed State plan for such State under this section. Such plan shall be reviewed by the Administrator and approved or disapproved not later than ninety days after receipt by the Administrator. If such plan meets the requirements of subsection (b) and is not inconsistent with any plan developed and implemented by the Administrator under paragraph (1), the Administrator shall approve the plan and withdraw any such plan developed and implemented by the Administrator.

"CONFORMANCE WITH STATE PROGRAMS

"SEC. 395. (a) Applications of States, schools, and health care facilities and State plans pursuant to this part shall be consistent with—

"(1) related State programs for educational facilities in such State, and

"(2) State health plans under sections 1524(c)(2) and 1603 of the Public Health Service Act, and shall be coordinated through the review mechanisms required under section 1523 of the Public Health Service Act and section 1122 of the Social Security Act.

"(b) No application of a State, school, or health care facility under this part shall be approved by the Administrator unless the appropriate State health facilities agency or the State school facilities agency, respectively, for such State shall have certified that it conforms to the requirement of this section.

"ALLOCATION OF FINANCIAL ASSISTANCE

"SEC. 396. (a) The Administrator shall provide grants for carrying out technical assistance programs and energy conservation projects from the sums appropriated for any fiscal year under section 398 (b) and (c) only upon annual application and shall allocate the sums appropriated for that fiscal year in the following manner:

"(1) eighty percent among school and health care facilities in the several States in accordance with a formula to be determined by the Administrator, by rule, taking into account population and climate of each State, and such other factors as the Administrator may deem appropriate;

"(2) ten percent among schools and health care facilities in the several States, as the Administrator shall determine, after taking into account the availability and cost of fuel or other energy used in, and the amount of fuel or other energy consumed by, schools and health facilities in the several States, and such other factors as the Administrator may deem appropriate; and

"(3) ten percent for making grants in excess of fifty percent of program or project costs as authorized by section 392(b).

"(b) Funds allocated to projects and programs in any State for a fiscal year under this section but not obligated or expended in such fiscal year shall be available for reallocation under subsection (a) of this section in any subsequent fiscal year for which an appropriation is made pursuant to this part.

"(c) Notwithstanding any other provision of this section, the total of grants made in any year to schools and health care facilities in any one State under this part shall not exceed 12.5 percent of the total appropriation for such grants in that year.

"(d) The Administrator shall prescribe rules limiting the amount of funds allocated to a State which may be expended for administrative expenses by such State.

"APPLICATIONS

"SEC. 397. (a) Applications of States, schools, and health care facilities for financial assistance under this part shall be made annually, shall be submitted to the Administrator by the State energy agency, and shall contain, or shall be accompanied by, such information as the Administrator may reasonably require.

"(b) Application for technical assistance programs and energy conservation projects shall be accompanied by a listing and description of technical assistance programs and energy conservation projects proposed to be funded within the State during the fiscal year for which such application is made, and such information concerning expected expenditures as the Administrator may, by rule, require.

"(c) The Administrator shall not provide financial assistance to States, schools, or health care facilities for technical assistance programs or energy conservation projects unless the application for a grant for such program or project has been submitted through, and been approved by the appropriate State health care facilities agency or State school facilities agency, respectively, and has been approved by the State energy agency.

"(d) The Administrator shall not provide financial assistance under paragraph (2) or (3) of section 392(a) unless the State has provided reasonable assurances that it has—

"(1) established procedures to assure that all programs and projects conform to the State plan for such State as approved by the Administrator;

"(2) established procedures to assure that funds made available under this part will be expended in compliance with the requirements of this part and with rules promulgated under this part;

"(3) established procedures to insure that funds will be allocated among eligible applicants on the basis of relative need, taking into account such factors as cost, energy consumption, and energy savings;

"(4) established procedures for implementation of energy conserving maintenance and operating procedures in those facilities for which projects and programs are proposed;

"(5) implemented a program to identify persons qualified to conduct audits, to carry out technical assistance programs, and implement energy conservation projects;

"(6) established policies and procedures designed to assure that financial assistance provided under this part will be used to supplement, and not supplant, State, local, or other funds, and, to the extent practicable, to increase the amounts of such funds that would be made available in the absence of Federal funds for carrying out this part;

"(7) established procedures to provide reports to the Administrator in such form and containing such information (including information for evaluation purposes) as the Administrator may reasonably require and to keep such records and furnish access thereto as the Administrator may find necessary to assure the correctness and verification of such reports; and

"(8) established procedures to insure that equitable consideration is given to all eligible public or nonprofit institutions regardless of size and type of ownership.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 398. (a) For the purpose of making grants to States to conduct preliminary energy audits pursuant to sections 392(a)(1) and 393, there is hereby authorized to be appropriated not to exceed $20,000,000 for the fiscal year ending September 30, 1978, and $5,000,000 for the fiscal year ending Septem-

ber 30, 1979, such funds to remain available until expended.

"(b) For the purpose of making technical assistance grants to States, schools, and health care facilities pursuant to section 392(a)(2), there is thereby authorized to be appropriated not to exceed $60,000,000 for the fiscal year ending September 30, 1978, $45,000,000 for the fiscal year ending September 30, 1979, and $20,000,000 for the fiscal year ending September 30, 1980, such funds to remain available until expended.

"(c) For the purpose of making energy conservation project grants to schools and health care facilities pursuant to section 392(a)(3), there is hereby authorized to be appropriated not to exceed $220,000,000 for the fiscal year ending September 30, 1978, $250,000,000 for the fiscal year ending September 30, 1979, and $280,000,000 for the fiscal year ending September 30, 1980, such funds to remain available until expended.

"(d) For the expenses of the Administrator in administering the provisions of this part, there are thereby authorized to be appropriated such sums as may be necessary for each fiscal year in the three consecutive fiscal year periods ending September 30, 1980, such funds to remain available until expended.

"ANNUAL REPORT

"SEC. 399. The Administrator shall, on March 1 of each year, submit to the Congress a detailed report of the actions taken under this part in the preceding calendar year and the actions planned to be taken in the next calendar year. Such report shall show the allocations made (including the allocations made to each State) and include information on the types of conservation measures utilized and not utilized, with funds allocated, and an estimate of the energy savings, if any, achieved.

"ADMINISTRATION

"SEC. 400. The Administrator is authorized to prescribe such rules as may be necessary in order to carry out the provisions of this part.".

"(b) TABLE OF CONTENTS.—The table of contents for such title III is amended by inserting the following at the end thereof:

"Part G—Energy Conservation Program for Schools and Health Care Facilities

"Sec. 391. Definitions.
"Sec. 392. Grant authorization.
"Sec. 393. Preliminary energy audits.
"Sec. 394. State plans.
"Sec. 395. Conformance with State programs.
"Sec. 396. Allocation of financial assistance.
"Sec. 397. Applications.
"Sec. 398. Authorization of appropriations.
"Sec. 399. Annual report.
"Sec. 400. Administration.".

SEC. 303. TECHNICAL AMENDMENTS.

(a) SECTION 1502.—Section 1502 of the Public Health Service Act is amended by adding at the end thereof the following new paragraph:

"(11) The promotion of an effective energy conservation and fuel efficiency program for health service institutions to reduce the rate of growth of demand for energy.".

(b) SECTION 1532(b)(2).—Section 1532(b)(2) of the Public Health Service Act is amended by deleting the period after "made" and inserting in lieu thereof: ", or in the case of non-substantive reviews, provision for a shortened review period.".

(c) SECTION 1532(c).—Section 1532(c) of the Public Health Service Act is amended by deleting the comma in paragraph (9)(A) after "construction" and inserting in lieu thereof: ", including the costs and methods of energy provision," and by adding at the end thereof the following new paragraph:

"(10) The special circumstances of health service institutions and the need for conserving energy.".

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and the line number of the ad hoc committee amendment to part III.

The Clerk read as follows:

Ad hoc committee amendment: Page 146, insert the matter in italics on lines 2 through 5, and on page 169, insert the matter on page 169, line 3 through page 180, line 7.

[The ad hoc committee amendment reads as follows:]

PART III—ENERGY CONSERVATION PROGRAM FOR SCHOOLS AND HEALTH CARE FACILITIES AND BUILDINGS OWNED BY UNITS OF LOCAL GOVERNMENT

Subpart A—Schools and Health Care Facilities

Subpart B—Buildings Owned by Units of Local Government

SEC. 321. STATEMENT OF FINDINGS AND PURPOSES.

(a) FINDINGS.—The Congress finds that—

(1) the Nation's nonrenewable energy resources are being rapidly depleted;

(2) buildings owned by units of local government are major consumers of energy, and such units have been especially burdened by rising energy prices and fuel shortages;

(3) substantial energy conservation can be achieved in buildings owned by units of local government through the implementation of energy conservation maintenance and operating procedures; and

(5) units of local government in many instances need financial assistance in order to make the necessary improvements in buildings owned by them to achieve energy conservation.

(b) PURPOSE.—It is the purpose of this part to authorize grants to States and units of local government to assist in identifying and implementing energy conservation maintenance and operating procedures to reduce the energy use and anticipated energy costs of buildings owned by units of local government.

SEC. 322. AMENDMENT TO THE ENERGY POLICY AND CONSERVATION ACT

(a) AMENDMENT TO TITLE III.—Title III of the Energy Policy and Conservation Act is amended by adding at the end thereof the following new part:

"PART H—ENERGY CONSERVATION PROGRAM FOR BUILDINGS OWNED BY UNITS OF LOCAL GOVERNMENT

"DEFINITIONS

"SEC. 400A. For the purpose of this part—

"(1) The terms 'building', 'health care facility', 'school', 'State energy agency', technical assistance program costs', and 'energy conservation maintenance and operating procedure' have the meanings provided by section 391.

"(2) The term 'unit of local government' means the government of a county, municipality, or township, which is a unit of general government below the State (determined on the basis of the same principles as are used by the Bureau of the Census for general statistical purposes). Such term also means the recognized governing body of an Indian tribe or Alaskan native village which performs substantial governmental functions.

"(3) The term 'building owned by a unit of local government' means any building, other than a building utilized primarily by a school or health care facility, which is owned by one or more units of local government, and which is—

"(A) primarily occupied by the offices or agencies of such unit or units, and which is

"(B) not intended for seasonal use by such offices or agencies.

"(4) The term 'preliminary energy audit' means any survey of a building that is conducted in accordance with rules issued by the Administrator and—

"(A) identifies the type, size, and energy use level of such building and the major energy using systems of such building;

"(B) determines appropriate energy conservation maintenance and operating procedures; and

"(C) indicates the need, if any, for the acquisition and installation of energy conservation measures,

"(5) The term 'technical assistance program' means a program carried out in accordance with rules issued by the Administrator which provides assistance to units of local government—

"(A) in conducting specialized studies identifying and specifying energy savings and related cost savings that are likely to be realized as a result of modification of maintenance and operating procedures in a building,

"(B) in the planning of specific remodeling, renovation, repair, replacement, or insulation projects related to the installation of energy conservation measures in such building, and

"(C) in such other planning as the Administrator may deem appropriate.

"GRANT AUTHORIZATION

"SEC. 400B. (a) The Administrator is authorized to make grants to—

"(1) States and units of local government to assist in conducting preliminary energy audits for buildings owned by units of local government, and

"(2) States and units of local government in payment of technical assistance program costs for technical assistance programs for buildings owned by units of local government.

"(b) The Federal share of the costs incurred in connection with any preliminary energy audit or any technical assistance program, shall not exceed 50 percent thereof and the remainder of the costs shall be provided from sources other than Federal funds.

"PRELIMINARY ENERGY AUDITS

"SEC. 400C. (a) The Administrator shall, by rule, not later than sixty days after the date of enactment of this part—

"(1) prescribe guidelines for the conduct of the preliminary energy audits for buildings owned by units of local government by State energy agencies, including a description of the type, number, and distribution of preliminary energy audits of such buildings that will be required to provide a reasonably accurate evaluation of the energy conservation needs of all such buildings in each State.

"(2) prescribe guidelines for the conduct of preliminary energy audits by State energy agencies or by units of local government, or both, that may be required in determining which buildings of units of local government qualify for grants for technical assistance programs, and

"(3) prescribe rules governing the allocation among the several States of funds for grants for preliminary energy audits for buildings owned by units of local government, taking into account the population and climate of such States and such other factors as he may deem appropriate.

"STATE PLANS

"SEC. 400D. (a) The Administrator shall, by rule, not later than one hundred and twenty days after the date of enactment of this part, prescribe guidelines for the development of State plans for the implementation of technical assistance programs for buildings owned by units of local government in such State. The guidelines may be amended from time to time by the Administrator after due notice and shall include—

"(1) a description of the factors to be considered by the State energy agency in determining which technical assistance programs will be given priority in making grants pursuant to this part, including such factors as climate, fuel availability and fuel cost, and energy conservation goals, and

"(2) a description of the types of energy conservation measures deemed appropriate for each region of the Nation.

"(b) The Administrator shall invite the State energy agency of each State to submit, within one hundred and twenty days after the effective date of the guidelines prescribed pursuant to subsection (a), or such longer period as the Administrator may, for good cause, allow, a proposed State plan under this section for such State. Such plan shall include—

"(1) a description of the energy conservation needs of the buildings owned by units of local government of such State;

"(2) a description of the number and type of buildings owned by units of local government in such State that may qualify for financial assistance for technical assistance programs under the Administrator's guidelines;

"(3) a recommendation as to the types of technical assistance programs considered appropriate for buildings owned by units of local government in such State, together with an estimate of the costs of carrying out such programs;

"(4) a statistical survey of buildings owned by units of local government identifying the type, size, and energy use levels of such buildings and their major energy using systems, and an estimate of the energy savings that may result from the modification of maintenance and operating procedures in such buildings;

"(5) a description of the policies and procedures to be followed in the allocation of funds among eligible technical assistance programs within such State, including recommendations as to how priorities should be established between buildings owned by units of local government, and among competing proposals taking into account such factors as cost, energy consumption, and energy savings; and

"(6) a statement of the extent to which, and by which methods, such State will encourage utilization of solar space heating, cooling, and electric systems and solar water heating systems where appropriate.

"(c) Each State plan submitted under this section shall be reviewed and approved or disapproved by the Administrator not later than ninety days after receipt by the Administrator. If such plan meets the requirements of subsection (b), the Administrator shall approve the plan. A State energy agency may submit a new or amended plan at any time after the submission of the original plan if the agency obtains the consent of the Administrator.

"ALLOCATION OF FINANCIAL ASSISTANCE

"SEC. 400E. (a) The Administrator shall provide grants for carrying out technical assistance programs from the sums appropriated for any fiscal year under this part only upon annual application.

"(b) Funds allocated to programs in any State for a fiscal year under this section but not obligated or expended in such fiscal year shall be available for reallocation under this section in any subsequent fiscal year for which an appropriation is made pursuant to this part.

"(c) Notwithstanding any other provision of this section, the total of grants made in any year in any one State under this part shall not exceed 12.5 percent of the total appropriation for such grants in that year

"(d) The Administrator shall prescribe rules limiting the amount of funds allocated to a State which may be expended for administrative expenses by such State.

"APPLICATIONS

"SEC. 400F. (a) Applications of States and units of local government for financial assistance under this part shall be made annually, shall be submitted to the Administrator by the State energy agency, and shall contain, or shall be accompanied by, such information as the Administrator may reasonably require.

"(b) Applications for technical assistance programs shall be accompanied by a listing and description of technical assistance programs proposed to be funded under this part within the State during the fiscal year for which such application is made, and such information concerning expected expenditures as the Administrator may, by rule, require.

"(c) The Administrator shall not provide financial assistance for technical assistance programs under this part unless the State has provided reasonable assurances that it has—

"(1) established procedures to assure that all programs and projects conform to the State plan for such State as approved by the Administrator;

"(2) established procedures to assure that funds made available under this part will be expended in compliance with the requirements of this part and with rules promulgated under this part;

"(3) established procedures to insure that funds will be allocated among eligible applicants on the basis of relative need, taking into account such factors as cost, energy consumption, and energy savings;

"(4) established policies and procedures designed to assure that financial assistance provided under this part will be used to supplement, and not to supplant, State, local, or other funds, and, to the extent practicable, to increase the amounts of such funds that would be made available in the absence of Federal funds for carrying out this part; and

"(5) established procedures to provide reports to the Administrator in such form and containing such information (including information for evaluation purposes) as the Administrator may reasonably require and to keep such records and furnish access thereto as the Administrator may find necessary to assure the correctness and verification of such reports.

"AUTHORIZATION OF APPROPRIATION

"SEC. 400G. (a) For the purpose of making grants to States or units of local government, or both, to conduct preliminary energy audits under this part there is hereby authorized to be appropriated not to exceed $7,500,000 for the fiscal year ending September 30, 1978, and $7,500,000 for the fiscal year ending September 30, 1979, such funds to remain available until expended.

"(b) For the purpose of making technical assistance grants under this part to States and units of local government, there is hereby authorized to be appropriated not to exceed $25,000,000 for the fiscal year ending September 30, 1978, and $25,000,000 for the fiscal year ending September 30, 1979, such funds to remain available until expended.

"(c) For the expenses of the Administrator in administering the provisions of this part, there are hereby authorized to be appropriated such sums as may be necessary for each fiscal year in the two consecutive fiscal year periods ending September 30, 1979, such funds to remain available until expended.

"ANNUAL REPORT

"SEC. 400H. The Administrator shall, on March 1 of each year, submit to the Congress a detailed report of the actions taken under this part in the preceding calendar year and the actions planned to be taken in the next calendar year. Such report shall show the allocations made (including the allocations made to each State) and include an estimate of the energy savings, if any, achieved.

"ADMINISTRATION

"SEC. 400I. The Administrator is authorized to prescribe such rules as may be necessary in order to carry out the provisions of this part.".

(b) TABLE OF CONTENTS.—The table of contents for such title III is amended by inserting the following at the end thereof:

"Part H—Energy Conservation Program for Buildings Owned by Units of Local Government
"Sec. 400A. Definitions.
"Sec. 400B. Grant authorization.
"Sec. 400C. Preliminary energy audits.
"Sec. 400D. State plans.
"Sec. 400E. Allocation of financial assistance.
"Sec. 400F. Applications.
"Sec. 400G. Authorization of appropriations.
"Sec. 400H. Annual report.
"Sec. 400I. Administration.".

Mr. ASHLEY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the purpose of this amendment is to authorize grants to States and units of local government to develop an accurate statistical evaluation of the energy conservation needs of buildings owned by units of local government. The amendment would assist in identifying and implementing energy conservation and maintenance and operative procedures to reduce the energy use and anticipated energy costs of such buildings. Under the amendment the Administrator is authorized to make grants to States and to units of local government, first of all, to conduct preliminary energy audits for buildings owned by units of local government; and, second, to pay for technical assistance program costs for these buildings.

In fiscal years 1978 and 1979, $7.5 million in each year is authorized to conduct preliminary energy audits, and $25 million in each year for technical assistance grants, for a total authorization of $65 million for this program.

Mr. Chairman, the gentlewoman from Maryland (Ms. MIKULSKI) is really to be congratulated for evolving this amendment in concert with the district that she represents and other units of local government who have made a strong case for this kind of assistance so that they, too, can contribute meaningfully in the effort to conserve energy.

At this time, Mr. Chairman, I would be pleased to yield to the gentlewoman from Maryland (Ms. MIKULSKI).

Ms. MIKULSKI. Mr. Chairman, I would like to thank the chairman and the ad hoc committee for his crisp and cogent description of what this amendment does. In effect what it does is provide $65 million over a 2-year period to local governments to be able to do their own energy audits, to figure out what their energy needs are in order to be able to conserve energy, and to provide technical assistance so that they may understand the methodology by doing so.

Mr. Chairman, I would like to amplify the need for this amendment. Most of us come from local government, home towns, whether these are big cities or small towns. The function of a local government is really to provide service. I think when we think about our town or our home town, we think of the library

on the corner or the firehouse that is so familiar to us. One of the problems that we look at in this energy package is that there has been very little attention paid to to the impact that this energy package will have on the cost of running a local government.

Mr. Chairman, before I proceed, I would like to bring to the attention of the House that the House is not in order, and I would like it to be so while I am addressing it.

The CHAIRMAN. The gentlewoman will suspend.

The House will be in order.

Ms. MIKULSKI. As a result of this energy package, the cost of energy will rise, and local governments, be they small towns or big cities, are faced with either charters or constitutions that mandate that they have a balanced budget. As the cost of running the government increases, they will be faced with either the problem of raising taxes or cutting services.

A third alternative would be to give them the resources/technical recommendation and other tools by which they could conserve energy, thereby saving money and thus being able to maintain their level of services.

I have found that in consultation with local government officials they would do so if they had the resources to do the energy audits and perform this technical assistance. Therefore, what my amendment will do is give the opportunity for a small town or a big city to take a look at its buildings to see what it needs to do to conserve energy in those buildings, and to have the resource and the advice, both managerially and architecturally to conserve energy. There is a will to do this if we provide them with the financial assistance to do so.

This amendment has the support of the League of Cities, the National Association of Counties, and so on. Therefore, I would urge the adoption of this amendment because it will, No. 1, help local communities to maintain their level of service with energy costs, and also accomplish the major objective of national energy conservation.

Mr. ANDERSON of Illinois. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, when this amendment was offered in the ad hoc committee by the distinguished gentlewoman from Maryland (Ms. MIKULSKI) I think it was generally recognized that it was appropriate in view of the fact that there are provisions in the legislation dealing with Federal buildings and Federal installations, and that it was appropriate that we make some provision to enable State and local governments to conduct the kinds of energy audits and to institute the kinds of energy conservation programs that are contemplated under the technical assistance grants that would be provided for in the amendment.

It is not a large program, as the gentlewoman from Maryland has indicated. I think a total of $65 million is involved over the next 2 fiscal years, and yet it could be a very vital and important program in contributing to the goals of this bill insofar as they relate to the conservation of energy. And even though the minority has some very distinct and substantial differences with the majority on some parts of the bill, we certainly subscribe to the overall goals of conservation as they are enunciated in the bill, and therefore we support the amendment offered by the gentlewoman from Maryland.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I thank the gentleman for yielding.

I would like to support the amendment. I think $65 million is a lot of money. I hope the Administrator will not spend it if he does not have to, because there are many known ways to save. Stevens Institute of Technology has a special energy task force to show what hospitals can do to conserve; one school saved $125,000 of a $60,000 energy bill. We know how to do it. People know how. The Prudential Insurance Co. has put up one building which saved, by recirculating air and an other ways, enough energy to heat 30 homes over the whole winter.

These plans exist. We do not need enormous studies and long delays. What the administration should do is call in the Governors of every State, and ask them what is being done in each State and tell them what can be done. We do not need to study. We need to save energy next winter.

Mr. KAZEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, how is this money going to be distributed to these thousands of governmental units?

Mr. ANDERSON of Illinois. If the gentleman will refer to the report on the legislation and more specifically to page 40 of that report, he will find under the terms of that authorization that the Administrator is required to provide grants for carrying out technical assistance programs. The total of grants made in any year in any one State shall not exceed 12.5 percent of the total appropriated for such grants in that year. State energy agencies must submit applications of States and units of local government annually. So it will be incumbent on those who desire assistance under these programs to make applications for grants to the Federal Administrator, and then, subject to the limitation that not more than 12.5 percent of the total amount authorized goes to any one State, those grants will be acted on.

Mr. KAZEN. Does the gentleman think that this amount of money will be adequate for all the cities that wish to participate in this program?

Mr. ANDERSON of Illinois. We have just heard an expression from the gentlewoman from New Jersey that this is a lot of money. There are others who perhaps, given the fact that we have literally thousands and thousands of local governmental units across the country, think that perhaps it will not be enough. I assume only time will tell.

Ms. MIKULSKI. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentlewoman from Maryland, the author of the amendment.

Ms. MIKULSKI. Mr. Chairman, there are approximately 110,000 buildings that would be affected by this and they could very well provide $100 per building to do such a study. Also, the allocation would be based on population and climate, and so it will be done as fairly and equitably as possible.

Another thing is, it is voluntary. There is nothing mandatory to make a local government apply for these resources if they do not need them.

AMENDMENT OFFERED BY MR. FORD OF MICHIGAN TO THE AD HOC COMMITTEE AMENDMENT

Mr. FORD of Michigan. Mr. Chairman, I offer an amendment to the ad hoc committee amendment.

The Clerk read as follows:

Amendment offered by Mr. FORD of Michigan to the ad hoc committee amendment: At the end of the committee amendment on page 180, insert the following new section:

"SEC. 5. Application of Davis-Bacon Act.

"The Federal employee or officer primarily responsible for administering any program established under any provision of, or amendment made by, title I of this Act which provides for Federal funding shall take such steps as are necessary to insure that all laborers and mechanics employed by contractors or subcontractors in the performance of work on any construction utilizing such funds will be paid at rates not less than those prevailing on similar construction in the locality, as determined by the Secretary of Labor in accordance with the Act of March 3, 1931 (40 U.S.C. 276a–276a–5, known as the Davis-Bacon Act); and the Secretary of Labor shall have with respect to the labor standards specified in this section the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 5 U.S.C. Appendix) and section 2 of the Act of June 13, 1934 (40 U.S.C. 276c)."

Mr. STEIGER. Mr. Chairman, did we adopt the ad hoc amendment which is known as the Mikulski amendment?

The CHAIRMAN. This is an amendment to the ad hoc amendment, the Chair will advise the gentleman.

PARLIAMENTARY INQUIRY

Mr. ANDERSON of Illinois. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ANDERSON of Illinois. Mr. Chairman, it was my understanding under the rule previously adopted that we would proceed to a consideration of all 23 of the amendments adopted in the ad hoc committee and that any other amendments would be subsequent to that.

Can the Chair enlighten us as to what the procedure will be?

The CHAIRMAN. We are only treating the ad hoc committee amendments to the pending part of the bill under the rule, which makes the amendment of the gentleman from Michigan (Mr. FORD) in order to the pending committee amendment.

PARLIAMENTARY INQUIRY

Mr. OTTINGER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. OTTINGER. Mr. Chairman, is the gentleman's amendment an amendment to the Mikulski amendment or an amendment to the committee amendment?

The CHAIRMAN. The gentleman's amendment is an amendment to the committee amendment, the so-called Mikulski amendment.

Mr. OTTINGER. Is that in order?

The CHAIRMAN. That amendment is in order under the rule.

Mr. OTTINGER. To the Mikulski amendment?

The CHAIRMAN. The gentleman from Michigan offered an amendment to the committee amendment, the ad hoc committee amendment. That amendment is the so-called Mikulski amendment and the amendment of the gentleman from Michigan is in order under the rule.

PARLIAMENTARY INQUIRY

Mr. BROWN of Ohio. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BROWN of Ohio. Mr. Chairman, I was under the impression that the order in which we would proceed was that all the ad hoc committee amendments would first be voted on before any other amendments to that part would be undertaken.

Now, is that understanding in error?

The CHAIRMAN. The gentleman is correct, except as specified in the rule, and this amendment is an exception to the statement that the gentleman from Ohio is making.

Mr. BROWN of Ohio. Mr. Chairman, it is then specifically outlined in the rule that the Ford amendment is an amendment to the Mikulski amendment, or is an amendment to this part of the bill?

The CHAIRMAN. It is an amendment to the ad hoc committee amendment, which in reality is the Mikulski amendment.

Mr. BROWN of Ohio. And the ad hoc committee amendment is to what?

The CHAIRMAN. The ad hoc committee amendment begins on page 169 to page 180.

Mr. BROWN of Ohio. Is this amendment then an amendment to all of the part addressed by the ad hoc committee amendment? That is what I am trying to inquire.

The CHAIRMAN. The Ford amendment adds a new section at the end of the ad hoc committee amendment on page 180.

Mr. BROWN of Ohio. Mr. Chairman, could the Chair perhaps with specificity indicate to me what the Ford amendment, if adopted, will amend; what language will it amend? Will it amend the language currently in the bill and in the Mikulski amendment or will it amend the Mikulski amendment only and that, if adopted, will amend the bill?

The CHAIRMAN. The Chairman cannot construe the effect of the amendment. The Chair can only indicate where the amendment comes and the amendment comes at the end of the committee amendment, adding a new section to the ad hoc committee amendment.

Mr. BROWN of Ohio. I thank the Chair.

PARLIAMENTARY INQUIRY

Mr. OTTINGER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. OTTINGER. Mr. Chairman, would it be in order to ask unanimous consent that the Ford amendment be considered separately, since it has nothing to do with the Mikulski amendment?

The CHAIRMAN. The Chair will state to the gentleman from New York that the Ford amendment is in order only under the rule and the rule cannot be changed.

Mr. OTTINGER. And it cannot be changed by unanimous consent?

The CHAIRMAN. The Committee of the Whole cannot directly change House Resolution 727, the special rule adopted by the House, even by unanimous consent.

The gentleman from Michigan (Mr. FORD) is recognized for 5 minutes.

Mr. FORD of Michigan. Mr. Chairman, the amendment that I propose is at page 3 of the Rules Committee print relating to amendments on H.R. 8444, dated August 1, 1977. I would say to those who seem somehow distressed by having this amendment introduced at this time that it was not my choice to get it mixed up with any other issue. It is absolutely necessary that I offer it at this time because of the way in which the rule from the Rules Committee is written, and it is my understanding from the Parliamentarian that it is now or never.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I will if the gentleman will leave me some time.

Mr. BROWN of Ohio. I would be delighted to, and would be delighted to ask for additional time for the gentleman.

I am merely trying to understand the impact of the amendment offered by the gentleman in the well.

Mr. FORD of Michigan. I would hope to explain that to the gentleman if I ever get a chance.

Mr. BROWN of Ohio. Is the amendment to all of title I?

Mr. FORD of Michigan. The amendment is intended primarily to reach the programs of part III of title I, which is the schools and hospitals and public buildings.

Mr. BROWN of Ohio. I thank the gentleman.

Mr. FORD of Michigan. The reason for the amendment is that, while this particular section of the bill was considered by other committees, it was not referred to the Committee on Education and Labor, which has general jurisdiction over the Davis-Bacon Act, and the application of the Davis-Bacon Act. For that reason, we discovered after the committee had acted that the committee had overlooked what would normally, in this type of legislation, be boilerplate-type language applying the provisions of the Davis-Bacon Act to the construction contracts financed with Federal funds under this legislation.

Now, as a matter of fact, in the other body they have enacted this part of the legislation as a separate piece of legislation, S. 701, the Education and Health Care Facilities Energy Efficiency Act of 1977, having the same or similar language to that which is in the committee bill with respect to education and health care facilities; that bill having been passed by the Senate, is now at the Speaker's desk and it is not subject to amendment at this point.

There is some suggestion that the way in which this amendment now offered by me is worded may cause some people concern, because it is too broad in its application. The language of the amendment is only confusing when we try to relate it to the several pieces of legislation that were brought together, and if we bear in mind that it is not the intent of this amendment to affect such things as the weatherization grant program for low income families in title I, part I, subparagraph B, and furthermore it should not affect those provisions. We do not want it to affect those provisions.

It must be borne in mind that these grants are not reached by Davis-Bacon even if we tried to reach them without amending the act itself, because they are limited to no more than $800, and no contract is reached by Davis-Bacon until it gets to $2,000. So, contracts under $2,000 not being covered, certainly grants under $800 would not be covered.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. FORD of Michigan. I yield.

Mr. STEIGER. I appreciate the gentleman yielding to me. This gets to one of the concerns that I think the committee has to have. The language of the gentleman's amendment is, as I understand it, that, "for administering any program established under any provision of or amendment made by title I of this Act."

Mr. FORD of Michigan. If the gentleman will let me retain my time, I can, with the legislative history, clear up the problem. If I do not get a chance to do it, it will stay a problem.

It is clear, and as the author of the amendment, I am indicating that there is no way Davis-Bacon could reach the section of the bill that the gentleman and members of the staff of the Banking and Currency Committee have expressed a concern over, because Davis-Bacon is never triggered for a contract less than $2,000, and there are no Federal grants over $800 in the section we are talking about.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(On request of Mr. STEIGER and by unanimous consent Mr. FORD of Michigan was allowed to proceed for 4 additional minutes.)

Mr. STEIGER. Mr. Chairman, will my colleague yield?

Mr. FORD of Michigan. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Let me ask, under the weatherization program, for example, if we have a grant made under that program to the Community Action Agency that covers Fond du Lac and Winnebago Counties, of $100,000, would that then fall under the $2,000, or fall over—however one says that—that $2,000 limit of Davis-Bacon?

Mr. FORD of Michigan. It is not my understanding that we can accumulate the grants and then substitute a different grantee for the grant.

Is it the gentleman's understanding that we can take this language, which merely says no grant shall be in excess of $800, and just count X number of people and give it all to one grantee?

Mr. STEIGER. That is my understanding. And we have the banking people here.

Mr. FORD of Michigan. It is not my understanding of how the program would work. There are individual grants to individual situations, ranging from $200 to $800, and I would expect that the gentleman's problem would not arise for that reason.

Mr. STEIGER. I thank the gentleman for yielding and for our colloquy.

Mr. FORD of Michigan. Further, it is not our intention to interfere with low interest loans for low or moderate income families for energy conservation improvements contained in title I, part I, subpart C. Therefore, even if this amendment at first appears to be overly broad and there is misunderstanding, that is easy for me to understand when people look at it for the first time. We need to adopt it as a part of H.R. 8444 at this time to assure that the provisions of the Davis-Bacon Act will apply to the appropriate projects. We can adopt it with the understanding that the questions, if any that exist in the minds of people who see conflicts with other provisions of title I, can be narrowed down or corrected in conference.

In fact, as we look at it now, we could have changed two words in the way the introductory language of this amendment was written and there would be no question in anybody's mind. It is a question of the semantic approach of people who are familiar with dealing with Davis-Bacon language and people who are not familiar with dealing with it and coming at it from two different directions. One reaches out and feels a horse and one reaches out and feels a cow. They are both wrong. It is quite something else again.

Mr. BROWN of Michigan. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have several problems with the amendment. I first have the problem which I believe was discussed earlier, and that is that the amendment is to the Mikulski amendment, and the Mikulski amendment does not in any way involve construction, as I understand it. The Mikulski amendment provides for Federal grants for technical assistance and planning. So, therefore, Davis-Bacon would have no application, because I do not think the gentleman from Michigan (Mr. FORD) would contend that Davis-Bacon applies to technical assistance and planning. That is the first problem.

The second problem the gentleman from Michigan (Mr. FORD) has attempted to address, and that is what is the full scope and what are the ramifications of the amendment. This amendment is very broadly written and covers any program established under title I which would be utilizing Federal funding for construction.

I would like to direct several questions to the sponsor of the amendment and the chairman of the ad hoc committee.

First, what is meant by new programs established under title I? Does this include programs which are revised and can be considered to be new programs by the provisions of title I, or only totally new programs not in existence prior to the enactment?

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Michigan. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. Mr. Chairman, the gentleman from Michigan (Mr. BROWN) is an old and dear friend. He knows the high regard I have for him, after many years serving in legislative bodies. However, in light of what I have just heard, I would have to say that today he reminds me of the gentleman standing on the corner clapping his hands trying to keep the elephants away.

If we read the instructions on which we have to determine the applications of the Davis-Bacon Act, can we find any section or any part of title I that is in fact reached by Davis-Bacon except the construction of schools, hospitals, and public buildings?

Mr. BROWN of Michigan. Yes, we can.

Mr. FORD of Michigan. The answer to that is no.

Now, if it makes us more comfortable to have the language narrowed down so we do not have to go by the process of elimination in reading the Davis-Bacon Act limitations, that can be done in the conference, but that will not have a legal effect on my amendment. It will simply make it easier for some people who do not now understand the act to understand it.

Mr. BROWN of Michigan. Mr. Chairman, I beg to differ with the gentleman.

There are programs in part I that would possibly come under Davis-Bacon. There are multifamily units where we have a new program as part of the solar energy program for FHA mortgages which significantly extends the maximum amount of mortgages available under FHA. That is a new program, and it is established under part I in accordance with the gentleman's exact language.

Mr. FORD of Michigan. Mr. Chairman, if the gentleman will allow me to continue, I can explain this.

Mr. BROWN of Michigan. Mr. Chairman, I will not yield now. I will yield to the gentleman at an appropriate time.

There are other programs that are in excess of $2,000. For instance, the 90-percent median income subsidized loan program authorizes loans up to $2,200 or above. So there are those new programs.

If the gentleman is willing to say that his amendment applies only to schools and hospitals that otherwise would be covered by Davis-Bacon, I will accept that.

This now exempts municipally owned installations in many cases where work is done by municipal employees who are on a salary basis. For example, work done in-house on municipal buildings under the community development block grant program, are not covered by Davis-Bacon. Yet, similar work done under a public works grant from EDA would be covered. If the gentleman will limit it only to those structures that were heretofore covered by Davis-Bacon, then we can eliminate the necessity for this colloquy.

Mr. FORD of Michigan. Mr. Chairman, if the gentleman will yield, I thought I had made it clear. The intention of the amendment is to apply basically to part III of title I, which covers educational institutions and health care institutions, and I am perfectly in agreement with saying it the way the gentleman wants me to say it. In fact, that is what I thought I had been saying all along. That is all I intend to cover, and, in fact, if the Members will read the amendment carefully, they will find that is all we do cover in the amendment.

Davis-Bacon does not cover Federal loans to anyone; it only covers Federal grants. It is the expenditure of Federal money for construction that is reduced by Davis-Bacon, not the expenditure of money that is loaned to someone else.

Mr. BROWN of Michigan. Mr. Chairman, I thank the gentleman for his explanation.

Would the gentleman, then, give me a yes or no answer to the question I asked? And that is, does he intend to expand the coverage of Davis-Bacon under this law to any projects, the construction or retrofitting of which was not covered by Davis-Bacon in the past?

Mr. FORD of Michigan. I do not know whether I can say that or not.

Mr. BROWN of Michigan. I thought that is what the gentleman had been saying before.

Mr. FORD of Michigan. I am talking about categories of structures. The category of structure reached by this legislation under part III of title I is what we are trying to reach.

Now, if the gentleman characterizes that as something he recognizes as structures previously reached by Davis-Bacon and we limit it to his understanding of Davis-Bacon, I will agree to that and say, "Yes." But I want the legislative history to indicate that that limitation goes on my "Yes" answer.

The CHAIRMAN pro tempore (Mr. EVANS of Colorado). The time of the gentleman from Michigan (Mr. BROWN) has expired.

(By unanimous consent, Mr. BROWN of Michigan was allowed to proceed for 1 additional minute.)

Mr. BROWN of Michigan. Mr. Chairman, I thought the purpose of the gentleman's discussion in the well in explaining his amendment was to limit it and assure us that he was not attempting to expand Davis-Bacon. If he is going to say he is attempting to expand Davis-Bacon, I have a problem. If he is limiting it to the present coverage of Davis-Bacon, then I have no problem.

Do I get a yes or no answer to my question? Does the gentleman wish to respond with an answer, preferably yes or no?

Mr. FORD of Michigan. Mr. Chairman, if the gentleman will assist me, as I know he is trying to assist me, I would be very happy to ask unanimous consent to add, before the words, "title I," on line 17, the words, "part III of."

In that way we can say legislatively what the gentleman is asking me to say. That is the way I believe it reads, with or without the added language.

Mr. BROWN of Michigan. Mr. Chairman, it is my understanding that the Chair has ruled that even by unanimous consent the gentleman could not amend his amendment. All I am trying to do in this colloquy is establish the legislative understanding.

Mr. FORD of Michigan. I do not understand that there would be a ruling that by unanimous consent I cannot modify my amendment.

The CHAIRMAN pro tempore (Mr. EVANS of Colorado). The Chair will state that the Chair merely stated that the rule cannot be amended by unanimous consent. The Chair did not state that the amendment could not be amended by unanimous consent.

Mr. FORD of Michigan. Then, Mr. Chairman, to meet the objection raised by the gentleman from Michigan (Mr. BROWN), I ask unanimous consent that in the first sentence of my amendment, after the word, "by," I be allowed to insert the words, "part III of", before the words, "title I".

We would leave the comma there and insert "part III of," so it is clear we are only talking about applying the amendment to part III of title I, which is that section dealing with schools and hospitals.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Michigan?

Mr. BAUMAN. Reserving the right to object, Mr. Chairman, I wonder whether either of the gentlemen from Michigan could restate their understanding of what the position will be if this amendment is adopted.

Mr. BROWN of Michigan. If the gentleman will yield, Mr. Chairman, very frankly, I do not pretend to be the expert on Davis-Bacon, as the gentleman from Michigan (Mr. FORD) presumes to be.

It seems to me that it would be rather simple to just agree—and if we leave the statutory language in, fine—that the gentleman does not intend that Davis-Bacon apply to projects or construction other than those projects or construction that are presently covered. It seems to me that if we agree to that, we have no problem; and I do not think the amendment to the language necessarily changes that matter.

Mr. BAUMAN. Mr. Chairman, I thank the gentleman, and I withdraw my reservation of objection.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HAGEDORN. Mr. Chairman, I move to strike the requisite number of words.

First, Mr. Chairman, if I could have the attention of the author of the amendment, the gentleman from Michigan (Mr. FORD), I want to ask him this question: Would this amendment apply only to hospitals or schools now, as just indicated, or would any municipal building which receives a grant in excess of $2,000 have to comply with the Davis-Bacon standards?

Mr. FORD of Michigan. If the gentleman will yield, Mr. Chairman, the effect of the language makes it very clear that the amendment would now apply to grants under part III on page 146 of the bill, energy conservation program for schools and health care facilities and buildings owned by units of local government.

Mr. HAGEDORN. Mr. Chairman, I rise in opposition to the amendment by the gentleman from Michigan (Mr. FORD). In presenting his energy plan to Congress earlier this year, President Carter stated that "fairness has to be one of its fundamental principles." He declared that "Our solutions must ask equal sacrifice from every region, every class of people, every interest group."

This amendment is certainly not the most important one that will be considered by this body during this week. The future course of energy policy in this country will not rest on its resolution. It is symbolic, however, of the same old brand of special interest politics that must be avoided, above all, on a bill of this magnitude.

The Davis-Bacon Act is an archaic and proto-typical example of special interest legislation. It subsidizes a select group of individuals, already earning incomes far above the average, at the expense of both the taxpayer, and of the intended recipient of public expenditures. According to estimates by the General Accounting Office, the Davis-Bacon Act increases labor costs on public construction projects by at least 5 to 15 percent.

This means, quite simply, that passage of the gentleman's amendment will insure that States, local communities, schools, day-care centers, and health care facilities all receive less funds with which to apply to energy conservation. Fewer funds will, effectively, be available for weatherization purposes, and less money will be devoted to the construction of small hydroelectric projects. Based upon GAO estimates, the total cost of this amendment to the taxpayer, and the total amount by which it will detract from energy conservation efforts will be as much as $100 million.

Mr. Chairman, if we are going to indulge in special interest games on this bill, probably the most important one that will be before this Congress, we are going to undermine any principles of "fairness" that purport to lie behind it insure that energy policy determinations become nothing more than simple power politics. I urge that this amendment be defeated.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. HAGEDORN. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, I would like to associate myself with the remarks of the gentleman from Minnesota (Mr. HAGEDORN), in opposition to the amendment.

Mr. Chairman, I rise in opposition to the pending amendment which would subject programs set up pursuant to title I of this bill to the Davis-Bacon Act and would like to associate myself with the remarks of my colleague from Minnesota (Mr. HAGEDORN).

A number of worthwhile energy conservation programs are contained within this title. Installation of insulation, as well as structural changes to reduce the loss of heat and waste of energy, will cost money. All that the pending amendment does is insure that such construction projects will cost from 10 to 15 percent more. In other words, to stop the waste of energy we would, by adopting this amendment, legislatively mandate the waste of money.

The Davis-Bacon Act as amended has cost the American taxpayer untold billions of dollars since it was first enacted ir. 1931. The way that this comes about is that Davis-Bacon requires that contractors adhere to wage scales which the Department of Labor has, in its ultimate wisdom, determined are prevailing in the areas in which the work in question is being performed. Suffice it to say that the evidence suggests that the Department's determinations are, more often than not, on the high side. Many times there is little if any correlation with reality. One reason for this is that the Department of Labor has adopted as its yardstick the union wage scale of the closest large city to the project. This could be 50 or even 100 miles.

Let us not clutter up this legislation with language such as that before us now. We ought to consider this whole matter at a later time when we could carefully examine the workings and effect of the Davis-Bacon Act over the past 46 years.

In summary I would urge my colleagues not to make a bill, with a price tag already considered too high by many, even more expensive. Commonsense, not to mention the facts and evidence at hand, mandate a "no" vote on the amendment.

Mr. ECKHARDT. Mr. Chairman, I move to strike the last word and I rise in favor of the ad hoc amendment and in favor of the amendment to the ad hoc amendment offered by the gentleman from Michigan (Mr. FORD). I think it is an improvement on that very good amendment that the gentlewoman from Maryland (Ms. MIKULSKI), has introduced and had adopted in the ad hoc committee. I am further authorized to say for the chairman of the subcommittee of the Committee on Interstate and Foreign Commerce that handled this portion of the bill that he too is in favor of both the Mikulski amendment, that is the ad hoc amendment, and the Ford of Michigan amendment thereto.

Mr. QUIE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, as I understand the explanation of the amendment given by the gentleman from Michigan (Mr. FORD) is would apply only to the hospitals and schools and municipal and

public buildings that are now covered under the Davis-Bacon Act.

In the Committee on Education and Labor, on which both of us serve, a number of times we have included Davis-Bacon coverage under legislation in which normally the construction would not have been covered. I mention specifically the construction of buildings under loans in colleges and universities, income producing buildings, as an example, that comes out of another committee, and there we specifically said that the Davis-Bacon Act would apply.

But after reading the amendment it would not automatically include the buildings which, under law, we included under the Davis-Bacon Act but only the buildings which the act of March 3, 1931, that he specifies it would relate to.

I yield to the gentleman from Michigan to see if my understanding is correct.

Mr. FORD of Michigan. Mr. Chairman, that would be my understanding. Frankly I think that, as I indicated to the gentleman from Minnesota (Mr. QUIE) in private conversation we should consider the possibility of amending the Davis-Bacon Act to take care of, on an automatic basis, the kind of situation we have here now so that we do not have to rewrite and reenact and reenact an act that has been on the books since 1931.

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Chairman, could I ask the gentleman from Michigan, through the gentleman from Minnesota, whether this amendment is necessary at all in the way it has been limited?

Mr. FORD of Michigan. Mr. Chairman, if the gentleman will yield, I believe it is. I think the one thing we all agree on is that this type of grant, because of the practice that has grown up over the years of applying it piecemeal, it might apply to some, as a matter of fact, of the projects but probably not and it invites a legal question without amendment.

Mr. STEIGER. May I also ask a question of the author of the amendment, it says, on line 21 that:

> . . . on any construction utilizing such funds will be paid at rates not less than those prevailing on similar construction in the locality, as determined by the Secretary of Labor in accordance with the Act of March 3, 1931 . . .

Do I misread something? If you say it that way rather than "will be paid pursuant to Davis-Bacon" are you excluding the exemptions in Davis-Bacon?

Mr. FORD of Michigan. I do not understand the gentleman's question.

Mr. STEIGER. In using Davis-Bacon if it is less than $2,000, Davis-Bacon is not applicable. When you say it the way that you read it, do you mean to say it in a way that means there are no exclusions as there are presently with Davis-Bacon?

Mr. FORD of Michigan. No, I did not.

Mr. QUIE. That is what I understood the gentleman to say earlier that all the exclusions would still apply and your amendment would apply only to part III in title I. I do not see why there should be any objection to this because if there was any other application of Federal moneys for grants for municipal buildings, schools, and hospitals the Davis-Bacon Act would undoubtedly apply.

Mr. ANDERSON of Illinois. Mr. Chairman, I move to strike the requisite number of words.

I wonder if the gentleman from Michigan (Mr. FORD), the author of the amendment, would be willing to answer a question that has occurred to me. I would just like to propound a question to the gentleman from Michigan (Mr. FORD). I can understand the gentleman's concern and belief that Davis-Bacon ought to apply to the schools and health care facilities program that is outlined in subpart A of part III of title I of the bill, because in reading the definitions in section 391, it clearly covers a great many items that deal with actual construction. And I will not go on to list all of the items that are specifically set forth in that section on pages 147, 148, and 149. But then I go from that particular part of the bill, subpart A of part III, to the amendment offered by the gentlewoman from Maryland (Ms. MIKULSKI) which deals with energy conservation programs for buildings owned by units of local government.

As I understand the amendment, and, of course, I support and spoke in favor of it, it deals with technical assistance programs, and they are further defined in subparagraph (A) of paragraph 5 on page 171 of the bill, (A) in conducting specialized studies, or (B) in the planning of specific remodeling, renovation, repair, replacement, or insulation projects, or (C) in such other planning as the administrator may deem appropriate.

My question, then, is are there any other instances where the Congress has applied the provisions of Davis-Bacon to technical assistance programs that do not contemplate or embrace actual construction activity but as these definitions clearly indicate, merely the conduct of studies and planning activities?

Mr. FORD of Michigan. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Michigan.

Mr. FORD of Michigan. I thank the gentleman for yielding.

I do not have the act in front of me. My recollection of the definition of the kind of work includes not only construction but renovation, including painting and decorating. Frankly, I do not know about planning expenditures not part of the total cost of doing something. If, included in the contract for doing construction on the project was also the architectural work and planning, and so on, obviously that is a part of the total.

Mr. ANDERSON of Illinois. But it seems to me, as I understand the Mikulski amendment, that what it contemplates are technical assistance programs and planning that may be done by employees pursuant to guidelines laid down by the administrator not actually a part of the overall construction project that actually calls for renovation, repainting, reconstruction, or anything of that kind. My difficulty in understanding the application of the gentleman's amendment to this particular amendment is does it represent a broadening with Davis-Bacon into something that has not heretofore been covered by that act?

Mr. FORD of Michigan. If the gentleman will yield further, yes. I would not expect it to expand Davis-Bacon. I might call to the gentleman's attention the language on line 21 of my amendment on page 3, which says starting on line 20:

"In the performance of work on any construction utilizing such funds," which would narrow it even further than the gentleman has suggested.

Mr. ANDERSON of Illinois. I thank the gentleman for what seems to be the assurance that we are not expanding the definition of that.

Mr. CRANE. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Illinois.

Mr. CRANE. Mr. Chairman, in a way I am glad the distinguished gentleman from Michigan (Mr. FORD) has offered this amendment, although I doubt he will appreciate my views on the subject. On the one hand, he would have us expand the scope of this legislation while, on the other hand, I see this as an opportunity to explore the question of whether or not the scope of the Davis-Bacon Act is too broad already.

Mr. Chairman, if the gentleman's amendment were to be adopted not only would five new categories of projects be covered, but it would seem that, for the first time, we would be extending coverage to individual entrepreneurs, such as farmers. Perhaps this is an inaccurate interpretation, and if so clarification would be appreciated, but when coverage is extended to FEA low-income weatherization grants and farmers home rural weatherization grants, it would certainly appear that such is the case.

If that were not enough, this amendment will also apply to small hydroelectric power projects, to energy construction grants to States, schools and health care facilities and, depending on the eventual outcome of the related ad hoc committee amendment, to grants to local governments for conserving energy in buildings they own. The total cost of all these projects, which would be covered by Davis-Bacon if this amendment were to pass, comes to roughly $1.6 billion.

Based on the 1971 estimate by the General Accounting Office to the effect that Davis-Bacon increases construction costs on federally assisted projects by 5 to 15 percent, it can be surmised that the cost of this amendment—to the American taxpayer—will come to somewhere between $80 million and $240 million. More ironic yet, these costs will act as a disincentive to the very same energy conservation ethic that the rest of this bill purports to encourage.

Beyond that, there is a definite constitutional question involved here. And that is, does the Federal Government have the right to dictate to the States what wage rates they should have to pay on projects affecting their schools and health care facilities? In National League of Cities against Usery, the Supreme Court ruled that it was a violation of the 10th amendment for the Federal Government to dictate wages and working conditions

to State and local employees via the Fair Labor Stadards Act. If that be the case, the same legal logic should apply to people working on these energy projects for State and local government—the Davis-Bacon Act notwithstanding.

I could go on but I think the key point here is not only is this amendment counterproductive in terms of cost and the ultimate objective but, for many of the same reasons, the Davis-Bacon Act is equally counterproductive when applied in other instances. If anything, what we ought to be considering today is eliminating the applicability of Davis-Bacon to other parts of this bill, not expanding it, and at the very least we ought to commit ourselves, here and now, to a full review of Davis-Bacon in the near future.

Mr. Chairman, I urge the defeat of this amendment and urge my colleagues to call for hearings on Davis-Bacon at the earliest possible date.

Mr. STOCKMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in strong opposition to the amendment. I want to say to the House that it is exceedingly mystifying to me that we approach one of the most important, complex, and far-reaching legislative enactments of this decade under such a restrictive parliamentary arrangement that the House cannot even work its will on some of the central issues involved in the energy area, but we still vote for bicycles and for building trades boilerplate—and that is exactly what this amendment is.

I need not remind the Members that at the heart of the energy problem we face is oil and the declining domestic production of oil, and we cannot even reach the question of domestic oil pricing policy in the program before us.

I need not remind the House that one of the cornerstones of the whole administration plan before us is the coal conversion program and in its present form all kinds of unresolved problems of cost and environmental impact are involved, and the coal conversion problem comes to the floor under a closed rule.

I need not remind the House that one of the essential elements of the plan before us is the novel idea that through a crude oil equalization tax we can tax the users up to the world price, and then can rebate the proceeds to the consumers who are paying higher prices and expect consumption to decline. I would suggest there is no economic evidence for that at all.

So after being precluded from addressing any of these central issues, we now find ourselves wasting our time and wasting the money of the taxpayers of this country to insure that one special interest group, the organized building trades, gets its gravy from this national energy plan. I find it ironic indeed to find that a program premised on a high national purpose and on the President's call for mutual sacrifice on the part of all Americans should be littered at this time with a parochial self-serving amendment that is designed to give the organized building trades a fatter slice or piece of the wage pie than they are getting already.

I think it is time to ask the question in this House as to just how much the building trades in this country want. They have already a wage rate, I would remind the Members, that is more than double the average manufacturing wage rates in this country. Ten dollars an hour is the basic rate as opposed to $5 for manufacturing generally, and that does not include all the indirect compensation that comes in the form of mandatory overtime, restrictive work rules, et cetera.

I would also remind the House the building trades already have $55 billion worth of Federally-financed construction that is under the Davis-Bacon Act and its artificially supported wage rates. Already this year the taxpayers have gone to the well, and coughed-up $6 billion in the form of a building trades bailout program in the Local Public Works Act we passed earlier this year, which was fully blanketed in by the Davis-Bacon.

So I would suggest it is time to consider the evidence as to what the real impact of the Davis-Bacon Act is not only on this program but also on all the Federal construction programs it blankets in. We know from 29 different General Accounting Office studies over the last 15 years it raises the basic wage rate by 5 to 15 percent. We know it props up the entire union wage scale in the entire construction economy because Davis-Bacon covers 36 percent of total construction in this country.

We also know it reduces competition for Government construction contracts because many nonunion employers and contractors do not even apply or bid for these contracts because of the effect it has on their private construction.

Even more than that we know it prevents the entry on the part of young people and particularly on the part of minorities into the building trades because under the Davis-Bacon Act employers cannot pay an apprentice rate or a helper's rate. Everyone has to get the journeyman's rate. That means that in 36 percent of all construction jobs in this country there are no apprenticeship jobs and no opportunity to enter the trades.

We know it magnifies costs far beyond the simple increase in the basic wage rate it causes. I would like to give one example on a project in the State of Michigan which originally was bid on with State and local money. The Davis-Bacon Act was not involved, and the impact, when that project was put under Federal financing and Davis-Bacon had to be determined, was dramatic. This was a courthouse, a public building.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(By unanimous consent, Mr. STOCKMAN was allowed to proceed for 3 additional minutes.)

Mr. STOCKMAN. Mr. Chairman, this project was a courthouse and it involved the central heating and air-conditioning system for that courthouse, very much similar to the kind of construction work that will be affected under this part. The original bid was not covered by Davis-Bacon and the contractor indicated he would pay $7 an hour, which is not too bad a wage, to the journeyman on the project and $5.50 an hour to the helpers.

But when the Davis-Bacon determination was made, he was required to pay $9 to the journeyman, a $2 increase; but even more important, 50 percent of the man-hours on this project were to be done by helpers or apprentices under the original bid, and had to be done at the rate of the journeyman level of $9 an hour under the Davis-Bacon determination. And that meant a 73-percent increase in wage costs for those helpers, who suddenly become transformed into journeymen when the Davis-Bacon Act was applied.

Now, overall, the construction wage cost for that project, increased by 60 percent; and that is just for the basic wage rate which went from $5 and $7 for journeymen and helpers, respectively, to $9.50 an hour across the board.

Even more than that, that was just the beginning, because when the basic rate went up to the Davis-Bacon level all the indirect costs of fringe benefits, workmen's compensation, pension contributions, health and welfare and so on, went up as well; that is because they are based on the gross hourly wage and when the Davis-Bacon Act forces the basic rate up, all the other costs go up. In this case it led to a 50-percent increase in the fringe-benefit cost. Thus, the overall labor cost in that simple little courthouse project in that small town was increased by 62 percent as a result of the imposition of Davis-Bacon Act; it rose by more than $30,000 above the original cost of $50,000.

I would suggest the same thing will happen on all the projects we fund under this act, because this is a labor intensive program. It is a retrofit. This money is not going to steel or cement. It is going to the workers to rip things out and put new things in.

I would suggest on the basis of the evidence available in terms of its impact on the basic rate and all the associated costs, that this amendment will reduce the purchasing power for conservation purposes for hospitals and schools and for the local units of government by $50 million to $80 million over the course of the program.

It seems to me that a program that is based on a call for sacrifice and a program that is based on high national purpose, in such a program we ought not to apply Davis-Bacon. We ought to allow the local units of government to stretch these grant dollars as far as possible to reduce their heating costs and mitigate the impact of rising energy prices on local taxpayers, and ask the building trades in the very protected and very strong position they are in already to make this one small sacrifice on behalf of the taxpayers of the country.

Mr. HAGEDORN. Mr. Chairman, will the gentleman yield?

Mr. STOCKMAN. I yield to the gentleman from Minnesota.

Mr. HAGEDORN. Mr. Chairman, I want to commend the gentleman from Michigan for bringing the facts and figures to this body. I think we have a chance in this body to end the rip-off in this program by eliminating Davis-Bacon from these very complicated retrofitted projects that will take place in the small communities of the Nation.

The CHAIRMAN pro tempore. The time of the gentleman from Michigan (Mr. STOCKMAN) has expired.

Mr. FORD of Michigan. Mr. Chairman, I ask unanimous consent that the gentleman from Michigan be allowed to proceed for 1 additional minute.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Michigan?

Mr. ST GERMAIN. Mr. Chairman, I object.

The CHAIRMAN pro tempore. Objection is heard.

Mr. ASHLEY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in favor of the amendment. I think it has been well explained, certainly by the gentleman from Ohio (Mr. BROWN) and the gentleman from Illinois (Mr. ANDERSON) and the others who engaged in colloquy. The effort has been to work out an understanding with respect to the application and that has been done.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I join in support for the amendment.

The CHAIRMAN pro tempore. The question is on the amendment, as modified. offered by the gentleman from Michigan (Mr. FORD) to the ad hoc committee amendment.

The question was taken: and on a division (demanded by Mr. HAGEDORN) there were—ayes 44, noes 39.

RECORDED VOTE

Mr. HAGEDORN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 265, noes 161, not voting 7, as follows:

NOT VOTING—7

Burke, Mass.	Flippo	Teague
Dent	Giaimo	
Derrick	McKinney	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Mr. PREYER changed his vote from "aye" to "no."

So the amendment, as modified, to the ad hoc committee amendment was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The question is on the ad hoc committee amendment, as amended.

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. BROWN of Ohio. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 317, noes 105, not voting 11, as follows:

[Roll No. 495]

NOT VOTING—11

AuCoin	Derrick	Stockman
Burke, Mass.	Flippo	Teague
Cochran	Giaimo	Wiggins
Dent	McKinney	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Messrs. MARTIN, PURSELL, and KEMP changed their vote from "aye" to "no."

Mr. BRINKLEY and Mr. MIKVA changed their vote from "no" to "aye."

So the ad hoc committee amendment, as amended, was agreed to.

The result of the vote was announced as above recorded.

PARLIAMENTARY INQUIRY

Mr. BAUMAN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BAUMAN. Mr. Chairman, earlier today when the gentleman from Massachusetts occupied the chair, a question was put to the Chair whether or not by unanimous consent amendments could be offered to the bill.

The resolution under which this bill is being considered says on page 2:

No amendment to the bill shall be in order except pro forma amendments for the purpose of debate and except the following amendments, which shall be in order without the intervention of any point of order, which shall not be subject to amendment except for amendments recommended by the Ad Hoc Committee on Energy.

Then those amendments are listed.

Now, subsequent to the Chair's ruling, with the gentleman from Colorado in the chair, in response to a question when the gentleman from Michigan (Mr. FORD) offered a unanimous consent request, said that the unanimous-consent request would be in order.

My question to the Chair is, what is the ruling on unanimous consent amendments to this bill or to the bill henceforth?

The CHAIRMAN. The Chair will respond by indicating that the Chair at the time understood the unanimous-consent request by the gentleman from New York was to change the rule adopted by the House.

The Chair would agree that by unanimous consent modification of a pending amendment is permissible in Committee of the Whole.

Mr. BAUMAN. Mr. Chairman, so any pending amendment can be modified by unanimous consent?

The CHAIRMAN. The gentleman is correct.

Mr. DINGELL. Mr. Chairman, I move to strike the requisite number of words.

Mr. MEEDS. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I am delighted to yield to the gentleman from Washington, who had a question in the ad hoc committee.

Mr. MEEDS. Mr. Chairman, I appreciate the gentleman's yielding and working with me to clarify the definition.

Mr. Chairman, I am concerned that the definition of "school" in part III may not be construed to cover colleges with open admissions policies which admit as students persons who have not graduated from high school and who do not have high school equivalency certificates.

I am referring to the language in section 391(5)(B)(ii) which specifies that one criterion of eligibility is that the institution "admits as students only persons having a certificate of graduation from a school providing secondary education, or the recognized equivalent of such a certificate." As you know, a number of community colleges throughout the Nation admit as students persons without high school credentials. Some do this as a result of institutional commitment to equal educational opportunity and others under requirements of State law.

My question is: Is it the intention of the committee to exclude such open admissions institutions from eligibility for aid under this bill and should the section be so construed?

Mr. DINGELL. I thank the gentleman for raising this very important point. It was not the intention of the committee to exclude such institutions and it is not the belief of the committee that the definition can be so construed.

For the purposes of this legislation it is the intention of the committee that the words "recognized equivalent" in section 391(5)(B)(ii) be construed to include whatever entrance requirements short of a high school certificate an institution otherwise qualified under this legislation chooses to impose for admission.

Specifically in answer to the gentleman's question, institutions following open admission policies are eligible to receive aid under the program established in part III if they meet the other applicable criteria of part III.

I thank the gentleman for asking this question. It creates the proper legislative history.

Mr. MEEDS. I thank the gentleman.

Mr. YOUNG of Alaska. Mr. Chairman, will the gentleman yield for a question?

Mr. DINGELL. I will be happy to yield to the gentleman from Alaska.

Mr. YOUNG of Alaska. Mr. Chairman, it has come to my attention that the natural gas pricing provisions of title IV may have an unintended adverse impact on the State of Alaska's ability to sell royalty gas from Prudhoe Bay. It is obviously too late to correct the problem with amendatory language but I believe that a clear statement of legislative intent may rectify the matter.

Early this year the State of Alaska signed a contract with El Paso, Tenneco, and Southern Natural Gas for the sale of Alaska's royalty gas from the Prudhoe Bay field. This contract was executed due in part to Federal Power Commission urgings; the FPC wanted some of the North Slope gas under contract to help clarify the situation regarding Alaskan gas pipeline financing.

Most, if not all of this royalty gas is not "new natural gas." If this gas were "new gas" no problem would exist since the $1.75 Btu related price would apply. Under section 405, old gas sold under existing contracts is ceiling priced by reference to the contract price applicable on April 20, 1977.

These contracts do not contain a specific price term; instead the price is to be determined by reference to the price

established under other sales contracts. However, section 414 would appear to prevent the operation of this clause.

The question, therefore, is whether section 405 applies to these contracts, and, if so, what would be the maximum lawful price?

Mr. DINGELL. Mr. Chairman, I would answer the gentleman first by saying that, although we are not in the natural gas sections yet, I am delighted to respond to the question raised by the gentleman, and I believe it is an important one.

Section 414 does apply to these contracts. If, by application of this section, no price is applicable to the contract, the contract would contain no enforceable price term. Under those circumstances, these agreements would not constitute a binding, enforceable contract. Therefore, section 405 would not apply. Instead the sale of this gas would be covered by section 406, sales of old gas under new contracts, and the price ceiling would be $1.45 per Mcf. In addition a higher price might be established by the FPC under section 409 in order to establish incentives to encourage development of high-cost Alaskan natural gas production.

Mr. YOUNG of Alaska. I want to thank my good friend for responding to my question.

Mr. DINGELL. It does create the legislative history that causes the gentleman apprehension.

Mr. YOUNG of Alaska. I thank the gentleman.

The CHAIRMAN. The Clerk will designate the heading of the part now under consideration.

The Clerk read as follows:

Page 180, line 8, "PART IV OF TITLE II—NATURAL GAS." (Part IV reads as follows:)

PART IV—NATURAL GAS

SEC. 401. FINDINGS AND PURPOSES.

(a) FINDINGS.—The Congress finds that—

(1) during the early history of this Nation's petroleum industry, natural gas was a byproduct of the production of crude oil, was not readily marketable, and was often treated as waste and flared;

(2) the natural gas market changed dramatically through the course of the last 40 years as a national distribution system was built to deliver natural gas to commercial and industrial consumers throughout the Nation;

(3) the Congress enacted the Natural Gas Act in 1938 to protect consumers and to provide a regulatory structure through which interstate pipelines and natural gas producers could be assured an opportunity to earn a fair rate of return;

(4) in 1954, the Supreme Court held that the Natural Gas Act applied to the wellhead sale of natural gas in interstate commerce thereby subjecting producers selling natural gas in interstate commerce, but not those selling natural gas within the same State in which it was produced, to a regulatory standard based upon a determination of historic production costs;

(5) since 1973, the differential between the price of natural gas and the price of crude oil on a Btu basis has widened with the continuation of cost-based regulation of natural gas and with a fourfold increase in world oil prices;

(6) estimates of the proven reserves of natural gas have declined while demand for this premium and relatively inexpensive fuel has increased;

(7) at the same time as proven reserves have declined and demand has risen, increasing proportions of new supplies of natural gas have moved to the unregulated intrastate market, resulting in growing critical shortages in the interstate market of the fuel which provides 30 percent of the Nation's energy; and

(8) a new system of natural gas pricing is needed to eliminate the distortions created by the existence of two separate markets for natural gas and to reflect the costs and risks associated with finding new supplies of natural gas, as well as the costs associated with reliance upon alternative fuels in the absence of new supplies of natural gas.

(b) PURPOSES.—The purposes of this part are—

(1) to bring the natural gas market into better balance by reducing the demand for natural gas and increasing the supply through the establishment of a uniform and incentive-based pricing system for new natural gas which provides fair and equitable producer revenues and protects consumers;

(2) to deal with short-term shortages of natural gas through extension of the allocation provisions of the Emergency Natural Gas Act of 1977; and

(3) to provide for the conservation of natural gas by pricing natural gas to low-priority users at a level which will provide incentives for conservation and conversion to other, more plentiful, fuels.

SEC. 402. DEFINITIONS.

As used in this part—

(1) The term "Commission" means the Federal Power Commission.

(2) The term "person" includes the United States and any State, and any political subdivision, agency, or instrumentality of either.

(3) The term "natural gas" has the same meaning as such term has under section 2(5) of the Natural Gas Act.

(4) The term "old natural gas" means natural gas other than new natural gas.

(5) The term "new natural gas" means natural gas—

(A) which is produced from a new lease on the Outer Continental Shelf; or

(B) which is produced (other than from the Outer Continental Shelf)—

(i) from a new well—

(I) which is 2.5 statute miles or more (horizontal distance) from any old well, and

(II) the completion location of which is in a newly discovered reservoir; or

(ii) from a new well the completion location of which—

(I) is 1,000 feet or more deeper than the deepest completion location of an old well, if any, which is within 2.5 statute miles (horizontal distance) of such new well, and

(II) is in a newly discovered reservoir.

(6) The term "Outer Continental Shelf" has the same meaning as such term has under section 2(a) of the Outer Continental Shelf Lands Act (43 U.S.C. 1331(a)).

(7) The term "new lease" means a lease, entered into on or after April 20, 1977, of submerged acreage—

(A) which was not leased before April 20, 1977; or

(B) which was leased before such date, under a lease which terminated or was abandoned before such date and was not in effect on such date.

(8) The term "new well" means a well the surface drilling of which was begun after April 20, 1977.

(9) The term "old well" means any well other than a new well.

(10) The term "completion location" means the subsurface location from which crude oil or natural gas is or has been produced from a reservoir.

(11) The term "horizontal distance", with regard to an old well and a new well, means the distance, measured horizontally and without regard to topography, between—

(A) the surface location of the old well, and

(B) the closest point of the completion location of the new well vertically projected to the same elevation as the surface location of the old well.

(12) The term "reservoir" means a porous and permeable underground formation containing a natural accumulation of producible crude oil, natural gas, or both, confined by impermeable rock or water barriers and characterized by a single natural pressure system.

(13) The term "newly discovered reservoir" means any reservoir which was first penetrated by a well the surface drilling of which commenced after April 20, 1977.

(14) The term "new contract" means any contract, entered into after April 20, 1977, for the sale of natural gas which was not previously subject to an existing contract.

(15) The term "rollover contract" means any contract, entered into after April 20, 1977, for the sale of natural gas that was previously subject to an existing contract which expired at the end of a fixed term specified by such existing contract.

(16) The term "existing contract" means any contract for the sale of natural gas entered into on or before April 20, 1977.

(17) The term "current Btu related price" means the most recently published Btu related price calculated pursuant to section 403.

(18) The term "inflation adjustment" means, with respect to any calendar quarter, the amount determined by dividing—

(A) the first revision of the implicit price deflator, for the calendar quarter which immediately precedes such calendar quarter, seasonally adjusted, for the gross national product as computed and published by the Department of Commerce; by

(B) the implicit price deflator, for the first calendar quarter of 1977, seasonally adjusted, for the gross national product as computed and published by the Department of Commerce.

(19) The term "Mcf" means, with respect to natural gas, 1,000 cubic feet of natural gas measured at a pressure of 14.73 pounds (avoirdupois) per square inch and a temperature of 60° Fahrenheit.

(20) The term "Btu" means British thermal unit.

(21) The term "United States" includes the Outer Continental Shelf.

(22) The term "State" means each of the several States and the District of Columbia.

SEC. 403. CALCULATION OF THE CURRENT BTU RELATED PRICE.

(a) CURRENT BTU RELATED PRICE.—Within 30 days after the date of the enactment of this Act, and on a monthly basis thereafter, the Commission shall calculate and publish in the Federal Register the current Btu related price. Such Btu related price shall be computed by dividing—

(1) the average per barrel domestic refiner cost of acquiring crude oil during the preceding 3 calendar months, by

(2) a Btu conversion factor of 5.8 million Btu's per barrel.

(b) COMPUTATION OF DOMESTIC REFINER COST OF CRUDE OIL.—For purposes of paragraph (1) of subsection (a), the average per barrel domestic refiner cost of acquiring crude oil shall be computed without regard to—

(1) costs associated with the purchase of entitlements under the regulation issued under section 4 of the Emergency Petroleum Allocation Act of 1973,

(2) the tax imposed by section 4986 of the Internal Revenue Code of 1954 or any credit or payment allowable under such Code in connection with such tax, or

(3) the cost of crude oil transported through the trans-Alaska pipeline (within the meaning of section 8(g)(2)(A) of the Emergency Petroleum Allocation Act of 1973).

SEC. 404. SALES OF NEW NATURAL GAS.

Except as provided in sections 409 and 413, the maximum lawful price for any first sale of new natural gas produced in the United States and delivered during any calendar month which begins on or after the date of the enactment of this Act shall be the current Btu related price at the time of such deliveries.

SEC. 405. SALES OF OLD NATURAL GAS UNDER EXISTING CONTRACTS.

Except as provided in sections 409 and 413 (e)(4), the maximum lawful price for any first sale of old natural gas produced in the United States and sold under an existing contract shall be the product of multiplying—

(1)(A) in the case of any such first sale subject to the jurisdiction of the Commission under the Natural Gas Act, the just and reasonable price established by the Commission and applicable to sales of natural gas under such contract on April 20, 1977 (without regard to any appeal of such price determination pending on April 20, 1977), or

(B) in the case of any other such first sale, the price applicable on April 20, 1977, under such existing contract: by

(2) the inflation adjustment.

SEC. 406. SALES OF OLD NATURAL GAS UNDER NEW CONTRACTS.

Except as provided in sections 409 and 413 (e)(4), the maximum lawful price for any first sale of old natural gas produced in the United States and sold under a new contract shall be $1.45 per million Btu's multiplied by the inflation adjustment.

SEC. 407. SALES OF OLD NATURAL GAS UNDER ROLLOVER CONTRACTS.

(a) MAXIMUM LAWFUL PRICE RULE.—Except as provided in sections 409 and 413 (e)(4), and subject to the limitations of subsection (b), the Commission shall, by rule, prescribe the maximum lawful price for any first sale of old natural gas produced in the United States and sold under a rollover contract.

(b) LIMITATIONS.—(1) In the case of any first sale of old natural gas to which the provisions of this section apply, if such old natural gas was committed or dedicated to interstate commerce on April 20, 1977, the maximum lawful price prescribtd by the Commission under this section may exceed the maximum price permitted under a previous existing contract to the extent that such price is necessary to permit the recovery of increased costs in order to maintain production of such natural gas, but in no event may any such price exceed $1.45 per million Btu's multiplied by the inflation adjustment.

(2) In the case of any first sale of old natural gas to which the provisions of this section apply, if such old natural gas was not committed or dedicated to interstate commerce on April 20, 1977, the maximum lawful price prescribed by the Commission under this section may exceed the maximum prices permitted under a previous contract to the extent that such price is necessary to permit the recovery of increased costs in order to maintain production of such natural gas, but in no event may any such price exceed—

(A) the product of multiplying the inflation adjustment by $1.45 per million Btu's, if the contract price applicable on April 20, 1977, was less than or equal to $1.45 per million Btu's; or

(B) the current Btu related price, if the contract price applicable on April 20, 1977, was greater than $1.45 per million Btu's.

(c) COMMITTED OR DEDICATED TO INTERSTATE COMMERCE.—For purposes of this section, the term "committed or dedicated to interstate commerce" shall not be construed as applicable to any old natural gas which was sold under a limited term certificate of 5 years or less, a temporary emergency contract pursuant to section 7(c) of the Natural Gas Act, or a contract authorized by section 6 of the Emergency Natural Gas Act of 1977.

SEC. 408. EFFECTIVE DATES OF RULES WITH RESPECT TO MAXIMUM LAWFUL PRICES.

The Commission shall promulgate and make effective rules required to be prescribed under section 407 within 60 days after the date of the enactment of this Act. Such rules shall apply to deliveries of natural gas with respect to the first sale of which section 407 applies and which occur on or after such date of enactment.

SEC. 409. SPECIAL PRICING PROVISIONS.

(a) GENERAL RULE.—The Commission may, by rule, prescribe a maximum lawful special price, applicable to the first sale of high cost natural gas produced in the United States. Such special price may exceed the applicable maximum lawful price established by sections 404, 405, 406, or 407 to the extent that such special price is necessary to provide reasonable incentives for the production of high cost natural gas.

(b) HIGH COST NATURAL GAS.—For purposes of this section, the term "high cost natural gas" means natural gas produced—

(1) from submerged acreage located beneath more than 500 feet of water;

(2) from a completion location more than 15,000 feet (true vertical depth) below the surface location of the well;

(3) from geopressurized brine; or

(4) under such other conditions as present extraordinary risks or costs.

(c) ADJUSTMENTS.—In the case of a first sale of natural gas with respect to which the seller bears all or part of the cost of gathering, processing, liquefaction, or transportation of such natural gas, the Commission may, by rule, provide for an adjustment to the maximum lawful price established by sections 404, 405, 406, or 407, or prescribed under subsection (a) of this section or section 413(e)(4), to reflect such cost borne by such seller.

SEC. 410. INCREMENTAL PRICING OF NATURAL GAS.

(a) GENERAL RULE.—(1) Not later than 90 days after the date of the enactment of this Act, the Commission shall, by rule, provide that, to the maximum extent practicable, the amount by which the average cost of natural gas delivered after such date of enactment to any pipeline company exceeds the product of the average cost of natural gas delivered to such company during the 12-calendar-month period ending immediately before the date of the enactment of this Act, multiplied by the inflation adjustment, shall be initially allocated to the rates and charges of such pipeline company applicable to sales of natural gas to—

(A) low-priority users served by such pipeline company, and

(B) local distribution companies for resale to low-priority users served by such local distribution company,

until the rates or charges applicable to such low-priority users, served by such pipeline company or such local distribution company, equal the reasonable cost of substitute fuels (as determined by the Commission) to such low-priority users.

(2) Not later than 90 days after the date of the enactment of this Act, the Commission shall, by rule, provide that, to the maximum extent practicable, the dollar amounts allocated to any local distribution company pursuant to subparagraph (B) of paragraph (1) shall be allocated by such local distribution company to the rates and charges of such company applicable to sales of natural gas to low-priority users.

(3) The rule required to be prescribed under paragraph (1) shall, to the maximum extent practicable, provide that after the rates and charges of a pipeline company applicable to sales of natural gas to—

(A) low-priority users served by such pipeline, and

(B) local distribution companies for resale to low-priority users served by such local distribution company,

equal the reasonable cost of substitute fuels (as determined by the Commission) to low-priority users, served by such pipeline company and such local distribution companies, further increases in the average cost of natural gas delivered to such pipeline company shall be allocated to the rates and charges of such pipeline company applicable to sales of natural gas to all customers of such pipeline company.

(b) DEFINITIONS.—For purposes of this section—

(1) The term "low-priority user" means any user other than a high-priority user.

(2) The term "high-priority user" means any person who—

(A) uses natural gas in a residence, or

(B) uses natural gas in a commercial establishment in amounts of less than 50 Mcf on a peak day.

(3) The term "pipeline company" means any person engaged in the business of transporting natural gas by pipeline other than as a local distribution company.

(4) The term "local distribution company" means any person engaged in the business of transportation and local distribution of natural gas and the sale of natural gas for ultimate consumption.

SEC. 411. ESSENTIAL AGRICULTURAL USES.

(a) PRIORITY FOR ESSENTIAL AGRICULTURAL USES.—Notwithstanding any other provision of law, no pipeline company and no local distribution company may curtail deliveries to any person who uses natural gas for any agricultural use identified as an essential use by the Secretary of Agriculture under subsection (b)(1), unless such curtailment of deliveries to such person does not reduce the quantity of natural gas delivered to such person below the use requirement specified in subsection (b)(2) or is necessary in order to meet the needs of high-priority users.

(b) IDENTIFICATION OF USES AND DETERMINATION OF REQUIREMENTS.—The Secretary of Agriculture shall, by rule—

(1) not later than 60 days after the date of the enactment of this Act, identify those agricultural uses for which an assured supply of natural gas is essential and with respect to which alternative fuels are not economically practicable or reasonably available, as determined by the Commission, and

(2) not later than 120 days after such date of enactment, determine the natural gas use requirements of persons using natural gas for agricultural uses identified under paragraph (1) in order to meet the requirements of full food and fiber production and processing and to otherwise preserve public health, safety, and welfare.

The determination of use requirements under paragraph (2) may allow for additional amounts necessary in cases in which production capacities are extended or in cases in which new production facilities are added, but only if such extensions or additions are determined by the Secretary to be necessary in order to meet national food and fiber production requirements and to otherwise preserve public health, safety, or welfare.

(c) DEFINITIONS.—For purposes of this section—

(1) The term "agricultural use" means, when used with respect to natural gas, an agricultural or food processing use of natural gas, including the use of natural gas—

(A) for irrigation pumping,

(B) for crop drying, or

(C) as a process fuel or feedstock in the production of fertilizer, agricultural chemicals, or food.

(2) The term "high-priority user" means any person who—

(A) uses natural gas in a residence,

(B) uses natural gas in a commercial establishment in amounts of less than 50 Mcf on a peak day, or

(C) uses natural gas in any other use the curtailment of which the Commission or the State regulatory authority, as the case may be, determines, by rule, would endanger life, health, or maintenance of physical property.

(3) The term "pipeline company" means any person engaged in the business of transporting natural gas by pipeline other than as a local distribution company.

(4) The term "local distribution company" means any person engaged in the transportation and local distribution of natural gas and the sale of natural gs for ultimate consumption.

(5) The term "State regulatory authority" means any State agency which exercises ratemaking authority or reviews the conditions for termination of service by any local distribution company located within such State.

SEC. 412. NATURAL GAS STORAGE FACILITIES.

(a) GENERAL RULE.—Not later than 60 days after the date of the enactment of this Act, the Commission shall, by rule, require that the injections to, and withdrawals from, storage facilities of any interstate pipeline company are made at such times and to such extent as will ensure that the needs of low-priority users served by such interstate pipeline company will not be satisfied to the detriment of high-priority users served by such interstate pipeline company. Such requirements may include—

(1) schedules of minimum net rates of injection of natural gas into such storage facilities during periods immediately preceding peak demand periods of high-priority users;

(2) prohibitions on the withdrawal of natural gas from such storage facilities for purposes of satisfying needs of low-priority uers;

(3) provisions requiring that, if such interstate pipeline company fails to comply with any requirements of such rule and such failure results in the purchase of natural gas by such interstate pipeline company to satisfy needs of high-priority users at an average cost which exceeds the average cost of the natural gas which would have been available to high-priority users if the requirements of such rule had not been violated, such excess cost shall not be borne by high-priority users; and

(4) such other measures as the Commission determines appropriate to carry out the purposes of this section.

(b) DEFINITIONS.—For purposes of this section—

(1) The term "high-priority user" means any person who—

(A) uses natural gas in a residence,

(B) uses natural gas in a commercial establishment in amounts of less than 50 Mcf on a peak day,

(C) uses natural gas as a process fuel of feedstock for which alternative fuels are not available,

(D) uses natural gas in any use identified by the Secretary of Agriculture under section 411(b)(1), but only to the extent of the use requirement established under section 411(b)(2), or

(E) uses natural gas in any other use the curtailment of which the Commission determines, by rule, would endanger life, health, or maintenance of physical property.

(2) The term "low-priority user" means any person other than a high-priority user.

(3) The term "interstate pipeline company" means any person engaged in the transportation of natural gas who is subject to the jurisdiction of the Federal Power Commission under the Natural Gas Act.

SEC. 413. ADMINISTRATIVE PROCEDURE, ENFORCEMENT, AND JUDICIAL REVIEW.

(a) ADMINISTRATIVE PROCEDURE.—(1) Subject to paragraphs (2), (3), and (4) of this subsection, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply to any rule or order issued under this part having the applicability and effect of a rule as defined in section 551(4) of title 5, United States Code.

(2) Notice of any proposed rule or order described in paragraph (1) which is substantive and of general applicability shall be given by publication of such proposed rule or order in the Federal Register. In each case, a minimum of 30 days following the date of such publication and before the effective date of the rule shall be provided for opportunity to comment; except that the 30-day period for opportunity to comment before the effective date of the rule may be waived if the Commission finds that strict compliance would seriously impair the operation of the program to which such rule or order relates and such findings are set out in the Federal Register at the time of the publication of such proposed rule or order.

(3) To the maximum extent practicable, an opportunity for oral presentation of data, views, and arguments shall be afforded with respect to any proposed rule or order described in paragraph (1). To the maximum extent practicable, such opportunity shall be afforded before the effective date of such rule or order. Such opportunity shall be afforded no later than 10 days after such date in the case of a waiver of the entire comment period under paragraph (2) and no later than 45 days after such date in all other cases. A transcript shall be made of any such oral presentation.

(4) Any officer or agency authorized to issue rules, regulations, or orders described in paragraph (1) shall provide for the making of such adjustments, consistent with the other purposes of this Act, as may be necessary to prevent special hardship, inequity, or an unfair distribution of burdens and shall in rules prescribed by such officer or agency establish procedures which are available to any person for the purpose of seeking an interpretation, modification, or recession of, exception to, or exemption from, such rules, regulations, or orders. If any such person is aggrieved or adversely affected by the denial of a request for such action under the preceding sentence, he may request a review of such denial by the officer or agency and may obtain judicial review in accordance with subsection (b) when such denial becomes final. The officer or agency shall, by rule, establish procedures, including an opportunity for oral presentation of data, views, and arguments, for considering requests for action under this paragraph.

(b) JUDICIAL REVIEW.—Any person aggrieved or adversely affected by any rule prescribed, or order issued, by the Commission under this part may obtain judicial review of such rule or order in the United States Court of Appeals for the District of Columbia Circuit pursuant to the provisions of chapter 7 of title 5, United States Code.

(c) ENFORCEMENT.—(1) It shall be unlawful for any person—

(A) to violate any provision of this part; or

(B) to violate any rule prescribed, or any order issued, under this part.

(2)(A) Whoever violates any provision of this part or any provision of any rule prescribed, or order issued, under this part shall be subject to a civil penalty, which may be assessed by the Commission—

(i) in the case of any violation relating to the production, gathering, sale, transportation, or distribution of natural gas, of not more than $20,000 for each violation; and

(ii) in the case of any violation not referred to in clause (i) of this subparagraph, of not more than $2,500 for each violation.

(B) Before assessing any civil penalty under this paragraph, the Commission shall provide to such person notice of the proposed penalty. The determination to assess such penalty shall be made on the record after opportunity for an agency hearing pursuant to section 554 of title 5, United States Code. The order of the Commission assessing such penalty shall state the Commission's findings and the basis for such assessment. If the person, against whom a civil penalty is assessed, fails to pay the penalty within the period prescribed in such order, the Commission shall file a petition for enforcement of such order in any appropriate district court of the United States. A copy of the petition shall be sent by registered or certified mail to the person against whom such order is sought to be enforced. At the time a petition for enforcement of such an order is filed, the Commission shall certify and file in such court the record upon which such order was issued. The court shall have jurisdiction to enter a judgment enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, the order of the Commission, or the court may remand the proceeding to the Commission for such further action as the court may direct.

(3) Whoever willfully violates any provision of this part or any provision of any rule prescribed, or order issued, under this part—

(A) shall be imprisoned not more than one year for each violation; or—

(B) shall be fined—

(i) in the case of any violation relating to the production, gathering, sale, transportation, or distribution of natural gas, not more than $40,000 for each violation, or

(ii) in the case of any violation not referred to in clause (i) of this subparagraph, not more than $10,000 for each violation; or

(C) shall be both so imprisoned and so fined.

(4) For purposes of this subsection each day of violation shall be treated as a separate offense.

(5) Any individual director, officer, or agent of a corporation who knowingly and willfully authorizes, orders, or performs any of the acts or practices constituting in whole or in part a violation of any provision of this part or any provision of any rule prescribed, or order issued, under this part shall be subject to penalties under this subsection without regard to any penalties to which that corporation may be subject under paragraph (2) or (3), except that no such individual director, officer, or agent shall be subject to imprisonment under paragraph (3) unless he also had knowledge, or reasonably should have known, of notice of noncompliance received by the corporation from the Commission.

(d) INFORMATION.—(1) In order to obtain information to carry out its authority under this part and to enforce compliance with the requirements of this part, the Commission may—

(A) sign and issue subpenas for the attendance and testimony of witnesses and the production of books, records, papers, and other documents;

(B) require any person, by general or special order, to submit answers in writing to interrogatories (including requests for reports or for other information) and such answers shall be made within such reasonable period, and under oath or otherwise, as the Commission may determine; and

(C) secure, upon request, any information from any Federal department or executive agency.

(2) The Commission may not exercise authority under subparagraph (C) with respect to information, in the possession of a Federal

agency, the disclosure of which to another Federal agency is expressly prohibited by law.

(3) In the case of any refusal to obey a subpena, or to obey an order of the Commission issued under this subsection, the appropriate United States district court may, upon petition of the Commission, issue an order requiring compliance with such subpena or order of the Commission and any failure to obey such an order of the court may be punished by the court as a contempt thereof.

(e) GENERAL RULEMAKING AUTHORITY.—(1) The Commission shall have power to issue procedural rules in enforcing compliance with the provisions of this part and rules prescribed and orders issued under this part.

(2) The Commission shall have power to further define terms used in this part consistent with the definitions set forth in, and the purpose of, this part.

(3) The Commission shall have power to prescribe rules, applicable to any first sale to which the provisions of section 404, 406, 407, or 409 apply, relating to contract terms other than price, including contract duration, conditions of termination, and delivery obligations.

(4) (A) Except as provided in subparagraph (B), the Commission may, by rule, prescribe a maximum lawful price applicable to any sale of natural gas other than sales to which the provisions of sections 404, 405, 406, 407, and 409 apply if it determines such maximum lawful price is necessary to prevent circumvention of any provision of such sections.

(B) Subparagraph (A) shall not apply to any sale for resale of natural gas if such sale is subject to the provisions of the Natural Gas Act.

SEC. 414. UNENFORCEABLE CONTRACT PROVISIONS.

(a) MOST FAVORED PRODUCER CLAUSES.—No natural gas price determined under this part may be taken into account for purposes applying any provision of a contract which determines, or permits renegotiation of, the price of any natural gas or terminates such contract on the basis of any sale of natural gas not sold under such contract, any sale of crude oil, or any sale of any refined petroleum product.

(b) CLAUSES PROHIBITING COMMINGLING.—Any contractual provision—

(1) prohibiting the sale or commingling of natural gas subject to such contract with natural gas subject to the provisions of the Natural Gas Act, or

(2) terminating, or granting any party the option to terminate, any obligation under any such contract as a result of such sale or commingling,

is hereby declared against public policy and unenforceable with respect to the first sale of any natural gas to which the provisions of section 404, 406, 407, 409, or 413(e)(4) apply.

SEC. 415. RELATIONSHIP TO THE EMERGENCY NATURAL GAS ACT OF 1977.

Nothing in sections 404 through 407 and sections 409 and 413(e)(4) shall apply to any price for the sale of natural gas which is allowed under section 4 of the Emergency Natural Gas Act of 1977.

SEC. 416. JURISDICTION OF THE COMMISSION UNDER THE NATURAL GAS ACT.

(a) DEREGULATION OF CERTAIN FIRST SALES.—(1) Section 1 of the Natural Gas Act (15 U.S.C. 717(b)) is amended to read as follows:

"(b)(1) Except as provided in paragraph (2), the provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use and to natural-gas companies engaged in such transportation or sale.

"(2) The provisions of this Act shall not apply—

"(A) to any other transportation or sale of natural gas;

"(B) to the local distribution of natural gas;

"(C) to the facilities used for such distribution;

"(D) to the production or gathering of natural gas;

"(E) to any sale of natural gas to which the provisions of section 404, 406, 407, 409, or 413(e)(4) of the National Energy Act apply; or

"(F) to any person to the extent to which such person makes a sale of natural gas to which the provisions of section 404, 406, 407, 409, or 413(e)(4) of the National Energy Act apply."

(2) Section 2 of the Natural Gas Act (15 U.S.C. 717a) is amended by striking out subsection (6) and inserting in lieu thereof the following:

"(6) 'Natural-gas company' means a person engaged in the transportation of natural gas in interstate commerce or the sale in interstate commerce of such gas for resale, but does not include any person to the extent that such person makes a sale of natural gas to which the provisions of section 404, 406, 407, 409, or 413(e)(4) of the National Energy Act apply."

(b) COMMISSION JURISDICTION OVER SYNTHETIC NATURAL GAS.—Section 1(b) of the Natural Gas Act, as amended by subsection (a), is further amended by adding at the end thereof the following new paragraph:

"(3)(A) Except as provided in subparagraph (B), the provisions of this Act shall apply to—

"(i) any facility owned and operated by a natural-gas company or an affiliate thereof for the manufacture of pipeline-quality gas for the purposes of transportation in interstate commerce or sale in interstate commerce for resale for ultimate public consumption.

"(ii) the transportation in interstate commerce or sale in interstate commerce for resale for ultimate public consumption of pipeline-quality gas, and

"(iii) any natural-gas company affiliate engaged in such manufacture, transportation, or sale.

"(B) The provisions of this Act shall not apply to the mining, production, transportation, sale, delivery, or any other activity related to the furnishing of hydrocarbon-containing material (other than natural gas) to a natural-gas company or its affiliate for the production of such pipeline-quality gas.

"(C)(i) If, before the date of the enactment of this paragraph, any natural-gas company or its affiliate was engaged in the manufacture of pipeline-quality gas from hydrocarbon-containing material, the Commission shall issue a certificate for such manufacture of such pipeline-quality gas without requiring further proof that the public convenience and necessity will be served by such manufacture, and without further proceedings pursuant to this Act or any other provision of law.

"(ii) If, before the date of enactment of this paragraph, a certificate of public convenience and necessity has been issued by the Commission authorizing the tranportation in interstate commerce of pipeline-quality gas manufactured from hydrocarbon-containing material or the sale in interstate commerce for resale for ultimate consumption of such pipeline-quality gas, the Commission shall issue a certificate for such transportation or sale for resale without requiring further proof that the public convenience and necessity will be served by such transportation or sale for resale and without further proceedings pursuant to this Act or any other provision of law.

"(iii) Application for such a certificate shall be made to the Commission by such natural-gas company or its affiliate within 90 days after such date of enactment. Pending the determination of any such application, the continuance of such manufacture, transportation, or sale for resale, shall be lawful.

"(D) For purposes of this subsection, the term 'pipeline-quality gas' means a mixture of hydrocarbons in a gaseous state (i) the principal ingredient of which is methane and (ii) which is interchangeable and compatible with natural gas as determined, by rule, by the Commission.".

SEC. 417. CONFORMING AMENDMENTS TO THE NATURAL GAS ACT.

(a) AMENDMENTS TO SECTION 4.—Section 4(a) of the Natural Gas Act (15 U.S.C. 717c(a)) is amended by adding at the end thereof the following new sentence: "For purposes of this section, any price for any sale of natural gas, to which the provisions of section 404, 406, 407, 409, or 413(e)(4) of the National Energy Act applies, shall be deemed just and reasonable if such price does not exceed the appropriate maximum lawful price established in, or prescribed under, such provisions.".

(b) AMENDMENT TO SECTION 5.—Section 5(a) of the Natural Gas Act (15 U.S.C. 717d(a)) is amended by adding at the end thereof the following new sentence: "For purposes of this section, any price for any sale of natural gas, to which the provisions of section 404, 406, 407, 409, or 413(e)(4) of the National Energy Act applies, shall be deemed just and reasonable if such price does not exceed the appropriate maximum lawful price established in, or prescribed under, such provisions.".

(c) AMENDMENT TO SECTION 5.—Section 7(c) of the Natural Gas Act (15 U.S.C. 717f(c)) is amended by adding at the end of the first paragraph thereof the following new sentence: "The Commission may not deny a certificate of public convenience and necessity under this section solely on the basis of the price for any sale of natural gas, to which the provisions of section 404, 406, 407, 409, or 413(e)(4) of the National Energy Act applies, if such price does not exceed the appropriate maximum lawful price established in, or prescribed under, such provisions.".

SEC 418. AMENDMENTS TO THE EMERGENCY NATURAL GAS ACT OF 1977.

The Emergency Natural Gas Act of 1977 is amended—

(1) in section 2, by striking out paragraphs (2), (3), and (4) and inserting in lieu thereof the following:

"(2) The term 'pipeline' means any person engaged in the transportation of natural gas.";

(2) in section 2, by redesignating paragraphs (5), (6), and (7) thereof as (3), (4), and (5), respectively;

(3) in section 4(a)(1), by striking out subparagraphs (A) and (B) and inserting in lieu thereof the following:

"(A) any pipeline to make emergency deliveries of, or to transport, natural gas to any other pipeline or to any local distribution company for purposes of meeting such requirements; or";

(4) in section 4(a)(1), by redesignating subparagraph (C) thereof as subparagraph (B);

(5) in section 4(a)(1), by striking out "April 30, 1977" and inserting in lieu thereof "April 30, 1979";

(6) in section 4(a)(2), by striking out "interstate" wherever it appears;

(7) in section 4(a)(3), by striking out "interstate";

(8) in section 4(d), by striking out "interstate pipelines, intrastate";

(9) in section 4(f)(2)(A), by striking out "by August 1, 1977, to the maximum extent practicable," and inserting in lieu thereof "as expeditiously as practicable,";

(10) in section 4(f)(2)(B), by striking out "interstate" both places it appears;

(11) in section 7, by striking out "an interstate pipeline" both places it appears and inserting in lieu thereof "a pipeline" and by striking out "such interstate" and inserting in lieu thereof "such";

(12) in section 9(c), by striking out "August 1, 1977," and inserting in lieu thereof "April 30, 1979,"; and

(13) in section 12(b), after "October 1, 1977,", by inserting "October 1, 1978, and June 1, 1979,".

AD HOC COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will designate the page and line number of the ad hoc committee amendments, the first group of the amendments recommended by the ad hoc committee to be considered en bloc.

The Clerk read as follows:

Page 183, line 11 through page 184, line 19, on page 185, line 8 through line 14, on page 186, line 7 through line 14, on page 189, line 10 through line 12, on page 207, line 14 through line 15, and on page 208, line 4 through page 209, line 2, and an amendment inserting on page 188, line 11, the word "domestic" before the word "crude";

(The ad hoc amendments considered in bloc read as follows:)

Page 183, line 11, strike:

(5) The term "new natural gas" means natural gas—

(A) which is produced from a new lease on the Outer Continental Shelf; or

(B) which is produced (other than from the Outer Continental Shelf)

(i) from a new well—

(I) which is 2.5 statute miles or more (horizontal distance) from any old well, and

(II) the completion location of which is in a newly discovered reservoir; or

(ii) from a new well the completion location of which—

(I) is 1,000 feet or more deeper than the deepest completion location of an old well, if any, which is within 2.5 statute miles (horizontal distance) of such new well, and

(II) is in a newly discovered reservoir.

And insert:

(5) The term "new natural gas" means natural gas—

(A) produced from a new lease on the Outer Continental Shelf; or

(B) produced (other than from the Outer Continental Shelf) from a new well the completion location of which—

(i) is 2.5 statute miles or more (horizontal distance) from any old well;

(ii) is 1,000 feet or more deeper than the deepest completion location of an old well, if any, which is within 2.5 statute miles (horizontal distance) of such new well; or

(iii) is in a newly discovered reservoir.

Page 185, line 8, strike:

(9) The term "old well" means any well other than a new well.

And insert:

(9) The term "old well" means any well which—

(A) produced crude oil, natural gas, or both, on or before April 20, 1977; or

(B) was capable of producing crude oil, natural gas, or both, on April 20, 1977.

Page 186, line 7, strike:

(13) The term "newly discovered reservoir" means any reservoir which was first penetrated by a well the surface drilling of which commenced after April 20, 1977.

And insert:

(13) The term "newly discovered reservoir" means any reservoir which, on or before April 20, 1977, was not discovered, by the drilling of a well, to contain natural gas.

Page 189, line 10, strike: "of this Act shall be the current Btu related price" and insert: "shall be the higher of $1.75 per million Btu's or the current Btu related price".

Page 207, line 14 following the word "apply," insert: "or to any sale to which paragraph (4) applies,".

Page 208, following line 3, insert:

(5)(A) On the request of any State agency having regulatory authority over the drilling of natural gas wells or the production of such wells, the Commission shall delegate to such State agency the authority to determine whether the requirements of section 402(5)(B)(iii) (relating to the definition of new natural gas) have been satisfied for purposes of applying section 404.

(B) Any such delegation shall be upon terms and conditions prescribed by the Commission. The Commission may rescind any such delegation at any time by notifying the State agency of such rescission. The Commission may review any determination made by any State agency pursuant to the delegation of authority under this paragraph and, within one year after such determination, reverse or modify such determination.

(C) For purposes of subparagraph (B), the one-year limitation of such subparagraph shall not apply in any case—

(i) involving a fraudulent filing with the State agency or the Commission, or

(ii) involving a failure to file information required by the State agency, or by the Commission pursuant to the terms and conditions of the delegation under this paragraph.

Page 188, line 11, following the word "acquiring", insert the word "domestic".

Mr. ASHLEY. Mr. Chairman, I rise in support of the amendments.

Mr. Chairman, at the outset of general debate on yesterday I commented that the national energy plan, which is the predicate for the legislation we are considering today, really has three basic cornerstones: conservation; conversion from oil and natural gas to coal, nuclear, and other sources of energy; and, finally, production incentives.

Production incentives, we all acknowledge are manifestly essential if we are to continue to have available the oil and the natural gas which drives the engine of our economy, heats our homes, provides fuel for our tractors, and gasoline for our automobiles.

The amendment that we are considering at this time, Mr. Chairman, goes to the very heart of this third cornerstone. Perhaps it can be best put in perspective by reminding my colleagues that in the national energy plan, as proposed by the administration, the definition of new natural gas is gas at least 2½ miles away from an existing well or, if within the 2½ miles, is 1,000 feet deeper than the deepest completion location of an old well. That was the definition that was sent to the Congress.

The Committee on Interstate and Foreign Commerce changed that, to some extent, by saying that, in order to qualify as new natural gas, not only must that gas be 2½ miles away from the existing well, or 1,000 feet deeper, but it must in fact come from a new reservoir.

The ad hoc committee, wrestling with a definition that would at the same time provide an incentive price and protect the American consumer, came up with a definition which is before us at this time. That definition—and I may say thanks to the majority leader, the gentleman from Texas (Mr. WRIGHT), thanks to the gentleman from Texas (Mr. CHARLES WILSON), thanks to the gentleman from Texas (Mr. ECKHARDT), thanks to the gentleman from Michigan (Mr. DINGELL), and thanks to the others who brought about this agreement—defines new natural gas as natural gas produced from a well more than 2½ miles from an existing well or 1,000 feet deeper than an existing well within 2½ miles—and I stress this because it is important—in addition, it says that any gas that truly is from a new reservoir within the 2½-mile radius or 1,000-foot limitation shall be considered as new gas.

That is a departure. Obviously it is a broader definition of "new gas" than that contained either in the administration proposal or the proposal from the Committee on Interstate and Foreign Commerce. It says that any gas outside the 2½-mile cylinder, if you will, whether it be from a new reservoir or old reservoir, shall be considered as new gas. Again that is a broadening of the definition.

As far as price is concerned, the administration proposed a ceiling at $1.75 per 1,000 cubic feet. This was retained in the Committee on Interstate and Foreign Commerce, and it is retained in the amendment before us.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. ASHLEY) has expired.

(By unanimous consent, Mr. ASHLEY was allowed to proceed for 3 additional minutes.)

Mr. ASHLEY. Mr. Chairman, I would like simply to conclude with these remarks:

Our responsibility at this juncture is twofold as we consider the definition and price of new natural gas. We do have a responsibility to the American people, to our generation, and to the generations to come to provide a mechanism and to provide an incentive price so there can be assurance that there will be new production tomorrow, next month, next year, and into the years to come.

There is a secondary and concomitant responsibility on this body, and that is to protect the American consumer from unwarranted high prices and from unjustifiable profits. This, too, it seems to me, Mr. Chairman, is provided for in the amendment before us.

Mr. Chairman, I do not suppose that any amendment has been more thoroughly discussed and deliberated than this amendment, not simply within this chamber or these halls but among the many diverse interest groups of this land. I can only say that I am confident we have struck a balance between the competing objectives which fall on our shoulders at this time.

Mr. Chairman, I want to pay particular tribute and offer congratulations to those whom I have named and to the others who have made possible the amendment that is before us.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I wonder if the gentleman will advise me further as to this amendment that results from this new compromise that was struck, as nearly as I can observe, among the Members on the majority side, since it was not discussed with any of us on the minority side of the ad hoc committee.

Under the definitions that have been set in the ad hoc committee amendments, gas that was previously sold in the intrastate market, flowing in the intrastate market, will be sold at what price?

Under section 406 and definitions in the other parts of the bill, gas subject to section 406 will now sell for $1.45; is that correct?

Mr. ASHLEY. I will say to the gentleman that it depends upon the previous contractual price for that gas.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. ASHLEY) has again expired.

(On request of Mr. DINGELL and by unanimous consent, Mr. ASHLEY was allowed to proceed for 3 additional minutes.)

Mr. DINGELL. Mr. Chairman, will the gentleman from Ohio yield?

Mr. ASHLEY. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I believe the question was this—and I hope the other gentleman from Ohio (Mr. BROWN) will give me his attention—what will be the price under a rollover contract of gas flowing under existing contracts in the intrastate markets? Is that the question?

Mr. BROWN of Ohio. No. Mr. Chairman, if the gentleman from Ohio will yield, the question is not "under existing contracts."

The question I asked was this: What would be the price of gas previously flowing in the intrastate market which will be sold under a new contract in the interstate market? What would that price be after the passage of this legislation that the ad hoc committee has recommended?

Mr. DINGELL. The answer to that question is: at most $1.75

Mr. BROWN of Ohio. Mr. Chairman, I think if the gentleman will check further, he will find the price of gas under section 406 of the bill is $1.45.

Mr. ASHLEY. Mr. Chairman, if the gentlemen will allow me to make this observation, I believe I am right in saying that it depends on whether there was an expiring contract. If there is an expiring contract, then it depends on whether the price was less than $1.45 or more than $1.45.

Mr. DINGELL. Mr. Chairman, if the gentleman will yield further, the gentleman from Ohio (Mr. ASHLEY) is correct. I think we will have to go to section 407, which is entitled, "Sales of Old Natural Gas Under Rollover Contracts."

The way that section works is that if the existing contract price was above $1.45, the price would go to $1.75. I refer the gentleman to pages 190 and 191 of the bill on that particular point, most specifically subsection 407(b)(2).

Mr. BROWN of Ohio. Would the gentleman look at Section 406 and interpret that for me.

It says:

> Except as provided in sections 409 and 413(e)(4), the maximum lawful price for any first sale of old natural gas produced in the United States and sold under a new contract shall be $1.45 per million Btu's multiplied by the inflation adjustment.

Mr. DINGELL. If the gentleman from Ohio (Mr. ASHLEY) will yield further, what we have to do is to look at the definition of "new contracts," "existing contracts," and "rollover contracts."

If the gentleman will do that, he will find that my interpretation is correct.

Mr. BROWN of Ohio. Is the gentleman saying that if gas previously sold in the intrastate market, say, in Texas, where the price is now $1.95 to $2——

Mr. DINGELL. If I may interrupt the gentleman, let me read the definitions. The definition of "new contract" reads as follows:

> The term "new contract" means any contract, entered into after April 20, 1977, for the sale of natural gas which was not previously subject to an existing contract.

The definition of "rollover contract," is as follows:

> The term "rollover contract" means any contract, entered into after April 20, 1977, for the sale of natural gas that was previously subject to an existing contract which expired at the end of a fixed term specified by such existing contract.

There we have the definitions of the two, and the gentleman will understand how it works.

If the gentleman will permit me to say something further, in view of these definitions, section 407 is applicable and not section 406.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. ASHLEY) has expired.

(On request of Mr. ECKHARDT and by unanimous consent, Mr. ASHLEY was allowed to proceed for 3 additional minutes.)

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, may I say to the gentleman that it makes no difference what the destination of the gas is, either to interstate or intrastate markets. It does make a difference from what store the gas originates.

If gas has come from intrastate sources and was under contract at $1.45 or more, the maximum rate goes to $1.75 whether or not that gas flows into interstate markets.

The point I am making here is that we have no discrimination against interstate markets, as the Krueger amendment originally had, in which it was said that gas going from intrastate markets into interstate markets should be controlled at not more than $1.45.

The gentleman from Ohio (Mr. BROWN) took that out of his amendment.

Mr. DINGELL. Mr. Chairman, if the gentleman will yield further, I thoroughly agree with the gentleman from Texas (Mr. ECKHARDT). His interpretation is correct, and I point out that under the committee bill, which the Eckhardt amendment will soon amend, there is no discrimination against either interstate or intrastate contracts, new or rollover; and that is something which cannot be said about some of the other legislation and the proposals which we have heard.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield further?

Mr. ASHLEY. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I want to be sure, by hearing it from either the gentleman from Texas (Mr. ECKHARDT) or from the gentleman from Michigan (Mr. DINGELL), that we have established what the price will be on gas previously sold in intrastate commerce, now to be sold in interstate commerce under the provisions of the ad hoc committee amendment.

Will it be sold at $1.45 or $1.75?

It seems to me that the interpretation of new contracts and rollover contracts would indicate that there at least is a question that it might be held to $1.45.

Could either gentleman give me assurance that it will not be held down to $1.45 under the amendment that has been presented?

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield so I may answer that question?

Mr. ASHLEY. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, as I stated before, it makes no difference whether the gas goes into the interstate or intrastate market, but it does make a difference from whence it came.

Mr. BROWN of Ohio. From whence it came is intrastate commerce.

Mr. ECKHARDT. If it came from intrastate commerce, if it is priced before the rollover contract permitted an increase, at $1.45 or more the maximum price may be $1.75, but that is not automatic.

Mr. BROWN of Ohio. What do you mean, it is not automatic?

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. BROWN of Ohio, and by unanimous consent, Mr. ASHLEY was allowed to proceed for 3 additional minutes.)

Mr. BROWN of Ohio. Mr. Chairman, if the gentleman will yield further, what does the gentleman from Texas (Mr. ECKHARDT) mean it is not automatic?

Mr. ECKHARDT. The $1.75 is the ceiling price that would be applicable in that case.

Mr. BROWN of Ohio. Could the gentleman from Texas (Mr. ECKHARDT) advise me how this would be determined? The $1.75 is a ceiling and the gas could be held to a much lower price under section 407.

Mr. ECKHARDT. If I may continue for a moment, if the gentleman will yield further, if the contract had a price of less than $1.45, then the maximum price is $1.45 but in both instances the price of gas either going into intra or interstate commerce is treated in the same manner because what we are attempting to get at in this bill is to eliminate the discrimination in favor of the higher price in intrastate commerce.

Mr. ANDERSON of Illinois, Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I must respectfully disagree with the statement made a few minutes ago by the distinguished chairman of the committee, the gentleman from Ohio (Mr. ASHLEY), that the ad hoc committee amendment now before us, will help to fulfill our goal of providing us with additional incentives to produce all of the natural gas that is required to meet the energy needs of our country.

I can agree with the gentleman in the statement that he made that we have a responsibility to the American people not only now in the present day but for future generations that lie ahead. But I would suggest that it is a responsibility that goes beyond an attempt to use the narrow approach of this amendment, and it is our responsibility to avoid the kind of disastrous shortages that devastated the American economy in the winter recently passed.

Make no mistake about it, in the amendment now before us we are being asked to take a giant step in the wrong direction in an approach to the national gas pricing policies of this country. What we are being asked in effect to do is to tie the price of new gas to the price of "old" oil, because the composite price of domestically produced oil would be the index that we would use in determining the price of new gas.

I would suggest that that composite price of oil as established in the pricing policies of EPCA has proved to be a disincentive to the further exploration and development of oil in this country.

What sense does it then make to tie the price of new gas to an oil pricing policy that has been bad, a pricing policy that has been more than bad, it has been a disaster?

I would go further, I would suggest that if we adjust this pricing scheme and it fails to work, then in the future we could say that it would have made more sense to have used the cost-based pricing system of the FTC than it would be to adopt the formula that is incorporated in the so-called Eckhardt amendment.

There is not any question that the amendment is going to provide for some increases in the prices of natural gas under that formula. But, there is certainly no question that those increases will have absolutely no relationship to the costs of producing new gas, nor will they have any relationship to the marketplace in which that gas is sold.

I will say that as ineffective and as counterproductive as the present pricing system may be under the cost-based formulas that are used by the Federal Power Commission, it would be in some sense, more logical to continue that system than to retreat to the artificial composite pricing scheme that is recommended in this amendment, and which has not worked on oil in the past.

What the authors of this amendment seem to forget is that in dealing with natural gas we are dealing with our cleanest and most versatile fuel. They forget that we do have large reserves of natural gas in this country. We in this Chamber do not have to resort to the kind of doomsday philosophy that seems to motivate the authors of this amendment. We do not have to force American consumers because there are shortages of natural gas to then go to other forms of energy that are much more expensive. Additional gas produced by deregulation would permit continued service to residential and commercial customers at prices that would be far below the projected prices for the alternative—$14 per million Btu for electricity and nearly $4 per million Btu for middle distillates for No. 2 heating oil. If we fail to get gas, then that is what we are asking the American consumer to pay. I say to the Chairman who professed concern a moment ago for the consumers of this country, What concern does he show when he tells them, "No, you cannot have the gas that you need at the burner tip to heat your homes, or to keep your factories going, or to keep your economy producing and your men employed. No. You will have to go to those sources of energy that will triple or quadruple the cost for their energy supplies compared to that which would be involved in having adequate supplies of natural gas."

With all of the force, with all of the vigor that I can summon to this proposition—and there are the experts who will address you who I think will bring out the fallacy that lies behind this amendment with even greater clarity—I would urge the members of the Committee to reject the pricing scheme embodied in this amendment.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. CHARLES WILSON of Texas, and by unanimous consent, Mr. ANDERSON of Illinois was allowed to proceed for 2 additional minutes.)

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the distinguished gentleman from Texas (Mr. WILSON).

Mr. CHARLES WILSON of Texas. I thank the gentleman for yielding.

I think that much of what the gentleman said is true, but the basic thrust of his amendment is really not in pricing. The basic thrust of the gentleman's amendment is in expanding the definition of new gas.

Mr. ANDERSON of Illinois. Let me reclaim my time. We are considering this amendment en bloc. We are not merely considering an amendment that expands the definition of new gas to include new reservoirs in addition to the other parts of the definition. We are also accepting, if we vote through this amendment, a pricing scheme that will go from a cost base pricing scheme to one where we are trying the price of new natural gas to the average refinery acquisition cost of crude oil produced in this country. Is that not correct?

Mr. CHARLES WILSON of Texas. No; that is not correct. I think that there will be an amendment offered by the gentleman from Ohio and my colleague, the gentleman from Texas (Mr. KRUEGER), which will in fact be a deregulation amendment that will be offered. But that amendment may fail, and if that amendment does fail, then I will ask the gentleman to have a more liberal definition of new gas.

Mr. ANDERSON of Illinois. Let me ask the gentleman, where would we be then if we had adopted the previous Eckhardt amendment, the amendment of the gentleman from Texas with its pricing scheme, and then we went on to consider the amendment that has been offered by my friend, the gentleman from Ohio (Mr. BROWN), which was defeated by only three votes in the full committee? If that amendment were defeated, would we not be left with a new pricing system whereby we would be trying the price of new gas to the average refinery acquisition cost of crude oil produced in this country? That is where we would be.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield on that point for me to answer that question?

Mr. ANDERSON of Illinois. I yield to the gentleman from Texas.

Mr. ECKHARDT. I thank the gentleman for yielding.

Here is where we would be. If we do not pass the Wilson-Eckhardt amendment, and we do not pass the Brown amendment, we would be in exactly the position the gentleman is talking about. That is what the gentleman from Texas (Mr. WILSON) was pointing out, that this amendment does nothing but expand the definition of new gas. That is all it does.

Mr. ANDERSON of Illinois. That is absolutely not the case, and a careful reading of the amendment makes that clear.

Mr. WRIGHT. Mr. Chairman, I rise in favor of the amendment.

Henry Clay once pleaded with his colleagues:

> Do not despise compromise. It is the cement that holds the Union together.

I think this is an amendment with which every one of us can live. It is not everything any one of us might desire. More importantly, it is an amendment with which the country can live and can make some progress toward energy sufficiencies.

This amendment does not deregulate natural gas. It does not raise the specter of wildly escalating prices to the consumer. This amendment retains a predictable price at $1.75 until such time as the composite price of domestically produced oil might by the equivalent Btu content slowly raise the price of new natural gas through and above that ceiling.

But the important thing is that while protecting the consumer against the fear of spiraling costs, it does provide an incentive for the explorer, the seeker, the risk taker, the independent who has discovered 75 to 80 percent of the oil and gas reserves in this country, to go out and continue looking. It does this by establishing the price at a level at which that explorer can borrow money from the bank to go look for new reserves, and it does it by expanding the definition of what constitutes new natural gas.

Now obviously if the price were $5 a thousand cubic feet and if a reservoir could not be identified as new natural gas, it would be of no benefit or attractiveness whatever to the individual who wants to take the risk in this extremely venturesome business and without whom we would not have had the petroleum discoveries which have undergirded our society.

So it seems to me that this is a compromise in which all of us, wherever we come from, can find a resting place. It will serve for the moment.

I should like to offer one other thought. This is a solution which treats all sections of the country alike. The oil producing sections have in the past enjoyed an advantage of the availability of natural gas in intrastate commerce by reason of the fact that the price was higher than for interstate markets. But their consumers have been faced with the disadvantage of paying quite considerably

higher prices for the fuel than consumers in the nonproducing States. This equalizes the opportunity, the availability, and the price. So what could be fairer from a national standpoint?

I assure the Members that the people in my State, the average Texans, do not want to disadvantage and cause physical suffering to other Americans in cases of shortage. We are 1 country, not 50 separate countries. Texans know that as well as anyone. There can be no long-term advantage to any region if it is gained at the pain of physical hardship to the citizens of other regions. And I can certainly assure the Members that those very, very few who have facetiously placed on their cars stickers with the invidious slogan, "Let them freeze in the dark," do not—do not—represent the sentiments of the people of my State.

I can assure the Members further that those of us from Texas and from Oklahoma and Louisiana and from other gas-producing areas in Congress represent more consumers than we do producers. It is precisely because of our concern for America's consumers, present and future, that we are determined to do all we can to assure continuing sources of energy supplies for the future. All of us need to recognize that unless we make it possible for people to go out and explore for this precious fuel we are not going to find it. And unless we find more of it, the price inexorably will go up, because a shortage is going to develop and intensify, as we have seen it already developing.

So I think this solution addresses both problems. It provides reasonable protection for the consumer against rapidly rising prices and it provides some protection for the future insofar as it offers an incentive to expand supply.

Conservation is not a whole energy policy. Conservation alone is not enough. Conservation is part of it. It is the first step. But it merely buys us time in which to increase our national supply. If all we did were to conserve—if we should fail to use that time to provide additional supplies—then we simply would be postponing that inevitable day when the national gas tank would be on empty.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(At the request of Mr. BROWN of Michigan, and by unanimous consent, Mr. WRIGHT was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WRIGHT. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. Mr. Chairman, I tend to concur with what the gentleman has said, because the Eckhardt amendment establishes as "new gas" that produced from a "newly discovered reservoir," and that is defined in the bill as:

> The term "newly discovered reservoir" means any reservoir which, on or before April 20, 1977, was not discovered, by the drilling of a well, to contain natural gas.

That is the legislative definition.

Then the bill grants to the Commission the authority to delegate to a State agency the determination of whether the reservoir is truly a new reservoir. The amendment also provides that after such delegation, the Commission can decide whether or not to rescind the delegated authority. I presume that means because the State regulatory agency has not pursued its determination in accordance to what the Commission says should be the criteria for such determination.

Now, in effect then, we get three definitions: The one provided in the amendment, the State regulatory agency's and the Commission's.

Would the gentleman not agree that regardless of who makes the determination what we intend by this language, is that if this is truly newly discovered gas, it gets new gas treatment?

Mr. WRIGHT. Mr. Chairman, I do agree, yes.

Mr. BROWN of Michigan. In short, when the Commission sets terms and conditions in delegating the authority to make a determination by the State regulatory agency, the Administrator cannot in those terms and conditions adopt standards that are inconsistent with the generally accepted standards of industry and the State regulatory agency authorities, in the area where the well is located; would the gentleman agree?

Mr. WRIGHT. I would think that the basic definition in the bill would and must prevail. The presumption must lie with the basic wisdom of those State regulatory agencies which are the governmental bodies most intimately familiar with the geological strata and formations that lie within their respective jurisdictions. Presumably, they can make the determination much better than someone sitting off in Washington as to whether, indeed, a discovery is a new reservoir, and therefore new gas.

Mr. BROWN of Michigan. Mr. Chairman, I thank the gentleman for those remarks. I completely concur, because it has ramifications for my State of Michigan.

Mr. BROWN of Ohio. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the gentleman from Texas, the majority leader, is an eloquent man. I praise the gentleman for that, but I think the gentleman is just absolutely wrong on this part of the bill. I worry about that, not only from the gentleman's standpoint, but from mine.

The ad hoc committee amendment is not a compromise. It is an admission of failure of the administration's definition of new gas. It is an admission that the administration definition was on its face idiotic. For instance, the first administration definition provided that if you drilled a new well within 2½ miles of a dry hole and found gas, the presumption was that what you found in the new well would be old gas because there had been a well drilled within 2½ miles, even though the first well was a dry hole. How silly.

The ad hoc amendment does not raise the possibility of any new gas in the interstate market because we have been told by everyone who testified before the Commerce Subcommittee on Energy and Power that if the prices were the same in interstate and intrastate markets, the sales would be made to intrastate markets; because producers do not want to have to mess around with good old Uncle Sam and his regulatory agency and regulated prices. So, there is not much hope for those of us in the interstate market.

But, what does raise a specter for the intrastate market is that there will be short gas supplies in the intrastate market because, in fact, what the bill before us amounts to in prices for the intrastate market is a rollback. It means that producers will seek less gas for that market, too. The ad hoc amendment, called a compromise, is a rollback of price in the intrastate market. It is a message to the gas seekers, the 10,000 or so independents that go out and look for gas, that they are going to have regulation forever; that somebody in Washington is going to tell them the price at which the gas they find will be sold, no matter what the cost was that went into finding that gas.

This bill is also a message that Washington will ultimately determine what is a new gas well. Oh, sure, the ad hoc amendment says the local regulatory authority can determine whether it is a new reservoir within that 2½-mile and 1,000-foot cylinder, but then it says that within a year—364 days later—Washington can come in and say, "We are vetoing what the local State regulatory agency decided about that being a new reservoir. The local agency was wrong and your new well is really in an old reservoir, so you get a different, lower price than the price for which you have already sold your gas."

The Texas higher price for natural gas, I hate to say to the majority leader, does not bring tears to my eyes. The fact that you in Texas were obliged to pay higher prices for natural gas at least meant that they had natural gas in Texas last winter. In Ohio, we could not pay that higher price for Texas gas because the Federal Government said that the price was price controlled, and, therefore, nobody could sell us gas above $1.42 and Texas producers would not sell it to us at $1.42 or below.

We had pipelines that were not full, so we had factories that were closed; we had people out of work; we had schools that were closed; we had residences where the homeowner was told where to go when his gas supply diminished altogether, which school would still be warm enough so that he could move his family there and not freeze to death in his own home. My tears do not go out to the Texas folks, who could pay $1.95 or $2 and have all the gas they needed to keep their houses warm, their factories providing jobs and their children in school.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent, Mr. BROWN of Ohio was allowed to proceed for 5 additional minutes.)

Mr. BROWN of Ohio. Our choice in Ohio was to either have closed factories and schools—well, that was not a choice, because they were closed anyway—but rather, to heat our residences we had the choice of paying $4.30 for synthetic gas to try to help fill our pipelines when we could not buy Texas gas, or we could have paid $8 for oil to heat our residences; or, we could have paid $11 for the same Btu equivalency for electric heat.

And many of our homeowners in Ohio have been doing just that since 1972. That is the last year that any homeowner who built a new home in my area could tap into a gas line—1972—that is 5 years ago.

Without being able to pay over $1.42 to buy gas from Texas or Louisiana or Oklahoma, or even to produce it in Ohio and sell it in Ohio because of the federally set price, we do without gas. We must use oil; we must use synthetics; we must use electricity. And we must pay through the nose much more than market-priced gas from Texas would cost us.

I would like to take the Members back to that time last winter a little more in detail, but I do not want to make anybody else weep. There were 1,200,000 people out of work for a period of a couple weeks last winter. The State of Pennsylvania was declared a disaster emergency area. Ohio schools were closed. Incidentally, we did not get calls in our office here in Washington when they closed the factories; we got letters. But we got phone calls when they closed the schools. The city of Columbus, incidentally, had their schools out for 2 or 3 months.

What does the so-called ad hoc committee "compromise" provide? The ad hoc committee amendments, in point of fact, do not significantly change the counterproductive, proven bankrupt policies of past Federal price controls on natural gas. The ad hoc amendments place virtually the identical ceilings on the price of new natural gas that has been the ceiling in the past, except that in some cases they will actually drop ceilings below the previous price. This is what I was trying to establish with the gentleman from Texas (Mr. ECKHARDT). There are circumstances in which intrastate gas can fall to $1.45, if I understand the way that amendment is drawn. Both the Committee on Interstate and Foreign Commerce and the ad hoc committee amendments retain identical authority for the President to place price and allocation controls on intrastate gas. Do the Members know what may happen next winter if we all get this same fixed price in both intrastate and interstate markets? You may just be allocated out of gas in Texas, Louisiana and Oklahoma. Then my guess is that you will understand just how lucky you were when you did not have Federal price controls—but had plenty of gas.

The Interstate and Foreign Commerce Committee bill sets the price of new natural gas at a level equal to the Btu equivalency price of refinery cost of domestic crude oil. Today the average domestic crude oil price of about $9.25 equates with $1.60 per mfc natural gas—$1.60 not $1.75. The ad hoc committee recognized that such price might be too low to get gas produced. And so someone said, in effect, "What we will do is set the price in the bill at the equivalency price of refinery domestic crude oil or $1.75, whichever is higher."

Do the Members know where the $1.75 came from? It came from questions to Mr. Schlesinger asked in the Energy and Power Subcommittee when we asked, "What is the Btu equivalency price?" And he said, "It is $1.75." And somebody looked it up and discovered that was not correct. But, he said, "Well, it will be $1.75 by the beginning of next year, by the time the President's program becomes law."

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield to the author of the amendment to tell where the $1.75 came from?

Mr. BROWN of Ohio. Yes, in time.

Mr. Chairman, Mr. Schlesinger said that he hoped that gas would be selling at that price by then. I hoped it would be at that price by then too. But let me tell the Members that the last time we passed new price controls on energy—and this is a new price control on energy—was the EPCA legislation, when we modified the price controls on oil.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. BROWN) has expired.

Mr. BROWN of Ohio. Mr. Chairman, I ask unanimous consent to proceed for 3 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. ECKHARDT. Mr. Chairman, reserving the right to object, will the gentleman from Ohio (Mr. BROWN) yield if he is given the 3 additional minutes?

Mr. BROWN of Ohio. Of course I will, I say to the gentleman, at the termination of my comments, if I can. I will ask for the additional time to yield at that time, If I have not done so.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BROWN of Ohio. Mr. Chairman, the last time we set new prices was in the EPCA legislation when we set a composite price for oil.

The bureaucrats—meaning FEA—made a slight error. What happened was that they just misfigured the percentages of old oil and new oil. and the result has been that since EPCA passed in late 1975, the price of new oil in this country has been going down steadily.

Three different downward adjustments were made, and the result is that the production of new oil has been going down steadily. The further result of that has been, as we know, that the importation of foreign oil has gone up and we are paying a higher price for that oil.

We have the same situation with gas. If we cannot get natural gas from our own country, we end up paying a higher price to somebody else for a substitute product. When we cannot get gas from one part of the country such as Texas, we have to pay higher prices to somebody else in order to get energy, whether that energy is oil, electricity, synthetic gas, imported gas, or whatever it is. But any of these will be more costly than market priced Texas gas.

That is what is wrong with the ad hoc amendment. It is no compromise at all. It recognizes the administration's failure in the cylinder definition and it corrects that as it should. It goes to a definition that is very close to what we have in the Krueger-Brown-Wirth amendment. But it still wrongly sets the price at $1.75 or $1.45. It does not allow prices to go beyond that point, except with the GNP deflator, which is, of course, the Cost of Living Index. That means that the price will always be fixed relatively where it is now.

Mr. Chairman, I have looked forward to yielding to the gentleman from Texas (Mr. ECKHARDT), and I do so yield.

Mr. ECKHARDT. Mr. Chairman, the $1.75 price, as far as I am concerned, came from a figure which constitutes approximately the average price of new gas in Texas during the year of 1976. Actually that happens to be one of the highest prices.

Oklahoma, for instance, during the first 3 months of 1977 has had an average price of uncontrolled gas of $1.6362.

Mr. BROWN of Ohio. Mr. Chairman, let us also explain where the $1.42 came from. That is the price that the Federal Power Commission set last July to take effect in January of 1977. It came from figures based on cost data gathered by the FPC in 1974 and 1975. That is the problem with Federal price fixing. It is always well after the realistic fact.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. BROWN) has expired.

(By unanimous consent, Mr. BROWN of Ohio was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Ohio. Mr. Chairman, it takes the FPC members 18 months to gather the information as to what the price was at the beginning of the 18 months; then they announce the price, and then they go through a series of lawsuits to establish the price. By that time they have a price which is 3 or 4 years old, and the result is that we do not get any gas sold in interstate commerce at that old price because it is a 3-year-old price.

I assume that we are doing something along the same lines with the fixed price of $1.75 or $1.45 for natural gas.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, in response to the statement containing the figures that were quoted by the gentleman from Texas (Mr. ECKHARDT) a moment ago, let me state that I have in my hand a news release from the Federal Power Commission which indicates that in Texas, for new gas, during the January-March period of 1977, the average price was $1.94 per thousand cubic feet, and of that contract volume, 33.4 percent, more than a third of it, sold for between $2.01 and $2.50 per thousand cubic feet.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I will be glad to yield to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Chairman, I am glad that the gentleman from Illinois (Mr. ANDERSON) made that statement.

We are in Texas now selling over 1½ trillion cubic feet of gas per year at $1.75 or more. The price at which it has been sold to my city is over $2 per thousand cubic feet, and that has been true for some 4 years.

Some Members from my State are lightly or glibly saying the average price is around $1.75, and that is not true in

my area. I do not think that is a factual statement.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. BROWN) has again expired.

(By unanimous consent, Mr. BROWN of Ohio was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Ohio. Mr. Chairman, if the gentleman from Texas (Mr. ECKHARDT) wishes me to yield to him, I will do so.

Mr. ECKHARDT. I do not wish the gentleman to yield to me. I will obtain my own time.

Mr. BROWN of Ohio. Mr. Chairman, in conclusion, let me say that this ad hoc committee amendment is not a compromise. This is a deal. This is a deal between the gentleman from Texas (Mr. WRIGHT) and the Speaker, the gentleman from Massachusetts (Mr. O'NEILL).

Mr. CHARLES WILSON of Texas. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I think that there is no one in the Chamber who does not understand that this particular compromise is not all that I would like to have. However, I do think there are some things that should be pointed out.

No. 1, the $1.42 set by the Federal Power Commission went into effect at once at the time it was set and was included in profit and loss statements of all the oil companies at the time.

No. 2, this amendment addresses itself purely and simply and only to a more liberal definition of "new natural gas." This amendment does not touch price, topside or bottom.

No. 3, however, under the pricing system of the bill, in 1978 gas will sell for $1.86; in 1979, for $2.02; in 1980, for $2.20; and in 1981, for $2.39.

Mr. Chairman, some of my colleagues on this side of the aisle, including the gentleman from Connecticut (Mr. MOFFETT), might think that that is a little much.

I would also like to say that as far as industrial fuel is concerned, we in Texas have enjoyed an advantage; but we know that we probably cannot continue to enjoy it. I submit to my colleagues from other parts of the country that we in Texas do not need an advantage. Our industrial base is new. We have a hard-working population. We have a very beneficial tax structure, and there is nothing anyone can do to legislate snow and ice in Lufkin.

Another little thing I would like to point out is that my good friend, the gentleman from Ohio, has talked about the long lines and the unemployment in Ohio. He has talked about having very few tears for Texas because of our high prices for natural gas; but I would like to point out to my good friend, the gentleman from Ohio, that Ohio and Pennsylvania suffered more than any other States in this Union due to the natural gas shortage last winter; and Ohio and Pennsylvania to this day have a law which prohibits drilling for natural gas in Lake Erie.

I have a constituent who has 100 wells on the Canadian side of Lake Erie. They produce gas that has been sold to the State of Ohio. I would suggest that we have a little saying down in Texas, "Drop your bucket where you are."

Finally, Mr. Chairman, I would like to say that I personally have made concessions in this bill that have been like taking castor oil. I have friends in the balcony who figure that I fed them castor oil. I might also say that my colleague, the gentleman from Connecticut (Mr. MOFFETT), had to hold his nose a little bit when he swallowed this, and he has a few friends with consumer groups out in the hall who are just as angry with him as some of my producers are with me.

Mr. Chairman, I entered into this compromise, although it was far short of what I think is wise national policy, because I think it is in the interests of this country to have confidence that this Congress can face a hard problem and come up with a rational solution.

I believe that the administrator, whoever he might be, whoever the Secretary of Energy might be, is going to have the responsibility not to have those lines of unemployment in Ohio. Therefore, I believe he is going to be very liberal in his determinations of what is new natural gas because it is going to be his responsibility if unemployment continues the way it did last winter.

Finally, Mr. Chairman, I say to my Democratic colleagues, when we caucused at the first of the year and I nominated the gentleman from Texas (Mr. WRIGHT) to be majority leader, I said that part of that effort and part of my effort and part of what I hope is all of our effort is some degree of reduction in regionalism in this House and some degree of dedication to the national interest, and that is what this is all about.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, the gentleman from Texas (Mr. CHARLES WILSON) has displayed remarkable courage.

I think all of us who come from other areas of the country recognize the remarkable courage demonstrated by the gentleman from Texas (Mr. CHARLES WILSON) and the gentleman from Texas (Mr. WRIGHT) in working together with their good friend and colleague, the gentleman from Texas (Mr. ECKHARDT), who also has demonstrated over the years a remarkable courage in this matter.

I want to commend the gentleman from Texas (Mr. CHARLES WILSON) for the leadership he has given. He has done a difficult task well. He has come to a compromise which has been very difficult for him and even difficult to start.

The CHAIRMAN. The time of the gentleman from Texas (Mr. CHARLES WILSON) has expired.

(On request of Mr. DINGELL and by unanimous consent, Mr. CHARLES WILSON of Texas was allowed to proceed for 2 additional minutes.)

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I think the RECORD ought to show the high respect the gentleman from Texas (Mr. CHARLES WILSON) has earned from his colleagues by the remarkable position he has taken.

I join with the gentleman in believing that this is going to lay to rest some of the regionalism, some of the sectionalism some of the antagonism and will give us a basis of going forward toward a program that will provide fairness and an opportunity to achieve fairness, both for the consuming ends of the pipeline and for the producing ends of the pipeline.

Further than that again I say that I believe the gentleman has earned the respect and admiration of the entire body.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to my friend the gentleman from Ohio (Mr. BROWN) for a less flattering question and for an explanation on why they do not drill in Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I thank the gentleman from Texas (Mr. CHARLES WILSON) for yielding to me, and let me say that his concern is wrong. The gentleman from Texas is a very fine gentleman and I am just sorry that he feels he had to take part in this so-called compromise. It is particularly difficult for me to understand his position since reading a volume put out by the Federal Power Commission that shows that 88½ percent of the new wells drilled in Texas in the first quarter of 1977, 88½ percent of them came in at a higher price than $1.75.

In Ohio we have under consideration, currently in the State legislature, legislation to repeal that law about drilling in Lake Erie. But in the meantime we have been drilling like crazy on the land in Ohio where we can do it legally. As a matter of fact, over 1,500 wells came in finding intrastate natural gas last year. Our wells in Ohio, to be sure, are not like those in Texas. The wells tend to be not very long in life, maybe 4 or 5 years, and so their gas comes in at quite a high price by comparison to the conventional wells in Texas. But when you put that $1.75 price restriction on us on intrastate gas in Ohio you have killed that stimulus to drill in Ohio, and I can tell you that we will not have gas from intrastate wells for consumers in Ohio on land or under the water.

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. DINGELL, and by unanimous consent, Mr. CHARLES WILSON of Texas was allowed to proceed for 4 additional minutes.)

Mr. DINGELL. Mr. Chairman, will the gentleman from Texas yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, there is in the legislation before us, I would tell my good friend the gentleman from Ohio, very specific language which permits higher prices for deep wells for purposes of bringing on line wells which are of relatively limited capacity or which require the drilling through obdurate rock and things of that kind. So that there is consideration given to special circumstances of where there are

very deep wells, that are now being driven, or with regard to wells which are offshore in deep water, and things of that kind. Further let me say that it is the full and complete intention of the administration and Dr. Schlesinger has indicated this to the committee on a number of occasions, that he will afford the necessary incentive prices to accomplish this end.

But the gentleman from Ohio (Mr. BROWN) should know that the general premise on which this works is as an incentive bill, to provide an incentive in order to produce, and it does afford specifically the basis for higher prices to bring on line the kind of oil production I have mentioned and the kind that the gentleman from Ohio has been describing.

Mr. HUCKABY. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Louisiana.

Mr. HUCKABY. Mr Chairman, I would like to address myself to the specific amendment before the House. As the gentleman has stated several times, we are expanding the definition of new natural gas?

Mr. CHARLES WILSON of Texas. That is all it does.

Mr. HUCKABY. But at no point in time has anyone mentioned estimates of what percentage we are expanding the definition of new natural gas. Are we now going to increase it by 5 percent or 50 percent or 90 percent? Could the gentleman give us some ballpark estimate based upon past history of new reservoirs?

Mr. CHARLES WILSON of Texas. Of course, there is visible disagreement on this point. I can only tell the gentleman from Louisiana (Mr. HUCKABY) that the production people estimate that the new definition will probably expand new gas by 15 or 20 percent and the consumers estimate it will expand new gas by between 50 and 60 percent.

Mr. BROWN of Ohio. Mr. Chairman, would the gentleman yield so that I may respond to the gentleman from Michigan (Mr. DINGELL)?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr Chairman, let me state to the gentleman from Michigan (Mr. DINGELL) that I know the provision he mentions is in the legislatior. And I know, as the gentleman does, that it does not work. It has been in the law ever since the Permian decision back in the 1960's, when drillers were permitted to come in and say, "Wait, just a minute, this drilling cost us more than we thought it was going to cost and, dear FPC, please try to make us whole and give us some kind of decision for higher prices by which we can recover." There have been very few cases pushed on that point because early on the drillers discovered that it takes the FPC 3 or 4 or 5 or 6 years, to make a decision on such matters after the fact and by the time you get things settled, it is all moot; the driller is out of business and broke anyway.

Mr. CHARLES WILSON of Texas. If the gentleman will let me reclaim my time, I will say that it is my opinion—and it can only be an opinion in judgment, but it is my opinion—that when one man is the Secretary for Energy—the Secretary for Energy—when it is his responsibility, and when there is unemployment and there are shortages, he is going to be very, very liberal in granting those high prices. Only time will tell.

Mr. COLLINS of Texas. Mr. Chairman, I move to strike the last word.

No one on our side of the aisle has risen in support of the amendment. I want to rise in support of it. I have been in complete agreement with the gentleman from Ohio (Mr. BROWN) and our distinguished leader, the gentleman from Illinois (Mr. ANDERSON), in the fight on this subject. I agree with them completely. I think the fight should be made later on full energy when we get to the Brown amendment. When we face up to this issue in its broadest terms of what this Eckhardt amendment before us does, and that is this amendment is an improvement on the bill.

What the gentleman from Texas (Mr. ECKHARDT), the gentleman from Texas (Mr. CHARLES WILSON), and the gentleman from Texas (Mr. WRIGHT) have recommended is just a fundamental gospel truth of a definition that is absolutely essential to the bill.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I thank the gentleman for yielding.

I just want to say that I agree with the gentleman, it is an improvement on what came out of the conference committee, and it is a vast improvement on what the administration proposed. It is not an answer to the problem, however.

Mr. COLLINS of Texas. I agree with the gentleman completely, and I think the Brown amendment is the answer to the problem.

But we are talking about a current issue. What the Eckhardt amendment does—and I heard the gentleman from Louisiana ask the gentleman from Texas (Mr. CHARLES WILSON) about what this definition of new gas does—is without this definition it would be impossible to determine what new gas is. It is absolutely essential, and the key words—it is in a very small added section—"a newly discovered reservoir." When they added this to the bill, they made it possible for the oilmen, geologists, commissioners, everybody now to know what is new gas. Until they put that in the bill, we just did not have a clear definition.

I hope that on our side of the aisle our leadership will consider this very, very carefully, and that we will not call for a vote on it but will join with the proponents, because everyone who has studied the bill knows that this amendment is an improvement on the bill.

Mr. MILFORD. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Texas.

Mr. MILFORD. I thank the gentleman for yielding.

I would like to commend my colleague, the gentleman from Texas. He is making a very important point at this time in the fact that this is definitely an improvement and one that does not take away a person's right later to address the basic problems that are involved.

Mr. COLLINS of Texas. I thank the gentleman.

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Texas.

Mr. WHITE. I thank the gentleman for yielding.

I want to commend the gentleman for his position. I agree entirely with him on the efficacy of this particular amendment. But as to price, as we go down the line with the Brown amendment, unless we accept the Brown amendment, the definition of new reservoir is not going to make any difference because no one is going to drill for new oil or gas.

Mr. BROWN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Michigan.

Mr. BROWN of Michigan. I thank the gentleman for yielding.

I can substantially concur in what the gentleman has just said. However, he knows—he knows very well—that this amendment did not come before the ad hoc committee as an intellectual compromise, accommodating the data and the facts with the law. Rather this amendment came to the ad hoc committee and is before us today because the proponents of the amendment who oppose deregulation, knew they were going to lose the deregulation battle, and thought by this slight movement toward providing more proper pricing, they might be able to weaken the forces of deregulation, and I hope it will fail.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Texas.

Mr. ECKHARDT. I thank the gentleman for yielding.

The gentleman from Michigan has disparaged the intent of the authors of the amendment. I want to say right here and now that I proposed a change in the definition of gas to the industry, very much like we finally agreed on, before this matter was acted on by the Committee on Interstate and Foreign Commerce. I believe in this change in definition, not because it is a compromise but because it is a right definition.

Mr. COLLINS of Texas. The gentleman is absolutely right. When the gentleman from Texas (Mr. ECKHARDT) and I agree on anything, these are most unusual circumstances. What he has defined at this time is absolutely right. It is an excellent definition, and it is absolutely essential for the bill in its future administrative determinations.

Mr. WAGGONNER. Mr. Chairman, I move to strike the requisite number of words and I rise in support of the amendment.

Mr. Chairman, I do support this amendment which has been recommended by the ad hoc committee. I support this amendment because I do believe that in a very small way it liberalizes the definition of new gas.

Whether or not this amendment is going to sap votes away from the later or yet-to-come deregulation amendment, I do not know. It should not. I wholeheartedly support deregulation.

The definition was provided, the gentleman from Texas (Mr. CHARLES WILSON) said, simply in an effort to liberalize the definition of new gas, and I will agree that this was his intent as well as the intent of the gentleman from Texas (Mr. ECKHARDT), who coauthored the amendment and offered it in the ad hoc committee.

But I do not want to mislead anybody into believing that this is going to accomplish very much, because we are still left with the original cylinder definition provided by the administration, wherein to be classified as new gas production must be from a zone which is vertically 1,000 feet more shallow or deeper or it must be horizontally 2½ miles farther away.

But a definition is provided for a new reservoir. This new definition of a new reservoir offers the potential for producing something in the way of additional new gas.

I am not as optimistic as others are, because first of all where we allow the production, the conventional producing States, Louisiana and Texas, there is not much of the State that we can get 2½ miles away from and find anything in the way of new gas, and probably no more than 10 to 20 percent of either State would fit that definition.

Do not be too enthusiastic about even the definition of a new reservoir because the Federal Government is going to define with whatever geological terms they can agree what constitutes, even beyond the language contained on page 186, a new reservoir, and they are going to pass on—they are going to pass on—to the States, the Governor, or some regulatory commission, the authority to make a determination as to whether or not gas is new.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I think the gentleman in the well is entirely correct. The initial administration of the provision would be by the State but the actual definition and control would be with the Federal Government.

Mr. WAGGONNER. I am glad that the gentleman agrees with me there because that allows me to accent the point that I was going to make.

We do not know yet what that definition is going to be. The Federal Power Commission would be succeeded by the Department of Energy, and its regulatory commission will at some point in the future prescribe those criteria, and they will simply say to the State: "Now here are the ground rules for you to make a determination about what constitutes new gas. Use these criteria. Use these guidelines and allow that gas to be priced as new gas if you conclude, using these guidelines, it is new gas."

But there is yet further jeopardy because this decision is later subject to the audit of the Federal Power Commission or, if we have it then, the Department of Energy at that point in time and by that point in time, they can overrule the State. They can use the State regulatory authority to make those decisions and if they at some further point in time choose, they can usurp that authority. So there is jeopardy for even that decision on the part of the State regulatory commission.

But how much new gas is it going to produce? Now, my colleague and friend, the gentleman from Louisiana (Mr. HUCKABY) asked a question a moment ago of the gentleman from Texas (Mr. CHARLES WILSON) and the gentleman from Texas responded, first, he said some of the producing people think 10 to 20 percent additional gas. The consumer people think maybe 50 or 60 percent.

For once, I would like for this consumer advocacy group to be right.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

(At the request of Mr. BROWN of Ohio, and by unanimous consent, Mr. WAGGONNER was allowed to proceed for an additional 2 minutes.)

Mr. WAGGONNER. Mr. Chairman, as I say, for once, I would like for that consumer advocacy group to be right, but I do not think they are.

I asked this same question in the ad hoc committee of the gentleman from Texas (Mr. ECKHARDT), how much gas this would produce? The gentleman had a document that the gentleman read from, wherein the gentleman said something less than 1 trillion cubic feet of new gas.

Now, considering the fact that last year we used 19.54 trillion cubic feet of gas in the United States, that is not very much new gas, is it? That certainly is not 10 percent. That is nearer to 5 percent new gas. That is a lot nearer 5 percent new gas; so I am saying that even though it is a little more liberal, it is not very much more liberal.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, the gentleman in the well and I frequently disagree, but we never kid each other. I think we were together on the facts in the question of the Hinshaw matter.

Mr. WAGGONNER. We certainly were.

Mr. ECKHARDT. The gentleman is correct that, on the basis of prior production, the additional amount of gas that is estimated is about 1 trillion cubic feet; however, that does not take into account the encouragement of the price and the fact that the new definition would apply to a rather broad base.

Mr. WAGGONNER. Oh, I would agree with the gentleman there, except in such circumstances as the gentleman from Ohio (Mr. BROWN) describes in high-cost exploration and production areas that a number of others are concerned about, they still are not going to get much new gas, because they are not going to drill in those new areas.

The gentleman from Louisiana (Mr. HUCKABY) represents one of the largest and oldest gas-producing sections in the Nation and Louisiana is providing 43 percent of all the gas that goes into interstate commerce.

I am going to tell you, the people in Louisiana with this provision are still going to keep whatever new production they can in intrastate commerce. They will be forced to do it to protect their own skirts in this situation.

The people of the gentleman from Ohio (Mr. BROWN) are not going to get much new gas at the intrastate regulated price of $1.75. Those short-lived, low-volume wells are not going to be drilled because they are not going to amortize those wells at $1.75 over that period of time.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, one of our colleagues, a very esteemed colleague, said to me the other day, Members get passionate when their district's vested interests are involved. My district's vested interests are not gas wells, but consumers. We are not going to get intrastate gas at $1.75 and we are not going to get the gentleman's gas from Louisiana at $1.75 sent to Ohio.

Mr. WAGGONNER. The gentleman would not get much new gas under the definition provided by the administration. The gentleman may get a little, but I do not know how much from the definition of new reservoir that the ad hoc committee recommends.

Because it will help some, I am supporting the amendment, because it is better than what we have; but I hope nobody will be led away from voting for deregulation when that time comes.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, there is another point the gentleman raises, that is the question of discovery, because what we have attempted to do in this bill is provide that the new price only goes to those reservoirs producing gas in which gas has not previously been discovered in the formation that ultimately becomes a reservoir.

Mr. WAGGONNER. The gentleman is absolutely correct. That is a real limitation; but the thing to really be concerned about is what sort of bureaucratic bungling geological definition to arrive at a definition of a new reservoir is the Federal Power Commission, or its successor, the Department of Energy, going to make in this particular instance, because the States are not going to have the authority they need.

Mr. HUCKABY. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I yield to my good friend, the gentleman from Louisiana.

Mr. HUCKABY. Mr. Chairman, I would like to associate myself with the comments of the distinguished gentleman from Louisiana (Mr. WAGGONNER).

The real issue here is the fact that there is still a lot of gas left in this country, but it is not easy gas to get. All the easy gas has been found. We have got to get at the hard stuff. In my district in the State of Louisiana we are drilling wells, producing wells of 200,000 cubic feet a day. Two years ago, that would have been a dry hole. This gas is only sold at the intrastate market rate.

The CHAIRMAN pro tempore (Mr. NATCHER). The time of the gentleman from Louisiana has again expired.

(By unanimous consent Mr. WAGGONNER was allowed to proceed for 1 additional minute.)

Mr. WAGGONNER. I just have one other thing I want to say. That is this:

I commented earlier about my hope that the consumer advocates would be right in this instance. They have contradicted themselves when they suggest that there might be that much new gas, because they are the same people who have been saying in recent months and recent years that price was not related to new gas; that there was not much gas left out there to find. I am happy now to see that they have come down on the other side of the fence, and that they will allow at some later point, at a going price, the exploration for this new gas that they think we are going to get.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I am going to support the Eckhardt amendment. I believe that it accomplishes some litttle bit, though not very much. But I would like to point out to the members of the committee some of the contradictions with which we have been faced during this debate.

We have implicit in the amendment itself and in the statement by the majority leader, the distinguished gentleman from Texas (Mr. WRIGHT), a concession that a higher price produces increased supply; a concession that a higher price for more gas is going to produce increased discovery, according to the gentleman from Texas (Mr. ECKHARDT), who talks about an additional trillion cubic feet of gas. We have this concession, that a higher price produces more gas; and yet, this amendment ignores its very own premise. It ignores its own argument that high price increases production, and continues regulation—setting price ceilings well below the current market price level in Texas.

Then, the majority leader, the gentleman from Texas (Mr. WRIGHT) talks of the great specter of high prices. I hope the Members all noticed, as I did, that he did not talk about higher prices. He talked about the specter of higher prices, being very careful to walk on both sides of that. The majority leader talks of the great specter of higher prices, and then his colleague from Texas, my friend, Mr. ECKHARDT, rises to tell us how low the free market prices are in Oklahoma.

I would only suggest that the purpose of the Eckhardt amendment is not a compromise, not to further more discovery, but is simply an attempt to stop deregulation. Many of the gentlemen who are supporting this amendment are no great advocates of deregulation and have never supported it in the past.

I will support the Eckhardt amendment because it does go in the right direction, but, as my friend from Louisiana, Mr. WAGGONNER, said, this is not the answer. This is not the solution. I will support it, and then I will vote for deregulation, and I hope the Members will do the same.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield to me?

Mr. EDWARDS of Oklahoma. I will be glad to yield to my friend from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. I had merely risen to say that I had supported a definition of this type long before the question came up for a compromise, because I think, as the gentleman in the well believes, that the definition of new gas should be broad enough to bring in a very substantial amount of new gas, and I agree with the gentleman in the well that a reasonable increase in price will do it.

The only point is that twice that price will not bring in twice that much gas. The gentleman I think is entirely wrong if he feels that production goes up in a straight line curve with price. It goes in a hyperbolic curve. So that at some point an extremely great increase in price will not bring in much more gas.

Mr. EDWARDS of Oklahoma. I will only point out that the gentleman himself pointed out the figures of my own State of Oklahoma, and I think it is inappropriate to raise the specter of higher prices, talking about $3.50 or $4, because that is not in the ballgame. It is not going to happen.

Mr. HUCKABY. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Oklahoma. I yield to the gentleman from Louisiana.

Mr. HUCKABY. I would like to point out to the gentleman from Texas that throughout this country and especially the gas producing States there are potentially many gas wells which produce one-quarter of a million cubic feet of gas per day which does not produce the $1.45. There is gas to be gotten at around a $2 level that will yield a return that is not there at $1.45.

Mr. EDWARDS of Oklahoma. That is absolutely correct.

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of Oklahoma. I yield to the gentleman from Ohio.

Mr. MILLER of Ohio. I thank the gentleman for yielding.

Mr. Chairman, I take the time only to clear the record. I understood the gentleman from Texas (Mr. WILSON) to make a remark twice that this is not a pricing amendment. And yet we have seven amendments being considered now en bloc. The pricing amendment is one that we are considering right now.

The CHAIRMAN. The time of the gentleman from Oklahoma (Mr. EDWARDS) has expired.

(By unanimous consent, Mr. EDWARDS of Oklahoma was allowed to proceed for 1 additional minute.)

Mr. EDWARDS of Oklahoma. Mr. Chairman, would the gentleman like me to yield to the gentleman from Texas for an answer to his question?

Mr. MILLER of Ohio. Mr. Chairman, it was designated that there were seven amendments in this section en bloc which we are considering right now. One of them is the new gas whereby we would have a cylinder of not more than 2½ miles from the well or 1,000 feet deeper but, by the same token, it does have the pricing amendment which controls the new gas, at $1.75 a thousand cubic feet.

Mr. ECKHARDT. Mr. Chairman, I move to strike the requisite number of words, and I rise to speak in favor of the amendment.

Mr. Chairman, the time has come to end the stalemate. It was the stalemate that the gentleman from Ohio (Mr. BROWN) was talking about when he was talking about the unemployment lines, the lack of gas over the country, and it is a stalemate created by a tyranny of words. Primarily, the words are "regulation" and "deregulation." Polarization around these words has paralyzed Congress too long and has thus hindered solution of the twin goals: First, to bring on more gas production and, second, to protect the consumer from an inordinate increase in utility costs, not only gas, but electric.

Mr. Chairman, I believe this ad hoc committee amendment offers an opportunity to meet these goals, and it deserves the careful consideration of the Members. When they have given it that, I believe they will support it. Yes, it is a compromise, but it is a compromise that does not move away from either of the twin goals that I have described.

The natural gas pricing measure adopted by the ad hoc committee retains the major natural gas pricing provisions proposed by the Carter administration and the Committee on Interstate and Foreign Commerce. These stem from and are based upon a fundamental proposition that I think has become universally accepted: That there cannot remain a wide spread between that price which natural gas can command in the interstate market and that which the identical resource can command in the intrastate market.

My friends, the gentleman from Texas (Mr. KRUEGER), the gentleman from Colorado (Mr. WIRTH), and the gentleman from Ohio (Mr. BROWN), would, I am sure, agree on this proposition, but, of course, they would take another path to achieve this objective.

On the other hand, my colleague, the gentleman from Texas (Mr. CHARLES WILSON); the chairmen of my committee and of my subcommittee, the gentleman from West Virginia (Mr. STAGGERS), and the gentleman from Michigan (Mr. DINGELL); and the top leadership of this body, including the distinguished majority leader, the gentleman from Texas (Mr. WRIGHT), who spoke so well on the point, have all concluded that the ad hoc committee's course, under the leadership of its distinguished chairman, the gentleman from Ohio (Mr. ASHLEY), is a correct one and have proceeded in this direction.

The major thrust of this course is to permit truly newly discovered oil to move to a Btu-related price which begins at $1.75, or such higher Btu-related price as may be in effect under the standards of the bill at the time it goes into effect, and moves up with the advancing price of domestic oil.

Mr. Chairman, it has been said on the other side that this is some kind of a rollback, and the question is asked: Why is it that Texans would support a $1.75 ceiling when for a short period of time in this year and toward the end of last year the price in Texas had been $1.94? And that is a correct price. as the gentleman from Illinois (Mr. ANDERSON) reported.

I will tell the Members why. It is because under this formula and under this proposal, enormously expanded interstate markets would be possible at far higher prices than are now available in those markets. We have to move gas into interstate markets. It will not do any good to continue to go up in intrastate prices in Texas at a time when we are commanded to take gas out from under the boilers in Texas.

The ad hoc committee proposal replaces the "new" gas definition, which did not accurately reflect the relative risks inherent in various ranges of gas exploration. It substitutes a definition which will assure us a continuous and regular pattern of gas exploration and development.

The measure encourages producers to increase step outs from existing wells beyond 2½ miles and below 1,000 feet by assuring the "new natural gas" price for such wells. In addition, the measure provides a higher price for natural gas from newly discovered reservoirs within the 2½-mile radius, 1,000-foot depth, to stimulate increased exploration.

The CHAIRMAN pro tempore (Mr. NATCHER). The time of the gentleman from Texas (Mr. ECKHARDT) has expired.

(By unanimous consent, Mr. ECKHARDT was allowed proceed for 4 additional minutes.)

Mr. ECKHARDT. Mr. Chairman, let me continue with my presentation.

While expanding the "new" gas definition to extend a higher incentive price to truly "risked-for" gas, the ad hoc committee amendment is also carefully drafted to protect consumer interests, First, the amendment excludes "new dedications to interstate commerce" from the category of gas receiving the "new" gas price.

Second, the "newly discovered reservoir" definition is limited to onshore gas. Offshore wells would continue to be governed by the "new lease" definition which limits the incentive price to gas produced from wells on Federal leases granted on or after April 20, 1977. This limitation is extremely significant because approximately one-half of the annual U.S. reserve additions in recent years have come from offshore lands.

Third, the ad hoc committee amendments restrict the definition of "newly discovered reservoirs" to reservoirs discovered after April 20, 1977. This definition is intended to limit the $1.75 price to reservoirs identified after April 20, 1977.

If merely insignificant—in other words minute—quantities of gas were identified prior to April 20, 1977, and the reservoir was subsequently tapped again and found to contain significant quantities of gas, the reservoir would qualify for the higher "new" gas price.

However, the term "discovery" specified in section 402(13) is not intended to adopt industry standards to determine the meaning of such term.

As indicated in the ad hoc committee report, the committee clearly did not intend the time of discovery or the fact of discovery to refer to the time at which a producer files a completion certificate and is ready to produce gas from a reservoir. Rather, the identification of the presence of more than minute quantities of hydrocarbons by mud logs, electric log data, core analysis, wire line bottle tests, drill stem tests or flow tests will be deemed to constitute a "discovery."

Moreover, if a formation is characterized as "producible" in an economic sense subsequent to April 20, 1977, gas produced from that formation, which was identified at an earlier date, such as 1960, would clearly not receive the higher "new" gas price. A discovery does not require the identification of an accumulation of gas which would qualify as a producible formation certainly not an economically producible formation. As the committee report indicates, the term "producible" is meant to refer to a determination of producibility made at the time the definitions are applied for purposes of classifying gas as new natural gas.

Mr. Chairman, I think you will conclude that this amendment has been carefully drawn. It is a proper amendment for the identification of new gas, and I urge a vote in support of the amendment.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I heard the gentleman from Texas (Mr. ECKHARDT) mention the $1.94 price. It reminded me of something from last winter.

There was a special dispensation given by the Federal Power Commission to the pipelines, serving Ohio to purchase gas at $1.94—from Canada. We got some special relief from Canada at that price.

The thing I do not understand is why we could not have bought Texas gas at $1.94 at that time. That is the part that really agonizes me about the $1.75 or the $1.45 price ceiling. We can buy from abroad, but we cannot by from our fellow Americans at the artificially low fixed prices. It makes no sense.

The CHAIRMAN pro tempore (Mr. NATCHER). The time of the gentleman from Texas (Mr. ECKHARDT) has expired.

Mr. BROWN of Ohio. Mr. Chairman, I ask unanimous consent that the gentleman from Texas (Mr. ECKHARDT) may be permitted to proceed for 2 additional minutes.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. RUSSO. I object, Mr. Chairman.

The CHAIRMAN pro tempore. Objection is heard.

Mr. FLOWERS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I shall not take the 5 minutes if anybody is concerned about that. However, let me plead guilty to being more resource-oriented than either the bill before use or the President's plan is.

I think we have to move very aggressively in the direction of resource development as well as conserving the use of oil and gas. We have to move in the direction of resource development, and I do not think that the natural gas pricing amendment does enough of that.

Therefore, Mr. Chairman, I intend to support the Brown-Krueger amendment, which will be offered tomorrow.

In any event, Mr. Chairman, let me say this about the so-called ad hoc committee compromise. It is a step in the right direction, and I fully support that, as opposed to the original Committee on Interstate and Foreign Commerce version.

Mr. Chairman, I have the privilege of chairing a subcommittee of the Committee on Science and Technology which is involved with research and development and resource development. We had a meeting on July 12, at which time we had a briefing from the ERDA people involved in something called the market-oriented program planning study, the MOPPS study, as it has been termed.

Specifically on the subject of natural gas and on the effect of price on supply, we had a little exchange with the gentlemen from ERDA.

Let me, if you will, just, very shortly, read the Members this exchange.

First of all, I asked the gentleman. Mr. Johnson, one of the senior officials of ERDA, who had been involved in this study this question:

What if you had in 1985 $3 a thousand cubic feet?

And we were talking about natural gas. Mr. Johnson answered my direct question, and I quote him:

Three dollars? Our analysis would indicate we would have more gas available than anybody could ever use.

Then the gentleman from Colorado (Mr. WIRTH) got into the conversation, being aroused by Mr. Johnson's answer, and he asked:

Would you say that again?

Mr. Johnson replied:

Our analysis would indicate at $3 that we would have more gas available than anybody could ever use.

Then the gentleman from New Mexico (Mr. LUJAN) joined in and said:

Natural gas?

Mr. Johnson said:

Natural gas.

Mr. WIRTH again said:

This is in 1985?

Mr. Johnson said:

Yes.

I would say to my colleagues that it seems to me as if we are in the final analysis talking about a couple of things here, one being, of course, supply and the other price. Unless we have an adequate supply of energy, whether it is in Texas or Massachusetts, then not only are the consumers not going to be happy, but the workers, who are also consumers, and the small business owners who are also consumers, and the American people whom you and I represent are not only going to be unhappy but they are not going to be adequately taken care of.

And we are not talking just about natural gas, we are also talking about the alternative to natural gas whether petroleum or some kind of synthetic gas or something imported from the far off Arabian states. Incidentally, we pay many times what it costs for natural gas to foreign nations, and this affects our balance of payments adversely. Actually, the effect is disastrous in comparison to what it would take to buy natural gas at even an increased price from Americans here in America, putting Americans to work.

It just seems to me that this is a very unwise policy, I would say to my colleagues, to limit the supply by limiting the price of this, perhaps our most valuable natural resource.

I urge, first of all, an affirmative vote for the ad hoc committee amendment, and then give serious consideration on tomorrow when we get into what I think is a more serious issue.

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. FLOWERS. I yield to the gentleman from Oklahoma.

Mr. WATKINS. Mr. Chairman, I thank the gentleman for yielding to me.

Mr. Chairman, I serve on the same Subcommittee on Fossil Fuels of the Committee on Science and Technology that the gentleman from Alabama (Mr. FLOWERS) serves on as the chairman. I believe that the gentleman from Alabama (Mr. FLOWERS) would also like to convey the indication that was given or was left in that hearing that basically, if deregulation was not adopted, the Brown-Krueger amendment, that not only this country, but for the shortfalls in the North and Northeast, would have several years to go until we move to the free market system so we can level out the price.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. ANDERSON of Illinois, and by unanimous consent, Mr. FLOWERS was allowed to proceed for 1 additional minute.)

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. FLOWERS. Mr. Chairman, I yield to my friend the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, as I observe the clock, it is now about 1 or 2 minutes to 7. A great many questions are being asked of me by Members on this side of the aisle as to what the minority leadership has in mind for the balance of the evening. At this time, if the gentleman from Alabama would permit, I would ask him to yield to the distinguished chairman of the ad hoc committee, the gentleman from Ohio (Mr. ASHLEY) and perhaps he can inform the membership.

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. FLOWERS. I yield to the gentleman from Ohio (Mr. ASHLEY) the distinguished chairman of the ad hoc committee, with whom I have had the pleasure of serving.

Mr. ASHLEY. Mr. Chairman, I thank the gentleman and I appreciate that statement.

Mr. Chairman, let me say that the leadership has discussed this with members of the minority and it is felt that because of time commitments all the way around, it would be best if the Committee would rise at 7 o'clock to resume tomorrow morning at 10 o'clock, it being understood that there would be a vote within a very few minutes after meeting on tomorrow morning.

Mr. FLOWERS. Mr. Chairman, in view of all that, I yield back the balance of my time.

Mr. CONTE. Mr. Chairman, I rise to express my opposition to some of the propoals and proposed amendments we will be considering this week during our deliberation on the Energy Act. Unfortunately, many of the provisions currently in the bill will not be brought for a separate up or down vote on retention. Under the rule adopted last week, we will only have the opportunity to vote on selected amendments, a substitute bill, a motion to recommit, and final passage. With this rule having been adopted, I will focus on several provisions I find objectionable.

Mr. Chairman, I would like to convey to this body the facts surrounding the proposed heating oil rebate, currently contained in the bill before us. While this rebate will assist the consumers of New England, it will also substantially benefit several other regions of the country. Without this rebate, every consumer who heats his home with oil will be forced to bear a disproportionate share of the sacrifice inherent in this energy proposal. If this rebate is removed, 19 States, in 4 major regions of the country, will be forced to bear the heavy impact of this tax.

Its cost to the consumer will surpass $1.4 billion by the year 1980. If this rebate is removed, an additional burden will be forced on those consumers who already have borne the burden of excessive fuel costs.

Mr. Chairman, I commended the President when, on April 20, he told this Congress that his plan is built on the cornerstone of fairness to all regions. He demonstrated this with a dollar-for-dollar rebate to the heating oil consumers, who must pay a high price for their fuel. If this rebate is removed, the homeowner heating his home with natural gas will, again, be in a better financial position than consumers of oil, since the cost of that gas, under the ad hoc amendment will be based on the Btu equivalent of oil, without the proposed equalization tax.

I submit to this body that the heating oil consumers throughout the country have carried this heavy cost burden long enough, and that, in the future, the financial burden should be equalized among the sectors of the country. With this proposed rebate, the heating oil consumer will be on an equal footing with the consumers of other, less costly, fuels. I urge my colleagues to consider carefully the impact that the proposed amendments, to be offered by the gentleman from Louisiana (Mr. WAGGONNER) and the gentleman from New York (Mr. CONABLE) will have on these consumers who are presently struggling with the high cost of heating oil. I urge my colleagues to defeat these crippling amendments.

Mr. Chairman, the provisions on the proposed coal conversion program will have a dramatic effect on energy consumption trends throughout the country. The anticipated increase in annual coal production and consumption of 400 million tons over the production in 1976 will greatly assist this country to reduce its dependence on oil and gas. However, I am disturbed with the recommendation of the ad hoc committee that the exemption provided in the bill, as adopted by the Ways and Means Committee, be stricken. This exemption would be granted to electric powerplants and other major fuel burning installations in which conversion would not be economically or environmentally feasible. As I understand the program, the user tax is intended as an incentive to conversion. For a plant which cannot convert for environmental or economic reasons, this tax becomes an additional burden. A burden I might add, which is then passed to the consumer in the form of higher rates. Thus, through our policies, we would be discriminating against a segment of our public who do not possess the alternatives to avoid the tax. I firmly believe that this is blatently unfair, and I urge my colleagues to reject this ad hoc committee recommendation.

Finally, Mr. Chairman, I would like to add my voice to the numerous others heard today in opposition to the proposed increase to the present 4-cent gasoline tax. This additional tax discriminates against those who do not possess an alternative to their continued use of the private automobile: The rural residents of this country who do not have access to forms of public transportation. These vital and optimistic people are, in my opinion, the backbone of our system. They are the individuals who have suffered the most under increasing fuel costs. Regardless of the proposed schemes to allocate the new revenues, this tax would not assist these individuals who are striving to make a living. Instead, this tax would benefit the urban dweller, who in most cases has numerous alternative modes of transportation, and who would benefit from the proposed mass transit allocation which is a part of one amendment we will consider. I urge my colleagues to consider the consequences of this tax on this vital and indispensable segment of our economic existence.

Thank you, Mr. Chairman.

Mr. BROWN of California. Mr. Chairman, I rise in support of H.R. 8444, the National Energy Act. I wish to praise the President and his staff, and the Democratic leadership for their recognition of the importance of this legislation and the need to act rapidly on it. The unusual approach in handling this bill, though the establishment of an ad hoc Committee on Energy, demonstrates the complexity of the issue and the dedication of the leadership, especially the Speaker, in finding a way to handle the President's energy bill in a coherent fashion. If I had any complaints about the process, they would only be to point out that not all aspects of the President's energy program are in the National Energy Act, and not all issues that should be considered in a national energy program have been included in the President's energy program.

One of the most important aspects of the National Energy Act is the fact that it will primarily be administered by a new Department of Energy. In fact, in some ways the legislation establishing a new Department of Energy is more important than the National Energy Act. The reason I say this is because we have passed energy bills in the past few years which have gone unimplemented, partly because the responsibility for implementation was too diffuse. The consolidation of energy responsibilities in one Department, along with a set of comprehensive energy programs for conservation, oil, natural gas, coal, solar, geothermal energy, and research and development of new energy technologies, as well as comprehensive energy outreach

programs, should result in effective policy making and management of a national energy policy.

Some of the issues which are not directly addressed in the energy program are environmental issues, such as the Clean Air Act which is now in conference; antitrust issues which relate to the free market assumptions about energy production and consumption; and research, development and demonstration issues, which will be considered by the House after the August recess in the Energy Research and Development Administration's fiscal year 1978 authorization bill. Other issues, which are not totally peripheral to the National Energy Act are transportation policy, because the transportation sector is where the majority of our oil is consumed; agricultural policy because of the enormous and wasteful use of energy in the agricultural sector; materials policy because of the need to conserve and recycle materials, which in turn conserves energy; and land use policy because our land use patterns either cause many of the energy demands we have, or could be used to reduce those demands in the future.

The bill before us, H.R. 8444, the National Energy Act, contains a variety of approaches to meeting the goals of the act. These include tax incentives and disincentives, regulatory policies, grants and loan support for certain activities, and authorizations for certain Federal programs and demonstrations. Quite clearly one single approach to increasing energy supply, or energy conservation, or shifting to other fuels, or reducing oil imports will not be adequate to meet the needs of the country. In our current complicated system of tax approaches, regulatory approaches, grant and loan approaches, and State, local and private involvement with various aspects of energy, it should be obvious that only reforms of the present system are possible. This is a regrettable situation, because there are many theoretically ideal ways of handling energy supply and demand which are precluded by this approach. It would be useful if the new Secretary of Energy would try to simplify and streamline the numerous laws and regulations that have grown up through the years in energy matters.

There are some aspects of this bill that I like better than others, as can only be expected in such a major piece of legislation. The gas-guzzler tax, although weakened from the President's proposal, is an example of an initiative that is long overdue. Another example is the residential solar and energy conservation tax credits provisions, which should especially help the individual homeowner move toward greater energy independence for themselves.

Other aspects of this bill can only be considered compromises that, while better than the status quo, are not the optimal approach either. Perhaps the best example of this is the coal conversion provisions of this bill. These provisions are entirely too complicated, and perhaps unworkable, to give one confidence in their impact. In addition, the environmental effects are uncertain enough to give me doubts that a massive coal conversion program can be undertaken without better pollution control technologies, such as fluidized bed combustion, being available.

Another provision of the bill, at least a provision expected to be in this bill, is a good idea that may not have the desired impact. I speak of the proposal for a 4-cent or a 5-cent gasoline tax, the revenues from which would be placed in a trust fund. I do not take issue with the need to increase gasoline taxes, especially to encourage energy conservation, but I do not believe an energy trust fund is necessary or wise. Our experience with trust funds in the past should demonstrate that a new trust fund is not necessarily a good idea. The highway trust fund, for example, should be opened up to all transportation needs. Instead, we have proposals to add even more funds to the highway trust fund to build more highways to encourage more automobile travel, which will consume more gasoline, which will work against the goal of the National Energy Act to reduce oil imports. Even if the taxes collected under this proposal were to go exclusively to an energy, rather than a transportation trust fund, the chances are that during part of the existence of the trust fund there would be too little money to accomplish the goals of the trust fund, and at other times there would be too much money to wisely spend on the goals of the trust fund. It would be far wiser to follow the congressional budget process, and allocate the funds necessary, regardless of source, to the energy needs of the Nation. The establishment of new trust funds goes contrary to the intent of the Budget Act.

It is really not clear how much energy the National Energy Act will save, regardless of how sure those who have analyzed it are about this. In a pluralistic society, with a mixture of public and private responsibilities, it is difficult to plan and predict exactly what will happen especially on an issue as complex as energy policy. If the legislation before us is passed, and that which has passed before as well as the National Energy Act are implemented, there could be amazing results. If State and local governments become fully involved, and adopt their own energy saving measures, the efforts of the Federal Government will be multiplied many times over. If private industry voluntarily pitches in and helps, rather than dragging their feet, as we have seen with so many environmental laws, implementation could be relatively easy.

And finally, if the people support the goals of this energy program and take advantage of the opportunities presented by it in the areas of consumer information, tax credits, and other provisions, the adjustment to the demands of this program will be rapid.

The goals of the National Energy Act are, actually, quite modest. They are as follows:

SEC. 3. NATIONAL ENERGY GOALS.

The Congress hereby establishes the following national energy goals for 1985:

(1) Reduction of the compounded average rate of energy growth in the United States to not more than 2 percent annually and maintenance of that rate thereafter.

(2) Reduction of the level of oil imports to less than six million barrels per day.

(3) Achievement of a 10 percent reduction in gasoline consumption from the 1977 level.

(4) Improvement of the efficiency in the energy use of heating and cooling systems in 90 percent of residential buildings, schools, and hospitals.

(5) An increase in annual coal production to at least 400 million tons above 1976 production levels.

(6) Use of solar energy in more than 2½ million homes.

The goal for solar energy in homes, for example, is 2½ million homes by 1985. Yet we have reports that Japan already has 1 million homes using solar energy for water and/or space heating. Reports by U.S. investigators have also shown the vast potential of solar energy, a potential which is much larger than 2½ million homes.

The goal to achieve a 10 percent reduction in gasoline consumption from the 1977 level is one that can readily be achieved, through engine improvements, reductions in vehicle miles traveled by encouraging shifts to mass transportation, car pools, bicycles, and walking, and by other mild conservation measures. Much greater reductions can occur if we were determined to do so. For example, a vastly more efficient automobile could be developed. Land use patterns could be encouraged which would maximize energy conservation. A stiff gasoline tax could be added to provide the incentive for gasoline conservation. And transportation control plans, similar to those prepared, but not used, to provide us with better air quality, could be implemented to reduce vehicle miles traveled in a comprehensive manner.

Finally, an energy growth rate of 2 percent per year is actually a very modest goal—much lower growth rates can be achieved without a detrimental effect on the economy. For example, a group at Princeton University has looked at two different scenarios for energy consumption out to the year 2000. One was called a "business as usual" and the other "modest conservation." In the status quo scenario, extremely conservative assumptions are made; first, energy prices remain stable at the 1975 level; and second, no new energy conservation measures are enacted beyond those already on the books. Through a detailed breakdown of energy consumption by end use, they predict a growth rate of only 1.9 percent per year. In the "modest conservation" scenario, energy prices increase and modest conservation initiatives are launched. In this case, they find that total energy consumption will grow only at 0.9 percent per year out to the turn of the century. Further support for these projections come from the preliminary results of a National Academy of Sciences study, which indicates that GNP can double by the year 2010 and energy consumption increase only 40 percent, which is about a 0.9 percent growth rate per year. Members of the President's staff who prepared the National Energy Act has been associated with reports that show we can reach a zero energy growth rate by 1985 without any damage to our economy. While the rate of growth would be zero in this case, the annual consumption of energy would still be quite large, and new energy sources would have to be found to replace the oil imports and the domestic energy sources which we are depleting.

Mr. Chairman, I am pleased to be associated with this act and the Members who have brought it to us. I hope we can approve most of the provisions presented to the House this week, and before this session of Congress is over, I hope we can see the National Energy Act become law.

When we are finished with this bill, I hope we all recognize that we are not finished with national energy issues. Unlike the Farm Act, which we completed action on last week, the National Energy Act will need revisions and additions to it, perhaps as early as next year. Certainly the programs we authorize will require that funds be appropriated. We can also expect the new Department of Energy to recognize gaps in the authorizing legislation under its jurisdiction. In addition, the other related issues I addressed earlier will continue to need our attention such as energy research, development and demonstration issues, and environmental issues, and the need to coordinate them with the energy programs which we enact will remain.

New initiatives may be needed as well, such as in solar energy. There are numerous proposals for encouraging solar energy development before the Congress, but only a few of them are included in this legislation. There are also many other small-scale, decentralized forms of energy production and conservation that are not fully covered by this and previous acts. It is my hope that the new Department of Energy will give this area a very high priority.

In conclusion, Mr. Chairman, this bill is not the beginning nor the end of energy policy, but it is an important and badly needed addition to our Nation's laws.

Mrs. HOLT. Mr. Chairman, H.R. 8444, the National Energy Act, is punitive legislation. Big Government has decided that the American citizen is using too much energy, and big Government intends to apply the whip to correct this moral lapse.

The administration and the Congress have approached this subject with a puritanical fervor as in the old days of witch burning. Oil profits are sinful, the automobile is an instrument of the Devil, the average consumer is a lost soul who must be saved from his wasteful folly.

And here is the legislation by which the administration and Congress hope to impose salvation. With holy zeal, we are supposed to enact legislation that will impose severe new taxes on the people and their industries, increase regulation of the production and use of energy, raise the price of nearly every product in our economy because of the energy cost factor, and vastly expand the energy bureaucracy of the Federal Government.

The emphasis of this legislation is on conservation, not production. The emphasis is on a lower standard of living for the American people, who are supposed to accept their new condition as a moral obligation.

It is true that American consumption of petroleum products has been rising too rapidly, that America is draining her oilfields, that we are increasingly and even dangerously dependent on foreign imports for oil, and that petroleum will never again be cheap and plentiful.

Of course, Government price controls are a large part of the problem. Price controls encourage consumption and discourage production, and this has been the policy of the U.S. Government. A more wrongheaded policy can hardly be imagined.

But now we are offered a new policy, one which emphasizes high prices without production. Conservation is to be achieved by imposing higher taxes which will affect all oil products. The new policy will mean slower economic growth and more unemployment.

This is no solution, except to those whose goal is to expand the power of the Federal Government to control the economic life of our Nation. There is a better way, and it would simultaneously stimulate energy production and induce conservation. Remove price controls and avoid new taxes.

If prices are allowed to rise to reflect the real value of oil and natural gas, this will stimulate investment in exploration, development, and production. We will be paying more, to be sure, but we will also be generating production, notably from offshore and arctic resources.

It is not just oil and natural gas that should concern us. As those prices rise and make other sources of energy competitive, investment would flow into those alternatives. Coal production, coal gasification, shale oil production, geothermal generation of electricity, solar energy research and development, biomass conversion, and nuclear power will require large capital investment.

We do not need Government to make the economic decisions. In fact, when Government makes such decisions, they are commonly the wrong ones. Our future will be far better if we allow a free economic system to work its way.

For the consideration of the House, Mr. Chairman, I offer this excellent analysis of the energy legislation which appeared in today's Wall Street Journal:

REPENT AT LEISURE

Speaker Tip O'Neill intends to get the Carter energy package passed this week even if it means keeping the House in session 10 hours every day. No wonder he is in a hurry. Congress begins its August vacation Friday and if the House postpones the vote and takes a month for sober reflection, it surely will kill the energy scheme.

Seldom has such a legislative mishmash gone so far. It is not overly pessimistic to estimate that it will inflict a half *trillion* dollars in unnecessary costs and taxes on Americans over the next eight years. It will certainly increase, rather than decrease, U.S. dependence on imported fuels. It will throw the electric utility industry into such a state as to practically guarantee frequent power shortages in the 1980s.

And yet Tip O'Neill wants the House to hurry. But lest we seem too harsh on the Speaker, it should be noted that speed at the expense of sanity has characterized the energy program from the start. A White House energy team, employing a dubious set of economic theories, threw it together in a scant 90 days. The resulting confusion was such that administration officials initially quoted widely varying figures on how much tax they planned to levy on industry and how much oil and gas they hoped to save as part of the program to convert industry and electric utilities to coal.

No one asked whether it was humanly possible to get an extra 600 million tons of coal in the time allotted. Or how much it will really cost to equip the coal-burning utilities with scrubbers. Or what you do with all the sludge and how you get all the limestone for scrubbing?

The proposed $1.75 per thousand cubic feet price ceiling that now will apply to both intrastate and interstate sales of gas was plucked out of thin air. Only later was an unconvincing rationale offered. Gas men say that since it is at least 25 cents under the present marginal price for gas, it will mean less, not more, natural gas production.

The House has done little better. Ways and Means voted to apply the "gas guzzler" tax on big cars to "retiring" the national debt, not bothering to explain how you start retiring a debt before it stops growing. The master work in terms of speed was Tip O'Neill's hand-picked ad hoc Energy Committee. He loaded it with the likes of Henry Reuss and John Moss, who adore the kind of political manipulation of economic resources the package so richly embodies. The committee didn't lay a finger on all the absurdities. In the best tradition of South Boston politics, the Speaker truly "delivered."

Almost anyone could make a rough calculation of the costs this slipshod work will inflict on an already wavering economy. But for a detailed analysis we turn to Milton R. Copulos of the Heritage Foundation. His cost figures are in billions, for the eight years 1978 through 1985, unadjusted for depreciation of the dollar:

(In billions)	
Taxes on oil, less rebate	$56.1
Taxes on natural gas	44.2
Gasoline taxes (new 4-cent tax plus extension of present 4-cent tax)	58.8
Gas guzzler tax	10
Coal taxes	1.81
Added cost of imported oil	57.8
Added federal income taxes caused by energy cost inflation	98
Utility coal conversion costs	50.6
Total	377.31

It is possible to quibble with some of these numbers. The existing gasoline tax, although due to expire, is not an added cost. It may be reaching a bit to include a number that represents added personal income taxes as taxpayers move into higher brackets because of inflation attributable to the energy package. And if utilities and industrial plants convert to coal quickly enough they will escape some tax penalties.

But the numbers are probably conservative, particularly since they make no allowance for generalized inflation. There also is no allowance for the amounts consumers could save, mainly through not having to switch to more expensive fuels, if Congress deregulated natural gas prices. Half a trillion dollars as the cost of the energy package is not unreasonable.

What will all that money buy? Maybe some aid for troubled federal welfare and Social Security programs. A little help for mass transit, although judging from the fantastic costs of the recent mass transit projects, that's no bargain. A bonanza certainly for folks who make scrubbers or sell coal or limestone. Additional contentment for the Arabs.

It will also buy a greatly expanded energy bureaucracy and just quite possibly, a whopping big recession that will sweep Mr. Carter and his fellow Democrats out of office. Tip O'Neill has every reason to be worried about the possibility Congress will give the package more thought than it has so far.

Mr. JOHNSON of California. Mr. Chairman, I am pleased to report to the House on sections 721 through 789 of H.R. 8444, the national energy plan, which were reported by the House Public Works and Transportation Committee. These sections are designed to further the application of energy conservation and solar energy systems in Federal buildings.

During the past several years, there has been a growing awareness of the severity of our national energy problem and the urgent need for the widespread adoption of cost-effective measures to conserve energy in all it uses. The Federal Government, as the single largest user of energy in the Nation, has a particularly important responsibility to demonstrate its commitment to resolving the energy crisis by implementing a comprehensive program of energy conservation in all of its facilities and operations. Furthermore, the Federal Government should take the lead in utilizing innovative technologies, such as solar heating and cooling and photovoltaic systems in its own facilities. By taking such actions, the Federal Government will be able to serve as a model to State and local governments and to the private sector in their efforts to conserve energy.

Mr. Chairman, at this time, I would like to compliment the distinguished chairman of the Subcommittee on Public Buildings and Grounds, Congressman MINETA and the ranking minority member of the subcommittee, Congressman WALSH, for their fine work in handling this important piece of legislation. I will briefly explain sections 721 through 789.

Section 721 amends section 381 of the Energy Policy and Conservation Act which directed the President to develop and implement a 10-year plan for energy conservation with respect to buildings owned or leased by the Federal Government.

This section specifies that all executive agencies and the U.S. Postal Service shall be included in the development of the plan, and authorizes to be appropriated $25 million for fiscal year 1978 and $50 million for fiscal year 1979, in addition to funds authorized under other statutes. This program is not a small undertaking.

Although it is difficult to estimate precisely the costs of implementing conservation measures in Federal buildings where such investments are cost justified, administration officials testified the total required investment is likely to be about $2.67 billion, but the resulting energy savings are likely to save more than $4 billion in the utility costs by 1990.

Sections 741 through 746 authorize a 3-year program with funding of up to $100 million through 1980 for the installation of solar energy systems in Federal buildings. A program funded at this level will allow the Government to lead the way in making use of solar energy in its own bildings. In addition, substantial purchases by the Federal Government over the next few years can help lower the costs of production and installation as experience is gained and economies of scale are attained.

The intent of section 761–772 of the bill is to further strengthen the efforts of the executive agencies to conserve energy in new and existing Federal buildings and to promote the development and widespread use of commonly accepted methods to establish and compare the life-cycle costs of buildings. These sections are considered essential to the effective implementation of the energy conservation activities in Federal buildings to be undertaken pursuant to section 721. It is also the purpose of these sections to aim for a reduction of energy use in existing Federal buildings by 20 percent by 1985.

Sections 781 through 789 cited as the Federal Photovoltaic Utilization Act establishes a photovoltaic energy commercialization program for the accelerated procurement and installation of photovoltaic systems for electric production in new and existing Federal facilities, using technologically approved and proved equipment.

There is authorized to be appropriated to the Administrator not to exceed $39 million for the period beginning October 1, 1978, and ending September 30, 1981, for photovoltaic system acquisition.

Mr. ASHLEY. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore. (Mr. BRADEMAS) having assumed the chair, Mr. NATCHER, Chairman pro tempore of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 8444) to establish a comprehensive national energy policy, had come to no resolution thereon.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On July 25, 1977:

H.J. Res. 24. Joint resolution to provide for the designation of a week as "National Lupus Week."

On July 26, 1977:

H.R. 5638. An act to amend the Fishery Conservation Zone Transition Act in order to give effect during 1977 to the Reciprocal Fisheries Agreement between the United States and Canada; and

H.R. 7636. An Act making appropriations for the Department of the Interior and related Agencies for the fiscal year ending September 30, 1978, and for other purposes.

On July 27, 1977:

H.R. 186. An act to implement the Convention on the International Regulations for Preventing Collisions at Sea, 1972.

On July 30, 1977:

H.R. 2502. An act to extend certain oil and gas leases by a period sufficient to allow the drilling of an ultradeep well;

H.R. 4088. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes;

H.R. 5864. An act to approve with modifications certain proposed amendments to the Federal Rules of Criminal Procedure, to disapprove other such proposed amendments, and for other related purposes; and

H.R. 5970. An act to authorize appropriations during the fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense to authorize the military training student loads, and to authorize appropriations for civil defense, and for other purposes.

On July 31, 1977:

H.R. 7552. An act making appropriations for the Treasury Department, the United States Postal Service, the Executive Office of the President, and certain Independent Agencies, for the fiscal year ending September 30, 1978, and for other purposes.

On August 1, 1977:

H.R. 4975. An act to amend the Public Health Service Act to extend through the fiscal year ending September 30, 1978, the assistance programs for health services research; health statistics; comprehensive public health services; hypertension programs; migrant health; community health centers; medical libraries; cancer control programs; the National Cancer Institute; heart, blood vessel, lung, and blood disease prevention and control programs; the National Heart, Lung, and Blood Institute; National Research Service Awards; population research and voluntary family planning programs; sudden infant death syndrome; hemophilia; national health planning and development; and health resources development; to amend the Community Mental Health Centers Act to extend it through the fiscal year ending September 30, 1978; to extend the assistance programs for home health services; and for other purposes.

On August 2, 1977:

H.R. 4746. An act to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes.

CONFERENCE REPORT ON H.R. 7555, DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATION ACT, 1978

Mr. FLOOD. Mr. Speaker, I call up the conference report on the bill (H.R. 7555) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies for the fiscal year ending September 30, 1978, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Clerk read the statement.

(For conference report and statement see proceedings of the House of July 26, 1977.)

Mr. FLOOD (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The SPEAKER pro tempore. The gentleman from Pennsylvania (Mr. FLOOD) is recognized for 30 minutes, and the gentleman from Illinois (Mr. MICHEL) is recognized for 30 minutes.

The Chair recognizes the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report before the House today is on the bill H.R. 7555 making appropriations for fiscal year 1978 for the Department of Health, Education, and Welfare; and

several related agencies, such as Action and the Community Services Administration.

If you want to know about Federal programs that help people, then you need to know about this bill. I am certain that most of you are contacted daily by your constituents about these Labor-HEW programs. In one way or another all of the people back home are affected by this bill.

The conference report provides $60,168,561,000 in new budget authority for fiscal year 1978. This amount is $1.165 billion below the House bill and $475 million below the Senate bill. The conference agreement is $425 million below the budget request.

It is very unusual for a conference bill on Labor-HEW programs to be below the President's budget and below the House bill. I want to be sure that Members understand the reason for it.

The Senate made major reductions from the budget and the House bill for public assistance, medicaid, and supplemental security income payments. The Senate cut over $1.5 billion from the House bill for these programs. Now the House bill itself reduced the budget for medicaid by $351 million. So in total the conference bill is $1.9 billion below the budget for these programs.

Of course, Members know that public assistance, medicaid and supplemental security income are mandatory, entitlement programs. Benefits have to be paid to all eligible people. The House conferees examined very carefully the fund requirements for these uncontrollable programs. We checked with the Secretary of HEW and the Congressional Budget Office and it appears that the Senate figures are realistic estimates based on current information from the States. In fact, we know there is an excess of about $1 billion in 1977 appropriations for these programs. The conferees agreed to carry forward these excess funds to offset requirements in 1978. We believe this adjustment should be made in order to reflect the actual fiscal requirements for these programs. It is really a matter of bookkeeping.

Now in total, the conference agreement is $12 billion less than appropriations for fiscal year 1977. These figures are somewhat misleading, because the fiscal year 1977 amount includes the economic stimulus appropriations bill which included large amounts in advance appropriations for fiscal year 1978. Also the 1977 Labor-HEW appropriation bill included $5 billion for advances to the unemployment insurance trust fund, much of which will carry over into 1978. We believe that a fairer comparison would show that this bill represents an increase of about $3.1 billion or 5.5 percent over the comparable appropriation for fiscal year 1977.

The point of all these comparisons is to give Members a clear picture of what this conference bill represents. It represents a compromise between the House and Senate. It differs from the President's budget because it reflects congressional priorities and more realistic funding requirements for Labor-HEW programs. Make no mistake, the conference bill does provide real increases over last year for many of the labor, health, and education programs.

Certainly in a bill of this magnitude, it is not possible to satisfy everyone. Some may feel it is too high. Others may feel it is not high enough to meet the needs of the poor, the minorities, the handicapped, the aged, and the unemployed. I feel the conference bill is a reasonable response to social needs that exist in this country but at the same time is an attempt to exercise some fiscal restraint in meeting those needs. Here are the highlights.

DEPARTMENT OF LABOR

The conference agreement includes $3,377,930,000 for the Comprehensive Employment and Training Act—CETA. The conferees agreed to restore $42,000,000 of the reduction made by the House in national training programs under title III of CETA. The conference agreement includes $693,000,000 for summer youth employment for the summer of 1978, an increase of $98,000,000 over the House bill and the amount appropriated for this summer.

The conferees agreed to provide $190.4 million for community service employment for older Americans under title IX of the Older Americans Act. That is an increase of $40.4 million over the current fiscal year. This will provide 47,500 part-time jobs, an increase of 10,100 jobs over the current year. The conferees agreed to bill language earmarking 80 percent of the funds for national contract organizations, with the remaining 20 percent being distributed among the States by formula.

The conference agreement provides for a continuation of the current staffing level for the employment service—30,000 man-years nationwide. The Senate had proposed an increase of 1,000 man-years, but the House conferees were not persuaded that this was justified.

The conferees agreed to add $2,500,000 over the House bill and the budget request for administration of the black lung program. I continue to be very disturbed by the huge backlog of pending claims in this program. I certainly hope that the new administration will make this a high-priority program and make every effort to administer it in a rational and efficient manner. The conferees have agreed to provide 100 additional permanent positions for the Division of Coal Mine Workers' Compensation in the Employment Standards Administration. It is our understanding that there are currently 170 positions assigned to that Division, so the conference action represents an increase of almost 60 percent. I certainly hope that all of these positions will be filled in a timely manner, and that none of them will be siphoned off for other purposes, as has happened in the past.

For the Occupational Safety and Health Administration, the conferees agreed to reprogram $1,500,000 from State programs to Federal enforcement to finance 100 additional permanent positions. All of these positions are to be used for health compliance activities. The Senate had proposed to add 200 positions by reprograming $3,000,000, but the conferees decided to reduce that by one-half.

There were also two OSHA bill language items in conference. The conferees agreed to delete both of them. The first was a House floor amendment which would have required OSHA to produce economic impact statements on all proposed health and safety regulations. This is currently being done by Executive order for major regulations, but the administration is in the process of reassessing the whole business of impact statements. The conferees did not want to tie the administration's hands on this by writing this requirement into law.

The second OSHA language amendment was added on the Senate floor and would have required OSHA to consult with violators after an inspection on ways to correct the violations. Fines could not have been levied until the employer was given a reasonable time to correct the violations. This seemed reasonable on its face, but it actually would have substantially rewritten the basic law. The conferees did not feel that such a substantial change in the law should be made through the appropriations process.

For the Bureau of Labor Statistics, the conferees agreed to restore $2,000,000 of the reduction made by the House in the prices and cost of living budget activity. The conferees also restored $1,000,000 included in the House bill but deleted by the Senate for a job vacancy survey. That amount includes 52 permanent positions for carrying out the survey.

HEALTH

For the health programs we agreed on a total increase of $213,905,500 over the House level. Of this amount, $87,014,500 was included for health services programs. These are the programs that provide health care to the underserved and disadvantaged, that help to build health services delivery in medically underserved areas, and that provide services to statutorily defined populations—such as American seamen.

I would like to call your attention to a few of the specific program increases in the health services appropriation.

For the maternal and child health programs we agreed to add $17,500,000 for grants to States, $1,284,000 to expand the sudden infant death information program, and $646,000 for research and training.

For family planning we agreed to add $11,385,000—bringing the total program level to $135,000,000 in fiscal 1978.

For the emergency medical services program we agreed to an additional $3,000,000. These additional funds, together with $925,000 in the National Center for Health Services Research, will provide a level of $3,925,000 for EMS research.

Also we agreed to initiate a program in genetic information and counseling at a level of $4,000,000, and we added $35,000,000 for improving the operations of the Public Health Service hospitals and clinics, and $15,000,000 for repairs and improvements of PHS hospitals and clinics.

For preventive health services the conferees agreed to add $5,000,000 for venereal disease project grants, $1,000,000 for immunization programs, and $1,750,000

for lead-base paint poisoning prevention. Along with these increases we agreed to reductions below the House of $2,107,000 for disease surveillance, $2,564,000 for health education, and $1,000,000 for occupational health—direct operations.

For the biomedical research programs of the National Institutes of Health we agreed to add $82,700,000 over the House level. The total amount for NIH under the conference report is $2,825,102,000, which is an 11-percent increase over last year. When you consider the vital work being done at NIH to find ways to fight cancer, heart disease, arthritis, diabetes, neurological disease, and other crippling disorders afflicting adults and children, I certainly would not call an 11-percent increase excessive.

The institutes receiving major increases over the House level are the Cancer Institute, $35.200.000; the Heart, Lung, and Blood Institute, $13 million; and the Arthritis. Metabolism, and Digestive Diseases Institute, $21 million.

With regard to the alcohol, drug abuse, and mental health programs we added $7.862.000 over the House level. Specifically, $3,750.000 of this amount is for alcoholism community project grants and contracts and $4,112,000 is for the community mental health center program.

Under the health resources appropriation, we agreed to an increase of $32,750,000 over the House level. Now, I would like to call your attention to a few of the significant increases under this appropriation:

For health planning we agreed to an additional $5 million over the House level. This money will be used to support the State and local health planning agencies. It is expected that these planning agencies will play an important role in containing the spiraling cost of health care;

For health professions student loans we agreed to add $10 million over the House level. This program provides long term, low-interest loans to students needing financial assistance;

For the National Health Service scholarships we agreed to add $5 million over the House level. This program awards scholarships to medical, dental, osteopathic, and other health professions students in exchange for a specified period of Federal service in the National Health Service Corps for the purpose of providing health services in medically underserved areas. For nursing assistance we agreed to add $2 million for advanced nurse training and $2,500,000 for student loans.

I have one remaining item I would like to call to your attention in the health area and that is new positions. The conferees agreed to provide a total of 513 new positions for the health programs. These positions are to be used exclusively for research, services, and grants and contracts management. The new positions are distributed as follows: Health services, 175 positions; NIH, 294 positions; alcohol, drug abuse, and mental health, 21 positions; health resources, 15 positions; and the Assistant Secretary for Health, 8 positions. I would like to point out that the joint explanatory statement of the committee of conference incorrectly identifies the eight positions with the Assistant Secretary for Education. The eight positions are specifically for the Assistant Secretary for Health.

EDUCATION

For the education programs the conferees agreed to $10,128,638,000, a reduction of $103.5 million from the House bill. Most of the reduction results from revised estimates for basic educational opportunity grants which show that the budget and the House bill overstate the amount required for this program.

For elementary and secondary education programs the conferees agreed to $197.5 million for support and innovation, an increase of $3.5 million over the House bill. We have agreed to a hold harmless provision which guarantees that each State will receive at least the same amount it received last year. The additional funds over the House bill will benefit large States which serve additional numbers of students. An additional $4 million was provided for educational broadcasting facilities to support additional educational TV and radio projects.

The conference agreement provides $310.2 million for emergency school aid. That is $15.5 million over the House bill and relates to increases for magnet schools and other special projects. The magnet schools program was initially funded at $7.5 million in the recent 1977 supplemental appropriation bill. As Members know, magnet schools are those offering educational courses of sufficient quality to attract students of different racial backgrounds. The Senate conferees appear to have strong feelings about this program. We agreed to $12.5 million over the House bill instead of the $22.5 million increase proposed by the Senate. For special projects we agreed to $51,250,000 or $3 million over the House bill. Special projects involve assistance to school districts undergoing court ordered desegregation.

For higher education programs, the conferees agreed to $3,599,503,000 a reduction of $138.5 million below the House bill. As mentioned earlier most of this reduction is in the basic opportunity grants program. The conference agreement is $2.16 billion or $140 million below the House figure. The House had approved the budget amount of $2.3 billion, but HEW later revised the budget estimates. Both the House and Senate agree on the changing eligibility standards to remove some of the present inequities. The conference figure is $468 million over last year's program. Part of that would allow an increase in the maximum grant which is now at $1,400. However, most of the increase would be to expand eligibility.

For college work study we agreed to $435 million. The House already provided an increase of $30 million over last year and we agreed to another $15 million to make it $45 million over last year.

For special programs for the disadvantaged the conferees agreed to $115 million. These programs are Upward Bound, Talent Search, Special Services, and educational opportunity centers. All are designed to help minority and low-income students go to college. The conferees agreed to restore $15 million of the Senate reduction of $25 million.

The conference agreement restores $2 million of the Senate reduction of $5 million for education information centers. This is a new program to provide information and referral services to college students. We have heard a lot about it and think it should get started.

The conferees accepted the House amount of $3,250,000 for minorities in the professions. We think it important to provide graduate training to minorities. This will help overcome some of the problems of underrepresentation of minorities in the professional work force. The conferees restored the Senate reduction of $1 million for law school clinical experience. This program would allow law schools to expand clinical experience for law students. The conferees agreed to the Senate increase of $500,000 for a new program, the Wayne Morse chair of law. This program was authorized last year so we provide the funds for it.

For library resources, the conference agreement provides $253,212,000 a net increase of $6.5 million over the House bill. We agreed to $167.5 million for school libraries an increase of $7.5 million over the House to offset the cost of inflation for library books and materials. For a new program to assist research libraries, the conferees agreed to $5 million which is $2 million over the House bill. We agreed to the Senate reduction of $3 million for guidance and counseling programs because there are other Federal programs available to serve this purpose.

For special projects and training, the conferees agreed to $100,659,000 an increase of $4.1 million over the House bill. Consumer's education would be funded at $4,068,000 or $933,000 more than the House. The new teacher centers program would be funded at $8,250,000 or $3,250,000 over the House. This program is designed to upgrade the skills of classroom teachers.

For the Assistant Secretary for Education, the conferees agreed to $12 million for the fund for the improvement of postsecondary education. This program is designed to help colleges and universities experiment with ways to improve higher education programs. We agreed to restore $820,000 of the Senate reduction of $1,820,000 for the national center for educational statistics. Congress has passed many laws in recent years calling for more studies and surveys in the field of education and we want to provide necessary funds to do the necessary work required of the center.

WELFARE AND OTHER HEW PROGRAMS

The conference agreements provide $20,110,000,000 in new budget authority for those programs previously administered under the Social and Rehabilitation Service. These funds are primarily for cash assistance, medical assistance, and employment and social services for indigent Americans. More than 25 million persons are directly helped through these activities. The amount provided is nearly $1 billion below the amounts originally allocated by the House. The reductions reflect the most current estimates of enrollment and costs submitted by HEW and the Congressional Budget Office. Over one half billion dollars of the reduction results from extended

availability of excess 1977 funds. Since these programs are "entitlements," changes in budget authority do not affect levels of service or actual Federal outlays. They are essentially bookkeeping adjustments to reflect more realistic estimates of costs than were previously available. The conferees have also agreed to delete language included in the Senate bill which would have limited the period of time for States to submit claims under public assistance programs.

For Cuban refugee assistance the conferees have agreed, after lengthy debate, to $71,950,000 to begin a 6-year phaseout of this 15-year-old program. This program has helped more than 700,000 Cubans become assimilated into American life. Most Cubans are now productive, tax-paying residents of the communities in which they live. In addition to extending the phaseout to 6 years, the conferees have agreed to provide an additional allocation of $4,250,000 over the House allowance in order to support 95 percent of costs during the first year of the phaseout instead of the 90 percent originally budgeted. This fiscal year 1978 allocation will also provide sufficient funds to cover an $8 million shortfall in 1977 costs. We feel this is a fair approach to terminating a Federal program which has met its goals.

In addition to the reductions in budget authority for public assistance, the conferees have also agreed to reduce the amount for supplemental security income by $500 million below the original House allowance. This is accounted for entirely by excess 1977 funds for which extended availability has been provided. Again this is essentially a bookkeeping change which does not affect the program level or budget outlays. The final agreements provide a total of $14,172,767,000 in Federal payments to the social security system. In addition to SSI this includes funds for black lung benefits as well as contributions to the regular social security trust fund programs specifically required by law.

For the Office of Human Development, the conference agreement is $2,195,978,000 or about $40 million over the House bill. For Head Start we agreed to a split of the Senate increase of $60 million. That will give a total of $625 million or $150 million over last year. That is a 32 percent increase in one year. There is a practical limit on how much expansion can be done in one year. Head Start is a program for helping preschool children and their families.

For the runaway youth program we agreed to $12 million or $3 million over the House bill. This program provides services and temporary care to runaway youths. The authorization for this program expires this year. A new authorization bill is now in the works and it may result in major changes in the program.

For State agencies on aging we agreed to split the Senate increase of $2 million for a total of $19 million. Because of the increases in programs for the aging, the States have greater responsibilities in administering programs within the States. We agreed to split the Senate increase of $2 million for training persons in programs for the aging. There is a need for more skilled manpower in this field so we agreed to a total of $17 million, or a 20 percent increase over last year. For multipurpose senior citizens the conferees agreed to the House amount of $40 million. That will double this program over last year. We had a lot of testimony supporting the need for facilities to serve the elderly.

For rehabilitation special projects, the conferees agreed to restore funds for two construction projects and provide an additional $500,000 for projects with industry which help the handicapped obtain employment. We also agreed to a split of the $3 million added by the Senate for expanding research to improve vocational rehabilitation programs. This will give a total of $31.5 million, or about 10 percent more than last year.

For the White House Conference on Families the conferees agreed to the Senate amount of $3 million.

RELATED AGENCIES

The conference agreement includes $117,260,000, the same as the House bill, for the domestic programs of Action. The conferees deleted the Senate increase of $1,400,000 for increasing Vista stipends, with the understanding that the funds will be appropriated after the administration submits a formal budget request making the case for a specific increase.

For the Community Services Administration, the conference agreements includes $596,353,000, an increase of $28,500,000 over the House bill. The bill includes $369,000,000 for community action agencies, an increase of $6,000,000 over the House bill and $39,000,000 over the budget request and the current year. The bill provides $3,000,000 for the community food and nutrition program, an increase of $2,500,000 over the House bill, the budget request and the current level. The conferees agreed on $65,000,000 for the energy conservation services program, the amount proposed by the Senate, and an increase of $20,000,000 over the House bill. There was no budget request for this program.

The conference agreement provides $152.000,000 for the Corporation for Public Broadcasting, an increase of $7,000,000 over the House bill. This is an advance appropriation for fiscal year 1980.

GENERAL PROVISIONS

Both the House bill and the Senate bill include a language provision prohibiting the use of funds for the forced busing of students. The conferees had little choice but to accept either the House version or the Senate version. Deletion of section 208 was beyond the scope of our authority. The conferees agreed to accept the Senate language after we learned that the author of the House language Mr. MOTTL, actually preferred the Senate version. The author of the House language sent a letter to the Senate conferees stating his support for the Senate language. The intent of the House and Senate language is basically the same. That is to prevent HEW from requiring busing beyond the school nearest the student's home including situations where merging, pairing, or clustering of schools are involved.

The Senate added a legislative provision barring funds for the purpose of conducting school civil rights surveys for school year 1977–78, providing that whenever the Secretary has reason to believe that a violation of the Civil Rights Act exists in a school system, he may take an appropriate survey of that school system. This provision was added by a floor amendment adopted by a recorded vote 78 to 11. A similar amendment was offered on the House floor but was rejected by a division vote 23 to 44. The language of the House amendment was a straight prohibition on conducting surveys and did not provide any discretion to the Secretary. The conferees agreed to delete the Senate provision from the bill on the condition that it be replaced with strong report language. As far as we know, the Secretary can live with the report language even though it is fairly strong. It will not cripple enforcement of civil rights laws.

The Senate deleted section 211 of the House bill prohibiting the use of funds requiring institutions to meet a hiring or admission quota, ratio, or numerical requirement. The Senate conferees were simply unyielding on their position. The House conferees tried to make a case for keeping the provision in the bill, but the Senate just would not budge.

The Secretary of HEW had written a strong letter urging the conferees to delete the House provision. We were told that the House language would limit severely the enforcement of Executive Order 11246, prohibiting discrimination by Federal contractors. Also it would prohibit the Department from requiring central remedial action by recipients who have been determined to be in violation of title VI of the Civil Rights Act of 1964 prohibiting discrimination on the basis of race, color, or national origin in federally assisted programs; and title IX of the Education Amendments of 1972, prohibiting discrimination on the basis of sex in federally assisted education programs. According to HEW, the House language would also interfere with the ability of the Department to comply with several court orders—such as Adams against Califano—which require the Department to issue and enforce desegregation guidelines which may require the use of timetables and goals.

In total, there were 89 amendments which had to be resolved by the conferees on this bill. Of course, the House conferees tried very hard to defend the House bill. There was give and take on both sides. Unfortunately there is one amendment which could not be resolved by the conferees. That is amendment No. 82 having to do with funds to pay for abortions.

On amendment, No. 82 relating to abortions, I will offer a motion at the proper time that the House recede and concur in the Senate amendment, with an amendment inserting the same language provision that is contained in the Labor-HEW Appropriation Act for 1977. I believe that is a fair compromise between the House and Senate bills.

Mr. Speaker, I urge adoption of the conference report and the motion which

I shall offer on the amendments reported in disagreement.

Mr. Speaker, I ask unanimous consent to insert at this point in the RECORD a detailed tabulation showing the amounts provided by the conference agreement, together with the appropriate tables.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

(The material referred to follows:)

[1] This is a 3 year advanced appropriation. The fiscal year 1977 amount was the first year under the advanced system and includes funds for 1977, 1978 and 1979. The fiscal year 1978 appropriation includes funds for 1980 only.

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I must say in all candor that this is one of the most misleading, if not phony, conference reports we have brought back from an appropriations conference with the Senate in some time so far as total figures are concerned.

The Labor-HEW bill as originally passed in the House was misleading to begin with because of some phony reductions that were cranked into the totals, and the conference report multiplies this deception severalfold.

On the surface, the conference report appears to be $425 million under the Carter budget. In reality, when you strip away postponed funding for youth training and some arbitrary reductions and bookkeeping manipulation in the public assistance field, the report is actually a substantial $2.3 billion over the President's budget. In other words, in the discretionary areas, we are really building that much additional spending into the budget—increases that will multiply in the years ahead and make it that much more difficult for the President to fulfill his promise to balance the budget by 1981. The President of course still has the option to veto the bill, as he suggested he might have to do at one time, but I doubt that he has the stomach for that now.

Just as the comparison of the conference report with the budget is deceiving so is the comparison with the House bill The report, instead of being $1,165,000,000 under the House bill, is actually $335 million over when you eliminate the items I mentioned earlier.

Now, looking specifically at the public assistance manipulation, what we had was a Senate bill that provided for a carryover of $500 million in public assistance funds and $500 million in SSI funds from 1977 to 1978, and a reduction of $500 million in actual allocations for 1978 due supposedly to lower cost estimates. The House conferees readily gave in to the Senate on these items, and it takes little imagination to discern the reasons why.

I do not have any great problem with the carryover of funds per se from one year to the next, although this goes against accepted budgeting procedures. The concern I do have is that this was done for the specific purpose of misleading Congress and the public as to the true size of this bill. When a billion dollars is carried over, it makes it look as though we are spending a billion less than we really are. And of course it makes it very difficult for the President to make a case against the high spending levels in the bill when bookkeeping manipulation results in a bill that on the surface appears to actually be under the President's budget.

Frankly, it seems to me that we ought to have greater respect for the intelligence of the general public than to try to deceive them in a manner such as this. Those Members who want to exceed the President's budget by $2.3 billion owe it to the public to do it openly rather than hide behind the smokescreen of accounting manipulation.

Moving to the issue of revised public assistance estimates, this conference report provides $872 million less than what the budget included for public assistance, ostensibly because the latest estimates from the States indicate a lower rate of projected spending. In all honesty, these estimates this far in advance have not in the past proven very reliable indicators of actual spending. They almost always have been understated. Secretary Califano states that "our experience with State projections of public assistance costs 18 months in the future is that they normally are understated." This has been the case in 4 of the past 6 years for public assistance as a whole, and in 5 of the past 6 years for medicaid.

The result has been that in 24 of the last 27 years, we have had to appropriate supplemental funding for public assistance. Just 3 years ago, this body decided it knew better than the executive branch as to what the public assistance needs would be, and it slashed AFDC and medicaid by $600 million. Then, as now, the real purpose was to hide the excessive amount by which the bill exceeded the budget. What was the result? Well, my friends on the committee do not like to be reminded of it, but we ended up having to provide a nice large supplemental appropriation of $1.7 billion to make up for the shortfall.

I am not saying this is going to happen again this year, but I would not bet against it. History is a pretty good teacher, and when we ignore the lessons of history, it is usually at our peril.

In running down some of the other key items settled in conference, we added $98 million over the House amount for summer youth employment, bringing the total number of jobs funded to 1,165,000.

Under OSHA, both the Dole amendment, which provided for consultation after inspection, and the Rousselot amendment, which required economic impact analyses, were dropped. As a substitute for the Dole amendment, the conference report includes language directing the Secretary of Labor "to develop a detailed plan for providing mandatory consultation services to all small businesses in all States and territories," and to submit the plan by January 1 of next year.

The conferees, after a lengthy argument, accepted $50 million of the $130 million the Senate added for public health service hospitals. There is really no justification for accepting any of those increases at this time, since the Secretary currently has the overall role of these hospitals under study, but when a conferee has one of these hospitals in his State, as does the senior Senator from Washington, commonsense more often than not gives way to parochialism.

For NIH, the conference report includes $2,825,102,000, an increase of $82.7 million over the House level and only $71.4 million under the Senate. Normally we come out of conference with figures for NIH that are closer to the House than to the Senate, because the Senate always loads these items up with the expectation that they will be substantially reduced in conference. It is one of the games they play. This year, however, the majority of House conferees were in a more generous mood, perhaps due to the absence of any significant veto threat.

Of the $82 million increase over the House figure, the largest share, some $35 million, goes to the Cancer Institute, bringing the total for cancer up to $867 million.

The report includes $3,254,503,000 for the various student assistance programs under higher education. Of this, $2,160,000,000 is for basic educational opportunity grants, a decrease of $140 million below the House bill. The House had come in later with a higher figure, based on the original budget estimate, but a later estimate indicated the maximum grant could be increased to $1,600 with $230 million less in funding than originally thought. The Senate went with the lower figure, and the conferees then settled on an amount $90 million higher; $50 million of the increase is earmarked in the report to increase the offset under the family contribution schedule for farm and small business assets, and the other $40 million is intended to be used for increasing the offset for personal assets. Frankly, I think we have the cart before the horse in this regard. We ought to provide the increased funds after we see what specific assets changes are proposed, not before.

We have provided $115 million for the special programs for the disadvantaged, such as Upward Bound, $10 million below the excessively high House figure, but still $15 million over the Senate. For Headstart, $625 million is included, an increase of $30 million over the House and $150 million over the fiscal year 1977 level. The latter represents nearly a 33 percent rise in funding from one year to the next. Headstart is a good program, but I think an increase of this magnitude is a little excessive.

The report allocates $10 million for monthly restrospective income reporting studies, which will seek to determine the viability of an approach that has the potential of saving upwards of a billion dollars in welfare costs. We had included $20 million in the House bill, and while I think a better and more thorough job could have been done with that amount, the $10 million will at least enable a significant effort to be made.

Now, moving to the various language provisions, the conferees accepted the Senate language on busing, and dropped the House language pertaining to ratios and quotas. The Senate language on school civil rights surveys was dropped, but report language was included telling the Department not to conduct any large scale or random surveys during the coming school year, nor to repeat any questions asked during this past year. We are going to have to watch the Secretary of HEW pretty closely to make sure he adheres to this language, because evidence came out during our conference that he is a pretty slippery fellow, bouncing around on all sides of the various issues we were considering, depending on who he was talking to.

On abortion, as you know, no agreement was reached, so we will have an-

other vote here today, and the issue will then likely go back to conference.

I think a word or two is in order on what appears to be a growing practice of attaching legislative provisions to appropriations bills. I have never particularly encouraged this practice, because I believe it diverts attention from the dollar amounts included in these bills, which after all is the essential purpose of an appropriation bill. However, I think we have to recognize why this is occurring. It is taking place because of a lack of action by the responsible authorizing committees. If the authorizing committee are going to continue to ignore problems that are of concern to millions of people, then Members are going to use the most effective device available to them.

In many cases that device is the appropriation bill. Another element is the closed or limited rule under which too many bills in this body are considered. When we deny Members the opportunity to amend authorizing legislation, the appropriations bill is again resorted to as the only other available opportunity.

In closing, I simply want to reiterate that the conference report, despite its surface appearance, is actually well above the original House bill in total dollar terms, and that bill itself was well above the President's budget. I thus urge rejection of the report, and I would suggest to the President that if he is truly committed to responsible spending levels, a veto of the bill is in order. I call to the attention of the President the words of the chairman of our Budget Committee a few days ago, when he said that—

An administration committed to a balanced budget in 1981 cannot continue to talk restraint, yet fail to carry out that commitment during the legislative process. There is a very serious prospect that the administration's credibility will be severely weakened in this area.

I hope the President is listening, and I would suggest that the same also applies to Members of Congress.

Mr. Speaker, I yield such time as he may consume to my fellow cohort on the subcommittee, the gentleman from Massachusetts (Mr. CONTE).

(Mr. CONTE asked and was given permission to revise and extend his remarks.)

Mr. CONTE. Mr. Speaker, I rise in support of this conference report on the Labor-HEW appropriations bill for fiscal year 1978. The conference agreement provides for nearly $60.2 billion in new budget authority for the vital employment, health, education, and other human resource programs administered by these departments, an amount which is below both the House and Senate bills.

I might point out, however, that we have been able to come in below both bills and even below the budget request largely by reducing the appropriation for public assistance below the requested amount. Since this is an entitlement program, of course if we have miscalculated then it will be necessary to come up with additional funds in a supplemental. I hope that the economy will improve, and that this will not be necessary—but as the distinguished gentleman from Illinois has indicated, this may in some sense be regarded as a phony cut.

On balance, I believe that we have arrived at a good compromise with the Senate. We all worked hard on this bill, and I think that this bill's responsible approach to the human resource needs of our people is a tribute to the effort which has been expended by our chairman, the gentleman from Pennsylvania; our ranking minority member, the gentleman from Illinois; and the other members of the committee.

I would briefly mention some of the items which were in conference which were of special interest and importance to me.

We have provided $98 million for summer youth employment for the summer of 1978, an amount which will support nearly 1.2 million youth jobs. We have also provided $190 million for community service employment for older Americans. These funds, which deal with the particular employment needs of our youth and our elders, are indicative of our concern for these two vital parts of our population.

Under the Occupational Safety and Health Administration, OSHA, we have included report language expressing our concern and desire that adequate emphasis be given to consultation services with employers, particularly with respect to serious hazards This is particularly important for small businesses, which lack the resources to hire safety consultants and engineers, and which are desperately in need of such consultation services.

In the health area, we provided $4 million for genetic information and counseling, for a new program that is so badly needed in providing services for the victims of genetic diseases like Huntington's disease, sickle cell anemia, cystic fibrosis, and Tay-Sachs disease. We also provided additional funding for maternal and child health programs, family planning, and the emergency medical services program.

For the National Institutes of Health, we provided significant levels of funding to meet our commitment to exploring the frontiers of biomedical research. We provided $876.1 million for the National Cancer Institute, which is not as much as I had proposed but which will permit the maintenance of ongoing programs while permitting a few very promising new areas to be explored.

For the Arthritis Institute, we provided $258.5 million, $21 million above the House-passed bill for research into arthritis, diabetes, and literally dozens of other diseases which fall under the jurisdiction of this umbrella Institute. In particular, I am hopeful that these additional funds will permit increased efforts in research on ileitis, colitis, and other digestive diseases which have often been overly subordinated to the so-called mandated diseases in the past. Other important areas which should receive increased attention include nutrition research and endocrine disorders.

For the National Institute of General Medical Sciences, we have provided $230.4 million These additional funds will help support this Institute's important responsibilities in overseeing recombinant DNA research, and will help fund such new projects as the development of carbon dioxide laser surgery technology.

For the National Institute on Aging, we split the difference and provided $37 million. This Institute has shown great promise in its initial years of operation, and we will all be looking forward to its research successes in future years.

Finally among the institutes of health, we were able to maintain the House position and provide the full $85 million for the National Eye Institute, which will go a long way toward finding cures for eye disease and vision disorders.

Under Health Resources, we provided $17 million for area health education centers. Of that amount, $14 million will be used to maintain existing center projects at last year's operating levels, and $3 million will be used for new projects. In this area, I was pleased that we were able to provide an additional $2 million, for a total of $12 million, for much-needed advanced nurse training.

Under Alcohol, Drug Abuse, and Mental Health, we provided an additional $3.6 million for new starts of community mental health centers, and an additional $3.7 million for alcoholism project grants and contracts. These funds will help alleviate two of the most serious health problems facing society today.

Under Higher Education, we provided $2.16 billion for the basic grants program, providing for a $1,600 maximum grant and for the extension of eligibility under the program.

For the Corporation for Public Broadcasting, we have provided $152 million. This provides a significant challenge to motivate non-Federal fund raising to come up with the matching share, and I am confident that the result can only be more effective public broadcasting facilities and programs.

Mr. Speaker, perhaps the most controversial part of this conference report is amendment No. 82, concerning Federal funds for abortion. I expect that we will be debating this amendment in more detail later this evening. At this point I would simply say that the House and Senate conferees were unable to reach an agreement on this amendment, and that we are proposing a return to the language which we enacted into law in the 1977 Labor-HEW appropriations bill. That language, which prohibits the use of Federal funds for abortions except where the life of the mother would be endangered if the fetus were carried to term, represents a genuine compromise between the House-passed language—allowing no exceptions to the prohibition—and the Senate-passed language—with considerably more exceptions.

Mr. Speaker, I will have more to say when we consider amendment 82 on this subject.

I believe that this conference report is a good compromise, and I urge its adoption.

Mr. MILLER of California. Mr. Speaker, the fiscal 1978 appropriations bill we are passing today, appropriates $250 million for title VII of the Older Americans Act. Title VII is the section within the

Older Americans Act that provides communal dining programs for senior citizens.

I am pleased to support the appropriation of these fiscal 1978 moneys for the elderly nutrition program. Since its inception in 1973, the program has been a huge success. Today more than 400,000 hot meals are served daily through the elderly nutrition program, to senior citizens. This program is particularly important to impoverished elderly Americans, many of whom depend on title VII daily as the sole source of their only hot, nutritional meal.

There are millions of elderly poor who are unable to participate in the elderly nutrition program simply because the program is underfunded and already overcrowded. This is why it is important that fiscal 1978 title VII appropriations be utilized to feed senior citizens as soon as these moneys are available.

I urge the Administration on Aging not to delay in allotting fiscal 1978 title VII appropriations to the States. State offices on aging should be quick in obligating these funds as soon as they are allotted. Local title VII projects should then use these funds immediately for the provision of hot meals to needy senior citizens.

In short, in appropriating $250 million for title VII in fiscal 1978, we intend that these moneys actually be expended in fiscal 1978—expended in a manner that delivers hot nutritious meals to as many needy senior citizens as possible. Fiscal funds should not remain unused for the better part of 1978 while elderly poor line up at local title VII projects only to be turned away because of inadequate funds. Instead these appropriations should go out to the local projects as early in the fiscal year as possible. Only then will the elderly nutrition program live up to its full potential to alleviate the plight of the many undernourished and malnourished senior citizens living in the United States today.

Mr. BIAGGI. Mr. Speaker, I rise in support of the conference report to H.R. 7555, making appropriations for the Departments of Health, Education, and Welfare for the fiscal year 1978. I am especially grateful that the Senate did join with the House in accepting my amendment barring the use of any funds from the Department of Labor from benefitting directly or indirectly illegal aliens.

This amendment takes on additional significance in light of the fact that the President on Thursday will present to the Congress his proposals for controlling the illegal alien problem. This very Congress has seized two important initiatives in one key problem created by illegal aliens—employment. Earlier this year my amendment to the Public Works Employment Act barred any of the estimated 600,000 jobs from going to illegal aliens. Today we are about to approve my amendment which would prohibit CETA funds, unemployment insurance and elderly employment funds from going to illegal aliens. We are continuing on the right track toward better protection of American workers.

Mr. CEDERBERG. Mr. Speaker, we are going to be voting here on a conference report which contains funds for Labor-HEW programs that have enjoyed political popularity down through the years, especially with certain interest groups and their representatives. So I am curious as to why these interest groups have not bombarded us with protests concerning the severe cutbacks in funding provided in this conference report, at least according to the comparisons shown on page 23 of the report.

Why are they not up in arms over the $12 billion cut below last year? Why have we not heard from them about this bill being $425 million below the President's budget, and $1.2 billion below the House bill?

I will tell you why. Because these are phony cuts, and we know it, and they know it. And if the President does not know it, somebody should tell him.

These interest groups know that when one-time funding items are removed from last year's totals, this bill is not $12 billion below fiscal 1977, it is $3 billion above last year.

They also know that when some fancy budget juggling is revealed, this bill is not below the budget, it is $2 billion over the President's request.

And they know the bill is $300 million over the House bill, not $1.2 billion under it.

I was a conferee on this bill, but I could not sign the report because of all this budget juggling. The conferees know full well that we will have to have a big supplemental bill sometime during fiscal 1978 just to take care of the phony cuts which are designed to convince the President to sign this bill.

The President may sign the bill, but I doubt that he will be convinced that it is below his budget when the education programs in the bill are almost a billion dollars over his budget, and health items are $700 million over his budget, and the related agencies are $186 million over his budget, and the summer youth jobs program is $168 million over his budget. If he is convinced, this Nation really is in trouble.

In regard to that so-called cut below last year, I want to point out that the fiscal 1977 Labor-HEW funding included nearly $15 billion in one-time items. That included over $9 billion for CETA public service jobs and training programs, much of which is actually going to be used in fiscal 1978. Is also included a $5 billion payment to the unemployment trust fund, $450 million in "doubling-up" funding to initiate forward funding of the vocational education grants, and that $200 million for the emergency fuel costs assistance program of the Community Services Administration. You remember that one; it was supposed to be for last winter's fuel bills, and now it has an August 31 deadline, and potential applicants are being told they can use the money for current or future fuel costs—including air-conditioning, I presume.

As I mentioned, this conference report is supposed to be $1.2 billion below the House bill. Do not expect much mail on that one. Setting aside the budget juggling, this report is $155 million over the House bill for Department of Labor items, $214 million over the House for health, and $35 million over the House for the related agencies.

So no one should feel guilty for voting for all of these so-called cuts this evening. All we are doing is postponing the funding of medicaid and public assistance entitlement payments until a later date, and carrying over a billion dollars in 1977 funds, which might otherwise have to be left unspent.

But it should at least be pointed out that the real increases in spending provided in this bill will provide the base for additional increases in next year's bill, and the next and the next. And before you know it, we will be in fiscal 1981, the year the President says he will have a balanced budget. There is a big difference between balancing a budget and juggling one, and this conference report is clearly in the latter category.

Memo to: Mr. Cederberg.
From: Jim Fairchild.
Re: FY 1978 Labor-HEW Conference Report Dollar Comparisons.

The conference totals indicate the bill is $12 billion below FY 1977, $425 million below the FY 1978 budget estimates, $1.2 billion below the House bill, and $476 million below the Senate bill. The following points should be noted in regard to those comparisons:

(a) $12 billion below FY 1977—

The FY 1977 total includes nearly $15 billion in one-time items, as follows: $9.3 billion for CETA Titles II and VI to be available through FY 1978; $5 billion for advances to the Unemployment Trust Fund; $451 million for "doubling up" to initiate forward funding of the Vocational Education grants program; $200 million for the emergency winterization program of the Community Services Administration.

Without these one-time items, the FY 1978 bill is $3 billion over FY 1977.

(b) $425 million below FY 1978 estimates—

Strictly budget juggling. Increases over the FY 1978 budget are as follows: Education Division, up $995 million over the budget; Health, up $710 million; Related Agencies, up $186 million; Labor's Summer Youth Jobs, up $168 million.

The "cut" below budget is obtained by a combination of re-estimates of need for Medicaid and Public Assistance, the carryover of $1 billion in FY 1977 funds for Security Supporting Income benefit payments and Public Assistance, and a denial of forward funding for CETA III programs. Committee reports clearly indicate that future funding will be considered for these items.

Without the budget juggling, the bill is $2 billion over the budget estimate.

(c) $1.2 billion below the House bill—

"Cut" is the net of the $1.5 billion reduction in the Conference bill due to re-estimate of need for Public Assistance ($500 million) and the carrying over of $1 billion in FY 1977 funds for Security Supporting Income benefit payments and Public Assistance; and the actual $300 million in increases in the Conference bill over the House bill as follows: Labor, up $155 million; Health, up $214 million; Related Agencies, up $35 million—Total increases: $404 million, partially offset by reductions of $103 million in the Education Division. (Mainly BOG's).

Without the phony cuts, the bill is $300 million over the House bill.

(d) $476 million below the Senate bill—

Reflects conference action on Senate bill increases. Major reductions are $200 million from the Summer Youth Employment program, and $200 million from various Health items. Education is up slightly ($16 million) over the Senate bill.

Summary of appropriations—Labor-HEW appropriations bill, fiscal year 1978, H.R. 7555

Appropriations fiscal year 1977	$72,173,358,575
President's budget request fiscal year 1978	60,593,970,000
House allowance fiscal year 1978	61,334,089,550
House compared to fiscal year 1977	−10,839,269,025
House compared to budget	+740,119,550
Senate allowance fiscal year 1978	60,644,126,000
Senate compared to fiscal year 1977	−11,529,232,575
Senate compared to House	−689,963,550
Senate compared to budget	+50,156,000
Conference allowance fiscal year 1978	60,168,561,000
Conference compared to fiscal year 1977	−12,004,797,575
Conference compared to budget	−425,409,000
Conference compared to House	−1,165,528,550
Conference compared to Senate	−475,565,000
Actual conference compared to fiscal year 1977	+2,947,000,000
Actual conference compared to budget	+2,059,000,000
Actual conference compared to House	+301,000,000
Actual conference compared to Senate	−476,000,000

Mr. FLOOD. Mr. Speaker, I have no further requests for time. I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore (Mr. BRADEMAS). The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 337, nays 82, not voting 14 as follows:

[Rollcall No. 496]

NOT VOTING—14

Anderson, Ill.	Flippo	McKinney
Badillo	Giaimo	Rhodes
Burke, Mass.	Heckler	Rose
Dent	Jones, Tenn.	Teague
Derrick	Leach	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Teague against.

Until further notice:

Mr. Dent with Mr. Anderson of Illinois.
Mr. Jones of Tennessee with Mr. Flippo.
Mr. Giaimo with Mr. McKinney.
Mr. Badillo with Mr. Rhodes.
Mr. Rose with Mrs. Heckler.
Mr. Derrick with Mr. Leach.

Mr. FINDLEY and Mr. MATHIS changed their vote from "nay" to "yea."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore (Mr. GIBBONS). The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 3: Page 3, line 4, strike out: "$144,400,000" and insert: "$100,000,000".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 3 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$152,320,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 12: Page 11, line 5, strike out: "leprosy:" and insert: "leprosy, and $60,000,000, to remain available until expended, shall be for construction and renovation of Public Health Service hospitals and clinics:".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 12 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert the following: "leprosy, and $15,000,000, to remain available until expended, shall be for construction and renovation of Public Health Service hospitals and clinics:".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 13: Page 12, line 23, strike out; "$209,426,000" and insert: $210,255,000".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 13 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment insert the following: "$211,505,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk wil report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 28: Page 17, line 25, strike out: "$1,000,000 and insert: $1,750,000".

MOTION OFFERED BY MR. FLOOD

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 28 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment insert the following: "$2,750,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 31: Page 18, line 7, strike out: "of title VII" and insert: "and 801: *Provided,* That funds appropriated under this head in Public Law 94–303 for carrying out title IX of the Public Health Service Act shall be available for carrying out the purposes of section 314(b) of the Public Health Service Act under the same terms and conditions as contained in Public Law 94–303".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 31 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 32: Page 18, line 14, insert:

"SEC. . Any payment made pursuant to the paragraph entitled "Health Resources" under chapter VII of the Act entitled "An Act making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes", approved May 4, 1977 (Public Law 95–26), to the Tuskegee Institute, Tuskegee, Alabama, for construction assistance for its school of veterinary medicine may be made without regard to the requirements of section 722(a)(1) of the Public Health Service Act, relating to the Federal share of the grants authorized pursuant to section 720(a)(1) of that Act."

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 32 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 45: Page 24, line 11, strike out: "$619,925,000" and insert: "$643,425,000, of which $3,000,000 shall be available until expended for carrying out the programs of section 625".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 45 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert the following: "$622,825,000, of which $2,400,000 shall be available until expended for carrying out the programs of section 625".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 59: Page 26, line 17, after "year" insert ": *Provided further,* That such funds are appropriated notwithstanding the provisions of section 1208(a)(1) of the Higher Education Act: *Provided further,* That amounts appropriated under this head in Public Law 95–26 for supplemental educational opportunity grants shall remain available through September 30, 1978.".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 59 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 66: Page 29, line 23, strike out: "$20,600,350,000" and insert "$19,602,000,000".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 66 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$19,600,150,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 68: Page 30, line 17, after "year." insert: "The funds appropriated for carrying out titles IV, XIX, and XX of the Social Security Act for fiscal year 1977 shall remain available for obligation and expenditure during fiscal year 1978.".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 68 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 72: Page 34, line 4, strike out all after "That" down to and including "Treasury" in line 7, and insert: "funds appropriated for carrying out title XVI of the Social Security Act for fiscal year 1977 shall remain available for obligation and expenditure during fiscal year 1978.".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 72 and concur therein with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following: "any portion of the funds provided to a State in the current fiscal year and not obligated by the State during that year shall be returned to the Treasury: *Provided further,* That funds appropriated for carrying out title XVI of the Social Security Act for fiscal year 1977 shall remain available for obligation and expenditure during fiscal year 1978."

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 76: Page 37, line 4, after "1973;" insert: "$3,000,000, to remain available until expended, shall be for a White House Conference on Families;".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the State numbered 76 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 79: Page 42, line 16, strike out "and which offers the courses of study pursued by such student," and insert: "except for a student requiring special education, to the school offering such special education,".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 79 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 80: Page 42, line 20, after "1964." insert: "For the purpose of this section an indirect requirement of transportation of students includes the transportation of students to carry out a plan involving the reorganization of the grade structure of schools, the pairing of schools, or the clustering of schools, or any combination of grade restructuring, pairing, or clustering. The prohibition described in this section does not include the establishment of magnet schools.".

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 80 and concur therein.

The SPEAKER pro tempore. Without objection, the motion is agreed to.

Mr. ASHBROOK. Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

The question is on the motion offered by the gentleman from Pennsylvania (Mr. FLOOD).

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 82: Page 43, strike out lines 11 through 13, inclusive, and insert:

SEC. 209. None of the funds in this Act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term, or where medically necessary, or for the treatment of rape or incest victims. This section does not prohibit the use of drugs or devices to prevent implantation of the fertilized ovum.

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. FLOOD moves that the House recede from its disagreement to the amendment of the Senate numbered 82 and concur therein with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following:

"SEC. 209. None of the funds contained in this Act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term."

PREFERENTIAL MOTION OFFERED BY MR. STOKES

Mr. STOKES. Mr. Speaker, I offer a preferential motion.

The Clerk read as follows:

Mr. STOKES moves that the House recede from its disagreement to the amendment of the Senate numbered 82 and concur therein.

Mr. BAUMAN. Mr. Speaker, I demand a division of the question.

The SPEAKER pro tempore. The gentleman from Maryland will be protected in his request for a division.

PARLIAMENTARY INQUIRY

Mr. BAUMAN. Mr. Speaker, I have a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. BAUMAN, If the question is divided and the motion to recede is in fact adopted, will it then be the right of the gentleman from Pennsylvania (Mr. FLOOD), the chairman of the subcommittee, to offer a motion to concur with an amendment?

The SPEAKER pro tempore. If the House recedes, a motion to concur with an amendment would be a preferential motion.

Mr. BAUMAN. Then the gentleman from Pennsylvania (Mr. FLOOD) would be able to offer that?

The SPEAKER pro tempore. If the gentleman from Pennsylvania sought recognition, he could offer that.

Mr. BAUMAN. I thank the Speaker.

The SPEAKER pro tempore. The gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Illinois (Mr. MICHEL) are recognized for 30 minutes each.

The Chair recognizes the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Speaker, this is a very difficult parliamentary situation. I direct the special attention of the Members to this. Hear this.

I urge the Members to vote for the motion to recede. If the motion to recede is adopted, I shall immediately offer a preferential motion to concur in the Senate amendment with an amendment. My motion to concur with an amendment will insert the language which I have already offered, the language of the 1977 Appropriation Act, the so-called Conte language. This permits payment for abortions only where necessary to save the life of the mother.

This motion to recede must be adopted before I can offer my motion to concur with an amendment. That is the parliamentary situation.

So I urge the Members to vote "aye," to vote for the motion to recede.

The SPEAKER pro tempore. The gentleman from Illinois (Mr. MICHEL) is recognized.

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume.

I take this time to say only that the chairman has very accurately described the parliamentary situation here.

Had the House conferees taken a position of giving nothing in that conference, we would be back here frankly on a motion in disagreement, to insist on the House position. There was a bit of movement on the part of the House conferees to really adjust to what last year's language was, and for that reason I will now yield 2 minutes to the gentleman from Illinois (Mr. HYDE), who is the author of the amendment that causes us to be here to discuss this particular subject.

Mr. HYDE. Mr. Speaker, I thank the gentleman from Illinois for yielding.

I take this time only to say I fully support the motion of the gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Illinois (Mr. MICHEL).

Now that the question is divided, the only question before us is whether or not we shall recede from the House position. I suggest and will support the motion to recede because it is the only way we can get to the amendment that originally was offered by me, namely the language that prohibits the use of any funds for abortions except to save the life of the mother. That therapeutic abortion exception ought to be in the amendment, and the way for us to do it is to recede and to adopt the motion the gentleman from Pennsylvania (Mr. FLOOD) will shortly offer.

So I urge my colleagues to join in the motion to recede.

Mr. KAZEN. Mr. Chairman, will the gentleman yield?

Mr. HYDE. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, the language that is now going to be offered after the motion to recede is the identical language that the gentleman in the well was going to offer before the point of order was sustained when the bill was before the House?

Mr. HYDE. Yes, and it is the only language the Supreme Court has had before it.

Mr. KAZEN. I thank the gentleman.

I likewise will support it.

Mr. FLOOD. Mr. Speaker, I move the previous question on the motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Pennsylvania (Mr. FLOOD).

The motion was agreed to.

PREFERENTIAL MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Speaker, I offer a preferential motion.

The Clerk read as follows:

Mr. FLOOD moves that the House concur in the amendment of the Senate numbered 82 with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following:

"SEC. 209. None of the funds contained in this Act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term."

The SPEAKER pro tempore. The gentleman from Pennsylvania (Mr. FLOOD) is recognized for 30 minutes, and the gentleman from Illinois (Mr. MICHEL) is recognized for 30 minutes.

The Chair recognizes the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the House and the Senate conferees, I repeat for the purpose of emphasis, had quite a conference, if I may say, and were unable to reach agreement on Senate amendment No. 82 which deals with this very controversial issue of abortion.

Section 209 of the House bill contains the following language, which was adopted in the House by a vote of 201 to 155:

None of the funds appropriated under this Act shall be used to pay for abortions or to promote or encourage abortions.

Now, the Senate conferees refused to agree to the House language. The House conferees refused to agree to the Senate language. The Senate conferees refused to offer any kind of compromise, although the House conferees were perfectly willing to agree to compromise language permitting abortions where necessary to save the mother's life.

The language which I now offer is identical to the language which was contained in the fiscal year 1977 Labor-HEW Appropriations Act. It was adopted last year by a vote of 256 to 114 in the House and 47 to 21 in the Senate. It is the law at the present moment. Further comments on the intent of this language were contained in last year's joint explanatory statement of the Committee of Conference.

Now, the language I am offering is also identical to the language in section 209 of the 1978 Labor-HEW Appropriations

bill as it was reported from the Committee on Appropriations on June 2 of this year. Unfortunately, a point of order against the language was sustained and the House did not have an opportunity to vote on this language which permits payments for abortions in cases where the life of the mother would be endangered if the fetus were carried to term; so I strongly urge that we vote for it now, because a large vote for it at this time will send a clear message to the other body. It would expedite the enactment of the $60-billion appropriations bill, which is very important to the welfare of the American people.

Mr. MICHEL. Mr. Speaker, I have a couple requests for time.

Mr. Speaker, I yield such time as he may consume to the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Speaker, I rise in support of the motion of the gentleman from Pennsylvania, our chairman (Mr. FLOOD), to recede and concur with an amendment which inserts last year's language prohibiting the use of Federal funds for abortion except where the life of the mother would be endangered if the fetus were carried to term.

I had not intended to take such an active role on this issue. But last year, when the House and Senate were deadlocked for 2 weeks over their disagreement on this issue, it was my compromise language which finally broke the deadlock and was enacted into law. Since it is the same language which is being proposed here today, it seems appropriate for me to defend it at this time.

Mr. Speaker, when the medicaid program began providing reimbursement for abortions, there were a relatively small number of them being performed. But that number has grown, to the point where we are presently spending about $50 million a year in Federal funds for some 300,000 annual abortions. It may rightly be pointed out that $50 million in a $60 billion-plus bill is not terribly significant. But the important point to make is that 300,000 federally financed abortions a year represents a serious abuse of the medicaid program. It is apparent that a significant number of people are using abortion as a form of birth control at Federal expense, or as a matter of convenience.

When you read the medicaid statute, you do not find any mention of abortions. The provision of Federal financing for abortions arose not out of a conscious legislative policy decision, but out of an administrative interpretation of the medicaid act. In my opinion, the question of Federal funding for abortions should be dealt with legislatively. The medicaid authorization should specifically prohibit or provide for the coverage of abortions. But the authorizing committees have not acted. And out of frustration with their inaction, here we are with this language on an appropriations bill.

Mr. Speaker, as you know, the House conferees have met in conference with the Senate on two occasions in an effort to develop language that will be acceptable to both Houses concerning Federal funding of abortions. During our deliberations, the House conferees voted against several weakening amendments to this year's Hyde language, and finally voted in favor of the language known as the Conte amendment from last year's Labor-HEW bill. The language accepted by the House conferees by a vote of 9 to 3, and which is now before the House, reads as follows:

> Sec. 209. None of the funds contained in this act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term.

Despite this compromise on the part of the House conferees, in adding the life of the mother exception, the Senate conferees voted to reject this language. The House conferees then vote to reject the Senate or so-called Brooke amendment language by a vote of 10 to 1.

What is needed in the House is a firm reaffirmation of our determination to limit the expenditure of Federal funds for abortion. I urge my colleagues to approve the motion of the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Speaker, I yield 5 minutes to the gentleman from Ohio (Mr. STOKES).

Mr. STOKES. Mr. Speaker, I rise to oppose the FLOOD motion, and rise in support of my own motion. The only way my motion can get a vote is for us to defeat the Flood motion.

Mr. Speaker, the purpose of my motion is to have the House recede from its disagreement to the amendment of the Senate and concur in the Senate language. The language passed by the Senate would allow Federal funding to be utilized for abortions only in cases where the life of the mother would be endangered, in cases of rape or incest, or in cases of medical necessity. Although I am certainly not satisfied with the restrictiveness of the Senate language, I believe that this is a question of civil rights and a question of equal access under the law for poor women, I believe that acceptance of the Senate language is the least that the house can do. Under the Senate language we would be sticking to our job which is legislating and allowing the medical profession, that is, the physicians, to treat the individual medical conditions of their patients in accordance with their best medical judgment. For this legislative body to restrict the ability of doctors to treat their patients in terms of delivering what they may have decided is medically necessary in a given circumstance, is unprecedented, and sets a dangerous standard for the future delivery of necessary medical services to those who are underprivileged. It also constitutes an unconscionable intrusion into the privacy of the doctor-patient relationship.

Mr. Speaker, I have heard one argument that the term "medically necessary" is too broad. It is really the only realistic language. There are an extraordinary number of medical conditions that exist which would make a continued pregnancy inadvisable. I want to read from a July 18, 1977 letter from the American College of Obstetricians and Gynecologists from which I quote:

> The most astute medical minds could not possibly devise a predetermined list of conditions completely including each individual patient for whom a procedure is medically necessary and excluding all others. This is because each patient presents a combination of conditions, and degrees of severity, the total weight of which can only be determined by the physician who evaluates that individual patient.

How then can we in Congress justify making a political judgment about serious life and health situations for the women who just happen to be poor and dependent upon the assistance of the Government for decent medical care? It seems to me that we ought not to be playing doctor.

Mr. Speaker, for those who feel abortion should not be allowed to poor women, I also ask, would you force these women to continue pregnancies when they were carrying a diseased or seriously deformed fetus? What about those who are affected with sickle cell or Tay Sachs and other genetic diseases. What about the woman who has taken a drug like thalidomide? Studies now show that women who drink heavily or ingest drugs—such as heroin addicts—have a much higher incidence of giving birth to grossly deformed babies. What about the epidemic of teenage pregnancies which are high risk for the teenager as well as for the baby? Must they be carried to term?

Mr. Speaker, not even the Senate language cures the unconstitutionality of prescribing a different standard for the poor. There is no law restricting middle class or wealthy women to a standard of "medically necessary." It is ironic that those who would not allow poor women to obtain abortions because they felt it was necessary, would allow these same women to subject themselves to self-induced or illegal abortions and risk their life. Those who would not allow these poor women to obtain safe, legal abortions should realize that by HEW's own predications 292,000 women will seek illegal, back-alley abortions each year. Of this number 25,000 will suffer serious injury requiring hospitalization, some 250 of these women will die.

Mr. Speaker, I believe that if there must be a compromise, this is the only humane compromise that can be made, at least a doctor can perform an abortion where medical conditions warrant such a procedure. Several other medical professional organizations besides the American College of Obstetricians-Gynecologists have taken a position supportive of the Senate language, including the American Medical Association, the physicians forum, and the National House Staff Physicians Association. Since we are legislators and not doctors I would hope that we would reject the presumption that we can by adoption of the Conte amendment answer a question of great medical complexity. This is the wrong arena for the intrusion of legal and political pronouncements.

Mr. Speaker, and my distinguished colleagues, the Supreme Court in its majority opinion recently stated that poor

women have no obstacles placed before them in their efforts to obtain an abortion by a withdrawal of funding for nontherapeutic abortions and suggested that they can draw upon the resources of the private sector as before. It is because the poor have not had access to the medical services of the private sector that Congress in 1965 enacted the Medicaid Act. I would strongly urge my colleagues to vote today not on the question of your view on the morality of abortion, but to vote instead upon the right of the poor to obtain abortions when it is deemed medically advisable in the opinion of a physician. The Supreme Court clearly portended that it was the responsibility of Congress to deal with this question of Federal funding. For all those who assumed that the Court would take care of this issue for them and therefore supported the Hyde amendment, I would say to you that we have a responsibility to act in accordance with a sense of fair play in at least making sure that poor women seeking abortions for medical reasons will have the chance to have safe ones. I urge you to support my motion to recede and concur in the Senate language.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. The Chair will remind all of those present, including those in the gallery, that no demonstrations are allowed in the Chamber.

Mr. FLOOD. Mr. Speaker, I yield 5 minutes for the purpose of debate only to the gentleman from Wisconsin (Mr. OBEY).

Mr. OBEY. Mr. Speaker, I am in a peculiar position because unlike so many people who seem to believe that they have access to perfect truth on this subject, I honestly do not know what language this amendment ought to contain. As I said on this floor previously, I am a Catholic.

I am opposed to abortion. I think that indiscriminate abortion brutalizes all of us and all of society.

I think that in the main the Government should not pay for abortions. But I do think that there are some extenuating circumstances which we ought to be adult enough to recognize, and I do not believe that the language proposed by the gentleman from Pennsylvania (Mr. FLOOD) goes far enough in that regard.

There are a couple of problems with this language. For instance, it makes no exception whatsoever in the case of rape or incest. It makes no exception in the case of life-shortening diseases, diseases such as renal disease, although we were willing to spell that out in the report last year.

That means, frankly, that if we adopt this language without the kind of clear exception we had or thought we had in the report last year, what we are really saying to a woman is this: "OK, we won't put you in the grave, but we don't mind if we put you in bed for the rest of your life or in a wheelchair for the rest of your life."

As a man, I am simply not willing to make that statement to a woman. I would much rather have a doctor make that choice rather than to have a medically uneducated politician like myself and all the rest of us, except for those Members in this Chamber who are doctors.

So what I am asking the Members to do is to oppose the language of the gentleman from Pennsylvania and the motion offered by the gentleman from Pennsylvania, because the report indicated last year, among other things, that we would make exceptions in the case of life-threatening diseases, such as renal disease, which does not take one's life immediately with pregnancy but threatens it in the long run and certainly shortens it.

We also said in the report last year that "it is not the intent of the conferees to prohibit medical procedures necessary for the termination of an ectopic pregnancy, nor is it the intent to exclude rape or incest, nor is it the intent of the conferees to prohibit the use of drugs or devices to prevent the implantation of the fertilized ovum"—the morning after pill. We also clarified what our intent was as to what could be taught in medical schools.

So, Mr. Speaker, I am simply asking the Members to vote down the motion offered by the gentleman from Pennsylvania so that I can offer an amendment which I have at the desk and which would read as follows:

SEC. 209. None of the funds in this Act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term or in cases of rape or incest victims or in cases where the mother is afflicted by potentially life shortening diseases which will be aggravated if the fetus is carried to term. This section does not prohibit the use of drugs or devices to prevent implantation of the fertilized ovum, medical procedures necessary for the termination of an ectopic pregnancy, or medical school research into the teaching of abortion procedures for therapeutic purposes.

Mr. Speaker, that is all this language attempts to do. I will admit this is a very imperfect way to include in the bill what was the essential thrust of the language in the report last year. I think, however, we have an obligation at least to be clear in what we do, and we will not be clear if we confine ourselves only to the language proposed by the gentleman from Pennsylvania.

Let me make one additional explanation. In addition to what I have stated this language will do, it would clarify, in light of what the Attorney General said yesterday in his opinion to the Secretary of HEW, that it is our intention in cases of rape or incest to allow an exception. That is essentially what this does. It would allow us to say what we said we meant last year, and it would make clear what our intention is in the case of rape or incest.

Mr. Speaker, I would predict that this is where the conferees will eventually wind up anyway.

Mr. FLOOD. Mr. Speaker, I yield 2 minutes to the gentleman from Minnesota (Mr. OBERSTAR).

Mr. OBERSTAR. Mr. Speaker, once again we are gathered on the threshold of a momentous decision affecting the right to life of the unborn.

Once again, just as on previous votes, I have no doubt that each of us is clear about how he or she will vote; but before we do vote there are some considerations that I feel ought to be brought to the attention of those who may yet be undecided.

Much has been said during this debate about the disadvantaged and about possible discrimination against the poor, in the funding of abortions. We ought to be very clear that where there is no basic human right there can be no discrimination. There is no basic human right to a federally financed abortion; therefore, to preclude the use of Federal funds for that purpose is not to deny the poor or any other class in society of a so-called right, since no such right exists.

The argument in favor of federally funded abortions completely misses the mark of the real discrimination against the poor in this country: inadequate health care for both parents and children, whether born or unborn. In fact, we could strike a very significant blow for progress and the cause of adequate health care for all Americans if today we would take the money we save by not funding abortions and commit it to programs that will realistically and effectively respond to the health needs of the poor.

Children from poor families have more chronic diseases and are four times more likely to be in poor health than those who are financially better off.

More than one-third of poor children between the ages of 1 and 4 are not protected against polio or measles.

Nearly two out of three or, to be precise, 58 percent of infants under 1 year of age in large central cities have not received DPT shots—the standard preventive care against diphtheria, tetanus and whooping cough.

According to the Children's Fund, the medicaid program for "early and periodic screening, diagnosis and treatment," whose purpose is to give poor children routine health care, is responding to less than a fraction of the number Congress intended it to serve. Only a quarter of the required screenings are actually being done; and of those medical and mental problems diagnosed in 1976 only 40 percent received the care they actually needed—a half million cases went untreated. Situations like this are intolerable.

The argument that poor people need Federal aid to abort their unborn will have a hollow ring until we have adequately provided Federal funds for a wide range of programs that will make it largely unnecessary for poor people or people in any economic class to even consider abortion as an option.

What we ought to do, if we are truly acting out of concern for the needs of poor people, is to take that $53 million spent in 1976 to finance abortions, and spend it instead on:

Liberalized adoption laws;

Adequate maternal and child health care;

Child care services;

Aid to unwed mothers;

Nutrition needs of the expectant mother and her unborn child;

Rape prevention and treatment centers;

Intensified research into birth defects; and

Programs to reduce poverty and eliminate its causes.

When we seriously commit ourselves to these kinds of programs that provide realistic alternatives to abortion, we will then truly be responding to the needs not only of the poor but of all Americans, and we will wisely be using Federal funds to provide for the health and social care of the born, rather than use these funds to deny life to the unborn.

I urge your support for the Hood amendment.

Mr. FLOOD. Mr. Speaker, I yield 2 minutes to the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Speaker, this is a very difficult subject for me to talk about because it is a very emotional issue.

The only thing I can say in responding to some of the statements that have been made is to get very personal and talk as a woman.

I am the mother of two children, and I have lost two children, so I have had four children all told. I do not have children very well. Perhaps that is one of the reasons I ran for office.

After the birth of my last child I spent 10 days in intensive care. I am not sure whether any doctor would say to me, if I were pregnant again, that I would die; but I am also not sure that I want to put my family through trying to decide whether or not I live. I resent very much my Government's saying to me, if I am poor, that my family would have absolutely no alternative but to either attempt to find the money during a period of time that realistically is less than 5 weeks or that I should gamble and hope that I live through it.

I do not know if any Members have been in intensive care. It is not fun, and it is not a pleasant thing; but that is what we are sentencing women like me to do, unless some doctor wants to go out on a limb and say that it is absolutely certain a matter of life or death, period.

Furthermore, Mr. Speaker, I resent the fact that this government would say that to poor women and I feel very, very strongly about that. I think that when we look at the issue, we will find that we really ought to allow language including something about "medically necessary" in the amendment. If something such as a "medically necessary" provision were in there, it would cover someone like myself if I were unfortunate enough to have to be relying on medicare or medicaid.

With respect to rape or incest, if I had to ask for help because of alleged rape or incest, admittedly I would be sentenced to a form of family violence. Who could go home and say that she had been the victim of alleged incest or rape?

I urge Members to vote down the Flood language so we can consider a much more reasonable and sensible Government policy.

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, if we conclude this debate in a reasonable period of time, I just think that the record in no way should indicate our indifference, as Members of the House, to the gravity of the issue, the volatile, the emotional issue that is before us.

The point I am making is that the language before us is the very same language we had last year. Except for the new Members who are with us here, every Member has spoken out on this subject or extended his remarks. I do not think there is one of those Members who is going to be changed one bit by what is said here unless he or she is influenced in one way or the other by the most recent Supreme Court decision, which, frankly, in my opinion, buttresses the House's position more this year than was the case last year.

Having said that, Mr. Speaker, I would be happy at this moment to yield 1 minute to our friend, the gentleman from Washington (Mr. PRITCHARD).

Mr. PRITCHARD. Mr. Speaker, I thank the gentleman from Illinois, Mr. MICHEL, for the kind remarks. I did not realize the gentleman carried those kind thoughts toward me.

Mr. Speaker, I will not get into the rhetoric or the arguments on this issue, but I do feel disappointed because of the parliamentary maneuvering which always goes on in a bill, that this House did not have a chance to have an up or down vote on the position of the Senate. I think we would come closer to a resolution as far as we all feel on this issue if we have a chance to have a vote on the Senate position. If that did not carry, then I think it is proper to go ahead the other way. I know we are not going to have that chance but I, for one, am disappointed because I do not think we are going to come out with the position that the majority truly hold on this issue.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. MICHEL. Mr. Speaker, before yielding a minute to my friend, the gentlewoman from New Jersey (Mrs. FENWICK), may I make this observation that if the gentleman from Washington (Mr. PRITCHARD), considers that he is being foreclosed from voting on the position of the Senate, let it be clear and understandable that the next vote is really one of either accepting the position of the House or the position of the Senate. If the position of the House prevails, as with the amendment of the chairman of the committee, the gentleman from Pennsylvania (Mr. FLOOD), that, in my opinion, is a clear expression of this House that we turned down the position of the Senate in favor of the position of the House.

I now yield 1 minute to the gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. Mr. Speaker, I thank my friend, the gentleman from Illinois (Mr. MICHEL), for yielding to me.

Mr. Speaker, I have an amendment at the desk.

The SPEAKER pro tempore. Does the gentleman from Pennsylvania, Mr. FLOOD, yield for an amendment?

Mr. FLOOD. I do not yield for the purpose of offering amendments, only for the purpose of debate.

Mrs. FENWICK. The gentleman from Pennsylvania (Mr. FLOOD), did not yield to me, the gentleman from Illinois (Mr. MICHEL), yielded to me.

Mr. MICHEL. Mr. Speaker, I did not yield to the gentlewoman from New Jersey (Mrs. FENWICK) for the purpose of offering an amendment.

PARLIAMENTARY INQUIRY

Mrs. FENWICK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore (Mr. GIBBONS). The gentlewoman from New Jersey will state her parliamentary inquiry.

Mrs. FENWICK. Mr. Speaker, it is my understanding of the parliamentary procedure that unless we are yielded to for the purpose of debate only, and for which I was not yielded, that then one can offer an amendment.

The SPEAKER pro tempore. The Chair will rule that the gentlewoman from New Jersey was recognized for the purpose of debate only.

Mrs. FENWICK. That is not what the gentleman from Illinois (Mr. MICHEL) said when he yielded to me.

The SPEAKER pro tempore. The Chair will state that the gentleman had to yield for the purpose of debate only, he did not have any authority under clause 2(b)(2) rule XXVIII to yield other than for the purpose of debate.

Mr. MICHEL. Mr. Speaker, I now yield such time as he may consume to the gentleman from Illinois (Mr. O'BRIEN), a member of the subcommittee.

Mr. O'BRIEN. Mr. Speaker, I thank the gentleman for yielding to me.

I would like to make one comment, Mr. Speaker, and that is that we have been over this ground many, many times. It is an emotional and a very difficult issue for many of us. I support the Flood position with all my heart, but, recalling that the last vote we had was 201 to 155, with 77 abstaining, that is 433 out of our 435 Members participating, so that I think there has been ample time for every amendment. I think we ought to get on with a vote. No one has changed a single vote.

Mr. MICHEL. Mr. Speaker, I do think, with respect to the author of the amendment, that I should yield whatever time he may consume, for general debate, to the gentleman from Illinois (Mr. HYDE).

Mr. HYDE. Mr. Speaker, I thank the gentleman for yielding me this time.

Mr. Speaker, I shall make just a few brief comments. First, on the statement made by the gentleman from Ohio (Mr. STOKES), who said we ought not to play doctor, let me reply that I think we ought not to play God.

I also would like to talk a little bit on the question about cripples and deformed people, because the fact of the matter is that the suicide rate among crippled and deformed people is almost zero. The people that want to destroy their lives are the jaded people who seem to have wealth and affluence, but the crippled and deformed want to live.

Mr. Speaker, there have been two significant developments on this issue since last we debated on the 17th of June. The U.S. Supreme Court has come out and said that a legislative body is not forbidden by the Constitution from denying tax funds to pay for abortions. That even though abortion is legal, there is no constitutional right to have it paid for by public funds.

In addition to that, the New York Times reported on July 29, in collaboration with the Columbia Broadcasting System—no proponents of the prolife position they—that they took a telephone poll from 1,447 interviews from July 20 to July 25, and on page 22 of that paper they say that, "One can say with 95 percent certainty the results, based on the entire sampling, differ by no more than 3 percentage points in either direction from what would have been obtained by interviewing all adult Americans." This survey was most illuminating in telling us what taxpayer attitudes are toward spending tax dollars for poor women.

The poll results which were published in the New York Times show, and the question they asked was this:

"Do you think the Government should help a poor woman with her medical bills when she has a baby?"

Sixty-four percent said, "Yes"; 26 percent said, "No."

The next question was:

"Should the Government help a poor woman with the cost of contraceptives to prevent pregnancy?"

Sixty-three percent said, "Yes"; 29 percent said, "No."

But the next question, Mr. Speaker, was:

"Do you think the Government should help a poor woman with her medical bills if she wants an abortion?"

Thirty-eight percent said, "Yes"; 55 percent said, "No," and 7 percent said they did not know.

What does that mean? The American people are not saying spend less on the poor. The American people are saying, yes, help a poor women with her medical bills when she has a baby; yes, help a poor woman with the cost of contraceptives to prevent pregnancy; no, do not use tax money to pay for abortion.

Those of us who accept the medical, scientific, clinical evidence that a fetus is human life and that abortion kills that human life, and who object to killing as a solution to the problems of poverty, are in the main stream. Some of the media and some militant organizations paint us as cultural lags and as throwbacks to the middle ages. But the New York Times and the CBS poll says most Americans oppose using Federal funds for abortion, so it is we who understand the mood of America. Those of us who oppose Federal funds for abortion respect the consent of the governed.

Yes, there is a double standard. I have heard that, and that is true. There is a double standard, but the real victims of the double standard are the unborn of the rich, because if you are wealthy, and you are rich, and you are unborn, there is not a voice nor a word that can be raised to defend you if your parents want to kill you. But if you are the unborn child of a poor person, you have a fighting chance to survive. That is the double standard. It is the unborn rich who are penalized by that double standard.

The Senate amendment that we heard of here is hollow and empty of any substance. It is barely cosmetic, and it is a gesture very cleverly designed to finesse the issue, but it would accomplish nothing.

Do not take my word. The Washington Post published an interview with Dr. Louis Hellman, late of HEW and now with the Population Reference Bureau—and he is all for medicaid abortions—in which he admitted that 90 percent of the medicaid abortions now being performed could be done under the Senate language.

When we tolerate abortions, when we pay for abortions, we do two things: We kill the unborn child, and we do something to ourselves, something that is the opposite of compassion, something dehumanizing.

The famous words of John Donne say it best:

> ... Any man's death diminishes me, because I am involved in mankind. ..."

The abortionists say: "Any man's birth diminishes me because there ain't enough to go around."

The bottom line of this problem is, what does a caring, humane society do with unwanted people? Whether they are very young, whether they are preborn, whether they are senile, whether they are deformed, or whether they are crippled, what does a caring, humane society do with its unwanted people? Do we kill them? Do we kill them? I pray we do not. Bringing an unwanted child into the world has been termed the ultimate obscenity, but unwanted by whom, and for how long would he be unwanted? To me that is a capitulation to the rankest sort of pessimism.

Why do we not efface the soaring invitation at the base of the Statue of Liberty, rub those words out, and put in our new credo: "Life is only for the planned, for the privileged, and for the perfect."

I think the reverence for life that is implicit in the view that I, and I think a majority of Americans, believe in, the celebration of life, is contained in some words by Anthony Padovano that I thought were so significant. I would like to share them with the Members.

This is what it means to live:

Those tragedies that break our hearts again and again
Are not more numerous than the healing influences that mend them
More impressive than the brokenness of our heart
Is the fact that we have a heart
And it is tender enough to suffer
Even the scar tells us of more than the wound we have sustained
It tells us we have prevailed
All the agony in the world cannot erase the fact that a man is born
And life and thought
Emotion and choice
Love and reason go on inside him.

Please support the Flood motion.

Mr. MICHEL. Mr. Speaker, at this time I yield 3 minutes to the gentlewoman from New Jersey (Mrs. FENWICK) with the reminder that with the position I have as a minority member, controlling half the time, it is not my purpose to yield for the purpose of an amendment. That is only for the chairman to decide. I am happy to yield to the gentlewoman at this time.

Mrs. FENWICK. Mr. Chairman, I thank the gentleman for yielding me this time.

We are not God, as has been referred to here, but we are legislators. That is the duty we have taken. We have to decide what we think is in the public interest and we cannot leave every decision to the Supreme Court. We have all objected to that problem.

I think the problem is that we do not think enough about human beings. I do not think anyone in this room is cruel. I do not think anyone in this room is unkind. I do not think anybody means to put somebody through hell for nothing. It is just that they do not understand. That is the problem we are dealing with.

I do not know whether the gentleman who has just spoken or the people who vote so easily to deny to the poor what is available and legal for the rich, have ever really sat down in a kitchen in the low-income high rise in some of our central cities or in our rural populations where it is equally pitiful. What does one say to a mother of a 14-year-old child?

If we could stop abortion, if this or any other bill would stop abortion, it would be different. It does not. Nothing does. It never has and probably, sadly, never will. There have been self-induced abortions and bad abortions and back street abortions ever since life began on this earth.

The question is: How do we handle it? We are not going to stop this. We have heard of 300,000 abortions paid for by tax funds. That is because they are listed. Nobody lists the ones done in motels and nobody lists the ones done by filthy and inexpert practitioners. This is why it sounds as though there has been an increase. This goes on anyway.

When I was in Chile 35 percent of the beds in every hospital in that nation was filled with women dying from self-induced abortions. That did not occur in Puerto Rico. Everything there was legal and proper.

But we do not stop it. We merely put it somewhere else. We merely put people through an experience that nobody can imagine until one has talked to the mother of a child or to the young person herself.

I do not know. I have never been a social worker but I have spent an awful lot of time with the poor. I know what they feel. It is just what I feel.

Suppose one of the daughters of a Member was in an accident and was dragged off someplace and a pregnancy resulted from incest or rape. Rape—does the Member mean he would not lift a finger? Of course, he would. But we have money. That child would be taken to a proper place.

Mr. DORNAN. Mr. Speaker, will the gentlewoman yield?

Mrs. FENWICK. Mr. Speaker, I do not yield.

Mr. FLOOD. Mr. Speaker, I yield 2 minutes to the gentlewoman from California (Mrs. BURKE) for the purpose of debate only.

Mrs. BURKE of California. Mr. Speaker, for anyone who is under the illusion that you are going to vote today for the same thing we voted on 1 year ago and it will have no different effect, I do think in all honesty it should be clarified. A year ago the language said one thing, but the report said something else. It was possible to say only to save the life of a mother in the bill; but in the report you could say we expect that Federal funds will be used in a case of rape, yes, in rape, incest, and in many other instances and that is what that report provides; but now the Attorney General has said to us yesterday that if this House is to provide assistance to victims of rape, to victims of incest, we are going to have to say what we mean and if we vote and approve this language we will not be doing anything but exactly what this language says. We cannot expand it by the report. So the only way we can be humane is if we do vote down this language and give the House the chance to consider alternatives.

We have heard quotations from polls that have been conducted, but no one asks the question, "Would you be willing to provide Federal assistance to assist a 12-year-old girl who had been the victim of rape?"

I believe the results of that poll would be different.

No one asks the question whether or not you would be willing to allow Federal funds that would prevent a mother from being crippled if she was required to carry a child to term.

These are the questions we cannot simplify in a poll. These are the questions we have to get down to specifically.

The only way we can have any humanity in this bill is to vote down this language and give this House a chance to consider some of the alternatives that we voted on last year, but we voted in a different way.

Mr. FLOOD. Mr. Speaker, I yield 2 minutes to the gentlewoman from New York (Ms. HOLTZMAN) for debate only.

Ms. HOLTZMAN. Mr. Speaker, I think we have to recognize what we are doing if we vote for the amendment of the gentleman from Pennsylvania.

We were saying "no" to providing any medicaid funds for abortion in the case of rape.

We are saying "no" to providing any medicaid funds in the case of incest.

We are saying "no" to providing any medicaid funds in cases where the mother's life would be forever marred, where a woman would be maimed or crippled if she had to give birth.

Since the amendment offered by the gentleman from Pennsylvania is a substitute for the amendment offered by the gentleman from Ohio, the amendment would, in effect, preclude this House from offering assistance to poor women in these circumstances.

I cannot imagine that if any Member here searches his conscience, he would wish to condemn any woman in this country just because she is poor to have to go through the trauma of bearing a child as a result of incest or rape. But that is the result of supporting this amendment. I do not think anybody in this House has a single illusion about the fact that by supporting this amendment we are stopping abortions. Instead, we are simply condemning the poor women of this country, and in some cases these are teenagers or very young girls, to the horrors of back alley abortions or self-mutilation.

Mr. Speaker, I hope that the House does not do that.

Mr. FLOOD. Mr. Speaker, I yield 2 minutes to the gentleman from Missouri (Mr. VOLKMER).

Mr. VOLKMER. Mr. Speaker, I yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Speaker, I rise in support of the position of the gentleman from Pennsylvania.

Mr. MAZZOLI. Mr. Speaker, once again, we find ourselves involved in the highly emotional and controversial debate of the appropriateness of expending taxpayers' money for abortions.

My opinion on this issue is well known: I am unalterably opposed to federally funded abortions or abortion-related activities.

My stance on abortion—though I am fully convinced it is correct—places me in somewhat of an awkward position. I find that many of my colleagues with whom I generally agree are my "opponents" on this issue.

But, the awkwardness of my personal situation—and that of countless others—is of little import. The need to protect the lives of the unborn and insure them their full constitutional safeguards, that is what is important.

As I am convinced that a humane and civilized society cannot condone the taking of life, so am I convinced that a humane society has a serious responsibility to offer viable alternatives to abortion.

And, I have repeatedly supported legislative "alternatives" to abortion—as in the case of funding family planning services; providing counseling services to pregnant, unwed adolescents; adoption subsidies; and the like.

Congress has a responsibility to assist women with the social, medical, and financial problems accompanying pregnancy. It does not, however, have any responsibility whatsoever to provide Federal tax dollars for abortion activities—tax dollars for improving the quality of life, yes, but for the taking of life, no.

I rise in support of the Hyde language prohibiting the use of Federal funds for abortions, except to save the life of the mother. I urge the Senate to adopt this language, as it did last year.

In closing, Mr. Speaker, let me commend my colleagues, Chairman DAN FLOOD, Mr. HENRY HYDE, and the Honorable SILVIO CONTE, who have contributed so much to the smooth handling of an extremely complicated and difficult issue.

Mr. VOLKMER. Mr. Speaker, I personally say I wholeheartedly support the amendment of the gentleman from Pennsylvania. I think it needs to be clarified to some extent from the earlier remarks by the opponents that there is no prohibition in here depriving anyone of the right to an abortion. No person is deprived of that right by this amendment. Any person can still legally receive an abortion; I do not agree with that, but that is the law.

Under this amendment, any doctor can still perform an abortion on any woman.

Under this amendment any clinic can still have abortions performed for any woman.

I would just like to say that we must not only think of the women in this society today, but we must also think of the children that are to be or not to be. I vote for those to be.

Mr. FLOOD. Mr. Speaker, I urge the adoption of the motion.

Mr. Speaker, I move the previous question on the preferential motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the preferential motion offered by the gentleman from Pennsylvania (Mr. FLOOD).

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. STOKES. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 238, nays 182, not voting 13, as follows:

[Roll No. 497]

NOT VOTING—13

Badillo	Flynt	Rose
Burke, Mass.	Giaimo	Ryan
Dent	McKinney	Teague
Derrick	Murtha	
Flippo	Rhodes	

The Clerk announced the following pairs:

On this vote:

Mr. Burke of Massachusetts for, with Mr. Badillo against.

Mr. Teague for, with Mr. Rose against.

Mr. Murtha for, with Mr. Ryan against.

Until further notice:

Mr. Dent with Mr. Derrick.

Mr. Flynt with Mr. Giaimo.

Messrs. MILFORD and PIKE changed their vote from "nay" to "yea."

So the preferential motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider the votes by which action was taken on the several motions was laid on the table.

GENERAL LEAVE

Mr. FLOOD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report and on the motions on the bill H.R. 7555, just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 320. Concurrent resolution directing the Secretary of the Senate to make certain corrections in the enrollment of the bill S. 826.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 826) entitled "An act to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes."

RECOMMENDATIONS TO IMPROVE THE QUALITY OF FEDERAL DRUG TREATMENT — MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. No. 95–200)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee of the Whole House on the State of the Union and ordered to be printed:

To the Congress of the United States:

Drug abuse continues to be a serious social problem in America. The lives of hundreds of thousands of people are blighted by their dependence on drugs. Many communities remain unsafe because of drug-related street crime, and the immense profits made in the illicit drug traffic help support the power and influence of organized crime. Among young American men aged 18–24 years, drugs are the fourth most common cause of death: only automobile accidents, homicides, and suicides rank higher. The estimated cost of drug abuse in America exceeds 15 billion dollars each year. Among some minority groups, the incidence of addiction and the harm it inflicts are disproportionate.

Drug addiction, which in recent years was viewed as a problem peculiar to America, now affects people throughout the world. We can no longer concern ourselves merely with keeping illicit drugs out of the United States, but we must join with other nations to deal with this global problem by combatting drug traffickers and sharing our knowledge and resources to help treat addiction wherever it occurs. We must set realistic objectives, giving our foremost attention domestically to those drugs that pose the greatest threat to health, and to our ability to reduce crime. Since heroin, barbiturates and other sedative/hypnotic drugs account for 90 percent of the deaths from drug abuse, they should receive our principal emphasis.

My goals are to discourage all drug abuse in America—and also discourage the excessive use of alcohol and tobacco—and to reduce to a minimum the harm drug abuse causes when it does occur. To achieve these goals with the resources available, effective management and direction are essential. Because the Federal effort is currently divided among more than 20 different, and often competing, agencies, I have directed my staff to coordinate Federal action and to formulate a comprehensive national policy. This will end the long-standing fragmentation among our international programs, drug law enforcement, treatment and rehabilitation, prevention, and regulatory activities. I will also seek the counsel and active involvement of members of the Cabinet and heads of major independent agencies on all drug abuse policy questions, through a revitalized Strategy Council on Drug Abuse. My staff will examine the functions of the various agencies involved in this field and will recommend to me whatever organizational changes are appropriate.

INTERNATIONAL COOPERATION

For certain drugs originally derived from plant sources outside the United States, especially heroin and cocaine, diplomatic agreements against cultivation and trafficking are indispensable. Turkey—once virtually the sole source of heroin supply in this country—is now gone from the illicit market as the result of such agreement. The enormous profits generated by the illicit drug traffic distort the economies of many smaller countries, aggravating inflation and draining tax revenues; they also engender corruption and corrode political stability. We must work closely with other governments to assist them in their efforts to eradicate the cultivation of drugs, and to develop legitimate alternative sources of income for the impoverished farmers

who have for generations raised and sold crops such as opium.

We have made significant progress in the last few months. In February, I discussed with President Lopez-Portillo of Mexico my deep concern about the illegal cultivation of opium in his country. Under his strong leadership, the eradication program has been intensified and is producing dramatic results, significantly reducing the availability of heroin in many American cities. In addition, President Ne Win of Burma and Prime Minister Thanin of Thailand have shown a resolute determination to control drug cultivation and trafficking in their countries. Most recently I have received strong assurances from President Lopez-Michelsen of Colombia that he plans to give the problem of drug trafficking his highest priority. We are establishing a commission made up of government officials from our two countries to coordinate a stepped up effort to deal with the major international trafficking of cocaine and marihuana between our two countries, and the devastating economic impact of that traffic.

As a result of these efforts and those of the Drug Enforcement Administration, the purity of heroin in our country has dropped in the last six months to 4.9%, the lowest level in 4 years.

There is, however, more that we can do:

(1) I am directing the Secretary of State to give greater emphasis to the international narcotics control program and to reiterate to foreign governments our strong desire to curtail production of, and traffic in, illicit drugs.

(2) To this end, I am directing the Administrator of the Agency for International Development to include such measures as crop and income substitution in its development programs for those countries where drugs are grown illicitly. I expect the Secretary of State to continue to call on other agencies and departments, such as the Drug Enforcement Administration, the U.S. Customs Service, the U.S. Department of Agriculture, and the National Institute on Drug Abuse, to assist in the international narcotics control program according to the special expertise of each.

(3) I am directing the intelligence community to emphasize the collection and analysis of information relating to international drug trafficking.

(4) I strongly support the work of the United Nations Fund for Drug Abuse Control (UNFDAC), the United Nations Commission on Narcotic Drugs, the International Narcotics Control Board, the World Health Organization, and other organizations working within the framework of the United Nations in their efforts to help drug-producing countries find alternate crops, improve drug control measures, and make treatment resources available.

(5) I am instructing the United States representatives to the loan committees of the Regional Development Banks and other international financial institutions to use their votes and influence to encourage well designed rural development and income substitution projects in countries which now produce dangerous drugs, and to ensure that assistance is not used to foster the growth of crops like opium and coca.

(6) Because of the need to improve international controls over dangerous drugs which have legitimate medical uses, like barbiturates and amphetamines, I urge the Congress to adopt legislation implementing the Convention on Psychotropic Substances, and I urge the Senate to ratify this treaty promptly.

(7) In my communications with foreign leaders, I will emphasize international cooperation among drug law enforcement agencies, so that intelligence and technical expertise can be shared. I will encourage them to send law enforcement officials to work with us to stop the gun in Bangkok among French, German, British, Dutch, American and Thai officials.

I will, in addition, promote the international sharing of knowledge and expertise in the treatment of drug abuse. We will make a special effort to share our experience, especially with those nations which have serious drug problems and which are working with us in the effort to control drug sources and prevent drug abuse. Our program will encompass training, research and technical assistance projects, including providing American experts as consultants.

LAW ENFORCEMENT

We must vigorously enforce our laws against those who traffic in drugs, so that the attraction of large profits is outweighed by the risk of detection and the likelihood of conviction. The Federal Government's job is to deter, and where possible prevent entirely, illegal importation and major trafficking of controlled substances. Often large-scale financiers of the illegal drug trade never come into direct contact with drugs. Through the cooperative efforts of the various agencies involved, we will attack the financial resources of these traffickers who provide the capital needed to support the smuggling of drugs into the country. Drug traffickers must understand that they face swift, certain, and severe punishment; and our law enforcement and judicial systems must have the resources to make this prospect a very real threat. We must allocate our resources intelligently, revise our penalty structure where necessary to concentrate on the actions (and the drugs) that are most dangerous, and improve the administration of justice.

Therefore:

I am directing the Attorney General to intensify investigations of the link between organized crime and the drug traffic, and to recommend appropriate measures to be taken against these organizations.

I am directing the Department of Justice in conjunction with the Departments of State and Treasury to study arrangements with other countries, consistent with Constitutional principles, to revoke the passports of known major traffickers, and to freeze assets accumulated in the illegal drug traffic.

To ease the burden on the United States District Courts, which must hear major drug cases, I support legislation widening the jurisdiction of U.S. Magistrates under certain circumstances to include misdemeanor offenses which carry sentences of up to 1 year.

In 18 United States Attorneys' Offices, special units devoted to the prosecution of major drug traffickers exist. The Department of Justice is now expanding this program to include additional units.

I support legislation raising from $2,500 to $10,000 the value of property which can be seized and forfeited from drug violators by administrative action, including cash within the definition of seizable property. Amounts above this figure will continue to require court proceedings.

I am directing my staff to recommend to me the appropriate Federal drug law enforcement role in the light of currently available resources—state, local and Federal. For nearly a decade, Federal support of state and local enforcement activity has steadily expanded. The time is ripe to evaluate the results of this effort, to determine whether federal participation should be altered, and to determine the proper division of responsibility between Federal and local officials. The Office of Drug Abuse Policy has already begun the first phase of this review, which includes consideration of border security and drug trafficking intelligence.

I am directing the Attorney General to study the necessity for and constitutionality of proposals which would deny pretrial release to certain persons charged with trafficking in drugs posing the greatest threat to health, and to give me his recommendations within 90 days. At the present time, some persons charged with major drug offenses can use their immense wealth to post bail and escape justice. If enactment of such proposals appears to be necessary and constitutional, their application should be tightly restricted and should include a provision granting the accused an expedited trial.

I am directing the Attorney General to review the adequacy of the penalties for major trafficking offenses and to give me his recommendations within 90 days.

I also have considered requesting changes in the Tax Reform Act of 1976. Some of its provisions—such as those for disclosure and summonsing—were designed to protect the privacy of citizens but may also impede unnecessarily the investigation of narcotics trafficking cases. I am asking the appropriate Federal agencies to determine the difficulties these provisions present to effective law enforcement. If it appears they can be amended to improve law enforcement without infringing upon legitimate privacy interests, I will submit legislation to the Congress.

MARIHUANA

Marihuana continues to be an emotional and controversial issue. After four decades, efforts to discourage its use with stringent laws have still not been successful. More than 45 million Americans have tried marihuana and an estimated 11 million are regular users.

Penalties against possession of a drug should not be more damaging to an individual than the use of the drug itself;

and where they are, they should be changed. Nowhere is this more clear than in the laws against possession of marihuana in private for personal use. We can, and should, continue to discourage the use of marihuana, but this can be done without defining the smoker as a criminal. States which have already removed criminal penalties for marihuana use, like Oregon and California, have not noted any significant increase in marihuana smoking. The National Commission on Marihuana and Drug Abuse concluded five years ago that marihuana use should be decriminalized, and I believe it is time to implement those basic recommendations.

Therefore, I support legislation amending Federal law to eliminate all Federal criminal penalties for the possession of up to one ounce of marihuana. This decriminalization is not legalization. It means only that the Federal penalty for possession would be reduced and a person would receive a fine rather than a criminal penalty. Federal penalties for trafficking would remain in force and the States would remain free to adopt whatever laws they wish concerning the marihuana smoker.

I am especially concerned about the increasing levels of marihuana use, which may be particularly destructive to our youth. While there is certain evidence to date showing that the medical damage from marihuana use may be limited, we should be concerned that chronic intoxication with marihuana or any other drug may deplete productivity, causing people to lose interest in their social environment, their future, and other more constructive ways of filling their free time. In addition, driving while under the influence of marihuana can be very hazardous. I am, therefore, directing the Department of Transportation to expedite its study of the effects of marihuana use on the coordination and reflexes needed for safe driving.

DRUG TREATMENT

My immediate objective will be to widen the scope and improve the effectiveness of Federal drug treatment programs. In conception and in practice, they have been too narrow. Drug addiction can be cured; but we must not only treat the immediate effects of the drugs, we must also provide adequate rehabilitation, including job training, to help the addict regain a productive role in society. In the past, Federal programs have given disproportionate attention to the heroin addict while neglecting those who are dependent on other drugs.

To improve the quality of Federal drug treatment, I am recommending these steps:

In recognition of the devastating effects that certain nonopiate drugs can have if abused, I am directing the Secretary of Health, Education, and Welfare to expand resources devoted to care for abusers of barbiturates, amphetamines, and multiple drugs used in combination, including alcohol.

To help drug abusers return to productive lives, I am directing the Secretary of Labor to identify all Federal employment assistance programs which can help former drug abusers and to give me, within 120 days, his recommendations for increasing the access of drug abusers to them.

A sustained effort must be made to identify the reasons that people turn to drugs, including alcohol and cigarettes. We should seek more effective ways to make people aware of the health problems associated with such substances (particularly cigarettes and alcohol) and to respond in more constructive ways to the human and psychological needs they satisfy.

DRUG RESEARCH

In the past, there has been no serious attempt to coordinate Federal research on opiates and alcohol despite the many similarities in the effects of these two drugs. A joint Federal research center might not only save money, but also lead to greater scientific understanding of addiction problems. Therefore I am directing the Secretary of Health, Education, and welfare to study the feasibility of making the Addiction Research Center responsible for coordinated research on a variety of drugs, including opiates, alcohol, and tobacco.

ADMINISTRATIVE ACTION

Improved treatment and prevention programs should be accompanied by appropriate changes in Federal regulations, administrative practices, and enforcement, among which are these:

First, I am recommending a conscious and deliberate increase in attention throughout the Federal Government to the problems related to the abuse of drugs that come originally from legitimate medical sources. Of particular concern are barbiturates, which despite their recognized medical use, are responsible for many deaths and are frequently used in suicide attempts. The withdrawal reaction of patients addicted to barbiturates can be more difficult and more dangerous than that associated with heroin withdrawal. They are frequently oversold, overprescribed, and overused. Therefore, I will:

—Instruct the Secretary of Health, Education, and Welfare to undertake a study of barbiturates and other sedative/hypnotic drugs to determine the conditions under which they can be most safely used.

—Instruct the Secretary of Defense, the Secretary of Health, Education, and Welfare, and the Administrator of Veterans' Affairs to review the prescribing practices of physicians under their jurisdiction, and to discourage the medical use of barbiturates and sedative/hypnotics except in cases where it is unmistakably justified.

—Continue the program, already begun at my direction, by which the Drug Enforcement Administration has instructed its regional offices and regulatory task forces to give priority attention to barbiturate cases. DEA has also begun to investigate the "street" market in order to determine the source of illegal supplies so that suitable Federal action may be taken. In the near future, DEA will conduct a special accelerated audit of the 120 companies lawfully manufacturing barbiturates in this country and will also notify foreign governments of our desire to see them control their barbiturate exports strictly.

Second, I am directing the Secretary of Health, Education, and Welfare to review those sedative/hypnotic drugs particularly subject to abuse to determine whether any should be removed from the market, taking into consideration not only their safety to the individual but also the dangers they pose to the public at large.

Third, I support legislation giving the Food & Drug Administration the authority to apply standards of safety and efficacy to all drugs, by repealing those laws which exempt a variety of drugs because they were placed on the market before a certain date. A number of barbiturates fit into this category.

Fourth, Some physicians still knowingly overprescribe a wide variety of drugs. Although, as a result of careful education, physicians have voluntarily reduced their prescriptions for barbiturates by 73 percent during the last five years, a few are continuing to misprescribe these and other drugs deliberately. I am directing the Attorney General, in full cooperation with State officials, to begin a concerted drive to identify and prosecute these violators.

No government can completely protect its citizens from all harm—not by legislation, or by regulation, or by medicine, or by advice. Drugs cannot be forced out of existence; they will be with us for as long as people find in them the relief or satisfaction they desire. But the harm caused by drug abuse can be reduced. We cannot talk in absolutes—that drug abuse will cease, that no more illegal drugs will cross our borders—because if we are honest with ourselves we know that is beyond our power. But we can bring together the resources of the Federal Government intelligently to protect our society and help those who suffer. The sufferers include the overwhelming majority of the public who never abuse drugs but for whom drug abuse poses the threat of broken families, a lost child or fear to walk the streets at night. Beyond that, we must understand why people seek the experience of drugs, and address ourselves to those reasons. For it is ultimately the strength of the American people, of our values and our society, that will determine whether we can put an end to drug abuse.

JIMMY CARTER.

THE WHITE HOUSE, *August 2, 1977.*

ON FREE EMIGRATION AND HUMAN RIGHTS IN ROMANIA

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 60 minutes.

Mr. KOCH. Mr. Speaker, for some time I have been very concerned about the human rights situation in the Socialist Republic of Romania, particularly as it relates to the freedom to emigrate, the treatment of dissidents and the status of national minorities.

This week I expect that the House will adjourn without having acted to dis-

approve the President's recommendation for another year of most-favored-nation treatment for Romania. I concur with the President's recommendation, but I do share the concern of the President and many others that events during the coming year need to show continuing progress in emigration and human rights in Romania. Without such progress, it will be even more difficult next year to agree to another extension for Romania of the most-favored-nation status provided under the terms of the Jackson-Vanik amendment to the Trade Act of 1974. That amendment, as my colleagues know, requires "nonmarket economy" countries such as Romania who receive most-favored-nation treatment to allow a free emigration policy.

In the case of Romania, the President has recommended a waiver of the free emigration requirement for an additional year, because it serves the national interest to do so and because Romania has continued to allow a significant number of persons to emigrate.

As a signatory to the Helsinki agreement and other international covenants protecting human rights, Romania also has an obligation to respect the human rights of those who choose to remain in Romania, including the national minorities of Hungarians and Germans. These national minorities consist of many persons who have no desire to emigrate, but who wish to be able to speak their own language, attend school in their own language, and to practice their own minority culture. I am pleased that in recent letters and testimony President Carter and the State Department have expressed an awareness of and concern about the treatment of Hungarians in Romania and that the State Department has discussed this question with representatives of the Romanian Government.

I have personally asked the Romanian Ambassador to the United States to clarify some of the policies of his government, which, as related to me by Hungarian-Americans here in the United States, appear to discriminate against the Hungarian minority in Romania. I have asked particularly for a written clarification of Decree Law 278, which appears on its face to require a minimum of 36 students to obtain a class taught in a minority language such as Hungarian, while no minimum number of students is required for those who desire a class taught in Romanian. On other matters as well, such as the availability of literature, schools, theater, and newspapers in the Hungarian language, serious questions have also been raised, and there are those who accuse Romania of attempting to repress completely all evidence of the Hungarian culture. I am still waiting for a definitive explanation of Romanian policies, in particular Decree Law 278, relating to educational opportunities for linguistic minorities.

Until these questions are clarified in writing by the Romanian authorities, I am forced to conclude that the allegations of discrimination against the Hungarian minority cannot be refuted. I hope that I will receive some written explanation about Romanian policies in the near future, and when I do, I will be happy to share it with my colleagues.

As for the question of freedom of emigration from Romania, I am pleased that the Romanians have approved a number of families and individuals for emigration to the United States, Israel, and the Federal Republic of Germany during the past year, but there are some areas that cause me concern. I am disappointed that there has been a decline in the number of persons approved for emigration to Israel. The number of those actually leaving Romania for Israel during 1977 has also declined precipitously since last year. Although the Romanian Government argues that the number of persons applying to leave for Israel has been dropping as the Jewish community left in Romania has declined, there are still many obstacles that are placed in the way of anyone who wishes to apply to emigrate. These barriers must be removed, and all those who wish to emigrate should be allowed to do so.

The number of those who have actually left Romania for the United States this year has also declined, but there has been a substantial rise in approvals to emigrate to the United States. I hope that the increase in approvals, many of which have only been made recently, foretells an increase in the number of persons actually coming to the United States later this year. I am pleased that the Romanian Government has agreed to allow these persons to emigrate—in most cases to join family members abroad. In the next year the President, the State Department, and many Members of Congress including myself will be watching very closely the trends in emigration from Romania. Next summer I hope that I will be able to congratulate the Romanians and wholeheartedly endorse continued favorable trade relations between the United States and Romania.

I wish to thank all of my colleagues who are participating in this special order, and I know that their remarks will also help impress on both the Romanian Government and our own that the issues of emigration and human rights continue to be of great interest and concern to a great many Members of Congress. We will be watching not only emigration figures but also the reports on the human rights situation in Romania, and I hope that on both accounts that we will be pleased that Romania is a "most favored" trading partner of the United States.

Mr. SIMON. Mr. Speaker, I rise to join my distinguished colleague from New York (Mr. KOCH), in discussing human rights and emigration procedures in Romania.

The Jackson-Vanik amendment to the Trade Act of 1974 requires "non-market" countries such as Romania to maintain a free emigration policy in order to receive most-favored-nation treatment. It also contains an implied requirement that such countries respect fundamental human rights.

On June 2, the President recommended a 1-year extension of most-favored-nation status to Romania. Those of us who are concerned about Romania's performance in the human rights and emigration fields were pleased at the President's promise to "monitor closely Romanian compliance with the objectives" of the Jackson-Vanik amendment. I want to join my friend Representative KOCH in urging the President to analyze carefully the evidence from Romania during the coming year.

During the past several months, the Commission on Security and Cooperation in Europe, of which I am a member, has held extensive hearings on implementation of the provisions of the Helsinki Final Act. We have heard testimony about Romania's response to the provisions on free emigration and respect for human rights. As indicated in the President's report to the Commission in June, the results have been mixed:

> Romanian performance on family reunification has generally improved since the signing of the Final Act. . . . In recent months, however, Romania's processing rate has not kept up with the increase of new cases, leading to a considerable backlog.

The Commission will be releasing shortly its own comprehensive report on implementation of provisions of the Helsinki Final Act. It will contain a detailed analysis of the Romanian experience.

I the meantime, I would like to insert for my colleagues' perusal a summary statement presented to the Commission describing some of the difficulties facing would-be Romanian emigrees. The testimony was given by Valerie Secu, chairman of the American-Romanian Committee for Family Reunion. It follows:

SUMMARY OF THE TESTIMONY OF VALERIE SECU

The testimony is based on Miss Valerie Secu's personal experience and on testimonies presented to the Committee by recent emigrants from Romania. The testimony is divided in the following chapters:

I. The procedures involved in obtaining exit visas from Romania.

The application forms needed for an exit visa cannot be obtained whenever an applicant chooses. The applicant must obtain written permission which is almost impossible to obtain from the management, syndicate and party organization of his company or school. Recently, new committees have been appointed to increase the harassment of a prospective emigre: Committee for Working People (C.O.M.) to review the applicant within his company; Neighborhood Committee under the auspices of the district Popular Council and local party organization, which then discusses the applicant again.

No application for an exit visa has been considered and approved unless pressure from the U.S. government and international media has been brought to bear on Romania.

II. Steps to be taken by American citizens or residents with relatives in Romania.

III. President Ceausescus's speeches on June 3, 1976 and on February 17, 1977 regarding family reunion and emigration policy.

President Ceausescu does not see family reunion as a humanitarian problem, as he is quoted on page 4. He uses the term of "traitor" for a prospective applicant for emigration.

IV. Provisions of the Romanian law.

Provisions from Romanian law regarding the crossing of Romanian borders and the resulting heavy punishment are quoted from the American Romanian newspaper SOLIA, Detroit, Michigan.

V. Specific cases of Americans with relatives in Romania.

VI. Conclusions.

After July 1975, Romania has changed nothing in her policy regarding people wishing to visit or to emigrate to join a relative abroad.

Mr. CHAIRMAN. The present statement is based on experience I have had with my family presently in Romania, and on testimonies presented to our Committee by recent emigrants from Romania.

I. THE PROCEDURE INVOLVED IN OBTAINING EXIT VISAS FROM ROMANIA

A. Written permission is necessary to obtain the application forms for an exit visa from several organizations. It is impossible for Romanian citizens to apply for an exit visa whenever they choose. Exit visa forms are released only by local militia precincts, and cannot be obtained without written permission from:

1. the management of the company the person is employed with, or from the counselor and department chairman (or principal) for college students or high school students;

2. the syndicate from the person's job or school;

3. the party organization from the person's job, school or college.

To obtain such written permission, the applicant has to forward his written request to the company or school directorship. Many requests are not even considered. If the request is considered, the applicant is often called for interviews with the people involved in the above-mentioned organizations. These interviews are often followed by public meetings involving the applicant, his co-workers, management, and party officials. These people "judge" the applicant and his reasons for traveling abroad to visit relatives or friends, or to emigrate. The applicant is repeatedly questioned about why he wants to travel, especially to a capitalistic country, why he wants to visit a relative in the Western World. If the applicant actually wants to emigrate, matters are even worse. Usually the applicant receives a blunt refusal followed by a severe criticism of his "bourgeois" and "dangerous" attitude. A prospective emigrant is regarded as a traitor.

Every applicant undergoes such harassment and humiliation. The result is almost always a total refusal to grant the applicant written permission which the applicant needs to get the exit visa forms. If the applicant has a strong nature he will apply again. Again, he will be forced to go through a humiliating obstacle course. Conclusion: Nothing has been changed in the above procedures since the Helsinki Conference of July 1975. In fact, things are even worse since an application for emigration is considered an act of treason.

B. During the last year, newly appointed "Neighborhood Committees" have been employed to interview and judge the applicants.

New committees have been appointed under the auspices of the Party organization and Popular Councils of each district or sector for the purpose of discouraging the applicant in his attempt to visit or emigrate abroad. Each applicant must face his "Neighborhood Committee," usually in the area where he works. This ad hoc committee includes a person from the State Security, the communist party secretary of the applicant's company, and a higher communist party secretary from the district-level party organization.

Over and over the same questions are asked: more information about the applicant, his relatives, spouse's relatives, friends, the relative he wants to visit, and the reasons for his trip. The capitalistic world is denounced and if the applicant is seeking to emigrate, such an attempt is condemned as treason. Continuous pressure of this type forces many applicants to renounce their intention to apply for an exit visa.

Those who have the courage to continue are persecuted by losing their jobs or by being offered menial work for very low pay. College students are expelled from their schools when they apply for emigration.

C. Requirements for the prospective emigre who has been promised a passport to leave the country.

While the authorities are processing the application, a prospective emigre must do the following:

1. If he lives in a State-owned apartment, he must clean, paint, repair, and thoroughly renovate the apartment, at his own expense.

2. If he owns an apartment, he must immediately pay to the State the remaining installments in a lump sum, then must proceed to donate his apartment to the Romanian Government.

3. In addition, several taxes are to be paid for every member of the family: needed are five copies of certificates for terminating the electricity contract, gas contract, telephone contract, radio/TV contract, water contract. These taxes amount to over a good month's salary.

4. When the emigrant has liquidated his assets and has his passport, a State inspector comes to check and seal the apartment, so that he has to live in a hotel until the day of departure.

If the cliche "adding insult to injury" accurately describes anything, it certainly describes the outrageous and humiliating procedure whereby a Romanian citizen who applies for emigration not only must pay for his house and donate it to the State, but also must pay high taxes to the State for being so kind and accommodating as to take his assets away from him.

If this Romanian citizen has had the emotional strength and financial resources to overcome all the obstacles mentioned above and is actually leaving the country, he must leave behind all possessions the Government considers "valuable". Such "valuable" items may include children's earrings and family pictures. When he leaves the country, the emigre loses everything he has accumulated by hard work during his lifetime, however small.

D. New criteria employed by the Romanian government for granting exit visas.

No application is processed unless and until the prospective emigrant is legally accepted by the country where his relative lives. For example, the daughter of Mrs. Lucy May of New York has been legally admitted to the United States, but the exit visa from Romania has not yet been granted. The brother of Mr. Nicholas Dima has also been legally admitted, but his exit visa application has not been processed.

During the past year no one was allowed to apply for an exit visa to travel abroad either to visit or emigrate, unless:

1. great pressure was brought to bear on the Romanian Government by U.S. Senators, U.S. Representatives, U.S. State Department Officers.

2. their cases have been publicized in the press, or received radio and television coverage.

3. their relatives abroad resorted to desperate actions such as hunger strikes, permanent vigils, peaceful demonstrations.

Pressure from U.S. officials is effective only at times when Romania is seeking economic concessions from the U.S., such as granting Romania Most-Favored-Nation treatment in 1975, and again in 1976.

Hunger strikes have been organized in various countries to call to the attention of the public the plight of people kept hostage in Romania. People with relatives in Romania went on hunger strikes in Italy, West Germany, Australia, and the U.S. to ask for the release of their spouses and children. In United States alone our committee has sponsored hunger strikes of about 100 people since 1972. The last hunger strike in the United States, which started on May 24, 1976, was organized in New York City in front of the United Nations. Thirty-five people participated by going on a hunger strike lasting from 6 to 24 days, recovering, and starting again. The last week of the strike took place in Washington, D.C. from September 4 to September 9, 1976. Even though the strikers received strong support from U.S. Senators and Representatives and the media, not all of them got their relatives out of Romania. For example, Mr. Walter Graur of New York has his wife and 5-year old daughter in Romania, unable to obtain exit visas, or Mrs. Irina Bebelea, who has two chidlren in Romania, also unable to obtain exit visas.

II. STEPS TO BE TAKEN BY THE AMERICAN CITIZEN OR RESIDENT WITH RELATIVES IN ROMANIA

To be accurate in describing the numerous and increasingly imaginative obstacles built up by the Romanian Government, we have to mention the action which people in the United States with relatives in Romania, must take with the Embassy of the R.S. Romania in Washington, D.C.

The would-be-emigrant or visitor in Romania is told that his exit visa application can not be processed unless the relative in the United States shows up at the Embassy of R.S. Romania to "legalize" his status with the Romanian Government.

Unfortunately, the U.S. State Department advises people in the U.S.A. with relatives in Romania, to comply with this requirement and visit the Romanian Embassy in Washington, D.C. Most of the people refuse, but with no other alternative left, they have to accept being interviewed by the Romanian Embassy in Washington. They have to give a full account of the way they left Romania, what countries they passed through before entering the United States, their status in the United States, their income, assets, etc. Then, they are offered two alternatives by the Embassy representative:

To apply to give up Romanian citizenship, pay the tax of $201 per person, and wait for about two years for the Government approval; then and only then the relative in Romania may apply for exit-visa; or

Apply to stay in the United States with a Romanian passport, as a "Romanian citizen living abroad", and wait from 6 months to one year to get the Government approval. The Romanian Embassy insists on the second alternative, persuading us that this is the fastest way to get a relative out of Romania.

However members of the U.S. Congress are informed differently when they try to contact the Romanian Embassy in behalf of their constituents. I will quote from a letter Representative E. Koch sent to my Committee when trying to reunite Mrs. D. Vircol with her husband: "He (the Romanian Ambassador) further stated that until her status is adjusted, there is no basis under Romanian law for her husband to be permitted to leave, since the premise for exist permissions is predicated on family reunion. And this requires that the person outside of Romania no longer be a Romanian citizen."

The processing of these papers generally takes about six to eight months.

Incidentally the processing of my application to give up my Romanian citizenship by the Romanian Government lasted two and a half years.

Not until April 19, 1974 did the Romanian Embassy in Washington send me a letter to inform me that my application to renounce Romanian citizenship had been approved on September 16, 1973. But my sister and her family are still in Romania. Before September 1976 she had not been allowed to apply for her exit visa.

In support of the above statements I submit the following:

Annex 1: a copy of official reply of the Ministry of Internal Affairs Bucharest, Romania, to Gabriela and Liviu Teodorescu's request for exist visas, in Romanian and English.

Annex 2: a copy of the questionnaire (Romanian text with English translation in small print) a person in the U.S.A. must fill out to "legalize" his status by renouncing his Romanian citizenship or living as a Romanian citizen abroad. Note that the petitioner must list all his relatives in Romania with a complete history of their employment and residence. They must also fill out information about their income, (salary, social security benefits, rents, etc.), their properties and other assets.

Annex 3: a copy of the Romanian original form and its English translation a person in the U.S.A. must fill out with Romanian Embassy, vowing not to engage, after losing his or her Romanian citizenship, in any action likely to cause harm to the interests of the Romanian state or people.

Annex 4: a copy of the letter I mentioned above I received from the Representative Edward Koch regarding his meeting with the Romanian Ambassador at that time, while trying to help a family in the United States to be reunited.

III. PRESIDENT CEAUSECU'S STATEMENT REGARDING FAMILY REUNION AND EMIGRATION POLICY MADE ON JUNE 3, 1976 AND FEBRUARY 17, 1977

President Ceausescu demonstrates the scorn he has for the Western World in his speech published by the Romanian newspaper *Scinteria* on June 3, 1976, exactly one day after President Ford waived Section 402 of the 1974 Trade Act for Romania only:

Regarding the *family reunion* and *emigration problems*, we consider that propaganda created abroad with the purpose of attracting citizens from Romania, has nothing to do with humanitarian principles, but it represents a means to exploit national sentiments for the purpose of satisfying the narrow and egoistic interests of capitalistic monopolies, which only want cheap qualified labor.

On February 17, 1977, Ceausescu delivered a speech at a meeting of communist party secretaries nationally broadcasted denouncing dissidents and would-be emigrants as traitors to Romania. He charged that, "some circles are attempting to use the Helsinki Final Act to interfere in the internal affairs of other nations." He applied the term "traitor" to Romanian citizens seeking to emigrate and to those carrying on propaganda against this country."

IV. PROVISIONS OF THE ROMANIAN LAW REGARDING THE CROSSING OF ROMANIAN BORDERS

At this point we would like to quote from the Penal Code of the Socialist Republic of Romania, concerning people desiring to travel abroad (from the American-Romanian newspaper SOLIA, Detroit, Michigan).

Art. 194.5: The fact that a Romanian citizen on a government or a general interest assignment abroad, refuses to return to the country, constitutes a crime of treason and is punishable with heavy imprisonment from five to fifteen years, loss of civil rights from four to eight years, and the confiscation of all his assets.

"Anyone who omits to denounce any preparatory acts regarding the above crime, before the infractor crosses the border, and before he is discovered by the State officials, is punishable with correctional imprisonment from one to five years and correctional interdictions from one to five years."

Art. 267: "Anyone who enters or leaves the country in other places than those designated, or passes secretly through these designated places, commits the crime of fraudulent passage of borders and is subject to correctional imprisonment from three to ten years. The same punishment is applicable to anyone who has helped the above act."

V. CONCLUSIONS

The facts in this statement have been gathered from personal experiences, and from the cases of other American citizens and residents with relatives in Romania, as well as people in Italy, West Germany, and Australia with relatives in Romania. Details have been supplied by recent immigrants to the U.S. such as Mr. and Mrs. F. Georgescu, of 65—45 Yellowstone Blvd., Forest Hills, N.Y. 11375, Mrs. Maria Manta, of 20–49 Palmetto St., Ridgewood, N.Y. 11227, and her recently emigrated sons in Rome, Italy, Miss Dorothy Zaharescu, of 93 Viale America, Rome, Italy, and many others.

From the testimony of hundreds of people like the above-mentioned, it is apparent that the provisions of the Final Act of August 1, 1975, regarding the right to travel and emigrate to join a relative are not observed by the government of R.S. Romania. In other words, there has been no improvement at all in the right of Romanians to travel abroad. If anything, such rights have been weakened.

As a group of Romanian dissidents including the writer Paul Goma mentioned in their appeal on February 8, 1977 to the 35 participants at the 1975 Conference on Security and Cooperation in Europe, other long-ignored constitutional rights such as Freedom of Assembly, Freedom of the Press, Freedom of Conscience, Inviolability of the Home, Secrecy of Correspondence and Telephone Communications are also flagrantly violated in Romania.

During the last telephone communication the Truth About Romania Committee of N.Y. had with Paul Goma in Bucharest on Friday, March 4, just two hours before the catastrophic earthquake in Bucharest, Mr. Goma informed us that 75 people joined the signatories of this appeal. Even though Paul Goma's apartment building is surrounded by plainclothes policemen, and his telephone conversations are under surveillance, more and more people are joining the group.

The American-Romanian Committee for Family Reunion asks that the Helsinki Commission of the U.S. House of Representatives make these facts known in Belgrade, Yugoslavia, where the East-West Conference on Helsinki Final Act will convene in June 1977.

Mr. HARRIS. Mr. Speaker, my constituents have called my attention to reports which describe certain repressive policies of the Socialist Republic of Romania with regard to the free exercise of fundamental human rights by its citizens. The complaints relate to the curtailment of a wide range of human rights, but are most specific in the area of cultural suppression of the Hungarian ethnic minority. I am most concerned about these complaints and urge our diplomatic representatives in Bucharest to carefully monitor the adherence of the Romanian Government to its obligations under various international human rights agreements, such as the Helsinki Agreement. I wholeheartedly support the President's worldwide initiatives in the realm of human rights and suggest that we make clear our concern that the Bucharest authorities have not made the agreed upon progress toward eliminating repressive measures.

Ms. MIKULSKI. Mr. Speaker, I join my distinguished colleagues today in condemning the injustices that have been continually occurring in Rumania against its many minorities, which include 2.5 million Hungarians, 400,000 Germans, and thousands of Jews, Ukrainians, Armenians, Greeks, and others. Most recently, the number of these minorities who have been allowed to emigrate from this Eastern European country has declined substantially.

One might come to the conclusion that the reason for this reversal is due to an improved situation for these minorities. In reality, the Romanian Government has been denying the applications of these minorities who wish to leave. Even though the numbers of emigrants has been erratic, the overall trend since 1974, when most-favored-nation status was not in effect, is significantly lower than the 3,7000 departures allowed in that year.

Recently I joined several of my colleagues in writing to President Carter urging him to review Romania's emigration record before recommending a waiver to section 402 of the Trade Act of 1974. I am most deeply discouraged by the lack of improvement in the record as to the number of minorities who have been allowed to emigrate within the last year.

I cannot sufficiently stress the importance that the House of Representatives thoroughly review and examine the current situation in Romania before deciding to renew the most-favored-nation status now extended to that country.

It is my hope that not only the Congress but the ongoing Belgrade Conference on the Helsinki Accords will be able to exert sufficient pressure on Romania to bring about a change in its current emigration policies.

Mr. FISH. Mr. Speaker, the alarming situation of human rights in Romania compels me to join my colleagues today in voicing my concern over conditions in that country. President Carter's policy, which affirms that the attitude of the United States toward another country is strongly influenced by the status of human rights in that country, fits the American tradition of upholding freedom and the rights of the oppressed.

I might also add that Congress has been as resolute in upholding the human rights policies than has the President. Since Romania is a recipient of U.S. commercial benefits, there exists the possibility that the President's human rights policies could be taken into consideration in any trade negotiations. Romania's internal oppression, in particular the systematic campaign to forcibly assimilate the 2.5 million member Hungarian minority, will continue to occupy the world's attention in the future. Such measures as the elimination of Hungarian schools and cultural institutions, the confiscation of minority church archives, the falsification of minority population statistics, interference in church activities, the forced dissolution of ethnic communities, and obstruction of contacts between the Hungarians and their friends and relatives abroad, must be reversed. If most-favored-nation status is to be considered for renewal in next year's bilateral trade negotiations, concrete ameliorative steps must be clearly shown to have taken place.

Recently, an article on the Hungarian minority in Romania appeared in the London Sunday Times—April 17, 1977, page 8. I am inserting it in the RECORD as

a brief but revealing indication of the Romanian Government's activity in denying human rights to the enormous Hungarian minority population:

ROMANIA'S OPPRESSED MINORITY

(By George Schopflin)

In the popular mind, the Transylvania region of central Romania is a land of vampires and wolves. But it has suffered in its history more from the claims of rival powers than from the depredations of Dracula. Twice in this century it has been part of both Hungary and Romania and neither side has a good record in its treatment of minorities—40 per cent of Transylvanians are Hungarian.

Now a unique document has reached the West by secret channels, detailing the cultural oppression of Romania's 2 million Hungarians who, concentrated in the Transylvania region, are the largest national minority in Europe.

The 27-page typed document is the first account of how an anti-minorities campaign is being operated in Romania, whose government claims to be Marxist, communist and internationalist, but practises policies that are intensely nationalist. Romania's unstated but unmistakable aim is to become a state without any national minorities.

The evidence of the document, which tallies with other information, is of a campaign to eliminate the Hungarian intelligentsia and skilled working class, which have a strong national consciousness and cultural traditions, and to break up the cohesion of Hungarian districts.

The method used involves a constant granting and withdrawing of concessions to the Hungarians in order to create uncertainty.

Mr. SYMMS. Mr. Speaker, testimony submitted to this House during recent hearings on the extension of most-favored-nation status to the Socialist Republic of Romania has raised serious doubts as to whether the human rights objectives of the Trade Act of 1974 are in fact being met in this particular instance. When our Government first extended MFN to Romania, alone among nonmarket-economy countries, it was done in the belief that this would strengthen that country's apparent attempts to free itself from the rigid Communist discipline imposed on members of the Soviet bloc and thus contribute to greater liberalization in that part of the world.

The evidence, however, supports the view that Romania's independent foreign policy is one more weapon in the arsenal of domestic totalitarian repression, justifying, among others, the current concerted campaign aimed at the forced assimilation of ethnic minorities, and does not in the least contribute to making the life of its much-abused citizens more bearable. One can, therfore, ask if our continued extension of MFN is in fact accomplishing what we set out to do, or if it would not be more to the point to discuss suspension of MFN until the human rights objectives contained in the Jackson-Vanik amendment are satisfied. Among the questions to be analyzed is how well Romania is living up to the guarantees for minority enshrined in its own constitution, such as those pertaining to use of the mother tongue in schooling, publishing and social and cultural activities, as well as how well it is complying with the provisions pertaining to minority rights in the Helsinki Agreements. As to the latter, it would be very important to instruct our delegation to the Belgrade Conference to have the question of human rights, and especially minority rights, in the Socialist Republic of Romania brought up and examined at that forum.

It is not enough to go on record as favoring human rights; we must also be willing to followup and ascertain that the other parties to mutual agreements in which both sides committed themselves to certain behavior are in fact complying.

Mr. AMBRO. Mr. Speaker, a sacrosanct concern for human rights lies at the core of any democratic society's legitimate foreign policy. Economic and strategic objectives are inseparably linked to the paramount goals of human freedom. This is our heritage and will continue to be our destiny.

One area where our concern assumes special importance is Romania—the only East European country which receives most-favored-nation treatment under the terms of the Trade Act of 1974. Historically, Romania—as a country with significant autonomy from the Soviet Union—has had one of the better human rights records among Communist nations. The dominant theme of Romanian foreign policy continues to be a desire to maintain a high degree of independence in both its political and economic relations with other nations.

Because of this tendency, President Carter recommended in June that most-favored-nation treatment for Romania be extended for the year beginning July 3, 1977. In his recommendation to Congress, the President said:

I believe that a further extension of U.S.-Romanian economic relations can help to promote a continuation of such independent policies and . . . expand our present over-all bilateral relationship.

The Congress supported the measure.

The decision may be commendable for several reasons. Enhanced trading opportunities between the two countries, of course, is mutually advantageous. Moreover, most-favored-nation treatment provides a framework for bilateral discussion of other issues besides economics.

At the same time, however, I think Romania should be put on notice that Congress willingness to continue most-favored-nation treatment does not imply a willingness to tolerate the kind of violations alleged to occur in Romania with greater frequency. The recent decline in emigration visas to certain nations approved by Romania, the alleged harassment of emigration applicants, the crackdown on certain dissidents, and the allegations of Romanian minority groups all cast grave doubt on the Romanian Government's good faith.

While many allegations are not fully documented, their sheer volume and distribution indicate that Romania could be much less repressive in its human rights policies. If nothing else, the Romanian regime should cooperate more fully in releasing information on its emigration practices and treatment of dissidents. Only in this way can Romania ever allay the lingering doubts of the United States and all nations that pride themselves on freedom.

In 1977—the beginning of a new era of commitment to human rights in foreign affairs—the Congress should indicate that it will be watching Romania's human rights performance during the coming year with special interest.

If we are to remain faithful to the principles that gave birth to this Nation and if we are to preserve certain freedoms for generations yet to come, then there can be no compromise on human rights. Our commitment to fundamental freedoms—of expression, of thought, of movement, and of choice—is the bedrock of our political institutions. How well we articulate and implement those principles—at home and abroad—is the best measure of how democratic we truly are.

Mr. OTTINGER. Mr. Speaker, in 1 month, a proposed extension of most-favored-nation treatment for Romania will be considered by the President. With this extension, Romania—the only Eastern European country presently receiving nondiscriminatory treatment under the Trade Act of 1974—would be granted special privileges to be applied to its commercial relationship with the United States.

The President has announced his intention to extend MFN for 1 additional year. I recently joined in a letter to the President urging him to permit extension only with a strong expression of concern over the human rights situation in Romania and to convey to the Romanian Government our expectation that its performance in this area will rapidly improve to the point that it is in line with the human rights objectives of the Jackson-Vanik amendment.

I am especially concerned about the emigration situation in Romania, and with its treatment of ethnic minorities. According to a recent report issued by the Trade Subcommittee of the Ways and Means Committee, the number of emigration visas issued by the Romanian Government has decreased during the past year. This trend is particularly evident in the number of denials to those who seek to emigrate to the United States or Israel.

Reports of human rights violations also are terribly disturbing. Several months ago President Ceausescu announced an amnesty program which provided for the release of approximately 19,000 Romanian political prisoners and the reduction of sentences of 9,500 additional prisoners. President Ceausescu's action is heartening; however, there are still many political prisoners being held, so this is a matter of continuing concern.

I hope that the President will get strong commitments from the Government of Romania with respect to human rights and emigration before acting on the extension and will watch the situation in Romania very closely during the upcoming months as part of a concerned effort to assure that its human rights and emigration practices are in keeping with the intention of U.S. trade policy.

Mr. NIX. Mr. Speaker, I rise in support of my colleagues on the matter of

the continuing violation of human rights in Romania.

This is an important matter in that Romania through its commercial relations with this country has created the illusion that it is relatively free of Soviet influence in comparison with the other nations of Eastern Europe.

This matter is an acid test for our commitment to human rights in that in the case of Romania we are dealing with a nation with which our commercial relations are excellent.

The world will watch and see if our interest in human rights is as keen where our money interests have been satisfied.

The Ceausescu regime in Romania has indulged itself in domestic oppression. It suppresses minority races and cultures such as Jews and Hungarians.

Yet this regime was excepted from the provisions of the Jackson-Vanik amendment and accorded most-favored-nation treatment under the Trade Act.

The time has come, I believe, to apply the Jackson-Vanik amendment to Romania, until such time as the persecution of minorities ceases and the provisions of the United Nations Covenant on Civil Rights under section 27 and the terms of the Helsinki final act are observed.

I congratulate our good friend and colleague Congressman EDWARD I. KOCH in obtaining this special order for a discussion of the Romanian question, and I join with him in urging justice for the people of Romania.

Mr. BALDUS. Mr. Speaker, while the question of granting most-favored-nation status to Romania still remains open, I think it is appropriate to express my hope that the Romanian Government will make continued improvements in its compliance with the provisions of the Helsinki Accord, particularly with regard to family reunification and respect for cultural diversity.

Romania's record on human rights is considerably better than that of the Soviet Union, although this does not give us grounds for complacency. For instance, compared with Romania's previous record, its approval rate of permission to emigrate to Israel has been disappointing. In both 1975 and 1976, the number of emigrants amounted to almost 2,000 yearly. This year, the emigration rate is running at just half that number.

Another area in which compliance with the provisions of the Helsinki Accord can be improved is in attempts to eliminate de facto discrimination against the Hungarian ethnic minority living in Romania. Reports of the phasing out of Hungarian publications and classes taught in Hungarian indicate that discrimination against foreign language minorities still exists.

The United States should continue its efforts to improve economic contracts with Romania, but at the same time, I would hope that the Romanian Government will continue to increase its awareness of the rights of its citizens.

Mr. STEERS. Mr. Speaker, as the United States is presently considering the extension of several trade privileges to the country of Romania, it is important that the question of human rights in Romania be considered. Frankly, the Romanian Government appears to be in the process of executing a wide-reaching plan to forcibly assimilate its 3½ million minority citizens, while, at the same time, decreasing the numbers of those allowed to emigrate.

The largest of these Romanian minorities, the Hungarians, comprise the largest minority population of Europe. However, the Romanian Government is attempting to erase the ethnic heritage of the Hungarian Romanians and other Romanian minorities. This is achieved through the elimination of many ethnic schools and universities, the curtailment of cultural opportunities, the confiscation of minority archives, and the harassment of minority churches. Is not this suppression of cultures a crime against humanity, since humanity will be the ultimate victim of these actions?

While the Romanian Government may feel that they must implement this policy to maintain social order, I hope they might learn a lesson from the United States, which has learned that ethnic heterogeneity can strengthen society, not weaken it.

Furthermore, while making life unbearable for many members of Romanian minorities, the Romanian Government has decreased the numbers of those allowed to emigrate from Romania. This is in violation of international agreements signed by Romania, most notably of which is the Helsinki Declaration. This states that emigration will be permitted in several circumstances including the reunification of families. Also, the Romanians are ignoring the Trade Act of 1974, which indicates that the United States will consider the emigration policies of those nations that receive special trade considerations from the United States.

I feel that a close examination of Romania's policy regarding emigration should be accomplished before it is accorded most-favored-nation status regarding trade. In the event that the Romanians receive most-favored-nation status, I hope that they will take into account the long and deep soul-searching we have undertaken here in the Congress.

Mr. KEMP. Mr. Speaker, I wish to thank and commend the efforts of my friend and colleague Representative EDWARD KOCH of New York to focus congressional attention on the ongoing violations of emigration and human rights in Romania. Even though Romania has still not completely complied with the free emigration requirements of section 402 of the Trade Act of 1974, the President, nevertheless, has recommended a 1-year extension of the most favored nation status. These trade benefits were granted in part because Romania, while remaining within the Communist bloc, was allegedly pursuing a foreign policy somewhat independent of the Soviet Union.

Is it not ironic that we have withheld MFN status from the Soviet Union because of the mistreatment of Soviet Jews, but have allowed it to be bestowed on Romania, a country that pursues an equally vicious policy toward the Hungarian minority and other citizens in its country.

During the first 2 years of the United States-Romanian trade agreement, the Romanian record on emigration has been highly unsatisfactory, according to evidence presented in congressional hearings last fall. In the 9-month period between July 1976 and March 1977, the number of visas issued by Romania for emigration to both the United States and Israel has dropped precipitously when compared to the previous year's period. The number of visas to the United States dropped from 1,054 to 715, and for Israel, from 2,157 to 1,146.

Since the beginning of this year, I have been working on trying to get exit visas for two Romanian citizens of German Lutheran heritage. Klaus Grasser and his daughter Heidemarie were forced to sell all their possessions, after Klaus lost his job and after his wife passed away. There are relatives in Germany that could care for 10-year-old Heidemarie, who is now out of school and who with her father can only look forward to the authorities of the Romanian Government to overlook and ignore them yet another day.

Back in April of this year, I was notified by the Embassy of the Socialist Republic of Romania, that exit visas had been granted to the Grassers. Now it is August and they have still not been allowed to leave the country. They are told to continue waiting.

Moreover, last year very serious charges were raised about human rights violations against several million minority inhabitants of Romania, including approximately 2.5 million Hungarians. Some of these allegations were substantiated by reference to official Romanian sources, and it appears that some of Romania's minority policies violate the Helsinki agreement and other international covenants all ratified by President Nicolae Ceausescu's government.

Romania is seeking to increase its two-way trade with the United States to $1 billion a year by 1980. It now stands at $450 million per year. If we are to maintain a most-favored-nation status with Romania and permit tariff-free imports of Romanian goods, then I believe we must make her live up to her end of the bargain as well. Not allowing its citizens to enjoy the most universal values of human freedom and liberty is the most irresponsive action that the Romanian government could pursue.

Citizens of Romania, and all other nations around the world, must be free to think, to speak, to print, to assemble, and to worship in accordance with their consciences. They must be allowed to enjoy equality before the law and freedom of mobility around the world. All these basic and inalienable rights are still all but dreams in the minds of the citizens in Romania.

It is for these reasons that we must remain strong in both our conviction and in our support of these oppressed people, and especially in letting the Romanian Government know that we are unswerv-

ing and steadfast as a free people and a free nation, perpetually confirming the rights of all citizens to know their own personal freedom and independence.

Trade is a two-way-street, dependent upon reciprocations by the parties on both sides. I believe that Romania, in order to keep its most-favored-nation status with the United States, must provide this government with evidence of its good faith by granting permission to people like the Grassers, who have waited such a long time to emigrate. She must cease in her harassment of those who apply to emigrate, and in her continued oppression and violation of those basic human rights that belong to every man, woman, and child around our globe.

GENERAL LEAVE

Mr. TUCKER. Mr. Speaker, I ask unanimous consent that all Members be permitted to extend their remarks and to include therein extraneous material on the subject of the special order speech today by the gentleman from New York (Mr. KOCH).

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

THE ASBESTOS HEALTH HAZARDS COMPENSATION ACT OF 1977

The SPEAKER. Under a previous order of the House, the gentlewoman from New Jersey (Mrs. FENWICK) is recognized for 10 minutes.

Mrs. FENWICK. Mr. Speaker, today, I am introducing a bill to insure that workers disabled by exposure to asbestos receive adequate compensation without having to resort to costly and time-consuming litigation. This legislation, the Asbestos Health Hazards Compensation Act of 1977, will provide equitable and comprehensive benefits to persons disabled as a result of employment-related diseases, members of their families, and surviving dependents.

At the present time, there is no single comprehensive method of dealing with the problems and hardships created by asbestos-related diseases, the dimensions of which have only recently become apparent in medical studies. It has traditionally been within the jurisdiction of the States to determine worker compensation laws; but in those cases where the States fail to provide the necessary services, the Federal Government must take the initiative. This is certainly the case here.

Asbestos-related diseases are not like coal mine related illnesses. Coal mines are located in specific States and the diseases connected with them are locally defined. Asbestosis and other asbestos-related diseases are not confined to mining areas, or even to the industrial facilities where asbestos is processed. They are scattered from California to Rhode Island, in shipbuilding yards, housing construction and repair, and other occupations and places where workers handle asbestos products.

Since few States provide adequate benefits for death or disability due to asbestos-related diseases, individuals have been forced to seek legal action against manufacturers, employers, and the Federal Government to acquire sufficient compensation. Such remedies are inconsistent and burdensome at best and fail to promote a comprehensive, unified approach to the payment of disability benefits.

This act, which is in the nature of "no fault" legislation, is designed to promote a comprehensive, unified approach and a workable benefit schedule that will be satisfactory to both employers and employees. In fact representatives from both New Jersey's largest asbestos manufacturer, Johns-Manville, and its workers' union, the International Association of Heat & and Frost Insulators & Asbestos Workers, helped to draft this legislation. Thus, this bill represents the culmination of the combined efforts of management and labor to correct existing inequities for asbestos workers.

We now know from medical studies that asbestos exposure is a leading cause of cancer. It is estimated that 50 percent of all asbestos insulation workers die of cancer. According to Dr. Irving Selikoff, the renowned and acknowledged expert in the field—

> At present, one in every five deaths among insulation workers is due to lung cancer, one in ten to cancer of the pleura or peritoneum, and one in ten to scarred lungs of asbestosis.

We also know, based on studies by Dr. Selikoff and others, that asbestos workers who smoke have an incidence of lung cancer 90 times greater than workers who smoke but are not exposed to asbestos.

I have narrowed the scope of the bill to cover only those diseases which are caused by exposure to asbestos and are diagnosed as such. The medical community has assured me that these diseases are clearly diagnosable, so there is no presumption factor to establish eligibility. Anyone who provides medical certification that the disease is asbestos-related will be eligible for benefits.

The bill which I am introducing today will pay benefits to affected persons and their dependents for disability or death from an asbestos-related disease. Affected persons are those whose occupations involve exposure to asbestos or members of their families who contract asbestos-related diseases from close contact with those individuals. Compensation will be provided for both partial and total disability, and benefits can be later adjusted if the nature or severity of the disease changes.

Compensation claims will be paid from the General Treasury through December 31, 1979. Thereafter, "responsible parties" and the Federal Government will jointly support an asbestos workers' compensation fund to pay benefits. "Responsible parties" include producers and distributors of asbestos products and, since smoking and asbestos diseases are so clearly related, the producers and distributors of cigarettes and cigarette tobacco are also included. The fund will be administered by an independent board, chaired by the Secretary of Labor; and this board will be responsible for determining the validity of claims.

The Federal Government must assume part of the burden of these compensation payments because it is partially responsible for the current dilemma. Since 1975, over 400 plaintiffs have asserted in court actions that the Federal Government is to blame for their illness because it failed to fulfill its legal obligation of warning workers of the health hazards of their job environment, as required under the Walsh-Healey Act of 1936.

This legislation would eliminate the need for such litigation in the future. In fact, those who are currently involved in legal action will have the option of withdrawing their suits in favor of this benefit plan. Persons presently eligible for compensation and those who become eligible in the future, will have 3 years from the time the disease is diagnosed in which to apply for benefits.

We are now aware of the health hazards of asbestos exposure and are beginning to move in the right direction by recognizing the danger and trying to do something about it through increased safety standards. I think all of us feel obliged to aid those workers who have long suffered from asbestos-related diseases without receiving adequate benefits. This legislation will finally provide those individuals and their families with a comprehensive compensation plan that is both equitable and expeditious. A brief section-by-section analysis of the bill follows:

ASBESTOS HEALTH HAZARDS COMPENSATION ACT—DIGEST

At the present time there is no single comprehensive method of dealing with the problems and hardships created by asbestos-related diseases, the scope of which were unknown to industry, labor, government, and medicine until recent time. Remedies pursued to date include worker's compensation and legal action against manufacturers, employers and the Federal Government. Such remedies are inconsistent and burdensome at best, and do little to promote an overall solution to the problem. This act, which is in the nature of "no fault" legislation, represents an attempt to equitably and comprehensively deal with the human burdens caused by asbestos-related disease. The legislation provides for a basic monthly benefit over and above a worker's compensation base. The act is funded by contributions from industry and the Federal Government. Recovery under this Act would be comprehensive, and would eliminate lawsuits against manufacturers, employers and the Federal Government.

The act may be summarized as follows:

TITLE I

1. Recognizes the existence and hazard of asbestos-related disease due to exposure to asbestos both alone and coupled with the inhalation of cigarette tobacco smoke.

2. Recognizes that there are inadequate remedies for those who suffer as a result of an asbestos-related disease.

3. Sec. 101(b) sets forth the intent and purpose of the act to provide equitable and comprehensive benefits for affected persons who suffer from an asbestos-related disease, and to the dependents of affected persons who die from such disease.

4. Includes within the coverage of the act as "affected persons," those persons occupationally exposed to asbestos and members of their household who may contract an asbestos-related disease. Sec. 102(b)

5. Diseases for which compensation would be paid when causally related to exposure to asbestos and asbestos coupled with the inhalation of cigarette tobacco smoke are defined in sec. 102(c) as:

(a) asbestosis
(b) bronchogenic cancer
(c) mesothelioma
(d) gastro-intestinal cancer

6. Provisions are made for permanent or partial total disability and permanent or partial temporary disability. A 60% diminution in earning capacity is considered total disability. Sec. 102(f)–(1).

7. Responsible parties, who together with the Federal government, will assume the burden of funding the legislation are defined as companies engaged in the manufacture and first sale of products containing asbestos and companies engaged in the manufacture and first sale of products containing asbestos and companies engaged in the manufacture and first sale of cigarettes, Sec. 102(j).

8. Responsible parties are further classified in order to permit different levels of contribution to the funding of the act in recognition of the risk created by various products. Sec. 102(k).

TITLE II

1. Provides for the payment of benefits to affected persons and their dependents for disability or death from an asbestos-related disease. Sec. 201.

2. Payment of benefits is scaled to the monthly payment to which a Federal employee in a given GS grade who is totally disabled would be entitled. The present draft is geared to the GS–5 level which would be approximately $500 per month for death or total disability. Sec. 202(a)(3). There are provisions for the increase of the benefit based upon the number of dependents of the affected person. Sec. 202 (a)5), (a)(6).

3. Medical criteria is established for the allowance of claims, and accordingly there is no presumption of disease based upon length or degree of exposure to asbestos. Sec. 201(b).

4. The benefits may be adjusted if the nature or severity of the disease changes, and provides for the payment of medical expense if such payment is unavailable under state worker's compensation. Sec. 202 (a)(8), (a)(9).

5. Legal and medical expenses incurred in establishing claims may be reimbursed in a sum not to exceed $1,000.00. Sec. 203(c).

6. Benefits are not to be considered income for purposes of the Internal Revenue Code and are exclusive of a base worker's compensation benefit. Worker's compensation payments above the base would be credited against benefits, received under the Act. Sec. 202(c).

7. Benefits for claims arising through December 31, 1979, are to be paid from general treasury funds.

TITLE III

1. Benefits for claims arising subsequent to January 1, 1980, are to be paid from an Asbestos Worker's Compensation Fund. The fund is to be supported by equal contributions from the responsible parties collectively and the Federal Government. Sec. 301.

2. The fund will be administered by an independent Board, chaired by the Secretary of Labor. The Board will determine the validity of claims filed. Sec. 302(b)–(h).

3. Responsible parties contribute to the fund according to a formula based on a percentage of net sales of asbestos containing products and/or cigarette sales made during the quarter fifteen (15) years preceding the quarter in which payment is made. The different classes of responsible parties would be taxed at different rates to appropirately recognize the risk created by particular products. Sec. 303(b).

4. No affected person shall be discriminated against for seeking benefits under the Act. Sec. 305.

5. There are provisions for clinical facilities for examination and treatment where deemed necessary. Sec. 307.

6. Orders allowing or denying benefits under the act may be appealed to United States District Court. Sec. 306.

7. All claims under the Act shall be filed within three (3) years of an initial diagnosis of total disability or death due to an asbestos related disease. Sec. 304.

THE PRODUCT LIABILITY INSURANCE TAX EQUITY ACT: HOW IT WILL HELP SMALL BUSINESS

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, on previous occasions I have placed statements in the CONGRESSIONAL RECORD discussing H.R. 7711, the Product Liability Insurance Tax Equity Act. In June I inserted articles describing how PLITE would work with regard to companies that have problems with product liability insurance, and I also discussed how this legislation would benefit those concerned with professional liability insurance. In the July 28 RECORD I reproduced portions of letters I have received from various trade and professional organizations, explaining how the bill would help their members.

But all this is rather sterile stuff. Yes, the information is good. But it somehow does not truly convey the pathos of the small businessman or the professional who cannot afford commercial insurance coverage but who must have insurance in order to stay in business. For many, the logical alternative is to provide self-insurance for all or part of the risk. However, our Federal tax laws currently preclude this option.

The Product Liability Insurance Tax Equity Act would provide a partial solution to this problem by eliminating the Federal tax bar to self-insurance. While not terminating the original problem of unreasonable elements in the tort law, this measure at least would allow small businesses and professionals to avoid bankruptcy while they await action on the tort law reform front.

In order to help us better understand exactly how the tax laws today discriminate against the small businessman who seeks to self-insure, I would like to share with my colleagues some of the correspondence I have received from individuals around the country. This is not any kind of organized write-in, mind you. These are letters that were sent to me by individuals who had heard about PLITE and wanted to tell me how the legislation would affect them.

First, to place things in perspective, there is a letter I received from a company in Pennsylvania. This firm cannot truly be called small but it is the smallest company in its industry. This letter illustrates not only the basic insurance problem but also the competitive problems imposed by our tax treatment of self-insurance reserve funds:

We are one of those unfortunate manufacturers who by choice have elected to go the self-insured route for products liability insurance coverage. Approximately 70 percent of our annual revenues carried close to 9 percent product liability insurance in 1976, and the cost for 1977 will approach 15 percent.

. . . Our product line covers Consumer grade, Commercial grade, and Industrial grade goods. We are the only major manufacturer in the industry who is privately held and whose [deleted] equipment revenues account for the majority of the corporate income. Our major competitors, whose annual volume is somewhat below ours, enjoy the distinction of being part of very large corporations whose total revenues are between $.75 billion and $1.3 billion. Thus, the tax treatment of self-insured reserves for climbin equipment have little or no effect on these huge corporations.

We have compiled a rather excellent data base which was used extensively in negotiating renewal of our insurance, which primarily consisted of a very significant self-insured retention ($500,000/$2.5 million) and $9 million of umbrella coverage. Had we elected to take the entire package through traditional insurance channels, our cost for 1977 would have been approximately $5.2 million.

For the fiscal year ending December 31, 1977, because we elected to go to a self-insurance program, it is quite probable that for corporate recording purposes and certified financial statements to our various lending institutions, we will show a very modest pre-tax income in the range of $2 million; however, because of the disallowance of self-insured liability insurance costs included in the operating statements of the Company, but disallowed for tax purposes, we will incur a $2 million tax liability and the net income for certified statement purposes will be "zero".

We have addressed this situation to our public accountants; and as of this writing, we have not collectively agreed that a provision could be placed on the corporate records reflecting a reduction of this corporate tax provision in certified statements, recognizing the future tax benefit that may ultimately accrue—as under the self-insured retention program, it is necessary for us to abandon the traditional occurrence-basis and go to a claims-made basis. . . .

An electronics company in my own district in Ohio told the same story in a more succinct fashion. They wrote:

With the same coverage, with the same company, and with no bad experience, the premium for our product liability insurance increased over five-fold. Right now, we are in the process of debating the best course of action, including "going bare." I welcome the news that you are promoting some relief in the form of a tax-deductible reserve.

As I have noted previously, H.R. 7711 pertains to professional liability as well as product liability. A senior partner in one of the larger law firms in Dayton writes:

The problem of our premiums for liability insurance is certainly becoming acute. First of all, we have had some difficulty in securing any coverage at all since many of our partners specialize in securities matters. Additionally, if we take the kind of coverage that we need, our premiums would triple this year. As a result of all this, we are giving consideration to the possibility of self-insurance. At this time, due to the tax laws, we cannot self-insure. If your bill passes, then we can give serious consideration to the matter of self-insurance.

A letter from a farm machinery company in Iowa clearly shows how frustrated and trapped many manufacturers

feel. Less than 2 weeks after PLITE was introduced I received this message:

I believe your proposed bill, "The Product Liability Insurance Tax Equity Act," is an excellent one and will be a major aid to individuals and businesses who are having trouble getting or paying for product liability insurance.

My particular company is currently going uninsured after not being able to receive a quote for our insurance since January 1977. When we were informed that we could not even set up insurance reserves that we could deduct from our taxes, we were disheartened to the point of quitting. Now with help from people like you perhaps we can start getting some equity in our tax system and later perhaps more equity from the courts in the product liability suits themselves.

In Dayton, in the congressional district I represent, the owner of a tool and die manufacturing company presented a very similar story. His letter to me includes this passage:

. . . H.R. 7711 would be of current value to (us). As you know, we dropped our product liability insurance in January because of the tremendous increase in cost. At this time we are charging our company for product liability, recognizing the cost but realizing that at the end of the year we must put this money back into the profit pool and pay a tax on it.

As mentioned above, I think the words "current value" are of greatest importance here, for we . . . can still be sued out of business. The real problem must not be forgotten and that is that we are in a position of jeopardizing our company, or at least its profits, because of something over which we have no control . . .

Another Ohio manufacturer of precision tools and equipment had a similar experience to relate:

We have just been informed that our renewal for our product liability insurance will require a premium substantially higher than that for 1976. This premium, which will be in excess of $100,000.00, forces us to immediately give strong consideration to some level of self-insurance.

The Product Liability Insurance Tax Equity Act will help make self-insurance an economically feasible alternative for a company of our size and we certainly hope for timely adoption of this bill. Although this Act is not a substitute for legislation needed to deal directly with the product liability problem, it certainly is a welcome means to more acceptably deal with it.

Mr. Speaker, many of the corporations that are not able to obtain reasonable product liability insurance coverage have, increasingly, been turning to insurance brokers for help in finding commercial coverage. Consequently, I think you may be interested in this note I received from the director of one of the larger insurance brokerage firms:

Your Product Liability Insurance Tax Equity Bill, we believe, would have a significant, positive influence on the product liability insurance problem. Not only would it provide fair tax treatment for those businesses unable to obtain or afford product liability coverage, but it will also work to increase the availability of coverage at realistic, rather than excessive, premium levels.

If one remembers that for the small and medium size manufacturer and distributor conventional insurance is better than tax deductible self-insurance, then the impact of the Tax Equity Act on the availability and affordability of coverage is of even greater significance than the tax relief. . . .

Like insurance brokers, law firms with many corporate clients are also in a position to see this problem from a broad perspective. A senior partner of one such firm wrote:

I wish to commend you on your introduction of H.R. 7711, the Product Liability Insurance Tax Equity Act. The aim of the bill, the deductibility of self-insurance reserves, is an equitable solution to the problems posed by the high cost and limited availability of product liability insurance. Many of our clients with manufacturing and distributing businesses could take advantage of such a bill. In addition, I believe that the bill provides a workable solution to the high cost of professional liability insurance for doctors and lawyers.

Returning to the issue of competition, it is interesting to note how many companies perceive the product liability problem as one that also impacts severely on the ability of small and medium sized firms to compete with conglomerates and multinationals that enter their industries. To illustrate this point, here is a portion of a letter received from a specialty manufacturer in Connecticut:

I am completely in favor of the legislation you propose and would like to comment that at the present time the law apparently permits American corporations to form captive insurance companies, and many of them are doing so outside of the United States. This is an unfairness to the smaller corporation, which cannot avail itself of this opportunity due to the costs involved. . . . Passage of your legislation would apparently solve this inequity favoring the larger corporations, and I am sure will meet with the approval of all small and medium size manufacturers with liability insurance needs.

Finally, I will conclude this exposition with a very brief quote from a company headquartered in Chicago:

The equitable treatment under the tax laws of those companies which choose to self-insure against product liability losses is long overdue.

HOW THE SOVIETS ARE ATTEMPTING TO EXCLUDE ISRAEL FROM THE 1980 OLYMPICS

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 5 minutes.

Mr. KEMP. Mr. Speaker, I am increasingly convinced the Soviet Union intends to exclude Israel from the 1980 Olympic games in Moscow. I am also convinced it will happen, unless the United States and other participating countries tell the International Olympics Committee they must stop it or else.

Very specific information has been brought to my attention on this matter. It is not just speculation. A deliberately thought through plan has been set into motion to exclude Israel without it appearing the Soviets have a hand in it. How? By making sure by the time the Moscow games are held in the summer of 1980, Israel will be ineligible.

This information comes through Mr. Joachim Maitre, a former member of the Communist East German Nordic ski team, who has just written a yet-to-be-released book about Olympics politics and through Prof. Jeffrey Hart of Dartmouth College. Hart, the nationally syndicated columnist has written extensively on this subject and his first column on this subject alerted all of us to this Soviet plot. See my remarks and Hart's column in RECORD dated July 1, 1977, page 22092.

The plan is a combined Soviet-Third World one. It is based on standards of eligibility for national participation in the Olympics.

There are 26 Olympic federations, representing the recognized Olympic events. The Israelis do not belong to all 26 because they do not field teams in all events, especially the winter sports. In order to participate in the Moscow games, a Nation must belong to five or more federations.

Under relentless pressure from the Soviets and from Third World nations, the Israelis are being forced out of these federations, one by one, usually on a technicality. The goal? Have the Israelis down to less than five by 1980.

Israel was excluded from the European soccer federation on the grounds that it is not a European nation even though Turkey, which is as near-Asian as Israel, remains in the European federation.

When the final crunch comes, the weapon against the Israeli's will be the outrageous United Nations vote equating Zionism and racism, which many of us protested so vigorously. Third World delegates can be expected to show up at all the federation meetings with the UN resolution in hand, demanding the exclusion of Israel on those grounds. South Africa was excluded from the Olympics on the grounds of racism as expressed in a similar resolution.

At their 1976 Congress in Kuala Lumpur, Malaysia, members of the Asian Games Federation voted not to invite Israel on the phony grounds of security. It was claimed that Israel's participation in international sports constituted a security risk for all, and an Indian delegate supposedly calculated the cost of protecting the Israeli athletes and found them "exorbitant."

In November 1976 the world chess championships were scheduled for Haifa, Israel. The Soviets cranked up a campaign to the effect that the Israelis could not guarantee the security of the participants. When the international chess federation, FIDE, rejected the claim, the Soviet Union, Hungary, and Yugoslavia walked out. These were the 1, 2, and 3 chess nations in the world. They competed instead in the chess "International Olympics" held in Libya.

This happened in basketball too. In November 1976, the international basketball federation's European Cup Commission was informed that the teams of Spartak Brno of Czeckoslovakia and the Red Army Moscow would not travel to Israel to play Maccabi Tel Aviv in the European Basketball Champions Cup. According to the rules, this merited instant disqualification. However, the rules were bent. The games were moved to Brussels, where the Israelis beat the Soviet Team 91–79 and went on to win the cup.

Israel has already been excluded from the World University Games, to be held this August in Sophia, Bulgaria.

On April 2 of this year, at Birmingham, England, another incident in this pattern

took place. Red China's fifth ranked table tennis player, Wang Chun, failed to turn up for his first round match against unknown Shlomo Mendelson of Israel. The reason given was Red China's nonrecognition of Israel.

As my colleagues are aware, I have been deeply distressed over the increasing politicization of the Olympic Games. As an amateur and professional athlete for nearly 20 years and as a Commissioner on the President's Commission on Olympic Sports. I could not believe the relative ease with which the IOC caved in when the Trudeau government excluded the Republic of China from Montreal Olympic. Other teams last year refused to participate because of political disputes.

It has become all too clear what is happening, but it should not be a surprise to anyone. The Soviets and their cohorts intend to politicize the sports just like they have tried to politicize everything else. They intend to use these games as a vehicle for propaganda. They intend to use the competition to reflect their dialectical views of class struggle.

Congress will go into recess for a month at the end of this week. That was determined by the leadership at the beginning of this Congress. But when we return after Labor Day, I intend to circulate to my colleagues a letter addressed to the IOC, reflecting our concern over politicization in general and the exclusion of Israel in particular. I invite all my colleagues to join with me in showing Congressional opposition to this growing Soviet menace to the Olympic Games.

As Jeff Hart points out in this second column on the subject, if the Soviets succeed, it would be a major step in the attempt to de-legitimize Israel. We must prevent it from happening.

ANNOUNCEMENT OF HEARINGS ON H.R. 8359

The SPEAKER. Under a previous order of the House, the gentleman from New Jersey (Mr. RODINO) is recognized for 5 minutes.

Mr. RODINO. Mr. Speaker, I wish to announce that the Subcommittee on Monopolies and Commercial Law of the Committee on the Judiciary will hold 1 day of public hearings on Thursday, September 8, 1977, to consider H.R. 8359. This bill will restore the effective enforcement of the antitrust laws, by overruling the Supreme Court's recent Illinois Brick opinion.

This hearing will be held in room 2141 Rayburn House Office Building at 9 a.m.

Testimony on this bill will be received from John Shenefield, Acting Assistant Attorney General for Antitrust and Lee Freeman, Jr., an attorney from the State of Illinois.

BETTE "GINGER" WEAVER OF LAURELTON

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. SCHEUER) is recognized for 5 minutes.

Mr. SCHEUER. Mr. Speaker, one of the greatest pleasures of serving as a U.S. Representative is that of meeting and working with community people of outstanding talent, energy and effectiveness. One of the leaders in my congressional district, Bette "Ginger" Weaver, joined my office as a volunteer—after I had noted her leadership qualities and asked her to contribute her time, talents, and energy to my New York office—and is now a full time assistant to me.

Nonetheless, despite our frenetic pace of work throughout the entire congressional district, Ginger has continued to step up her leadership role in the Laurelton community. Ginger was recently elected President of Public School 156 in Laurelton.

Laurelton is not just racially integrated; it is proud and it is at peace with itself. It is a community made up of good people of every faith and every color. It is a good community to represent in Congress and it is a good community to be part of, and to call home.

There is a particular uniqueness to Laurelton, as exemplified by Ginger's remarks. Laurelton is a community where racial conflict has given way to a harmonious and integrated way of life, where people relate to each other as neighbors and friends.

I would like to share with my colleagues Ginger's remarks—which were called to my attention by people in Laurelton—as eloquently reaffirming something of what is great about America:

INSTALLATION ADDRESS

Our nation has long been known as a country of pioneers constantly on the move in search of new frontiers, leaving in their wake embryonic communities that became stopovers or way-stations for the next wave of those in quest of the better life.

But we've now traversed this huge country from coast to coast, and there are no really new geographic frontiers in America, so we must settle in and make a commitment to the communities in which we live. We must make our communities the permanent bases to which, through our commitment and efforts, we bring that degree of perfection that we—each of us—seek.

And this can be done by focusing our attention and energies upon those for whom many of us want that better life—our children.

I believe that we in Laurelton have done just that

We have not abdicated our responsibility for the education of our children. Rather, we have been an integral part of that education process. And we must continue and redouble our efforts in this direction.

P.S. 156, the Laurelton school, has a student population of 1,200. Relative to New York City's total student enrollment, that's not a large number. But, to us, it is important because these students are our children. They are our most important responsibility and our community's most vital asset. For it is only through them that Laurelton will continue to thrive and prosper.

What we all want for our sons and daughters is a truly exemplary education, one that prepares them well for the next stage in their ongoing learning process—both formal and informal. This can only be achieved by the cooperative efforts of parents and teachers.

Our school is most fortunate in having an excellent staff and administration vital to us and to our children in these, their formative years. They have earned our confidence and our gratitude.

But we, as parents, cannot—must not—let our good fortune allow us to become less diligent in our efforts to ensure that improved standards of education are sought, provided and maintained for our children. This is no mean task. It requires our continued dedication and vigilance. The Parent Association of P.S. 156 has shown, time and time again, that it has an abundance of both these qualities.

It is with this knowledge that I thank you, most humbly, for investing your confidence in me. My election to the office of President of the Parents Association is an honor that I shall cherish, and I will endeavor to serve the families and children of our community with dignity and integrity. But our association can only be as good as the sum of the efforts of all of its members. I look to you for your interest, support and guidance.

Again, I thank you for the honor you have bestowed upon me.

REPEAL THE 25TH AMENDMENT

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, our Constitution is remarkable for its durability. The institutional arrangements created by the Constitution have met the test of time incredibly well. I am convinced, however, that one of the recent additions ought to be deleted. I am once again introducing a resolution to repeal the 25th amendment.

The 25th amendment is intended to establish an orderly succession in the event the President dies or becomes disabled, or in the event of a vacancy in the office of Vice President. These are not easy problems, and there are no neat solutions. The 25th amendment is, in the words of the current Constitution, revised and annotated, "an effort" in that direction. But, note this, the commentary concludes:

It can no doubt be improved upon, but for the present it is apparently the consensus that the amendment offers the Nation a workable procedure in case one should be needed.

The need has arisen, and it is past time to give thoughtful consideration to the adequacy of this procedure.

At the time this amendment was enacted, it was in response to the murder of President Kennedy, which created a vacancy in the Office of the Vice President for which no replacement could be named, there being no procedure for it. Moreover, it was thought that something had to be done about the possibility of Presidential inability—for suppose that the President had been the victim of massive and disabling—but not fatal—brain damage? Could a vacancy be declared? It was not the first time this case had existed; Garfield lived for 80 days after being wounded, and Wilson suffered a disabling stroke 18 months before expiration of his term of office.

The solution of the amendment was to permit the principal officers of the executive departments or of such other body as Congress may by law provide to send a written declaration to the Speaker of the House and the President pro tempore of the Senate to the effect that the President is unable to carry on—whereupon a vacancy would exist, and the Vice President assume the powers and duties of office as Acting President. Later,

if the President were to revive, he could serve notice and resume office. It would be up to Congress to resolve any dispute.

The question that was not asked was whether or not it might be possible for a cabal to conspire against a President and declare him disabled. At the time, and even now, this may seem too incredible a situation to arise, but is it? We have already seen how a Vice President could be a simple crook, and forced to resign; and we have likewise seen how a President could become enmeshed in a criminal conspiracy, and forced to resign in the face of overwhelming evidence that made impeachment the inevitable alternative. That left us with an unelected Vice President who succeeded to the Presidency, and with another unelected Vice President who might well have succeeded him.

If such incredible events as these could arise, it might also be possible that unthinkable events of another character could also arise, and deprive a wholly competent President of office. Suppose a President fell into some kind of immense public disfavor. Could he be deprived of office by anxious cabinet appointees anxious to save the fortunes of their party, aided by an equally anxious and complaisant party in Congress? It is not impossible to imagine. Consider the case of Andrew Johnson, who was nearly impeached—not because he had committed any crime, but because he was in violent disagreement with his cabinet and their party in Congress, who happened not to share his political views. If forces of that kind had been able to use the tool of the 25th amendment the course of history might well have been very different.

The framers of the Constitution, and those who would amend it, must take into account all kinds of possible situations, even the bizarre. For the bizarre has happened, both before and after the 25th amendment. It is not an instrument adequate to the possible tests. The only time that this particular amendment would come into play would be in the midst of exactly the kind of tragic and bizarre situations that I have mentioned—the kind of times when our institutions are at their weakest. The amendment ought to be repealed, because, in the words of the analyst, it is an effort that can be improved upon. The time to do that is now, while we can see and think clearly—not later, in the midst of some unforeseeable tragedy, or in the aftermath of a great trauma.

HUMAN RIGHTS AND CAPTIVE NATIONS WEEK

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, anyone who knows the meaning and tradition of the Captive Nations Week observances since 1959 cannot but declare a full awareness of the natural bind between the captive nations thesis and any advocacy of human rights.

As a current congressional reprint being widely circulated both in this country and abroad expresses in its apt title, "Human Rights Are Old Hat for Captive Nations." And indeed they are old hat, for the captive nations analysis has always, and necessarily so, stressed human rights in all generic spheres of the concept—not only the personal, not only the civil, but also the national.

All too many in this country who speak in behalf of human rights tend to ignore the last category and thus fail to understand the virtual identity of human rights and captive nations. Captive nations are a natural for human rights formulation of policy.

Objectively, my selected reports on the week must carry comments and interpretations of 19 years of Captive Nations Week observances. Mr. Speaker, I request that the following items be appended to my remarks: The proclamation by Gov. James R. Thompson of Illinois; the certificate of recognition by Gov. Mills Godwin of Virginia; the proclamations by Mayor Michael A. Bilandic of Chicago, and Mayor Vincent J. Thomas of Norfolk, Va.; and a news account in the July 18 issue of News World on "Rally Held for Captive Nations."

The proclamations follow:

STATE OF ILLINOIS, PROCLAMATION

The nineteenth observance of Captive Nations Week beginning July 11 will be culminated with a parade at noon Saturday, July 16, down State Street in Chicago.

The colorful, annual event, with its different ethnic groups. reminds us that many peoples throughout the world are denied the right of self-determination and the freedom that we here take for granted. Through the years liberty-loving people have sought the freedom of America where they can worship as they wish and develop their talents in our free society.

Their different customs and characteristics have made our lives more exciting and interesting, broadened our perspective, and enriched the culture of our state. Getting to know them has given us a warm understanding and sympathy for the aspirations of all peoples.

Appreciative of their contributions to the growth and development of this Prairie State, I, James R. Thompson, Governor of the State of Illinois, proclaim July 11 through 16, 1977, Captive Nations Week and suggest that all Illinoisans participate in the observance.

CERTIFICATE OF RECOGNITION

By virtue of the authority vested by the Constitution in the Governor of the Commonwealth of Virginia, there is hereby officially recognized: "Captive Nations Week 1977."

Many people in Europe and Asia remain under the dominance of collective dictatorships, which deny the freedoms they once enjoyed.

Calling attention to their plight, the Congress of the United States and the National Captive Nations Committee, Inc. of Washington observe the period July 17–23 as Captive Nations Week, and I call the reminders it suggests to the attention of Virginians everywhere.

OFFICE OF THE MAYOR, CITY OF CHICAGO, PROCLAMATION

Whereas, our city's annual observation of Captive Nations Week will be highlighted by a State Street parade at noon on July 16th; and

Whereas, under auspices of the Captive Nations Friends Committee, the week's activities will direct public attention to the plight of people whose homelands are under Communist control; and

Whereas, many citizens of these countries are linked by family ties to residents of this community, and it is commendable that United States citizens, in appreciation of their freedoms, should extend sympathy and the hope of freedom to their fellow-men and women whose liberty has been denied:

Now, Therefore, I Michael A. Bilandic, Mayor of the City of Chicago, do hereby proclaim the period of July 11 through July 16, 1977, to be Captive Nations Week in Chicago and urge all citizens to take cognizance of the special events arranged for this time.

Dated this 3rd of June, 1977.

CITY OF NORFOLK, VA., A PROCLAMATON

Whereas, the policies of Communist Russia have led to enslavement for many peoples of many captive nations in all parts of the world; and

Whereas, the desire for liberty and independence by the overwhelming majority of peoples in these nations constitutes a powerful deterrent to any ambitions of Communist leaders to initiate a major war; and

Whereas, the freedom-loving peoples in the captive nations look to the United States as the citadel of human freedom and to the people of the United States as the leaders in bringing about their freedom and independence; and

Whereas, the Congress of the United States, by unanimous vote, passed Public Law 86–90, establishing the third week in July each year as Captive Nations Week and inviting the people of the United States to observe such week with appropriate prayer, ceremonies and activities as expressions of their sympathy with and support for the just aspirations of captive peoples,

Now, therefore, I, Vincent J. Thomas, Mayor of the City of Norfolk, do hereby proclaim the week of July 17–23, 1977, as *Captive Nations Week* in Norfolk, and I call upon the citizens of our community to join with others across the nation in observing this week by offering prayers and dedicating their efforts toward the peaceful liberation of the captive nations.

Given under my hand this 15th day of July, 1977.

RALLY HELD FOR CAPTIVE NATIONS

(By Cheryl Smith)

With guest speakers Rep. Mario Biaggi and mayorial candidates Mario Cuomo and Barry Farber in attendance, the chairman of the Captive Nations Committtee of New York read a declaration to hundreds of New Yorkers yesterday calling for maximum U.S. aid "to help liberate all nations under communistic control and imperialistic control.

"Our people, our lands are in slavery," stated one spokesman. "We must never stop fighting for their freedoms, although we may now be free."

Biaggi said that in his recent visit to six Far Eastern countries, the heads of state were deeply concerned about human rights.

"In Japan, South Korea, Indonesia, Thailand—all the heads of state were understanding and sympathetic to the human rights issue," he said. "I think it is so important for people to continue to work here, doing things like this. "It's collective efforts like this that will pay off in the end."

Earlier, some 500 people attended a special High Holy Mass at St. Patrick's Cathedral.

Rt. Rev. Basil II, Losten, Ukrainian Bishop of Philadelphia, warned the congregation that "the enemy never sleeps," and asked them: "Are we also sleeping when Christ, His church and His People need us the most?"

He concluded the stirring sermon by assuring them that "the oppressed will be set free."

Representatives of the respective nations then carried banners and flags in a parade up Fifth Avenue to the Central Park Mall.

The official proclamation of Captive Nations Week will be held on July 21 at City Hall, but recognition of the various nations' situation was dramatized yesterday with fiery speeches and warm entertainment.

One 70-year-old lady arrived at Hollis, Queens, looking understandably weary.

"You understand why I come here," she said with a shy smile. "I would not miss this."

The dancers suffered in their heavy ethnic costumes which were several layers thick. Yet, they danced with the same enthusiasm as if a cool, brisk breeze were upon them.

TOWARD A STRONGER U.S. COMMERCIAL FISHING INDUSTRY

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. SIKES) is recognized for 5 minutes.

Mr. SIKES. Mr. Speaker, I wish to discuss my views on the current status of our U.S. commercial fishing industry and actions the Congress should undertake to make this Nation the No. 1 fishing power in the world.

Last year, the Congress passed what may be the most comprehensive fisheries legislation in the history of our country. I refer to Public Law 94–265, which extended our fisheries jurisdiction to 200 miles. This is the greatest single acquisition of territory in our history. It involves about 2.2 million square miles—larger than the Louisiana Territory; larger than the State of Alaska. Within this area exists approximately 10 percent of the world's marine fisheries resources.

For the first time, we have a mechanism within which to effectively manage our fishery resources. Effective management is a requisite of our country to realize the full potential from the bountiful fishery resources with which we are endowed. The Congress has taken the first of two steps necessary for the United States to become the greatest fishing nation in the world. The second step the Congress should take is to enact comprehensive legislation in the area of fisheries development. Such a proposal should include provisions for exploratory fishing and gear research, produce and processing technology, financial assistance and consumer education, and market development.

There will be a requirement for a strong financial assistance program for seafood producers and processors. There is a requirement for additional consumer education and market development programs for the commercial fishing industry. Such programs are provided for the farmer who tills the soil. We must now make them available to the fishermen who cultivate the seas.

First, let me address the need for financial assistance. Commercial banks normally make loans to commercial fishermen for periods of roughly 5 to 8 years, whereas the life of most fishing vessels is 15 to 20 years. Therefore, on an annual basis, repayment of these loans is quite high. This retards expansion and modernization of our fishing fleet. Also, commercial banks normally require 25 percent downpayment on the construction of a new fishing vessel. This makes it difficult, and many times impossible, for a commercial fisherman to raise $250,000 for a downpayment on a $1 million vessel. And, to have to repay the loan in 5 to 8 years creates a financial burden that sometimes is insurmountable—particularly, when one considers the nuances of commercial fishing such as bad weather, engine breakdown, and extreme fluctuations in seafood abundance and in market prices.

What is needed is an expanded fisheries vessel obligation guarantee program which provides Federal guarantees to the banks and, more importantly, enables the commercial fishermen to obtain commercial loans with lower downpayments and longer repayment periods.

The next critical need is for a major consumer education and market development program to better enable a more economically viable commercial fishing industry to provide a greater supply of reasonably priced seafood products to better informed customers. Therefore, an extensive consumer education program on the role of fishery products in the American diet will be of benefit to our people as well as contributing to a more healthy commercial fishing industry.

The recently concluded Emergency Marketing program by the National Marine Fisheries Service is an excellent example of benefits to be derived from an adequately funded Consumer Education and Market Development program for fishery products. In 1974, there was an unprecedented decline in the demand for fish in the U.S. marketplace. The commercial fishing industry in all sections of the country suffered serious financial losses, many went broke, and thousands of people in fish processing plants, shipyards, and other areas lost their jobs. To alleviate this problem, the Office of Management and Budget released $1 million in November 1974 to the National Marine Fisheries Service for an Emergency Marketing program. A national campaign was immediately begun which involved industry, State agencies, and the Federal Government. This program was most successful and in early 1975, the fishing industry was in a much sounder economic position. U.S. commercial fishermen received nearly $73 million more for their catch in 1975 than they received in 1974. This represented better than a 12-percent increase in volume. Shrimp fishermen alone received over $48 million more for their harvest; a 27-percent increase in gross income for shrimp fishermen. Thus, in contrast with 1974, when according to studies conducted by Texas A. & M. University, shrimp fishermen lost an average of 90 cents per pound on every pound of shrimp caught.

In essence, industry experienced an economic disaster in 1974, made a profit in 1975, and had one of the most rewarding years in history in 1976.

Mr. Speaker, comprehensive fisheries development legislation is needed to assure full use of our abundant and renewable fishery resources. I plan to introduce such a bill during this session of Congress and I welcome the support of colleagues in the development of this legislation. I plan to seek the advice and assistance of industry leaders in the development of this legislation. Industry support and understanding are essential for many reasons. Understandably, many Congressmen are unfamiliar with the problems of the fishing industry. Many of those from interior States cannot be expected to realize what is needed to insure a sound, self-supporting seafood producing industry. The problem of education obviously begins in the Congress, but it must also be extended to the general public.

THIRTY-YEAR RETIREMENT AT ANY AGE

The SPEAKER. Under a previous order of the House, the gentlewoman from Maryland (Mrs. SPELLMAN) is recognized for 5 minutes.

Mrs. SPELLMAN. Mr. Speaker, today I have introduced legislation to amend section 8336(a) of title V, United States Code, so as to authorize the voluntary retirement of a Federal employee after completing 30 years of service, regardless of age.

It is most important to remember that this legislation would not place the Federal Government in a "trend setting" position. Rather, this bill would allow civil service retirement provisions to keep pace with current changes in many private and municipal retirement programs—changes which reflect the widespread feeling within the private and public sectors that 30 years of service constitute a full career. Many Federal employees share this feeling and, additionally, contend that present law discriminates against employees who come into Federal service at an early age. Under present law, Federal employees may retire at age 55 with 30 years of service, at age 60 with 20 years of service, or at age 62 with 5 years of service.

As the pace of production accelerates in Federal agencies, increasing physical and mental effort is required of employees. Particularly where individuals are assigned jobs involving a large degree of physical activity, their conditions are likely to deteriorate more quickly. Even in sedentary occupations, where a great deal of mental concentration is required people undergo stress which tends to shorten their careers. In each of these instances, physical or mental impairment may not be sufficient to warrant disability retirement, but the employee may wish to retire at an early age so as to preserve his physical health or his mental health.

Although this legislation would permit a Federal employee to retire voluntarily at any age after completing 30 years of service, it is essential to note that it would require a 2 percent reduction in annuity for each year the employee is under the age of 55 at the time of retirement.

By passing this act, we hope to bring younger people into the civil service and allow them the opportunity to advance. Further, we hope to retain these younger

people during the first 5 years of service, which is the period during which attrition is the greatest. In effect, the passage of this legislation would create thousands of new jobs for the very people who most need them.

Mr. Speaker, having reviewed the provisions of law relating to retirement benefits for Federal employees, I firmly believe the law should be amended in the manner provided under this legislation. Therefore, I strongly urge my distinguished colleagues to support this vital measure which would affect not only many thousands of Federal employees, but also would help to curb this Nation's high unemployment rate by opening up more jobs at lower grades.

A bill to amend chapter 83 of title 5, United States Code, to authorize the retirement of employees after thirty years of service

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 8336(a) of title 5, United States Code, is amended by inserting "(1)" immediately before "An employee", and by adding at the end thereof the following new paragraph:

"(2) An employee who is separated from the service after completing thirty years of service is entitled to an annuity. Notwithstanding the first sentence of section 8332(c) of this title, for the purpose of this paragraph, an employee may be allowed credit only for the greater of—

"(A) four years of military service; or

"(B) all periods of military service performed by the employee during a war declared by Congress.".

(b) The first sentence of section 8339(h) of title 5, United States Code, is amended by striking out "section 8336(d)" and inserting in lieu thereof "subsection (a)(2) or (d) of section 8336".

HUMAN RIGHTS IN ROMANIA

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. ROSENTHAL) is recognized for 5 minutes.

Mr. ROSENTHAL. Mr. Speaker, President Carter and the House Ways and Means Subcommittee on Trade have both recommended a year-long extension of most-favored nation status for Romania. I support this recommendation. However, I want to take this time to carefully review Romania's recent record on human rights.

In particular, I am disturbed by the apparent decline in the number of persons granted permission to emigrate to Israel since the approval of MFN status for Romania. Month-to-month figures are erratic, but the overall trend is downward. Surprisingly, the projected figure for 1977 departures is significantly lower than the 1974 figure of 3,700—when MFN was not in effect. The trend can be seen more clearly in the following statistics:

Permitted Romanian emigration to Israel—Arrivals in Israel, 1973–77

1973	3,700
1974	3,700
1975	2,140
1976	2,035
1977 (projected)	1,150

Many families remain divided, either because they have been turned down for an immigration visa or for fear of harassment. Threats of job loss, demotion, confiscation of property, mail censorship, loss of telephone privileges or military induction prevent many Romanian Jews from even expressing their desire to emigrate to be with their loved ones.

In addition, innumerable obstacles have been built into the application process that discourage even the most persevering. They must first undergo an intimidating preapplication process which is designed to screen out those who are not even eligible to apply. An individual may either receive permission to complete an application; be denied permission for any number of reasons, or receive no reply at all. An applicant may be confronted by official committees which probe into his background and try and persuade him from leaving. Adding to the confusion, the applicant is then required to produce countless documents, perhaps including assurances that all his taxes and utility bills are paid. Costs are prohibitive, and the waiting process is uncertain. The Kafka-like absurdity of the process is a significant deterrent to free emigration.

Romania is one of the 33 countries which signed the Helsinki agreement, which in Basket Three sets forth certain international standards concerning family reunification and other human rights. In light of the Helsinki accords and the MFN agreement, I feel that we must set forth publicly Romania's record on Jewish immigration. It is my hope that within the coming year Romania will liberalize its inordinately stringent immigration policy.

THE ECONOMIC OUTLOOK FOR THE NATION

(Mr. MOORHEAD of Pennsylvania asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, the Subcommittee on Economic Stabilization of the Committee on Banking, Finance and Urban Affairs, of which I am chairman, has as one of its primary tasks the continuous monitoring of the Nation's serious and perplexing inflation problem. The Members of this House need no reminder of the importance of the problem. Public opinion polls consistently place the rise of prices at or near the top of the concerns of our people. Perhaps equally important, there is considerable doubt that we can have the kind of sustained, confident expansion of private investment that is needed for a return to reasonably full employment as long as the inflation we have had in recent years persists. Among its many other costs, inflation adjustment in numerous Government programs—social security, veterans benefits, pay of Government workers and others—is "eating up" billions of dollars a year of Government outlays that could be used for better purposes, including tax reduction.

Today I would like to give the House a report on the inflation situation and outlook. As will be seen, the report contains news that is both good and not so good. But while the situation has a certain baffling stubbornness about it—while significant further reduction of the inflation rate is exceptionally difficult—the picture, I am glad to say, is by no means alarming.

Let me begin with the good news.

The first thing to be said is that there is no sign, no significant danger, of a return to the distressing double-digit inflation of 1973–74. In hindsight, we can now see that that period was characterized by a most unusual combination of forces, several of them international and beyond the control of public policy or private decision in the United States. A quick rundown of some of these factors will serve as a reminder: The quadrupling of world oil prices; a series of poor crops at home and abroad; a simultaneous boom in the industrial countries, associated with an almost globally excessive expansion of money supplies that pulled up the prices of virtually all internationally traded raw materials; the aftermath of the necessary and unavoidable devaluation of the dollar's international exchange rate, which increased the prices of imports and added to an already high demand for many of our agricultural and nonagricultural exports. These forces, incidentally, rendered our now-unlamented experiment in wage and price controls completely unworkable.

Today the picture is much different.

With few exceptions, agricultural supplies are ample. Our own huge crops have produced price declines in the commodity markets that have been painful for some farmers but signal good news for consumers for many months to come. Internationally, the worst is over in coffee and a glut rather than a shortage characterizes the sugar situation. We cannot expect food prices on average to decline, given the nonagricultural factors at work that give an upward bias to the price of finished foods to the consumer; but we need not fear another explosion of food prices as a result of events on the supply side.

The economies of the other industrial economies are characterized by sluggishness rather than boom. Nearly all are showing some growth and nothing approaching a world recession is on the horizon, but exuberance is lacking everywhere—from the relatively healthy countries like Japan and Germany to the troubled ones like Britain and Italy. This situation creates serious problems, chiefly high unemployment almost everywhere; but it does mean that the United States is unlikely to suffer from "transmitted inflation" from the rest of the world.

This picture of nonexuberant growth in the industrial countries shows up strikingly in the markets for nonagricultural raw materials. All of the commodity indexes are well below their peaks and some are lower than at this time a year ago. Excess supplies and weak demand have caused notable price declines in some items, like copper; in the case of others like tin and natural rubber, the period of soaring prices has given way to stability or moderate decline.

Thanks mainly to our huge trade deficit, which in turn is a consequence entirely of our still-insatiable demand for imported oil, the dollar's exchange rate has declined recently. But the decline has been chiefly against the Japanese yen and the cluster of European currencies tied to the German mark. It is proper that the mark and yen appreciate, given the German and Japanese trade and balance-of-payments surpluses. Our trade is much broader than just with Japan and the nations associated with the European currency "snake." Our dollar has risen, for example, against the Canadian dollar. Against the basket of currencies contained in the International Monetary Fund's new standard of value, the special drawing right or SDR, the decline of the dollar since its peak earlier this year has been less than 2.5 percent, not enough to have a significantly inflationary influence at home.

Last on this list, the world oil price is now at a stage that closely approximates stability though of course stability at a high level that is maintained only by the effective working of an international cartel. Barring a new Middle East war, there is no reason to expect another violent increase in oil prices. Recent statements at the OPEC meeting in Stockholm by the ministers representing not only Saudi Arabia but also Iran were reassuring on that point. Oil prices may rise a little further next year, but we do not face another quantum jump.

Also in the category of good news, I believe it is right to list monetary and fiscal policy in the United States. With a prospective budget deficit of about $60 billion in the new fiscal year and with the money supply growing by upward of 6 percent on the narrow or M1 basis and close to 10 percent on the broader or M2 basis, neither fiscal nor monetary policy can be characterized as strongly anti-inflationary. But neither should they be, with unemployment still at 7 percent and the economy operating well below its capacity potential. Significantly tighter macroeconomic demand policies are not the right cure for our present residual inflation.

More important is the fact that in both cases we have now built in very significant safeguards against the kind of inflationary excess that sometimes characterized the past and which contributed to the distressing experience of the late 1960s and earlier in this decade. In the case of the budget, we have the effective new system of congressional control against runaway spending, and we obviously have a cautious President. In Federal Reserve monetary policy we now have the system of periodically announced targets for growth in the monetary aggregates—again thanks to Congress—that should prevent the almost mindless bursts of money growth that could occur under previous procedures. The rate of money growth in the past few months is worrisome, but I believe the Federal Reserve can be trusted to bring this growth back under control.

Monetary and fiscal policies, it seems fair to say, are not now adding a significant, independent inflationary thrust of their own despite the seemingly large budget deficit. A better description is that they are "accommodating" the present degree of inflation, which has its roots elsewhere. That is, monetary and fiscal policies are permitting real output to continue to grow and be purchased despite higher prices. If they turned more vigorously anti-inflationary, the result—according to numerous studies—would be less output and more unemployment with only a modest and delayed payoff on the inflation front.

I should mention also several other aspects of Government policy, which have been explored by our subcommittee. In the case of possible new international commodity agreements, for example, the administration has assured us that none would be signed by the United States unless it had a significant potential for averting inflation at home. While the present administration is more sympathetic than its predecessor to the concept of such agreements, they are not being viewed as a disguised means of giving foreign aid to the less-developed countries through higher commodity prices. Few agreements are likely to be negotiated in any event, but where they are, a major element will be accumulation of supplies as a buffer against sharp future price increases at times of booming world demand or short supply.

Our foreign trade policy also has inflation very much in mind. While import restraints have been imposed upon a few products, notably shoes and color television sets, Ambassador Strauss, the President's top trade official, has testified persuasively before us that the remedies chosen for those situations of clear damage to domestic producers were the least inflationary of the alternatives available. A successful outcome of the trade negotiations in Geneva, by lowering our tariffs further along with those of other countries, will enable imports to play a continuing and improved role as a competitive force in domestic markets.

All of these factors add up, I believe, to a convincing case that accelerating inflation is not now a serious danger.

While we must view economists' forecasts of inflation with extra caution, in light of their poor record in recent years, I know of no forecast that envisages an early return to double-digit inflation. Some of the projections estimate that inflation next year will be a little worse than in 1977 and some see improvement; the range of estimates of the Congressional Budget Office, to cite one respectable example, suggests that the odds favor a somewhat lower inflation rate next year than the current 6 to 7 percent. In any event, disaster is not lurking around the corner.

What about the bad news?

The most important bad news is quite simply the continuation of the inflation at its present rate of at least 6 percent. It is better than 12 or 15 percent, but it is hardly comforting. In measuring compound interest, bankers and bond dealers use the familiar "rule of 72," which says that an investment with a compounded interest yield of 7.2 percent will double in value in 10 years. By the same token, an inflation of 7.2 percent a year will cut the value of the dollar in half—that is, will double the price level—in 10 years. We are not far below that disturbing threshold, and our people know this and act upon their awareness. In acting, through such things as cost-of-living escalators in wage contracts, they help to perpetuate the inflation—a well-recognized phenomenon.

There are several forces at work, apart from escalators, that are continuing to exert upward pressures on the price level.

Energy. I fully accept the desirability, incorporated in the President's energy plan, of somewhat higher prices for energy, particularly oil and natural gas, as part of the effort to reduce consumption and increase energy efficiency. But the President's plan, taken by itself, will add at least one-half of 1 percent to the inflation rate in each of the coming years, possibly more.

Payroll taxes. Social security taxes on the employer now amount to about 30 cents for each hour worked, and they have risen steadily. The President's plan for closing the social security financing gap would add significantly further to the employer share of the tax, with inevitable consequences for employment costs and hence prices. I have commented on this elsewhere and will not go into detail now, but there is room for improvement in this area from the inflation point of view. In addition, we may face a significant increase—beyond that enacted last year—in the payroll tax for unemployment, compensation, a matter on which I hope to comment further later and which may require legislation.

Government regulation. We are obviously not going to retreat in our basic objective of cleaner air and water, safer products, and safer and more healthy working conditions. But there is no escaping that all of these improvements add to costs and hence prices, even though the exact amount cannot be quantified. One important function of the Council on Wage and Price Stability, whose life would be extended under legislation approved by our subcommittee and the full Banking Committee and soon to come before the House, is to make sure that Government decisions in these and related areas take into account the inflation consequences.

Finally, we must recognize that the rise in the price level will continue to reflect, as it always has, any excess of average wage and other labor cost increases over average improvements in productivity. With wages now rising about 8 percent a year and productivity gaining by 2 to 3 percent, the resulting gap is precisely in line with our "underlying" inflation rate of 5 to 6 percent. The figures are stark, simple—and true.

I am not criticizing the pace of wage increases. In a very real sense they are a "catchup" to prior price increases, from the time when world forces were pulling up the price level. The real standard of living of the average worker has improved a little in the past 2 years, but by some measures it is still below what it was in 1972.

But if the rate of wage increase can be understood and not blamed, the fact

remains that we cannot get inflation much lower as long as wages rise at their present rate. How to get this figure reduced is probably the most baffling aspect of the entire inflation problem; suffice it to say here that there is no merit whatever in trying to do so through mass unemployment, which results not only in human suffering but in lost output for the society as a whole.

That, then Mr. Speaker, is the current inflation picture. It is not alarming, but there is little reason to be optimistic that we can achieve the President's target of a reduction of 2 percentage points in the inflation rate by 1980. For the present purposes of the House, the important thing is to weigh the inflation consequences of each action we take, small and large. For if we can gradually tame this monster, we shall find that a "virtuous circle"—a lower rate of inflation in one year helping to bring a still-lower rate in the following year—can work just as effectively as the "vicious circle" with which we are all too familiar.

NEW BOOK ON TET OFFENSIVE SHOWS SHAMEFUL BEHAVIOR OF THE PRESS

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, John P. Roche wrote in the Washington Star on Wednesday, July 27, 1977, about a possibly deliberate effort on the part of the media to make United States and Vietnam forces appear incompetent and to glorify the North Vietnam offensive at the time of Tet. It is strong reading but reading that should not be overlooked. Many people have wondered about the way in which the Tet offensive was reported. It represented a major effort by North Vietnam forces and many students of warfare felt it achieved a measure of success for a limited time, but the important fact is it failed in all its major objectives. Mr. Roche's diagnosis is quite interesting. I submit it for printing in the RECORD:

NEW BOOK ON TET OFFENSIVE SHOWS SHAMEFUL BEHAVIOR OF THE PRESS

(By John P. Roche)

After reading Peter Braestrup's Big Story: How the American Press and Television Interpreted the Crisis of Tet 1968 in Vietnam and Washington, I feel like the family of the Californian accidentally lynched in 1854. What do you say when the vigilantes come by, take off their hats, and say, "Sorry about that. We just got the wrong man—nothing personal"? I also feel spiritually drained. Braestrup's meticulously accurate study of how the American media handled the January 1968 Tet offensive forced me to relive three of the worst months of my life, January-March 1968. There is a good psychic sense in the Irish proverb, "Do not discuss rope in the house of the hanged."

January 1968 was a horrendous month for the president of the United States. On the 20th the North Vietnamese besieged Khe Sanh, a major blocking post held by U.S. Marines and ARVN Rangers in Quang Tri province just south of the Demilitarized Zone. The garrison was vastly outnumbered and people in the government and out began meditating on the possibility of an American Dien Bien Phu.

Almost simultaneously the North Koreans seized the intelligence ship "Pueblo" on the high seas and commando raiders almost reached the "Blue House" (the South Korean White House), prepared to blow it sky high. Did this indicate the Asian Communists were opening a second front? Or was it just a bluff to obtain the withdrawal of crack ROK divisions from Vietnam? Were the Soviets in the act?

President Johnson and his aides were mediating on these matters when seemingly the roof fell in. In the early morning hours of Tuesday, Jan. 30, in Saigon (early afternoon in Washington), the Vietcong hit various locations in the capital city and full-scale attacks were launched on the other major cities of South Vietnam. Hanoi had recommended, and Saigon accepted (despite American military warnings), a week's truce to celebrate the Tet holiday, so half the South Vietnamese Army was on leave when General Giap struck. While initially the assaults on Danang and Hue were the most substantial, interest world-wide focused on the battle for the American Embassy.

From the coverage you might have thought a whole North Vietnamese division was emplaced around the Chancery, and early reports indicated the VC had penetrated the building and held three floors. Curiously this (false) news seemed to overjoy leading elements of the Washington press corps—it just proved that LBJ was lying again when he talked of improved security. This attitude led even the tight-lipped Dean Rusk to ask some journalists which side they were on.

Actually a suicide squad of about 20 VC sappers hit the embassy, raised some hell, never penetrated the fortress-like building, and got killed. But it was a media event. I came close to committing homicide when I invited a leading Washington newsman who was trumpeting the VC accomplishment at the embassy. "Look," I said, "I'll put you on the phone to Arch Calhoun (the political officer) in his embassy office, which you and your pals have the VC occupying." He told me it was the kind of set-up that we could easily rig—how would he know whether Calhoun was actually in his office?

Enough therapy, Roche—moreover it's no fun to say, 'I told you so," when you cannot resurrect the dead. Suffice it that Braestrup's mordant microanalysis fully justifies Dean Rusk's query. The American media virtually single-handed turned a great victory for American and South Vietnamese troops into a demoralizing defeat. Neither Rusk nor I believe in the Soviet notion of "objective guilt"—we never wanted the journalists jailed as accomplices of Hanoi; in subjective terms that was nonsense. But there is a difference between punishment and exposure of incompetence, bias or both.

Thus, as Braestrup himself a participant overwhelmingly demonstrates, the American press—with a few outstanding exceptions—could not have done a better job of undermining the American people's commitment to the defense of the South Vietnamese had they been on Hanoi's payroll. For example, I got early information about the brutal North Vietnamese massacres at Hue which, unlike My Lai, were not spontaneous outbursts of brutality, but thoroughly researched and planned. They came with lists, broke down doors, systematically seized teachers, agronomists, civil servants and other civilians, and disposed of them KGB-style.

We found the mass graves and tried to stimulate press coverage and pictures. Except for USIS photos, which by law could not be distributed in the United States, the execution pits went unphotographed for too long. After all, the dead were Vietnamese not American. This Pavlovian ethnocentrism, as Braestrup Shows, dominated the coverage of the whole Tet offensive. It was a shameful episode in the annals of the American media.

PERSONAL EXPLANATION

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, I was obliged to be in Illinois earlier today, and missed several rollcalls.

Had I been present, I would have voted "aye" on rollcall No. 488 to adopt H.R. 731 for consideration of the Department of Energy conference report. I would have voted "no" on rollcall No. 489, the motion to commit the conference report. I would have voted "aye" on rollcall No. 490, the adoption of the conference report.

I would have voted "aye" on rollcall No. 491, pertaining to the insulation program. I would have voted "aye" on rollcall No. 492, pertaining to the Department of Transportation study. I would have voted "aye" on rollcall No. 493, pertaining to bicycles.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. EDWARDS of Oklahoma) and to revise and extend their remarks and include extraneous matter:)

Mrs. FENWICK, for 10 minutes, today.
Mr. WHALEN, for 10 minutes, today.
Mr. STEERS, for 5 minutes, today.
Mr. KEMP, for 5 minutes, today.

(The following Members (at the request of Mr. TUCKER) to revise and extend their remarks and include extraneous matter:)

Mr. RODINO, for 5 minutes, today.
Mr. SCHEUER, for 5 minutes, today.
Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. FLOOD, for 5 minutes, today.
Mr. SIKES, for 5 minutes, today.
Mrs. SPELLMAN, for 5 minutes, today.
Mr. ROSENTHAL, for 5 minutes, today.
Mr. PEPPER, for 5 minutes, today.
Mr. KOCH, for 30 minutes, on August 5.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. EDWARDS of Oklahoma) and to include extraneous matter:)

Mr. FINDLEY.
Mr. MARTIN in two instances.
Mr. LATTA.
Mr. RHODES.
Mr. KASTEN in two instances.
Mr. MCKINNEY.
Mr. WHALEN in two instances.
Mr. MCCLORY in two instances.
Mr. ASHBROOK in two instances.
Mr. ARCHER in two instances.
Mr. DORNAN.
Mr. CARTER in three instances.
Mr. DICKINSON.

(The following Members (at the request of Mr. TUCKER) and to include extraneous matter:)

Mr. LEVITAS.
Mr. MCDONALD in five instances.
Mr. BRECKINRIDGE in two instances.
Mr. OBERSTAR.
Mr. SCHEUER.
Mr. GONZALEZ in three instances.
Mr. ANDERSON of California in three instances.
Mr. PANETTA in two instances.
Mr. JOHNSON of California.
Mr. YOUNG of Missouri.
Mr. PATTISON of New York.
Mr. TEAGUE in two instances.
Mrs. SCHROEDER.
Mr. BRINKLEY.
Mr. CORNWELL.
Mr. LEHMAN.
Mr. BEARD of Rhode Island.
Mr. MURPHY of Illinois.
Mr. CHARLES H. WILSON of California.
Mr. LEGGETT.
Mr. LEDERER.
Mr. MCCORMACK.
Mr. FARY.
Mr. WEISS.
Mr. WOLFF.
Mr. KOCH in 10 instances.
Mr. EARLY.
Mr. RICHMOND.
Mr. JOHN L. BURTON.
Mr. DOWNEY.
Mr. MILLER of California.
Mr. DRINAN.
Mr. AMBRO.
Mr. MOORHEAD of Pennsylvania.
Mr. HARKIN.
Mr. ZABLOCKI in two instances.
Mr. SIMON.
Mr. OTTINGER.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 1935. An act to amend Public Law 95–18, providing for emergency drought relief measures; to the Committee on Interior and Insular Affairs.

SENATE ENROLLED BILL AND JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled bill and a joint resolution of the Senate of the following titles:

S. 826. An act to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes; and

S.J. Res. 79. Joint resolution to amend the Federal Home Loan Bank Act.

ADJOURNMENT

Mr. TUCKER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 9 o'clock and 1 minute p.m.), under its previous order, the House adjourned until tomorrow, Wednesday, August 3, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2058. A letter from the Secretary of Agriculture, transmitting a report on studies to determine the reasons for extensive loss of livestock sustained while being transported in interstate commerce for commercial purposes, pursuant to section 809(b) of the Agricultural Act of 1970, as amended (87 Stat. 237); to the Committee on Agriculture.

2059. A letter from the Comptroller General of the United States, transmitting a report that the hiring limitation imposed on the Forest Service, U.S. Department of Agriculture, will preclude the obligation of money allocated to certain Forest Service programs prior to the end of fiscal year 1977, constituting a rescission of budget authority in one instance and deferrals of budget authority in three instances, none of which have been reported to the Congress by the President, pursuant to section 1015(a) of Public Law 93–344 (H. Doc. No. 201); to the Committee on Appropriations and ordered to be printed.

2060. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of various construction projects proposed to be undertaken by the Air Force Reserve, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

2061. A letter from the President and Chairman, Export-Import Bank of the United States, transmitting a report on the export expansion facility program for the quarter ended June 30, 1977, pursuant to Public Law 90–390; to the Committee on Banking, Finance and Urban Affairs.

2062. A letter from the Acting Director, National Institute of Education, Department of Health, Education, and Welfare, transmitting the first of a series of six reports on compensatory education programs, pursuant to section 821(c) of the Education Amendments of 1974, as amended (90 Stat. 2235); to the Committee on Education and Labor.

2063. A letter from the Secretary of the Treasury, transmitting the fifth quarterly report on antirecession fiscal assistance to State and local governments, pursuant to section 213 of the Public Works Employment Act of 1976, as amended; to the Committee on Government Operations.

2064. A letter from the Secretary of the Interior, transmitting notice of the resignation of the Government Comptroller for Guam, pursuant to section 9–A(a) of the act of August 1, 1950, as amended (82 Stat. 845; 48 U.S.C. 1422d); to the Committee on Interior and Insular Affairs.

2065. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a quarterly report on the programing and obligation of international narcotics control funds as of June 30, 1977, pursuant to section 481(b)(1) of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

2066. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a report on a study of methods through which U.S. narcotics control programs in foreign countries might be placed under the auspices of international or regional organizations, pursuant to section 481(c)(2) of the Foreign Assistance Act of 1961, as amended (90 Stat. 764); to the Committee on International Relations.

2067. A letter from the Acting Director, Defense Security Assistance Agency, withdrawing the notice of the proposed sale of certain defense articles to Iran (Transmittal No. 77–46), previously submitted pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2068. A letter from the Administrator, U.S. Environmental Protection Agency, transmitting the Agency's final report on resource recovery and the reduction of solid waste generation, pursuant to former section 205(a) of the Solid Waste Disposal Act, as amended; to the Committee on Interstate and Foreign Commerce.

2069. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders suspending deportation under the authority of section 244(a)(1) of the Immigration and Nationality Act, together with a list of the persons involved, pursuant to section 244(c) of the act (66 Stat. 214, 76 Stat. 1247); to the Committee on the Judiciary.

2070. A letter from the Chairman, National Transportation Safety Board, transmitting a draft of proposed legislation to amend the Independent Safety Board Act of 1974, as amended, to authorize additional appropriations; to the Committee on Public Works and Transportation.

2071. A letter from the Director, National Science Foundation, transmitting the analytical section of the report on Federal support to universities, colleges, and selected nonprofit institutions during fiscal year 1975, pursuant to section 3(a)(7) of the National Science Foundation Act, as amended (82 Stat. 360); to the Committee on Science and Technology.

2072. A letter from the Comptroller General of the United States, transmitting a report on the Department of Agriculture's practice of providing free cotton classing and tobacco grading services (CED–77–105, August 2, 1977); jointly, to the Committees on Government Operations, and Agriculture.

2073. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness of the Civil Service Commission's financial disclosure system for high-level executive officials (FPCD–77–59, August 1, 1977); jointly, to the Committees on Government Operations, the Judiciary, and Post Office and Civil Service.

2074. A letter from the Comptroller General of the United States, transmitting a report on the need for legislation to improve the Department of Health, Education, and Welfare's program for reducing erroneous welfare payments (HRD–76–164, August 1, 1977); jointly, to the Committees on Government Operations, and Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. REUSS. Committee on Banking, Finance and Urban Affairs. H.R. 8094. A bill to promote the accountability of the Federal Reserve System; with amendment (Rept. No. 95–559). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BEDELL (for himself, Mr. THONE, and Mr. CORNWELL):

H.R. 8685. A bill to require that all reports concerning certain sales of meat and meat food products meet standards set by the

Secretary of Agriculture concerning accuracy and completeness; to the Committee on Agriculture.

By Mr. BRECKINRIDGE:

H.R. 8686. A bill to establish the Office of Congressional Legal Counsel; jointly, to the Committees on House Administration, the Judiciary, and Rules.

By Mr. CARTER:

H.R. 8687. A bill to encourage the States to establish cost and quality standards for hospitals and to contain inflationary rises in hospital costs, with transitional federal system of hospital cost containments to be applied in the absence of State action for that purpose; to provide for coordination of hospital budget programs with health planning and peer review activities to impose limits on hospital capital expenditures; and for other purposes; jointly, to the Committees on Interstate and Foreign Commerce, and Ways and Means.

By Mr. DANIELSON:

H.R. 8688. A bill to provide that certain annuity payments made pursuant to the Civil Service Retirement Act shall be fixed at the nearest penny; to the Committee on Post Office and Civil Service.

By Mrs. FENWICK (for herself, Mr. BEARD of Rhode Island, Mr. DODD, Mr. EILBERG, Mr. VENTO, Mr. SIMON, Mr. LAGOMARSINO, Mr. HOLLENBECK, Mr. HARRINGTON, Mr. MITCHELL of Maryland, Mr. STEERS, Mr. HAWKINS, Mr. DELLUMS, Mr. EDWARDS of California, Mr. MINETA, Mr. CARR, Mr. RODINO, Mr. DANIELSON, Mr. MAGUIRE, and Mr. MCCLOSKEY):

H.R. 8689. A bill to provide equitable, comprehensive and exclusive benefits to: (a) persons who are disabled as a result of employment-related diseases caused by the inhalation or ingestion of asbestos, and/or the inhalation of asbestos coupled with the inhalation of cigarette tobacco smoke, (b) members of such person's household, and (c) the surviving dependents of such persons whose death was due to such disease; to the Committee on Education and Labor.

By Mr. JACOBS:

H.R. 8690. A bill to amend title 18 of the United States Code, to provide for rewards for information leading to the apprehension and conviction of certain kidnapers; to the Committee on the Judiciary.

By Mr. KOCH (for himself, Mr. CORMAN, Mr. GEPHARDT, Mr. GUYER, Mr. HAWKINS, Mr. JENRETTE, Mr. MAGUIRE, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mr. OBERSTAR, Mr. PANETTA, and Ms. SPELLMAN):

H.R. 8691. A bill to amend the Public Health Service Act to provide for the protection of the public health from unnecessary medical exposure to ionizing radiation; to the Committee on Interstate and Foreign Commerce.

By Mr. LEFANTE:

H.R. 8692. A bill entitled the "National Domestic Development Bank Act"; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LEVITAS (for himself, Mr. JONES of Oklahoma, Mr. MONTGOMERY, Mr. RISENHOOVER, Mr. BYRON, Mr. ERTEL, Mr. ABDNOR, Mr. ARCHER, Mr. BAFALIS, Mr. THONE, Mr. WALSH, Mr. YOUNG of Alaska, and Mr. YOUNG of Missouri):

H.R. 8693. A bill amending title 5 of the United States Code to improve agency rulemaking by expanding the opportunities for public participation, by creating procedures for congressional review of agency rules imposing certain sanctions, and by expanding judicial review, and for other purposes; jointly, to the Committees on the Judiciary, and Rules.

By Mr. LEVITAS (for himself, Mr. HAMILTON, Mr. RYAN, Mr. DICKS, Mr. ERTEL, Mr. YOUNG of Missouri, Mr. ABDNOR, Mr. ARCHER, Mr. BAFALIS, Mr. FINDLEY, Mr. JONES of Oklahoma, Mr. JONES of North Carolina, Mr. KASTEN, Mr. RISENHOOVER, Mr. SCHULZE, Mr. YOUNG of Alaska, Mr. BYRON, Mr. CUNNINGHAM, Mr. SLACK, Mr. SNYDER, Mr. STEED, Mr. SYMMS, Mr. THONE, Mr. WALSH, and Mr. FOWLER):

H.R. 8694. A bill amending title 5 of the United States Code to improve agency rulemaking by expanding the opportunities for public participation, by creating procedures for congressional review of agency rules, and by expanding judicial review, and for other purposes; jointly, to the Committees on the Judiciary, and Rules.

By Mr. LEVITAS (for himself, Mr. HOLLAND, Mr. JONES of Oklahoma, Mr. RISENHOOVER, Mr. BYRON, Mr. ERTEL, Mr. EVANS of Delaware, Mr. ABDNOR, Mr. BAFALIS, Mr. ERLENBORN, Mr. THONE, Mr. WALSH, Mr. YOUNG of Alaska, and Mr. YOUNG of Missouri):

H.R. 8695. A bill amending title 5 of the United States Code to improve agency rulemaking by expanding the opportunities for public participation, by creating procedures for congressional review of future agency rules, and by expanding judicial review, and for other purposes; jointly to the Committees on the Judiciary, and Rules.

By Mr. PICKLE:

H.R. 8696. A bill to amend the Internal Revenue Code of 1954 with respect to the tax treatment of an individual who receives a retroactive determination of eligibility for disability compensation from the Veterans' Administration; to the Committee on Ways and Means.

By Mr. QUILLEN:

H.R. 8697. A bill to provide for the payment of losses incurred as a result of the ban on the use of the chemical Tris in apparel, fabric, yarn or fiber and for other purposes; to the Committee on the Judiciary.

By Mr. ROBERTS (for himself, Mr. HAMMERSCHMIDT, Mr. TEAGUE, Mr. SATTERFIELD, Mr. MONTGOMERY, Mr. CARNEY, Mr. DANIELSON, Mr. BRINKLEY, Mr. MOTTL, Mr. HEFNER, Mr. WYLIE, Mr. HILLIS, Mr. ABDNOR, Mr. WALSH, Mr. GUYER, Mr. HANSEN, and Mr. SAWYER):

H.R. 8698. A bill to deny entitlement to veteran's benefits to certain persons who would otherwise become so entitled solely by virtue of the administrative upgrading under temporarily revised standards of less than honorable discharges for service during the Vietnam era, and for other purposes; to the Committee on Veterans' Affairs.

By Mrs. SMITH of Nebraska (for herself, Mr. MURPHY of Pennsylvania, Mr. SEBELIUS, Mrs. LLOYD of Tennessee, Mr. LOTT, Mr. ABDNOR, Mr. DUNCAN of Tennessee, Mr. NOLAN, Mr. GOODLING, Mr. EMERY, Mr. PATTISON of New York, Mr. BADILLO, and Mr. BAUCUS):

H.R. 8699. A bill to establish an Office of Rural Health within the Department of Health, Education and Welfare, and to assist in the development and demonstration of rural health care delivery models and components; to the Committee on Interstate and Foreign Commerce.

By Mrs. SPELLMAN:

H.R. 8700. A bill to amend chapter 83 of title 5, United States Code, to authorize the retirement of employees after 30 years of service; to the Committee on Post Office and Civil Service.

By Mr. TEAGUE (for himself, Mr. ROBERTS, Mr. HAMMERSCHMIDT, Mrs. HECKLER, Mr. MOTTL, Mr. HANNAFORD, Mr. ALLEN, Mr. HEFNER, Mr. WYLIE, Mr. WALSH, Mr. SATTERFIELD, Mr. MONTGOMERY, Mr. CARNEY, Mr. DANIELSON, Mr. BRINKLEY, Mr. BEARD of Rhode Island, Mr. HILLIS, Mr. ABDNOR, Mr. GUYER, Mr. HANSEN, and Mr. SAWYER):

H.R. 8701. A bill to amend title 38, United States Code, to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons, to make improvements in the educational assistance programs, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. WHALEN:

H.R. 8702. A bill to amend the Internal Revenue Code of 1954 to exclude from the gross income of an individual the first $5,000 received from civil service and Foreign Service retirement annuities; to the Committee on Ways and Means.

By Mr. YATRON (for himself, Mr. BAFALIS, Mr. MURPHY of Pennsylvania, Mr. GUYER, Mr. WINN, Mr. MOTTL, Mr. CHARLES WILSON of Texas, Mr. HUGHES, Mr. ERTEL, Mr. BURKE of Florida, Mr. LEVITAS, Mr. GOLDWATER, and Mr. BAUCUS):

H.R. 8703. A bill to amend the Immigration and Nationality Act to change certain criteria for determining whether an alien is excludable from admission to, or deportable from, the United States as a public charge and to provide that an alien may not be admitted to the United States unless a citizen of the United States enters into an enforceable agreement to provide support to such alien for a period of 5 years after admission; to the Committee on the Judiciary.

By Mr. BIAGGI:

H.R. 8704. A bill to amend the Social Security Act to strengthen and improve the program of Federal support for foster care of dependent children, to establish a program of Federal support to encourage adoptions of children with special needs, and for other purposes; to the Committee on Ways and Means.

By Mr. FOUNTAIN:

H.R. 8705. A bill to provide for the payment of losses incurred as a result of the ban on the use of the chemical Tris in apparel, fabric, yarn or fiber, and for other purposes; to the Committee on the Judiciary.

By Mr. LUNDINE:

H.R. 8706. A bill to amend title XVIII of the Social Security Act to include dental care, eye care, hearing aids, physical checkups, and foot care among the items and services for which payment may be made under the supplementary medical insurance program, and to provide safeguards against consumer abuse in the provision of these items and services; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. NEAL (for himself, Mr. MCCORMACK, Mr. JEFFORDS, Mr. ROSE, Mr. CARR, Mr. WON PAT, Mr. MURPHY of Pennsylvania, Mr. BROWN of California, Mr. KILDEE, Mr. WIRTH, Mr. MOAKLEY, Mr. KINDNESS, Mr. RICHMOND, Mr. LOTT, Mr. MITCHELL of New York, Mr. DE LUGO, Mr. HEFNER, Mr. CHARLES WILSON of Texas, Mr. CORRADA, Mr. BEDELL, Mr. ST GERMAIN, Mr. SIMON, Mr. OTTINGER, Mr. SEIBERLING, and Mr. BLANCHARD):

H.R. 8707. A bill to establish a Solar Energy Development Bank to provide long-term low-interest loans for the purchase and installation of solar energy equipment in commercial and residential buildings in the United States; to the Committee on Banking, Finance and Urban Affairs.

Br. Mr. TEAGUE:

H.R. 8708. A bill to amend the Atomic Energy Act of 1954, as amended, to expedite and stabilize the licensing and regulation of production and utilization facilities, by providing for the approval of sites and for standardization; and for other purposes; to the Committee on Interior and Insular Affairs.

By Mrs. BURKE of California (for herself, Mr. BENJAMIN and Mr. MARKEY):

H.R. 8709. A bill to provide for the establishment of multipurpose service centers for displaced homemakers, and for other pur-

poses; to the Committee on Education and Labor.

By Mr. FAUNTROY:

H.J. Res. 565. Joint Resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. GONZALEZ:

H.J. Res. 566. Joint resolution proposing an amendment to the Constitution of the United States to repeal the 25th amendment to that Constitution; to the Committee on the Judiciary.

By Mr. MINETA:

H.J. Res. 567. Joint resolution relating to the publication of economic and social statistics for Americans of East Asian or Pacific Island origin or descent; jointly, to the Committees on Education and Labor, Post Office and Civil Service.

By Mr. BUCHANAN (for himself, Mr. ARCHER, Mr. BAUCUS, Mr. BEILENSON, Mr. BEVILL, Mr. BLANCHARD, Mr. BRODHEAD, Mr. BURKE of Florida, Mr. PHILLIP BURTON, Mr. CAVANAUGH, Mr. COTTER, Mr. COUGHLIN, Mr. DRINAN, Mr. EDWARDS of California, Mr. EDWARDS of Oklahoma, Mr. EILBERG, Mr. ERTEL, Ms. FENWICK, Mr. FRASER, Mr. FRENZEL, Mr. FREY, Mr. GRADISON, Ms. HOLTZMAN, Mr. JEFFORDS, and Mr. KEMP):

H. Con. Res. 321. Concurrent resolution expressing the sense of Congress that the Soviet Union should comply with the Helsinki Final Act, the International Covenant on Civil and Political Rights, and the Soviet Constitution, with respect to all its citizens, and on that basis should allow Anatoly Shchransky to emigrate from the Soviet Union; to the Committee on International Relations.

By Mr. BUCHANAN (for himself, Mr. KOCH, Mr. LEDERER, Mr. LEHMAN, Mr. LENT, Mr. LEVITAS, Mr. LONG of Maryland, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. MOORE, Mr. MURPHY of Pennsylvania, Mr. OTTINGER, Mr. PEASE, Mr. PRICE, Mr. QUIE, Mr. RANGEL, Mr. RICHMOND, Mr. ROE, Mr. ROSENTHAL, Mr. SIMON, Mr. SOLARZ, Mr. STEERS, Mr. STOCKMAN, Mr. THOMPSON, and Mr. WAXMAN):

H. Con. Res. 322. Concurrent resolution expressing the sense of Congress that the Soviet Union should comply with the Helsinki Final Act, the International Covenant on Civil and Political Rights, and the Soviet Constitution, with respect to all its citizens, and on that basis should allow Anatoly Shchransky to emigrate from the Soviet Union; to the Committee on International Relations.

By Mr. BUCHANAN (for himself, Mr. BENJAMIN, Mr. CONTE, Mr. WEISS, Mr. CHARLES WILSON of Texas, and Mr. ZEFERETTI):

H. Con. Res. 323. Concurrent resolution expressing the sense of Congress that the Soviet Union should comply with the Helsinki Final Act, the International Covenant on Civil and Political Rights, and the Soviet Constitution, with respect to all its citizens, and on that basis should allow Anatoly Shchransky to emigrate from the Soviet Union; to the Committee on International Relations.

By Mr. BURGENER:

H. Res. 732. Resolution urging the expeditious completion of the Subcommittee on Communication's review of the Communications Act of 1934; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. GOLDWATER introduced a bill (H.R. 8710) for the relief of Jane McMahon Jantzen and Gilbert N. Hair; which was referred to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

170. By the SPEAKER: Petition of the Monroe County Legislature, N.Y., relative to changes in procedures and requirements relating to the resale of foreclosed homes; to the Committee on Banking, Finance and Urban Affairs.

171. Also, petition of the Boston Bar Association Council, Boston, Mass., relative to creation of an independent and separate bankruptcy court; to the Committee on the Judiciary.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 8444

By Mr. CUNNINGHAM:

On page 404, line 22, strike "20 percent" and insert in lieu thereof "100 percent", and on page 404, line 23, after the word "taxpayer", insert "for materials only".

EXTENSIONS OF REMARKS

SANFORD McDONNELL SPEAKS OF THE FUTURE ON AIR TRANSPORTATION

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. TEAGUE. Mr. Speaker, the most recent issue of Flying Colors the Braniff International travel magazine carried a guest editorial by Sanford H. McDonnell, president, McDonnell Douglas Corp., in which he speculated on air transportation for the future and how it will be brought about by the technology of the present.

I have had the distinct pleasure of knowing both Sanford McDonnell and his father; both of whom have contributed greatly to the future of this country through their company. I also had the pleasure of lunching with Mr. McDonnell recently while at the Paris Air Show when we discussed technology with respect to both air and space travel. Under leave to extend my remarks I wish to include his editorial:

GUEST EDITORIAL

(By Sanford N. McDonnell)

Imagine this. You go to the airport, pick up your ticket and check your luggage, and are directed to the gate where something new called a global rocket transport stands waiting. You find your seat, relax while the other 169 passengers come aboard, and when the scheduled departure time arrives you take off.

Forty-five minutes later, after a cup of coffee and a leisurely browse through the morning paper, you land at your destination. You're in Melbourne, Australia, on the other side of the world. Less than two hours has elapsed since you stepped out of your front door back home.

If this sounds like science fiction, it is. For now. But there's as much science as fiction in it: it could happen, and it's just possible that you might live to see it happen. Much of the technology needed for the development of global rocket transports exists today, and much of the planning needed to put such technology to work has already been done by America's aerospace industry.

It won't happen tomorrow, of course. These things do take time. But astonishing progress is routine for airplane manufacturers and the airlines they serve (remember that the Wright Brothers made their first flight just 74 years ago), and it is likely to remain so for a long time to come.

Certainly big changes lie ahead for the flying public. If some of those changes prove to be less startling than a 45-minute flight from the United States to Australia, they will nevertheless be dramatic—and important—in their own right.

One very important possibility is that new technology will eliminate the lingering economic and environmental problems of supersonic air travel. Most major aerospace firms are deeply involved in exploring the technology for an advanced supersonic transport, and as this work proceeds it is beginning to produce highly encouraging results.

At McDonnell Douglas Corporation, the example that I necessarily know best, engineers have been creating the concept of an advanced supersonic transport that would travel at 2.2 times the speed of sound—9 percent faster than the Anglo-French Concorde, the first SST to enter airline service. Our advanced SST would carry 273 passengers (the Concorde carries a maximum of 108), its range would be 4,500 nautical miles (versus 3,150 for Concorde), and it would be equipped with new, highly efficient engines capable of making it both economically competitive and acceptable to environmentalists.

That we will eventually be traveling in advanced SSTs now seems nearly inevitable.

Looking further ahead—to the next century, perhaps—we foresee the possibility of a "hypersonic" aircraft that would vastly outperform even the advanced SST.

The hypersonic transport concept developed at our company involves a plane with eight engines. Four turbojets would lift it off the ground, propel it through the sound barrier, and send it to three and a half times the speed of sound. Then four ramjets would take over, raising the speed still higher. This plane would be 475 feet long and capable of carrying 500 passengers. Though not quite as fast as a global rocket transport, it could fly at 4,000 miles per hour.

Sound incredible? Stick around. The incredible has been happening in commercial aviation for a long time now.

WAUCONDA, ILL., CELEBRATES ITS CENTENNIAL

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. McCLORY. Mr. Speaker, on August 18, 1977, residents of Wauconda in Lake County in my 13th Congressional District will begin a 4-day celebration observing the 100th anniversary of the organization of that community as a village.

Clearly those early residents who organized this village felt strongly that it was time to become a municipality be-

cause the vote was more than 2 to 1 nearly a century ago: 49 for incorporation to 24 against.

But the lovely name Wauconda, meaning "Spirit Water," already was affixed to the map of northeastern Illinois before the village's incorporation. In 1849, a township had been created. Several months later in 1850 the name Wauconda was selected for the township.

History tells us that a young man, a schoolteacher in the area, proposed it. He had been reading an Indian story in which the name Wauconda appeared. Further, local tradition held that a young Indian chief named Wauconda had been buried on the southern shore of Bangs Lake, named for Justus Bangs, a man from New England who built a log cabin on its shores and in 1836 became Wauconda's first settler.

Mr. Speaker, in 1849, the year Wauconda Township was created, the area that later became the village of Wauconda had about 200 people, 3 good stores, and 2 public houses. By July 1, 1975, its population was 5,700.

Wauconda, of course, has changed through the years. Yet continuity has been assured by descendants of some of its early families who have stayed on. For 3 hours Saturday afternoon, August 20, part of the Andrew Cook home on Main Street in Wauconda will be open for the centennial festivities. This home, built of brick made in Wauconda and the first brick house in the area, was begun sometime after 1840.

Now the Wauconda Township Historical Society is beginning to restore the Andrew Cook home with revenue sharing funds from the township. Still living in the village are two of my most cherished friends, Mrs. Avis Powers, now 96, a granddaughter of Andrew Cook, and Mrs. Mertie Cook, widow of Homer Cook, onetime Wauconda Township supervisor and a grandson of Andrew Cook. In Wauconda Township, Glenn and Daisy Bacon continue to farm the land his grandfather began farming in 1868. These are just a few examples of people who still make Wauconda their home—on or near the lands their forefathers settled.

One of the other early Wauconda families is that of the late Senator Ray Paddock, a long-time honored member of the Illinois State Senate. I succeeded Senator Paddock in that office upon his retirement in 1952 and then served in the State senate for 10 years preceding my election to the Congress in 1962. Senator Paddock's son, Jim Paddock, and daughter, Doris Paddock Wiemuth, together with their families, continue to make their homes in Wauconda.

Mr. Speaker, I look forward to joining the people of Wauconda on Sunday, August 21, for their centennial parade. I congratulate Mayor John Kuester, Hal Pohlman, and George Lincoln, cochairmen of the centennial celebration, and members of their steering committee, and all the many other individuals and organizations who have given time and effort to make the 100th anniversary of Wauconda's incorporation another joyful historic event in Illinois—and in the Nation.

UNSETTLING SETTLEMENTS

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. FINDLEY. Mr. Speaker, the West Bank of the Jordan River will undoubtedly be one of the most difficult issues to resolve at the Geneva Conference. Prime Minister Begin indicated during his recent visit to the United States that Israel will not set any preconditions to negotiations, yet he also made it quite clear that Israeli withdrawals from the West Bank will be extremely difficult. The Arab States have insisted with equal determination that Israel must withdraw to the pre-June 1967 borders.

Prime Minister Begin and the Arab leaders have expressed their great willingness to pursue negotiations in the near future. To maintain what appears to be the building momentum toward a Geneva Conference, it is important that the states involved stress potential areas of agreement and attempt to avoid emphasizing their differences.

Unfortunately, the recent announcement of the Israeli Government that it has decided to legalize three unauthorized settlements in the West Bank strengthens the impression that it is unwilling to forego preconditions to negotiations and risks unsettling a mood conducive to peace initiatives. I hope that these three settlements are evidence of Mr. Begin's need to conciliate his pronouncements as a politician with his policies as head of state rather than an indication of a deliberate effort to establish further settlements throughout the West Bank. The latter would undermine our hopes for peace.

I call to the attention of my colleagues the following editorials on the settlements in the West Bank:

[From the New York Times, July 28, 1977]

ISRAEL'S UNSETTLING SETTLEMENTS

In giving official sanction to three previously unauthorized settlements on the occupied West Bank of the Jordan River, Prime Minister Begin's new Israeli Government has surely complicated the search for a Middle East peace settlement. By making the move only hours after his return from a generally amicable meeting with President Carter, Mr. Begin has also complicated further his relations with the United States.

By itself, the granting of legal status to settlements, which had been founded by militant Israelis acting largely on their own, does little to alter the existing situation. No new settlements are thus created, and no additional settlers are being moved into Arab regions (although the development funds for which the three communities now become eligible will certainly make them more attractive as homes for other Israelis).

But the context and timing of the action are disturbing. The United States had wanted a sign from Israel that all territories occupied since 1967 were negotiable, including the West Bank. Attention ought now to have turned to the Arab governments to see how much peace and genuine security they are prepared to grant the Israelis for a return of occupied land. Secretary of State Vance will be touring the region next week to see how formal negotiations might be set in motion. This was hardly the time for Israel to appear to be asserting new territorial claims or to give the Arabs a new pretext for avoiding difficult questions.

Mr. Begin, of course, did not initiate the process of extending Jewish settlements into the West Bank. The previous Labor Government was deeply divided over the propriety and prudence of creating Jewish communities on territory controlled by Jordan from 1949 to 1967. Accordingly, the Labor coalition tried to block new settlements, but often only half-heartedly. It sought to appease politically significant groups that assert a strong claim to these Biblical lands while avoiding a final juridical resolution on their future status.

The new Israeli Government depends for its narrow majority on parties that are passionately convinced of the rectitude of West Bank annexation—as Mr. Begin himself seems to be. It is not surprising, therefore, that his Government would move in this direction. But the fate of negotiations may well depend on how far he means to go. It may be that his actions represent only a minimal and politically necessary concession to the militants on his right flank, "legalizing" some existing settlements to avoid creating new ones. If that is the case, the United States should be so informed, and perhaps even reassured. But if he intends a more massive settlement of Jews in disputed territory, he may well make real negotiation or a test of Arab flexibility impossible.

[From the Washington Past, July 28, 1977]

ISRAEL'S CHALLENGE TO CARTER

The Israeli Government's decision to legalize three previously illegal settlements on the West Bank is more than "deeply disappointing," as the State Department declared. It is reckless, provocative and indefensible. It amounts to a frontal assault on the American effort to arrange a settlement by inducing Israel to exchange war-won territory and a place for the Palestinians, for contractual acceptance by its Arab neighbors. Coming on the heels of Prime Minister Begin's warm reception in Washington, the decision conveys the unmistakable aura of sticking a thumb in Jimmy Carter's eye.

Mr. Begin's view that the West Bank is "liberated" territory, Israel's by holy scripture, and not occupied territory, is well known. It is also wholly unrealistic and incompatible with any serious effort to work out a lasting settlement in the Middle East. For the purposes of American diplomacy, it cannot be controlling. It is Mr. Begin's problem, religious and political, to solve as best he can. Last week in Washington he chose to muffle disagreements with the United States on this substantive issue and others. Mr. Carter did not press him, at least publicly. To the extent that Mr. Begin chose to mistake the President's discretion for consent, or weakness, that was a mistake. Legalization of three West Bank settlements and loud Israeli demands to plant more pose a challenge the Carter administration can no longer ignore.

Edward Sheehan, in an article on the opposite page today, suggests that Mr. Begin may wish to absorb the West Bank and, if the Arabs overly protest, to wage preemptive war. We do not subscribe to this scenario but it seems to us undeniable that the latest Israeli move adds plausibility to it. Certainly it puts the whole credibility of the administration's Mideast diplomacy on the line.

President Carter has been, we believe, amply attentive to Israel's legitimate security needs. He has offered Israel generous and effective alternatives to the permanent retention of territory. These include arms guarantees, interim security borders beyond the political borders, limitations on a Palestinian "homeland," relations of a new sort with its neighbors and, of course, American friendship and commitment. So the United States

does not have to apologize to Israel for asking it, in a negotiated peace put into effect over a period of years, to withdraw to something reasonably close to the 1967 lines.

Now that the Israelis have forced the issue, we are led to conclude that it is a good and necessary one to fight out with them. The time is right: It is early in both the Carter and Begin administrations and if either is serious about peace, this issue has to be resolved. Good feeling of the superficial and misleading sort achieved by Mr. Begin here last week is not merely worthless. It becomes positively perilous if it encourages Israel to proceed in ways that could fatally foreclose all hope for a comprehensive Arab-Israeli settlement.

SELFISH REASONS FOR OPPOSING INSTANT VOTER REGISTRATION

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. DORNAN. Mr. Speaker, I believe that most of my colleagues here today are aware of the potential for fraud which is inherent in the administration's instant voter registration scheme.

Representative STEVE SYMMS and I illustrated how easily false identification can be obtained when we purchased Virginia ID's in false names for a nominal amount of money. Representative HENRY HYDE—possibly in anticipation of such voter abuse—has introduced excellent legislation which would make it a Federal crime to obtain false identification. Many of our colleagues have agreed with him that the chances for abuse at the polling place and at the immigration office are almost limitless.

Now, I believe that the potential for abuse is sufficient reason for the Congress to reject the President's proposal for instant voter registration. We owe it to our constituents. They deserve to have their votes counted. They do not want—or deserve—to have them watered down by duplicate or fraudulent voting. "One man, one vote." That is what the law states. It does not state: "One honest man, one vote; one dishonest man, two votes." And yet, I fear that the latter will most likely result if this legislation is passed.

But there is another, less obvious and more selfish, reason why we as representatives of the people should oppose the administration's proposal. It is a selfish reason, I admit. But it is something about which we should rightly be selfish. It is the confidence of the people in us as their representatives. I am speaking not only of the confidence of our own constituents but of the entire American people in its Congress as a whole. In this, the era of the Watergate and Korean scandals, can we afford to be anything but selfish and jealous of the people's confidence and our reputations? Public confidence in the Congress is at an all-time low. Need I remind my colleagues that garbagemen have a higher rating in confidence polls than do we?

If we are to approve the instant voter registration scheme, do we not invite incredulity among our constituents as to the validity of our own elections? Our constituents are not dolts. They know how easily the provisions of the administration's plan can be abused. And, if knowing the ease with which fraudulent votes can be recorded, can they be confident in the outcome of an election? And if they are not confident in the outcome of the congressional elections, can they long respect the Congress and its laws?

Now, there may be a few Members who minimize or ignore the threat this legislation poses to the confidence of the people in their elected Representatives. But one need only turn to recent reports in the Washington Star to see how easily honored public servants of high standing can come into disrepute through irregularities at the polls. Even Presidents are not immune to the stigma of voting fraud perpetrated by others.

The Washington Star in last Sunday's edition, relates the story of Luis Salas who admits to certifying enough fictitious ballots to steal an election 29 years ago and start Lyndon Johnson on his path to the Presidency. The Washington Star article did not accuse Congressman Lyndon Johnson of having had a hand in the fraud but the glaring fact remains that his original election and subsequent elections are now placed under a cloud that can only impugn the respectability of every office he held.

It is just this point which we should keep in mind when we are called upon to vote on President Carter's proposal: It makes little difference if we condone fraudulent voting in our own favor, all it takes is one dishonest supporter to cast doubt on our own right to hold office.

If fraudulent voting was so easy to achieve 30 years ago with much more stringent controls, how easy will it be if same-day registration is established?

Before any of my colleagues decide to support the President's proposal, I ask them to read the Washington Star article and imagine that their names appear in the place of Coke Stevenson's.

TEXAN CLAIMS HE STOLE 1948 ELECTION FOR LBJ

(By James W. Mangan)

ALICE, TEX.—A former Texas voting official seeking "peace of mind" says he certified enough fictitious ballots to steal an election 29 years ago and start Lyndon Johnson on a path that led to the presidency.

The statement comes from Luis Salas, who was the election judge for Jim Wells County's notorious Box 13, which produced just enough votes in the 1948 Texas Democratic primary run-off to give Johnson the nomination, then tantamount to election, to the U.S. Senate.

"Johnson did not win that election; it was stolen for him. And I know exactly how it was done," said Salas, 76, who in '48 had absolute say over vote counts in his Mexican-American, South Texas precinct.

The controversy over that run-off election against ex-Gov. Coke Stevenson has been a subject of tantalizing conjecture for nearly three decades, ever since U.S. Supreme Court Justice Hugo Black halted an investigation, but the principals have been silent.

George B. Parr, the South Texas political boss whom Salas served for a decade, shot himself to death in April 1975. Johnson is dead and so is his opponent. Salas, retired from his railroad telegrapher's job, is among the few living persons with direct knowledge of the election.

Johnson's widow, Lady Bird, was informed of Salas' statements and said through a spokeswoman that she "knows no more about the details of the 1948 election other than that charges were made at the time, carried through several courts and finally to a justice at the Supreme Court."

The Associated Press interviewed Salas frequently during the last three years, but he only recently agreed to tell his full version of what happened. Salas said he decided to break his silence in quest of "peace of mind and to reveal to the people the corruption of politics."

Salas says now that he lied during an aborted investigation of the election in 1948, when he testified that the vote count was proper and above board. "I was just going along with my party," he says.

He said Parr ordered that 200-odd votes be added to Johnson's total from Box 13. Salas said he saw the fraudulent votes added in alphabetical order and then certified them as authentic on orders from Parr.

The AP interviewed everyone connected with the case who is still alive to corroborate Salas' story. One man who got a brief look at the Box 13 vote tally in the original investigation is former FBI agent T. Kellis Dibrell, who confirmed Salas' statement that the last 200 votes were in alphabetical order.

"It stuck out like a sore thumb," said Dibrell. "Also the last 202 names were made with the same colored ink, and in the same handwriting, whereas the earlier names in the poll list were written by different individuals and in different color links."

The final statewide count, including Box 13 votes, gave Johnson an 87-vote margin in a total tally approaching 1 million and earned him the tongue-in-cheek nickname, "Landslide Lyndon."

Texas Democrats were split in 1948. Johnson, then 39 and a congressman, represented "new" Democrats in his bid for the U.S. Senate. His primary opponent was Stevenson—60, three times Texas governor, never beaten and the candidate of the "old" wing of the party. They called him "Calculating Coke."

The vote in the July primary was Stevenson 477,077, Johnson 405,617. But a third candidate, George Petty, siphoned off enough votes to deny Stevenson a majority, forcing a runoff between Stevenson and Johnson on Aug. 28, 1948.

In the interim Johnson intensified his campaign. One of the places he went stumping was the hot, flat brush country of South Texas, George B. Parr country, where the Mexican-American vote seemed always to come, favoring Parr's candidate, in a bloc.

The power had passed to Parr from his father, Archie, a state senator who had sided with Mexican-Americans in a 1912 battle with Anglos over political control in Duval County. The younger Parr was known as the "Duke of Duval."

Salas said he was Parr's right-hand man in Jim Wells County from 1940 to 1950, but quit over Parr's failure to support a fellow Mexican-American who had been charged with murder.

"We had the law to ourselves there," Salas said. "It was a lawless son-of-a-bitch. We had iron control. If a man was opposed to us, we'd put him out of business. Parr was the godfather. He had life or death control.

"We could tell any election judge: 'Give us 80 percent of the vote, the other guy 20 percent.' We had it made in every election."

The night of the runoff, Jim Wells County's vote was wired to the Texas Election Bureau, the unofficial tabulating agency: Johnson 1,786, Stevenson 769.

Three days after the runoff, with Stevenson narrowly leading and the seesaw count nearly complete, Salas said, a meeting was called in Parr's office 10 miles from Alice. Salas said he met with George B. Parr; Lyn-

don Johnson; Ed Lloyd, a Jim Wells County Democratic Executive Committee member; and Bruce Ainsworth, an Alice city commissioner. Lloyd and Ainsworth, like Johnson and Parr, now are dead.

Salas told The AP:

"Lyndon Johnson said: 'If I can get 200 more votes, I've got it won.'

"Parr said to me in Spanish: 'We need to win this election. I want you to add those 200 votes.' I had already turned in my poll and tally sheets to Givens Parr, George's brother.

"I told Parr in Spanish: 'I don't give a damn if Johnson wins.'

"Parr then said: 'Well, for sure you're going to certify what we do.'

"I told him I would, because I didn't want anybody to think I'm not backing up my party. I said I would be with the party to the end. After Parr and I talked in Spanish, Parr told Johnson 200 votes would be added. When I left, Johnson knew we were going to take care of the situation."

Salas said he saw two men add the names to the list of voters, about 9 o'clock at night, in the Adams Building in Alice. He said the two were just following orders and he would not identify them.

The AP interview then produced this exchange:

Question. When you told Parr you would certify the votes, he said he would get someone else to actually add the names?

Answer. Yeah. And I actually saw them do it. I was right there when they added the names.

Q. Were all 200 names in the same handwriting?

A. Oh, yeah. They all came from the poll taxes, I mean, from the poll tax sheet.

Q. But some were dead?

A. No one was dead. They just didn't vote.

Q. So you voted them?

A. They voted them.

Q. You certified?

A. I certified. So did the Democratic county chairman. I kept my word to be loyal to my party.

Q. Had some of those names already voted?

A. No, they didn't vote in that election. They added 'em. They made a mistake of doing it alphabetically.

Q. They added them alphabetically, as though they had walked in to vote alphabetically?

A. Yeah, that's what I told George B., and he wouldn't listen to me. I said: "Look at the A, you add 10 or 12 names on that letter. Why don't you change it to the other, C or D or X, mix 'em up?" George said, "That's all right." George was stubborn. He would not listen to anybody. But it was stupid. They went to the poll tax list and got those names. For instance, on the A they got 10 or 12 names.

Q. People who had not voted?

A. That's right. They went on the B the same way, until they complete 200, and I told George, "That's wrong."

Q. While they were doing it you told him?

A. Yeah, and he said: "It's OK."

Q. They should have changed the handwriting?

A. How? Only two guys? How they going to change it? The lawyers spotted it right away, they sure did.

Six days after the runoff, with Stevenson still holding a narrow lead in the statewide count, a second telegram was sent, changing Jim Wells County's vote to: Johnson 1,988, Stevenson, 770.

Johnson gained 202 votes; Stevenson 1. They came from Box 13.

The next day, the official statewide vote canvass gave Johnson 494,191 and Stevenson 494,104.

Stevenson protested. Johnson said that if Stevenson had evidence, it was his duty to go to a grand jury. "I know that I did not buy anybody's vote," Johnson said.

Stevenson went to federal court in Fort Worth and, on Sept. 14, Judge T. Whitfield Davidson signed a temporary restraining order forbidding certification of Johnson as the Democratic nominee. The judge ordered an on-the-spot probe of voting in Jim Wells County.

---

201 YEARS LATER, AND 5 YEARS AFTER

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. PANETTA. Mr. Speaker, in 1976, when this Nation celebrated its bicentennial, our attention was focused on the events of those 200 years which helped to shape our national character. As we pass our 201st year, perhaps it is better to narrow our focus and measure the impact of our more recent history.

In a recent editorial, the Watsonville Register-Pajaronian examines the events of the last 5 years in the context of America's constant stuggle for self-improvement and our ability to learn from past mistakes. I believe the spirit of cautious optimism which this editorial reflects is shared by a large number of Americans throughout the country, and for this reason I would like to share it with my colleagues:

201 YEARS LATER, AND 5 YEARS AFTER

It's 201 years now—as we were amply reminded during last year's Bicentennial observances—since the Declaration of Independence was signed as the forerunner of the federal government by which the United States is glued together.

Centuries are hard for people to count, except as a concept, because so few of us experience more than a substantial fraction of one century. Years, we can cope with, understand, and sometimes marvel at.

For instance, can you believe it was really five years since Watergate began—a bungled burglary which in the end rocked the country and disgraced a president into resignation?

Why, just the other day Richard Nixon was back in our living room insisting he was guilty of no more than "mistakes of the heart."

Just the other day, the President's men, H. R. Haldeman and John Mitchell, were playing out their final scene before Judge John Sirica and then going to prison.

Just the other day, the Cubans were on television explaining why an order from their old CIA chum, E. Howard Hunt Jr., to break into the Democratic headquarters seemed perfectly reasonable.

The names, the faces, the excuses, the places—they are all so sharp and clear, so close to the surface of our lives. How could a full half decade have elapsed since we first made their acquaintance?

But wait—has it been only five years? That doesn't seem possible either.

We have had three Presidents, four vice presidents, six attorneys general and three FBI directors since the bungled burglary of June 17, 1972.

We have lost a war, survived a recession and celebrated, as of today, our 201st birthday in the interim.

We have seen ancient enmities erupt once more in the Middle East and on Cyprus, subsiding into sullen truces. We have hailed the rebirth of democracy in Greece, Spain, and Portugal, and condemned the rise of tyranny elsewhere.

The world has changed, and we have changed with it.

Even Watergate itself, physical symbol in Washington of our most searing scandal, is altered. In the rooms where the burglars prowled five years ago, scientists from the National Institute of Medicine now quietly ponder the future of American health care. Only a small plaque on the door commemorates the political crime of the century.

No matter. Long after the plaque and building have crumbled, the real legacy of Watergate will remain.

Because of Watergate, the presidency has been taken off the auction block. Sunshine laws have been enacted, aimed at opening the federal government to public inspection. Tough new ethics codes have been enacted.

Congress has reasserted its authority as a co-equal branch of government. The federal law enforcement and intelligence establishments have been reminded of the meaning of the Bill of Rights.

And the age of implied consent is over. "Because we say so" is no longer an acceptable answer when people ask why the government thinks a certain course of action to be wise.

The nerve endings of the body politic are still noticeably frayed. The Korean investigation drags on and whispers of "coverup" mount.

A deputy attorney general tries to invoke "executive privilege" to keep Congress from seeing a Justice Department memo criticizing President Carter's instant-voter-registration proposal. He is bludgeoned into submission by angry legislators.

A suggestion by Attorney General Griffin Bell that there is a distinction between "national defense" and "national security" as far as wiretapping is concerned provokes howls from senators who learned the hard way that "national security" can cover a multitude of sins.

We have renewed the social contract between the government and the governed, but the terms have been subtly altered. We read the fine print carefully now.

Watergate is behind us, yet part of us. It is ancient history and current events, a memory and an omen. The fifth anniversary is hardly an occasion to "celebrate." But it is well worth noting for the changes—changes for the better—that is has wrought in American politics.

ROCKY POMERANCE

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. LEHMAN. Mr. Speaker, I wish to pay tribute today to Chief Rocky Pomerance who has just retired from his post of Chief of Police in Miami Beach.

Rocky Pomerance leaves behind an impressive record in the field of law enforcement. Most memorable perhaps is his handling of the 1972 political party conventions. We all remember how we feared that either or both of those conventions would be a repetition of the 1968 Chicago convention. Thanks to Rocky, violence was kept to an absolute minimum. He went out himself among the demonstrators for the purpose of discussion and not confrontation. He was so successful, that he was asked to direct security at the 1976 Democratic Convention in New York City as well.

His belief in humane law enforcement set an example for the entire department as well as his peers among chiefs of police. He was so well respected in his field that he was elected president of the International Association of Chiefs of Police.

He has served on numerous commissions and has received countless awards in recognition of his superior service to the public. At the time of the announcement of his retirement, tributes appeared in all Miami's major newspapers.

Rocky Pomerance believed that violence is a byproduct of frustration. To reduce violence in our society, one had to deal with the frustration. It would be well for all law enforcement officers to take note of Rocky's philosophy. "Give people the opportunity to speak out, allow for a wider representation among the citizens, and you remove most of their frustrations."

Rocky Pomerance will be sorely missed, not only in Miami Beach, but throughout Dade County.

FINANCIAL STATEMENT

HON. JAMES G. MARTIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. MARTIN. Mr. Speaker, because it is desirable that people in public office be open about their financial affairs in order to retain the confidence of the public, I am herewith submitting a statement of my assets and liabilities as of the end of 1976 and as of the end of 1973, my first year in Congress.

It is my belief elected officials have an obligation not only to avoid conflicts of interest, but also to give such assurances as are possible to the public that such conflicts do not exist.

The statement follows:

Assets	Dec. 31, 1976	Dec. 31, 1973
Cash and bank accounts	$740	$2,048
Savings accounts	6,405	900
Automobiles and boats	10,500	7,500
Household, miscellaneous	10,000	8,000
Subtotal	27,645	18,448
Stocks, bonds (traded)	10,790	6,095
Stocks, bonds (untraded)	2,747	2,896
Subtotal/personal property	41,182	27,439
Real estate:		
Home in North Carolina	32,930	50,000
Home in Alexandria, Va	84,000	68,000
Subtotal/real estate	116,930	118,000
Retirement funds:		
TIAA (vested)	21,361	18,676
Insurance cash values	3,700	2,850
Subtotal	$25,061	$21,526
Total assets	183,173	166,965
Liabilities and net worth:		
Mortgage, North Carolina	------	18,314
Mortgage, Virginia	52,941	54,524
Personal loans, total	14,600	19,539
Total liabilities	67,541	92,377
Net worth	115,632	74,588
Liabilities and net worth	183,173	166,965

Mr. Speaker, also for the public record I am submitting at this point a listing of my income for 1973, my first year in Congress, and for the year just ended, 1976 along with my income tax payments for those 2 years.

	1976	1973
Congressional salary	$44,600	$38,722
Honoraria	500	450
Dividends, interest, rent	2,051	880
Subtotal (gross income)	47,151	40,052
Office expenses in excess of allowances	------	−2,564
Adjusted gross income	47,151	37,488
Net taxable income, Federal	26,901	25,641
Net taxable income, State	32,303	27,840
Federal taxes paid	6,479	5,755
State taxes paid	2,021	1,729
Total income tax paid	8,500	7,484

SACCO AND VANZETTI—A CASE OF BELATED JUSTICE

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. BIAGGI. Mr. Speaker, almost 50 years ago, the State of Massachusetts executed Nicola Sacco and Bartolomeo Vanzetti, following their conviction for robbery and murder. Practically since that very day, Italo-Americans have challenged the manner in which these two men were tried and convicted. It was charged that Sacco and Vanzetti were denied a fair trail by virtue of their being foreigners and political dissidents. Last week in a courageous and commendable act, Gov. Michael Dukakis of Massachusetts officially issued a proclamation clearing these two men of the charges.

This proclamation closes the door on one of the darkest episodes in the history of American jurisprudence. The proclamation confirms that these two men were victims of a travesty of justice, in a nation which prides itself on its system of due process. In reality, Sacco and Vanzetti were deprived of all their rights under the law and, in effect, were tried and convicted by a kangaroo court.

The action of the State of Massachusetts does a great deal to remove the stigma which affected the Italo-American community. Governor Dukakis, a Greek American, responded to the concerns which many immigrants have regarding their ability to get a fair trial in the United States.

A policy of selective justice for some is in total violation of the intent of our Constitution. We provide for liberty and justice for all in this Nation, and any wavering from this policy should be condemned and not repeated.

It is regrettable that it took almost 50 years to have this horrid injustice rectified. Yet rather than berating those who failed to act, let us commend the man who did, Governor Dukakis. In addition to issuing his proclamation, Governor Dukakis also set aside August 23, 1977, as a memorial to Sacco and Vanzetti.

A great nation achieves this status by admitting to and learning from its mistakes. Hopefully, the laws of this land will never again be so abused by those vested with the powers of enforcement and judicial action. The proclamation should be viewed as more than a symbolic gesture. It should be the catalyst upon which we, as a nation, reaffirm our commitment to insuring justice for all Americans irrespective of race, religion or ethnic background.

EIGHTIETH ANNIVERSARY OF ALIEF POST OFFICE

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. ARCHER. Mr. Speaker, quite often we who serve in the House of Representatives receive complaints about the way our constituents are treated by various agencies of the Federal Government, and certainly the U.S. Postal Service has come in for its share of criticism over the years.

That is why I would like to share the following editorial written by the president of the Alief Chamber of Commerce, Mr. Fred F. Warren, which described his community's deep appreciation for the service provided by their post office during its 80-year history:

EIGHTIETH ANNIVERSARY OF ALIEF POST OFFICE

Alief observes a significant anniversary this year, in the 80th birthday of the Alief, TX, Post Office.

The Post Office was named for Alief Ozella Magee. It was established in 1897. Mrs. Magee became the postmistress.

Prior to this date the town was known as Dairy, from which Dairy-Ashford Road gets its name.

The town had been platted in 1895. This is the area which all Aliefians today refer to, reverently, as "Old Alief".

There is much speculation about the future of the Alief Post Office. We sincerely hope the Post Office will be allowed to continue functioning and serving the people of this rapidly-growing area.

The Chamber of Commerce will do everything it can, working through our elected representatives in Washington to try to insure the permanency of the Alief Post Office.

At the present time there are 700 boxes in the Post Office. If space were available, this number could easily go to 2500 boxes.

We are proud of the service provided by the Alief Post Office Personnel and only wish they had adequate facilities to handle the constantly increasing flow of business.

Don't know how many Post Offices in the United States Postal Service are profit centers, certainly not many, judging by the deficits, and increased user costs, but we know the Alief Post Office returns a handsome profit to the Postal Service.

VIETNAM: WHAT HAS CHANGED?

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. McDONALD. Mr. Speaker, in spite of the United States leaving Vietnam, the fighting goes on. If our purpose was to "stop the war" and "stop the killing" as some Members of Congress would have had us believe, neither has stopped. And, interestingly enough, the self-immolation of Buddhist monks has not stopped either. Only this time, they are protesting against the Communists. The difference is that now, however, the networks and the New York Times are not covering these events as this is impossible in a Communist society. This all goes to prove that we stopped our support of South Vietnam for the wrong reasons. One could hope that certain policymakers and the media will someday admit their mistakes or their lack of pure motives, but, it is doubtful. The relevant articles from the Washington Star of July 29, 1977, and the London Daily Telegraph of June 30, 1977, follow:

[From the London Daily Telegraph, June 30, 1977]

MONKS TURN "DEATH BY FIRE" PROTEST AGAINST COMMUNISTS

(By Ian Ward in Manila)

Monks have been burning themselves alive again in what used to be South Vietnam, this time as a result of Communist persecution of Buddhists.

Now the Communists have attacked the seat of the Unified Buddhist Church in Saigon and arrested the entire top echelon Buddhist leadership.

Among those detained is Thich Tri Quang who—ironically enough—master-minded the South Vietnamese anti-Government Buddhist demonstrations in 1963.

These led to the overthrow and assassination of President Ngo Dinh Diem and set the Communists on the road to ultimate victory in 1975.

But according to reports and documents that have reached me in the past few days the Communists' anti-Buddhist drive makes moves against the Buddhist Church by any of the pro-American Governments, from Diem onwards, look very mild in comparison.

Yet with real persecution under way the Communist authorities have little to fear from world opinion. Their closed society ensures that by the time news filters out the impact is lost, and the Western world is now bored by Vietnam, any way.

THEN—AND NOW

In the closing stages of the Diem regime, the Western Press made much of flaming monks. Journalistic prizes were won on the strength of it. The world registered shock, horror, and sympathy.

But there has not been such publicity about numerous self-immolations that have taken place in Vietnam's southern zone in the past few weeks.

Among those arrested by political police on April 6 were Thich Huyen Quang, deputy head of the Institute of the Dharma, Thich Quang Do, secretary-general, and all five newly elected committee chairmen.

Coinciding with this there was a systematic drive against Buddist centres in the provinces. According to sources many monks and laymen have been imprisoned, sent to "re-education" centres, or held under house arrest.

Some pagodas have been converted into storehouses.

COLLECTIVE SUICIDE

A mass of self-immolation took place late in November, 1975, and after the reunification of Vietnam a Buddhist delegation was promised religious freedom by Pham Van Dong, Prime Minister.

But a new outbreak of self-immolations occurred in the Mekong Delta regions last November, culminating in the collective suicide of the entire staff of the Cau Tharm-tuong pagoda in Can-thoa city.

Then in January representatives at a national Buddhist congress began detailing what are reported as "hundreds of instances of persecution—and numerous outright murders."

The Government responded by trying to infiltrate delegations attending the congress. The Buddhist hierarchy then barred the Government infiltrators. Persecution followed.

Now the Communist authorities often speak of "political security" being endangered by "saffron-clad agents." Strange echoes from the the past when some Buddhists were once called "Communists in saffron robes".

It is difficult to discover how far Vietnamese Buddhists are being helped by brethren abroad.

But it is reported that some days ago Pham Van Dong received a letter from a top Buddhist leader outside the country saying that unless the persecution ceased, 127 monks and nuns would one by one begin committing suicide by self-immolation in various parts of the free world.

The letter is reported to have said that the 127 had already volunteered.

[From the the Washington Star, July 29, 1977]

GUERRILLAS BATTLE HANOI IN JUNGLES—VIET CONG TACTICS USED ON 'NAMELESS FRONT'

(By Henry S. Bradsher)

A widespread, well-organized resistance movement is fighting the Communist regime in southern Vietnam, the Vietnamese army newspaper has reported.

"In the fighting it is not clear where the front line is and where the rear area is," an army major wrote in his diary before he was killed by the anti-Communist guerrillas, "They call it 'the nameless front,'" he wrote.

"Many soldiers have fallen on that nameless front," the newspaper quoted from Maj. Nguyen Thanh's diary.

A recent series of articles on efforts to suppress the guerrilla challenge to the Hanoi government pictures a mirror-image of the methods that the Viet Cong used to use against the Saigon government. However, the strength of the resistance does not seem to be comparable to that attained by the Viet Cong.

The articles confirm reports from Vietnamese refugees that armed opposition to the winners of the long war has been both extensive and coordinated, rather than consisting of isolated bands in the jungles. The few U.S. officials still taking an interest in Vietnam have up to now tended to be skeptical of such reports.

The Army newspaper, Quan Doi Nhan Dan, said that those opposing the new regime "are carrying out the orders of the obstinant tyrannical elements who are still hiding out in the jungle, or of the CIA." It also referred to "the plots of the CIA."

Captured documents of one resistance member told of "preparing to meet brother Minh, who had returned from Thailand to give instructions" to the resistance. Minh communicated "many urgent tasks that must be performed during the coming period."

The articles did not elaborate on who Minh was or who sent the instructions from Thailand.

Despite these references, there was little attempt to blame the resistance on the United States or other outside influences. Instead, the problem of the Communist government was pictured as primarily one of "eliminating the consequences of the neocolonial war" and "mopping up enemy troop remnants."

The articles identified the resistance organization as the National Restoration Front.

The Vietnamese term *phuc quoc*, translated as "national restoration," has been used for a century or more by organizations fighting government control. Because of its generic nature, the name has been thought by Western analysts of Vietnamese affairs to cover a number of possibly separate or only loosely connected groups.

But the Quan Doi Nhan Dan articles discussed the front as one organization with numerous local units. The nature or relocation of a central command for all of southern Vietnam was not mentioned.

An American specialist in Vietnamese affairs who has studied the articles, Cecil Spurlock, said that the National Restoration Front seemed to bear a striking resemblance to the Viet Cong's National Liberation Front in organization and methods of operation.

Spurlock noted, for example, that the articles referred to a "national restoration women's central committee." This implied that the front has developed—or is working to develop—the same network of subsidiary organizations to rally specific interest groups to its support that the NLF used to have.

The sophisticated structure of the front was shown by references to forged identity papers, an apparent system of "safe houses" where resistance personnel could obtain shelter while traveling, disguises and "secret zones," and coordination with "a strange ship running without lights" off the Vietnamese coast.

One resistance member who was captured by government forces was quoted as referring to orders from "the upper echelon." This man was well supplied with money.

The articles, signed by To Phuong with the date April 1977, focused on the situation in three provinces in the new Communist reorganization of southern Vietnam. They lie inland from the South China Sea north of Dalat, an important highland city some 150 miles northeast of Saigon.

Most of the area is inhabited by hill tribes who have always resisted control by lowland Vietnamese. But the articles gave Vietnamese names in identifying guerrilla leaders.

After the Vietnam war ended in the capture of Saigon by the North Vietnamese Army on April 30, 1975, most people enthusiastically accepted the new regime, the articles claimed. "But a considerable number of puppet officers failed to report, refused to undergo study (for 're-education' of former supporters of the Nguyen Van Thieu government), and sought ways to hide out," To Phuong wrote.

"They also rallied others to oppose the revolution. After the people who underwent reform study returned they did not undergo sincere transformation but continued on their criminal paths of the past."

This has created the problem of insincerely transformed people "having their citizenship rights restored" but then using their new status for "surreptitiously opposing the revolutionary administration," the articles said.

"Some people have truly reformed and want to earn honest livings, but their former tyrannical commanders who are still in the jungle continually threaten and dominate them and force them to continue to oppose the revolution."

This opposiiton includes such things as "throwing a grenade into a field in which a film was being shown, blowing up a bridge, stopping a few cargo trucks to plunder them, etc." In one reported coup by the government, "two intelligence agents" were captured while "presiding over a meeting to plot to sabotage the elections, murder cadres, and create disturbances in places where our governmental administration is careless and has relaxed its vigilance."

The Guerrillas steal rice, hogs, salt and other things from villagers, the articles said. It described their lives in the jungle as hard.

In one area, the guerrillas reportedly posed as Catholic priests. Their hideout was discovered to have a "radio, a military equipment storeroom, newly printed anti-Communist leaflets, and a book of lessons on how to oppose communism."

A search of one captured guerrilla's house found 20 weapons, 1,000 rounds of ammunition, "many antirevolutionary leaflets and a three-barred flag." This was the flag used by the American-supported Thieu government.

Captured documents referred to the Chau Duc area of the Mekong River delta, 250 miles west of the three-province area about which To Phuong was writing. The Seven Mountains near Chau Duc, historically the refuge of Vietnamese bandits and a Viet Cong stronghold throughout the war, are now reported to be inhabited by opponents of Hanoi.

One guerrilla diary was quoted as saying that a resistance leader, Lt. Col. Huynh Ngoc San, who operated in the Ban Me Thuot area of the highlands above Dalat took his wife "to operate in the Chau Duc area." Some coordination between the regions was clearly indicated, supporting the implication of an organized national resistance.

The Hanoi newspaper's descriptions of victories over the resistance, the quotations from papers captured from guerrillas, and other aspects of the articles bore a striking resemblance to the kind of material that U.S. information officers distributed to the American press in Saigon during the war to prove that the Viet Cong was losing and becoming demoralized.

THE ASBESTOS DISEASE COMPENSATION BILL

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am happy to join with my distinguished colleague, Congresswoman MILLICENT FENWICK, in hailing the introduction today of a bill that will give hope and aid to many people in this country and to their families in the wake of the effects of asbestos-induced diseases.

Representative FENWICK has been working on this bill for a long time and I was very pleased to be the first of the cosponsors and to work closely with her. Medical research has shown that asbestos can lead to some of the most serious industrial diseases known to us. It is not only in the area of manufacturing that asbestos presents a danger to the person handling it. It has been reliably determined that those using asbestos products in other industries are subject to the serious diseases directly related to handling a finished product. For example, this bill would cover workers in a multitude of occupations including painters, like myself, who work with spackling compounds, to shipyard workers, carpenters who install and rip out wallboard, insulation workers and even automobile mechanics who work with brake linings every day.

Mr. Speaker, I am very close to this major health hazard and as a member of the Subcommittee on Occupational Safety and Health and also chairman of the Blue Collar Caucus, I envision the provisions of this bill providing help for many people who, up to now, have been sidetracked in their misfortune and in their attempts to find remedial aid.

I congratulate Representative FENWICK and assure her of my total support for this measure.

KENT STATE CRYBABIES ARE AT IT AGAIN

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. ASHBROOK. Mr. Speaker, the specter of a small, vocal minority once more causing trouble on Kent State campus is looming before us. I believe that those, like the junior Senator from Ohio, Mr. METZENBAUM, who call for memorializing the Kent State disaster by enshrining the grounds on which the bloody confrontation occurred are completely off the mark.

A memorial to what? To the radical efforts of the leaders of the American crazies—not Kent State students, I might add, but interstate agitators—to get the confrontation they wanted and the reaction from the Guard they wanted? To the stupidity of those who charged the National Guardsmen hurling rocks, bottles, and obscenities? To the lawlessness of the students who took the law into their own hands, ignoring lawful orders to abandon the area of their rioting? To the ignominious liberal professors who excused the rioters as pranksters expressing legitimate political beliefs?

The tragic deaths at Kent State were indeed unfortunate, but they were not by any means surprising. It was entirely foreseeable that if hordes of students attacked a vastly outnumbered group of National Guardsmen with rocks, pipes, and bottles, at some point such violence risked a stronger response.

Militant radicals had, by their own admission, sought by every conceivable means precisely the type of violent confrontation that took place at Kent State. They made nonnegotiable demands, aroused passions, and goaded law enforcement officials, hoping for a violent confrontation. To our sorrow, they got it.

In 1968 and 1969, radicals continued an incessant barrage of violence oriented hate propaganda on campus. Top SDS types like Mark Rudd, Carl Oglesby, and Bernardine Dohrn bombarded campus audiences. SDS rhetoric, to give specific examples, included in an instance of an SDS leader urging followers to kill the cops.

The Kent State disruptions were the subject of investigation by the House Internal Security Committee on which I served. During our hearings on SDS activities there, we were shown a copy of a document entitled "Organizers' Manual for the Spring Offensive" listing such non-negotiable demands as open admissions for what they called third world, black and white working-class people. Demands were to be pursued through a series of escalating actions described in the manual in this way:

Beginning with guerrilla theater actions in dorms we can escalate to disrupting classes, street marches, quick assaults on buildings, etc., before moving to the major confrontation of the struggle.

Also during these Kent State hearings, testimony by school officials revealed that no more than 15 to 25 hard-core members of SDS out of an enrollment of more than 21,000 were responsible for the disruptions. This small number was supplied with films, pamphlets, newsletters, and directives by the Ohio regional SDS office in Cleveland, some 30 miles away.

In a column headed "There's Proof the SDS Planned to Destroy KSU," writer Victor Reisel blasts the myth that Kent was a bucolic school that suddenly and spontaneously went haywire. He recalls:

There are those of us who would hop off at Akron, drive the 10 miles and observe the SDS Weatherman faction—Mark Rudd, Bernardine Dohrn and comrades—scream, literally, for blood, for murder, for revolt, for the leveling of its buildings to wind-blown ashes, and for armed rebellion. For some time now Kent State U. has been the target for the SDS Ohio region and the Akron communes.

In July of 1969, in one of my weekly Washington reports to the residents of Ohio's 17th District, I warned:

The true face of the campus enemy is revealed in just two quotations from the radicals at Kent State. Both are from reports published by the student newspaper, The Daily Kent Stater.

First: An SDS spokeswoman [Joyce Cecora] called for armed rebellion on the Kent State campus, saying "Sitting on the grass in front of the administration building is not fighting—They used guns at Cornell, and they got what they wanted. It will come to that here!"

Second: Another speaker declared, "We'll start blowing up buildings, we'll start buying guns, we'll do anything to bring this (obscenity) school down."

As I have said before, the handwriting was on the wall for all of us to see who would look. When you have people of this type promoting violence, the violence and its tragic aftermath at Kent State are entirely predictable.

It is inaccurate to refer to those students and youths who congregated there that tragic day as innocent. Duped, stupid, foolish, unfortunate, curious, cynical, dedicated, revolutionary—one of these descriptive adjectives or a score of other ones might fit them individually but, perhaps with one or two exceptions, certainly not the word "innocent."

In our proper concern over the deaths at Kent State, we must not let emotionalism obscure the facts in the matter. Planned violence usually results in violence, but tragically sometimes also in unplanned violence and unexpected tragedy.

Those who excuse violence or illegal conduct as "pranks" are more guilty than any National Guardsman. Professors who sense the rebellion on campus but do not endeavor to direct it into proper channels are more culpable than the Guardsmen. College presidents who capitulate to violence and non-negotiable demands are far more to blame than the police or the Guardsmen who must come to their campuses to fill the void created by their leadership vacuum. Political leaders who pander to minority groups and then turn their eyes away from riots and looting helped pull more triggers than any law enforcement official. Those who proclaim the right to violate the law as a "constitutional right" and call law and order "repression" or fascism fan the fires which lead to tragedy.

The radical protesters and their political allies, in and out of office, get the headlines. Overlooked is the fact that most Americans do not agree with them. Take the results of the poll which the Mansfield, Ohio, News-Journal took on this very subject. The results show where the right-thinking, good Americans land on this issue—not with the radicals or the opportunists who want the headlines but with traditional law and order, proper exercise of authority and an understanding of the issues, unclouded with emotional rhetoric. The results of the poll follow:

[From Mansfield-Ohio News Journal]

How You Voted

LAST WEEK'S QUESTION

Do you think Kent State University should preserve the area of the 1970 National Guardsmen killings as a memorial to the four slain students?

YES . . . 4 PERCENT

"As a KSU sophomore I feel well-informed on this issue. The administration is all talk, no answers. Through this my views have changed. Let's be concerned and remember the fallen students."

"Move the gym."

"The Kent State site should be kept as a memorial. Too many Americans hide their heads in the sand hoping the problem will go away by building another building."

"The students that were killed should remind all of us that it can happen here."

"I think the area should be preserved out of respect for the dead students and their families. If the university trustees insist on building there, perhaps they could dedicate the gym in memory of the slain students.

NO . . . 96 PERCENT

"To enshrine the cesspool of violent, authority defying, riotous actions of those responsible for instigating, inflaming and-or participating in that infamous incident is completely unthinkable."

"I would rather see them close the college up."

"They weren't where they belonged. Those students got what they deserved."

"If anything, it should be a memorial for the guardsmen."

"How about a fitting memorial for all the soldiers who were killed in Vietnam while these student punks were burning and looting our campuses."

"They were lawbreakers. They deserved to be shot."

"If the monument is erected, it will undoubtedly be destroyed before it is up a week."

"I see no reason why taxpayers should honor students who followed people like Jerry Rubin and Bernadine Dohram."

"It's out of the question. It's a tragic reflection of our fallen values to even consider making heroes out of rioters."

"A public school is a place to learn, not to destroy public property."

"A new gym would benefit future generations of young people. It would be better in the long run than a statute or a plaque set up to honor four dead students."

"Who is running Kent State? The Ohio taxpayers who own the property or a group of radicals, most of whom never attended the university?"

"I am sick of hearing about Kent State."

"Hallowed ground, my eye."

"I feel the demonstrators were wrong in every way."

THE MARITIME LOBBY'S TRIUMPH

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. RHODES. Mr. Speaker, for some time now I have been concerned over the growing distance between protestation and practice by the Carter administration. It is beginning to remind me of the preacher who would admonish his flock to "do as I tell you, not as I do."

The latest, and most blatant example of this is the current effort to require 9½ percent of oil shipped to this country to be carried in American vessels. This "cargo preference" bill is simply a political payoff to the maritime interests that will cost Americans as much as $800 million over the coming years.

I am pleased to see that the Washington Post, in its lead editorial of Tuesday, August 2, has also questioned the wisdom and validity of this action, and ask that it be inserted in the RECORD:

THE MARITIME LOBBY'S TRIUMPH

The maritime lobby, with its money bags, has scored a great political triumph. The costs will be borne over coming years by everyone who buys oil products. It's another defeat for the enlightened trade policy that President Carter keeps proclaiming but never quite manages to put into practice.

The maritime interests—ship builders, ship operators and unions together—already enjoy more different kinds of subsidy than any other American industry. Despite this torrent of aid, they have worked their freight rates up so high that nobody uses American-flag shipping unless the law requires it. The maritime lobby has now obtained President Carter's misguided support for its perennial bill to force part of this country's oil imports into those American-flag tankers. The proportion of imports affected will be small at first, but it will rise steadily.

It's called a cargo preference bill, and it is 200-proof protectionism. It would violate American treaties with other nations. It would be inflationary. It would add still another layer of subsidy, this time paid directly by consumers in the form of higher oil prices. As national policy, it's got absolutely nothing going for it but the lobbying muscle and the extensive campaign contributions of the people who wanted it. But that turned out to be enough to get the President's support.

Mr. Carter's whole trade policy is rapidly deteriorating. He keeps talking in terms of the most high-minded commitments to open trade and international competition but, unfortunately, the actual record points the other way. There have been three major cases so far, and three times the administration has caved in to the protectionists.

In the case of the color television sets from Japan, Mr. Carter resorted to an Orderly Marketing Agreement. That term is a euphemism for an agreement by the exporting country to limit shipments. In the shoe case, the administration imposed another couple of Orderly Marketing Agreements on Korea and Taiwan. They will save some jobs in American shoe factories; they will also cost some jobs in American retail stores as well as increase prices to American consumers. But at least an Orderly Marketing Agreement is limited in duration and is a legal procedure under the general trade rules that this country has bound itself to. The cargo preference bill is neither.

It's a strange performance for an administration that foresaw trade troubles and staffed itself with people to meet them constructively. Those people, led by Treasury Secretary Michael Blumenthal and Under Secretary of State Richard Cooper, have been walloped in each successive test. The President has been mainly following the advice of Robert S. Strauss, currently his special trade representative and formerly chairman of the Democratic Party. Like most party managers, Mr. Strauss thinks in terms of constituencies and grievances: a factory here, a union there. He apparently does not work in terms of broader concerns, like consumer interests in general, or American productivity, or the future of the highly competitive American industries whose overseas markets are now threatened by foreign retaliation.

If Mr. Carter will not resist protectionist pressure, he cannot expect the fragile governments of Western Europe to do better. He may get heat from aggrieved unions—but unlike, for example, the president of France, he does not face an election next year that might bring the Communists to power. In May, at the London summit conference, Mr. Carter joined in a pledge to support firmly the principle of open trade and a growing world economy. The people who heard him must wonder what he had in mind when they now read the cargo preference bill that he has promised to support.

ON RETIRED CIVIL AND FOREIGN SERVICE PERSONNEL TAX EXEMPTION PROVISION

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. WHALEN. Mr. Speaker, today I am introducing legislation to provide retired civil service and foreign service personnel an annual tax exemption of $5,000 on their annuities.

The amount of $5,000 best equates with the $437.10 monthly tax-free benefit—or about $5,245 annually—which an individual covered under social security and

contributing on the maximum wage base under that program may receive. Thus, this measure would grant more equitable tax treatment to all foreign service and civil service retirees who do not receive social security benefits.

As explained in a July 18 letter to me from the Wisconsin Chapter of the National Association of Retired Federal Employees:

Since many retired U.S. Civil Service employees do not receive social security payments, they do not have the benefit of such tax-exempt income as retired non U.S. Civil Service employees. In view of this, it is desirable to increase and expand the exemption.

I believe it is our responsibility to keep in mind those living on fixed incomes as we address meaningful tax reform. Too often, our efforts at "reform" have left senior citizens worse off than before that reform was undertaken. The bill I am introducing today should be a valid part of any comprehensive tax reform undertaken by the 95th Congress.

MESA'S TRANSFER TO THE DEPARTMENT OF LABOR

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. OBERSTAR. Mr. Speaker, responding to widespread concern over ineffective administration of the mining enforcement and safety program and its inappropriate location in the Department of the Interior, the House on July 14 passed H.R. 4287, the Federal Mine Safety and Health Act of 1977.

If further justification for this legislation were needed, it certainly is provided in abundance in the August 1 Washington Post article by Peter Masley reporting on "deficiencies and violations of Federal regulations in hiring, promotions, and incentive awards for employees" in the Mining Enforcement and Safety Administration.

This revealing article underscores the need for change in the Nation's hard rock mine safety program and, I hope, will inspire House and Senate conferees on H.R. 5287 to act speedily so that deficiencies such as are reported in this story can be corrected and miners assured of a strong effective mine safety program.

The article follows:

U.S. MINE AGENCY PERSONNEL WOES CITED

(By Peter Masley)

The personnel management program at the Mining Enforcement and Safety Administration is riddled with deficiencies and violations of federal regulations in hiring, promotions and incentive awards for employees, an Interior Department investigation has found.

Personnel problems are so widespread that "it is virtually impossible to isolate program deficiencies from headquarters and field," a department report says.

The Interior Department review "revealed many problems which were found to be systemic not only at the bureau headquarters level, but also in the field offices located in Denver and Pittsburgh," it says.

The department's evaluation, made with the Civil Service Commission, recommends that MESA Administrator Robert E. Barrett "issue a strong policy statement to all employees stating unequivocally his support for open and fair competition when filling all positions in the bureau and that pre-selection will not be tolerated."

Barrett could not be reached yesterday for comment. His superior, Joan Davenport, assistant secretary of the interior for energy and minerals, said Saturday that "there will be action taken" to correct problems in the personnel management program.

The Interior Department-Civil Service Commission report obtained by The Washington Post cites "substantive violations" of the Civil Service merit system, which is designed to assure that all qualified persons receive equal consideration for hiring, promotions, assignments and training.

Last November, the Civil Service Commission reported that MESA's Denver office had serious personnel management problems, and it raised the issue of "official culpability."

In one instance, persons were hired part-time to work in the field office's automated data processing division, "but, in reality, people who were hired on part-time were working fulltime and overtime and then those that were working overtime were getting incentive awards for working overtime," according to Lawrence Bembry, acting chief of the Interior Department's Division of Program Planning and Evaluation.

The November report also cited preselection in hiring and unjustified promotions. It said they occurred in a "series of paper manipulations of the technical personnel systems, i.e., misleading or false position descriptions to expedite specific management objectives for the placement or promotion of selected individuals."

MESA was established in 1973 by the Secretary of the Interior to provide more stringent mine safety and health enforcement. It has about 3,000 employees, 10 per cent of whom are located at MESA headquarters in Arlington.

Congress is expected to enact legislation this year transferring MESA from Interior to the Department of Labor. President Carter has endorsed the transfer, Interior Secretary Cecil D. Andrus opposes it.

The Interior Department's personnel management review said that MESA employees were promoted from clerical to technical or professional levels "without competition."

"Many of these actions were improper and reflect the lack of management responsibility for positions within their charge," it said.

It cited "lack of required documentation" to support promotions, and said MESA will have to "identify highly qualified employees whose opportunities were abridged by improper actions . . . and possibly require adverse action to remove employees improperly promoted or placed. . . ."

The report said that there has been interference by MESA headquarters in the classification and selection of employees in the Denver and Pittsburgh field offices. On the other hand, in Pittsburgh, personnel work "has been seriously impaired by the absence of firm and positive policy guidance from the headquarters function."

Also in Pittsburgh, "We found a situation of nonaction, inertness, if you will, because of what has been unanimously interpreted as headquarters policy to avoid unpleasant and/or corrective actions," he report said. It said that so simple a personnel correction as reclassifying a clerk-stenographer job to clerk-typist was not done in two years.

At headquarters, "We found the MESA position management and classification program as being most inadequate," the report said. "The quality of overall position classification of the headquarters was such that of approximately 62 positions, roughly 50 per cent were found to be improperly graded . . . Evaluation statements are either nonexistent or actually highlight the impropriety of the grade assigned," it said.

"Position and organizational structures which reflect duplication of effort, layering of lines of supervision, costly fragmentation of responsibilities not only are allowed to continue, but flourish," it said.

The report said that at MESA headquarters "It is not uncommon . . . for an individual to recommend and approve an incentive award with the same stroke of a pen."

The department's review of some of the incentive awards "disclosed a need for stronger justification."

CONGRESSIONAL LEGAL COUNSEL ACT OF 1977

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. BRECKINRIDGE. Mr. Speaker, today I am privileged to introduce legislation creating an Office of Congressional Legal Counsel. The bill is similar to title II of S. 555, passed by the Senate 74 to 5 on June 27.

The need for creating an Office of Congressional Legal Counsel is clear. It is not surprising that the exercise by Congress of its constitutional powers is frequently challenged in, and affected by, various court proceedings. As Alexis de Toqueville observed during his travels in America in 1831:

Scarcely any political question arises in the United States that is not resolved, sooner or later, into a judicial question.

Unlike the executive branch of Government, Congress does not generally attempt to effectuate its will and perform its duties by initiating law suits in the courts. With a few notable exceptions, I firmly believe that Congress should rely primarily on its legislative, oversight, and impeachment powers—rather than the initiation of law suits—to fulfill its constitutional responsibilities. However, through no choice of the Congress, many matters vitally affecting Congress end up in the courts. Most of these cases arise where law suits have been brought against Congress to challenge an official action of the Congress, a Member or employee of Congress, or a committee or agency of Congress. In cases where Congress is not named as a party, the powers of Congress are often at issue and are interpreted by the courts.

At present, representation of Congress and congressional interests in these cases is provided on an ad hoc basis by the Justice Department and, occasionally, by private legal counsel. Indeed, because no permanent office has ever been given the responsibility to monitor and defend these interests, the Senate Subcommittee on Separation of Powers has often undertaken to warn Congress that its interests must be defended.

In recent years, Congress has involuntarily been subjected in extensive litigation to defend its constitutional powers. Indeed, in the last 5 years the Justice Department alone has defended Members, officers, and committees of Congress in at least 56 cases. This total does not even include the 60 legal mat-

ters in which the Senate Watergate Committee became involved.

Not included in this number are actions involving allegations of criminal conduct, abuse of the franking privilege by an individual Member, or contested elections, which the Department and the proposed Congressional Legal Counsel will not and should not handle.

Mr. Speaker, various legislative initiatives in the past have been undertaken to create an Office of Congressional Legal Counsel. I commend to the readership of the CONGRESSIONAL RECORD, to my fellow colleagues and to the American people, an excellent series of articles on the need for a Congressional Legal Counsel; the type of cases the office would handle; a detailed description of its duties, and historical, constitutional, and legal overview of the issues involved, appearing in the February 1, 1977, CONGRESSIONAL RECORD, pages 2961–2987; July 20, 1976, CONGRESSIONAL RECORD, pages 22788–22799; and the most recent debate on S. 555, as passed by the Senate in the June 27, 1977, CONGRESSIONAL RECORD, pages 29058–21007.

I understand from the Congressional Budget Office, in their June 11, 1976 cost estimate for an Office of Legal Counsel, that the figures of $300,000 for fiscal year 1978, $300,000 for fiscal year 1979, and $400,000 for fiscal year 1980, were based on an initial staff of a Congressional Legal Counsel, a Deputy Counsel, five assistant legal counsels, and clerical support.

Mr. Speaker, the basic proposition is simply this: That Congress needs a lawyer, and it needs a lawyer to handle its complex range of legal business, both for defense and for affirmative action. We need this legislation in order that this Office might: First, defend the Congress in civil actions; second, bring civil actions to enforce congressional subpenas; third, to represent Congress; and fourth, to intervene or appear as amicus curiae in legal actions effecting the Congress

I urge the House to consider this bill, and similar legislation, creating an Office of Congressional Legal Counsel and to join with their colleagues in the Senate.

ST. LOUIS TRAINING ORGANIZATION RECEIVES AWARD

HON. ROBERT A. YOUNG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. YOUNG of Missouri. Mr. Speaker, I would like to take this opportunity to congratulate the St. Louis branch of the Opportunities Industrialization Center, OIC, upon its receipt of the top award plaque from region VII of the OIC's of America.

The award is presented annually to the OIC in the region with the best overall record. The St. Louis OIC has shown remarkable progress over the past 2 years, moving from 30th to 1st place in training, enrollment, placement, and community service.

OIC is a national organization which teaches people skills through which they may find employment. The St. Louis branch of OIC has now trained more than 1,250 people, and placed 850 of these people in related jobs.

I wish this organization, and its dedicated executive director, Jewel P. Livingston, the best of luck, and know it will continue its fine service to the St. Louis community.

THE LOSS OF JIMMIE ROSENBURG

HON. JACK BRINKLEY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. BRINKLEY. Mr. Speaker, seldom does an article capture the real drama of life and death so well as the one by Joel Ferguson of the Warner Robins Sun with reference to Jimmie Rosenburg. I submit it for the RECORD as the example of a man who took everything out of life and put back a lot more:

FRIENDS AND LOVED ONES SAY GOODBYE

(By Joel Ferguson)

He was a veteran of World War II, and one of his most prized possessions was a 1929 calendar from his father's general store in Lake Butler, Fla. The calendar was displayed near his desk and he admired it often.

Mayor Foy Evans said the man made many contributions to the city. One of the most significant of these contributions, according to the mayor, was the establishment of a Housing Authority in Warner Robins to provide low-cost housing for persons without homes.

Mayor Evans said the man had a great deal of political influence in Warner Robins and Washington.

"But he never used that influence for himself," Evans said. "It always seemed to me that he used his influence to help others. He was an outstanding citizen of Warner Robins, and he did a lot more for this community than most people realize."

He liked to greet folks near the entrance to his store, Evelyn's, which is a few steps from the fountain at Houston Mall. And he welcomed the chance to talk to almost everybody—hoboes, merchants, doctors, bankers, lawyers or politicians. One day he laughed and said, "I even like to talk to newspaper reporters."

Keeping property taxes low was one of his main objectives. He took an enormous amount of pride in the fact that Houston County provided more services for fewer tax dollars than any other county in Middle Georgia.

The pride was justified because he had served on the Houston County Board of Tax Assessors for 18 years, and had served as chairman of that board for the past 10 years.

He was one of the persons responsible for organizing high school football programs in Warner Robins. This contribution, which brings untold joy and excitement to city football fans on cool nights in autumn, reached the pinnacle of success last year when the Warner Robins High School Demons became national champions.

As a member of the Chamber of Commerce, he served for many years on the Military Advisory Committee for Robins Air Force Base, and strongly advocated appropriations to promote and improve relations between the city and the base. He also recommended programs designed to retain and expand the mission of the base.

One time he told me that local groups seeking new industry should always remember that Robins Air Force Base is the largest industry in Georgia. For that reason, he said he would question a program that devoted all of its time and energy to seeking new industry and neglected to respond to the importance of maintaining good relations with the base.

During his early days in Warner Robins, he developed real estate projects that added millions of dollars to the local tax digest. He was one of the founders and a director of the Bank of Warner Robins, which later became the Citizens and Southern Bank of Houston County. He also provided leadership in business and financial affairs as president of the Warner Robins Merchant's Association.

He was a veteran of World War II, and was a member of the American Legion and the Elks Club.

He died last Tuesday at the age of 58 following a lengthy illness. He had lived in Warner Robins 30 years.

After being eulogized by such good and honorable men as Rev. Napp Granade, Dr. James O. Dorriety and Congressman Jack Brinkley, a bronze casket covered with green fern and red roses was removed from Shirley Hills Baptist Church, where he had been a member.

As the outside temperature stood at 98 degrees the casket was loaded in a hearse for Lake Butler, Fla., for burial. The casket was borne by his dear friends Billy Randall, Frank Bizzell, C. B. Mitchell, Denmark Groover, F. O. McKneely, Lee Miller and Russell Norris.

And this is the way it was at 12:40 p.m. on Thursday, July 7, 1977, when friends and loved ones said goodbye to Jimmie Rosenburg.

CHRISTIAN SCIENCE MONITOR DISCUSSES ABOLITION OF MANDATORY RETIREMENT IN EDITORIAL

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. BRIGG. Mr. Speaker, today's editions of the Christian Science Monitor contain an editorial entitled "Right To Work After 65?" This editorial presents an objective evaluation of one of the key legislative issues confronting the 95th Congress—abolition of mandatory retirement.

A main theme of the editorial is that retirement shculd be voluntary and at the discretion of the individual. It should not be mandated due to the reaching of an arbitrary chronological age. The main objection I have to mandatory retirement is that it completely eliminates ability and experience from the criteria used to determine a person's capability to continue work. As the editorial states, "When it comes to holding a job—competence should be the criterion."

One argument consistently offered to support mandatory retirement is that it opens jobs for young people. This argument is specious in that there is no direct one-to-one relationship between the job vacated by a person at 65 and one a young person will assume. More importantly this argument in effect condones the practice of promoting one form of discrimination to remedy another.

One of the main forces behind the development of H.R. 5383, the bill changing mandatory retirement rules in both the public and private sector, has been Chairman CLAUDE PEPPER of the House Select Committee on Aging. I am privileged to serve with Chairman PEPPER on the Aging Committee as well as be a member of the Education and Labor Committee which reported this bill to the floor. I firmly support H.R. 5383 and feel it merits the early passage of both the House and the Senate.

Abolition of mandatory retirement is essential to promoting equality and justice as well as economic security for America's elderly workers. It is our way of demonstrating our disagreement with the fallacy that age determines ability. I urge my colleagues to take the time to read and evaluate this objective and reasoned editorial:

RIGHT TO WORK AFTER 65?

The new momentum against mandatory retirement in the United States demands attention both from institutions and from individuals. Whatever the outcome of pending federal legislation, institutions ought to take the hint to reexamine their employment and retirement policies to ensure maximum fairness for all concerned. And individuals should be reminded that the prime responsibility for security and satisfaction in later years remains with them.

No matter what employers and government programs can do to help, it is only the individual who knows himself and his resources well enough to put together the retirement package tailored best for him. This means prudent financial arrangements combining savings, private pensions, and social security. But it also means developing the interests, talents, and skills to make "retired" means something more than the "tired" which some retirees playfully put on their new nonbusiness cards. Such inner resources can be drawn upon no less by those whose economic circumstances do not permit many options for financial preparedness.

What the legislation should do is to support the best efforts of institutions and individuals. This may not mean a ban on all mandatory retirement programs, especially when these are the result of collective bargaining. The provision for a two-year study commission in the committee-passed House legislation should not be dismissed as a compromise or delaying tactic. The question is complicated enough to repay further study.

On the one hand, as a number of spry septuagenarian congressmen argue, people should not be discriminated against simply because of chronological age. When it comes to holding a job, competence should be the criterion. It is fitting for the legislation, which will probably go to the House floor in September, to bar a mandatory retirement age in the federal government. At least a dozen states already bar it in state jobs.

Yet the issue of "rights" for the elderly, a station in life open to everyone, is different from that for blacks or women, for example, who are separate and distinct groups. And, if rights are to be based on age, the rights of the young have to be considered, too. Unless the elderly are retired, especially in times of high unemployment, what happens to young people's rightful access to employment?

Such questions at least dictate caution before ruling out mandatory retirement in private business, though such mandates should have review mechanisms so that today's collective bargainers do not determine the rules for future generations. The country cannot ignore studies such as the one undertaken for the United Automobile Workers which found that mandatory retirement probably costs the American economy $10 billion a year. The loss comes both from forcing the skills of skilled workers off the market and from reducing their purchasing power.

The House legislation does move with some caution. It advocates no mandatory retirement in private business before the age of 70. But it would allow two years for accommodation in cases where collective bargaining had specified earlier retirement.

It must be remembered that mandatory retirement ages came about at least partly for such constructive purposes as ensuring that people would not be forced not to retire and that young people would find jobs opening up. There is also the element of turnover without having to specify to the incompetent or unproductive that they are being let go for reasons other than age.

It should be emphasized that banning mandatory retirement would not bar voluntary retirement. Indications are that the mass of people would not stay beyond 65 anyway. Those who want to continue working and are competent to do so would probably not upset pension plans.

But, as longevity increases, later retirement ages may prove economically attractive. There is consideration now for extending from 65 to 68 the age at which full social security benefits are available. If that were to occur, clearly a mandatory retirement age of 65 would be out of keeping.

A perspective comes from Japan, where the average retirement age has been about 55. With Japan's dramatic increase in longevity, there is talk of it rising to 56 or 57.

Obviously, what might seem a clear-cut issue is not one. That two-year study will be welcome.

HOSPITAL COST CONTAINMENT BILL

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. CARTER. Mr. Speaker, I am introducing today a proposal designed to assure that a cooperative hospital cost-control system is implemented through the encouragement of State cost-control systems.

We all are aware of the magnitude of the problem of rising health care costs. Expenditures for hospital care have more than quadrupled since 1965 with the average rate of inflation of those costs 13.9 percent. Even if this increase is adjusted to reflect constant prices in the general economy, the average annual increase still was 8.6 percent for hospital care. But a simple recounting of these statistics does not describe the whole problem. We must also look at the health status of our citizens in light of this tremendous increase in health care investment.

Although we certainly have made great strides in combating the many health problems we face, there still are improvements to be made. The infant mortality rate in some of our States is twice as high as it is in others, while the rate of deaths from cancer actually has increased since 1968. Furthermore, many of our citizens do not have access to the care which they need.

Unfortunately we have reached the point where our increased spending for health care—spending which now represents 8.6 percent of the gross national product—is buying only maintenance of existing health programs. The enormous amounts of money going for maintenance of programs effectively prevents new programs for improving health care from being added. This, therefore, is the rationale behind attempts to control mounting health care costs; unless we control the runaway spending we have little hope of being able to afford new programs for improving our health care system. Since hospital care represents about 40 cents out of every dollar spent for health, any attempts to control health care costs must first concentrate on hospital costs.

As ranking minority member of the Subcommittee on Health and the Environment, I have devoted much of my legislative effort to issues concerning our country's health care system. And, as a physician, I have made a personal commitment to doing what I can to help improve the health care of our people.

After considering this problem of rising costs, I have concluded that we must have a program to contain the dramatic increases in hospital costs. In a time of limited resources, we no longer can afford to maintain 100,000 idle hospital beds at an estimated $20,000 to $30,000 per bed per year. We no longer can afford to allow every hospital to build expensive open heart surgery units when they do not have the patients to make economic and efficient use of those units. If we continue to devote our financial resources to unnecessary or duplicative and inefficient services, we will never have the funds needed to improve emergency rooms and outpatient departments, to provide more and better preventive care and health education, and to remove the financial barriers to health care which now exist for many of our citizens.

In recent weeks I have devoted a great deal of time to the study of the various legislative proposals designed to deal with this problem, including the administration's proposal, H.R. 6575. Although, as I have indicated, I certainly share the administration's desire for timely action, I feel that the approach embodied in H.R. 6575 cannot accomplish the goals toward which we all should be working. Instead, I believe that the administration's proposal may do more harm than good.

A simple formula approach, as proposed by the administration, cannot insure that needed facilities are not forced to close. It cannot assure that base-year budgets are "reasonable." It cannot guarantee that present utilization levels represent care which is needed. It cannot take into account the wide variations among hospitals in terms of their size, location, case mix, and scope of services. Moreover, the formula approach does not differentiate between the overextended, inefficient hospitals and the efficient ones. In fact, the imposition of a simple, across-the-board formula would reward the inefficient hospital because 9 percent

of a "fat" budget involves more dollars than 9 percent of a "lean" budget.

In contrast to the administration's proposal, the legislation which I am introducing today focuses on the establishment of State commissions on hospital budgets to prospectively review the budgets of hospitals within a State. I am proposing this substitute approach because only a program instituted at the State level can achieve the level of specificity necessary to insure that the desired level of efficiency is achieved while insuring that quality of care is maintained.

Mr. Speaker, let me make it clear that this should not be an issue of Federal versus State power; the important point is the ability of State and local officials to institute selective and cooperative approaches to the problem of spiraling hospital costs. We must also keep in mind that cost containment is at present an art, not a science. Several cost-containment methods have been employed or are being developed by various States. My proposal provides the flexibility, and the oversight, to insure that all of the viable methodologies are examined, and that each State could develop a system that would be most consistent with its needs.

Many States have already taken the lead in developing creative cost-containment systems designed to meet their State's special needs and problems. Connecticut, Maryland, Massachusetts, New Jersey, New York, and Washington already have instituted cost-containment systems through regulatory agencies. Sixteen other States have instituted some form of cost containment or are in the process of development. Maryland's system has saved an estimated $55 million over 2 years, while Connecticut has saved its taxpayers over $30 million.

Most importantly, a cost-containment system must be based at the State level because the other components of an effective cost-containment system, health planning and utilization review, have already been instituted at that level. It is crucial to the success of a cost-containment system to have the planning activities of the health system agencies—HSA's—and the State health planning and development agencies—SHPDA's—linked to the budget review process. It is just as crucial to link the utilization review and quality assurance activities of the professional standards review organizations—PSRO's—to the budget review process. Only through linking these organizations, as proposed by my bill, can we implement a coordinated system which deals with all of the factors leading to spiraling increases in health-care costs. It would be impossible to link these programs if a major part of the overall system was based in Washington.

Under my proposal each State would be encouraged to establish a State commission on hospital budgets with the Federal Government paying the start-up costs. The commissions would review hospital budgets in advance to insure that they represented reasonable expenditures. Broad participation in the review process would be assured through an advisory council representing all of the groups concerned, including the HSA's and the PSRO's.

The use of prospective budget review would provide hospitals with an incentive to contain costs on their own, without the retroactive penalties proposed by the administration's bill. Under my proposal any hospital which was able to remain within the prospectively approved budget would be allowed to retain the surplus generated and use it for improvements in the care provided by the hospital. I believe that it makes sense to provide hospitals a clear goal, thereby allowing them to make adjustments as the year progresses.

In addition, my proposal would insure that cooperative effort necessary to strengthen and improve our health care system became a reality. The relationship between budget review and health planning would be enhanced through memoranda of agreement covering data sharing, development of complementary guidelines and procedures, and financial feasibility review of capital expenditures by the budget commission. Similarly, PSRO and budget commission efforts would be coordinated in order to assure that budget commission decisions did not adversely affect quality of care and that duplication of data collection did not occur.

This legislation also would improve the ability of health planners and PSRO's to carry out the tasks they have been assigned. PSRO review would be extended to all patients, not just medicare and medicaid patients. The State health planning and development agency would be provided with the authority to declare services and facilities surplus or unnecessary, and Federal funding would be authorized to finance the costs of decertification.

Other key elements of the operation of State commissions as laid out in my bill would be:

Flexibility in the selection of a prospective budget review methodology;

Uniform definition of reimbursable costs;

Public disclosure of hospital budgets and administrative salaries;

Enhanced grouping of hospitals based upon case mix, size, type, and other factors;

Requirements that hospitals submit long-range capital plans and capital budgets to State commissions and to health planning agencies—SHPDA's—and

Provisions for Federal oversight of State budget review.

In addition to these elements, the legislation which I am introducing acknowledges that it will take time to develop State programs, and that not every State will wish to participate. For this reason my proposal would direct the Secretary of HEW to develop a permanent program for those States which do not have a State commission on hospital budgets. It would also create a transitional program similar to one in the administration's plan, with certain exceptions designed to reduce the inequities inherent in the formula approach.

The major differences between my proposed transitional program and that contained in the administration proposal are that:

The base year would be more realistically set as that accounting year which ends after September 30, 1976, thereby insuring that no hospital would be held to revenue and volume levels set so far in the past that compliance with the program would necessitate drastic reductions in service;

Phase-out of duplicative services and facilities would be encouraged through insuring that volume increases associated with a shared-service agreement would be added to the base-year volume of the hospital providing the service while the hospital discontinuing the service would not be penalized by having the difference subtracted from its base-year volume;

Hospitals in underserved areas would receive 100 percent of their average reimbursement per admission regardless of changes in the number of admissions. In contrast, the administration proposal would reduce revenue by 50 percent for numbers of admissions higher than 102 percent of the base year admissions;

Each hospital's allowable rate of increase would at least be equal to the Consumer Price Index; and

Funding to hospitals which constitute national health resource centers such as the Mayo Clinic, the Lahey Clinic, and the Cleveland Clinic, would be assured.

Mr. Speaker, I believe that the approach embodied in my bill would achieve our goal of an efficient, effective, high-quality health-care system while bringing spending under control. I like to think that it attacks the complex problem of out-of-control health-care spending with a scalpel instead of a meat cleaver. For while we try to control the financial aspects of our health-care system, we must keep in mind that our goal is insuring that every American has access to medical care at a reasonable, affordable cost. We will not reach that goal by needlessly crippling our existing hospital system.

I realize that a cost-containment program, such as I am proposing, which builds upon the strengths of the State and local level will take time. But the payoff in terms of a coordinated, balanced approach to cost-control will benefit our entire health-care system. I offer this proposal for the perusal of my distinguished colleagues and hope that they will consider this alternative carefully.

KENNEDY CENTER BENEFITS THE ENTIRE NATION

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. LEVITAS. Mr. Speaker, one of the best things that has happened to Washington in recent years was the opening of the Kennedy Center. It is more than a

static monument to a President. The Nation built a living memorial to a great man, a memorial which has been enjoyed by millions.

Unfortunately, an erroneous assumption about who really benefits from this living tribute is prevalent. It is sometimes, though wrongly, believed that the Kennedy Center caters solely to the tastes of the rich and prosperous.

Each time we need to appropriate moneys for the Center's emergencies or upkeep, we hear this totally misleading charge. It took us 3 years to appropriate the money to fix the leaking roof—and we ended up having to spend far more than originally necessary just because of the shortsightedness displayed on this very matter. Some might say Congress did not have enough sense to get out of the rain in time on this occasion.

For the benefit of all the Members who have reservations about appropriating funds to keep this national treasure in good working order, as well as for those who understand what the Center does for our Nation's Capital and our Nation but would like to see it in print, I am inserting an article by Harry McPherson, the general counsel to the Kennedy Center, from the Washington Star of July 17, 1977. I call it to the Members' attention as an explanation of the millions of people, not just well-to-do residents of Washington, for whom the Center is a generous benefactor, public forum, and a center of artistic, dramatic, and musical delight.

The article follows:

KENNEDY CENTER: NOT JUST FOR THE RICH

(By Harry McPherson)

Last Sunday, *The Star* carried an article reprinted from *The New Republic*, contending that the Kennedy Center is run "mainly for the prosperous, the chic and the powerful." This must come as a surprise to those who regularly attend performances at the center. Either Stephen Chapman, who wrote the article, is wrong, or there are many more such people around than one had supposed. More than eight million persons have attended theatrical and musical events at the center since it opened in 1971.

The thrust of Chapman's piece is that the Kennedy Center, ostensibly a national institution supported by federal funds, is in fact offering high-priced entertainment to the well-to-do of Washington. Thus "the lower orders" (sic) elsewhere are subsidizing the extravagant tastes of this area's "Who's Who."

Many things might be said about this, beginning with references to the state-supported theaters, opera houses, and concert halls of Europe and the Soviet Union, and ending with the perilous economics of the performing arts here and throughout the country. But I shall limit this reply to a few facts, not included in the article, about the Kennedy Center itself.

First, the trustees of the center—principally Roger Stevens—have raised $35 million from private sources to help build and operate the place. When it was originally conceived in the 1950s, the notion was that it should be entirely financed by private funds. In 1964 the Congress determined otherwise. The center would be a "living memorial" to President Kennedy—by which was meant that it would be more than a shrine for visiting, but a platform for the continuous production of the performing arts in the national capital. Government appropriations were made which, together with private contributions, paid the construction bill.

Because 17 million persons have visited the center since then, and continue to do so at the rate of almost 14,000 each day, the Park Service bears the principal cost of maintaining and policing it, as it does in the case of other national memorials.

Second, the center is considerably more than an entertainment center for the affluent.

Since 1971, 600,000 half-priced tickets have been made available to students, the elderly, the handicapped, military personnel, and citizens of low income. These have not been throw-away tickets to poor shows; it is the center's policy to provide them consistently, whatever the box-office situation. Their monetary value to the users, and their cost to the center, was nearly a million dollars.

In the 1976 fiscal year, the center sponsored 1,500 free events. They included children's theater—in an effort to stimulate quality in such productions across the country; concerts in the Grand Foyer; symposia, films and exhibitions. The Christmas festival of free music costs the center $75,000 annually. In each of the past few years the center has mounted festivals in honor of a single great composer—Haydn and Handel so far. Brahms to come. Each costs the center about $100,000.

Since the center receives no performing arts subsidy from the government, these events—and others that cannot begin to pay their way even with high ticket costs, such as grand opera—must be underwritten by the returns from profitable shows. So the occasional "Pippin" or "Annie" makes possible the production of Monteverdi operas and plays for children—and, hopefully, of another successful musical that will put the next round of free and adventurous offerings on the boards and in the halls.

There is still more to be done that cannot be entirely financed this way. A musical theater lab has been created on the top floor, where new productions can be tried out before small audiences, and without the exorbitant costs that deny most of them even a look on the commercial stage. The cost to the center will run about $200,000 annually. Nearby, a Performing Arts library will soon be opened, stocked with 5,000 volumes from the Library of Congress, and connected with the main library by an information retrieval system. It will give the center and visitors to it the research arm it has lacked so far.

Behind and above the Eisenhower stage, a new Studio Theater will be completed within a year or so. The Japanese have made it possible, with a Bicentennial gift to America. In this versatile setting, the kind of performance that cannot be mounted now in the large halls—experimental plays, recitals by lesser-known artists, and the like—will have a home.

Private contributions will be needed to help support the Studio Theater, the musical theater lab, and other public service programming in the center. A number of corporations and foundations have already provided generous subsidies for particular shows—including the annual College Theater Festival—and a corporate fund has been created, with a goal of $1 million annually, to sustain the effort.

So with the government's help in building and maintaining it; with quite substantial private contributions; with the profits from its own successful productions; and with the determination of Roger Stevens and its trustees, the center has become, in a little more than five years, an enterprise of considerable value to the capital—and to the nation. The "prosperous, the chic and the powerful" do in fact attend its programs. But so do far greater numbers of citizens who fit none of those categories. They, no less than the affluent of Washington, have reason to be glad that such a place exists.

HELPED JOHNSON STEAL 1948 ELECTION, TEXAN SAYS

HON. DELBERT L. LATTA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1977

Mr. LATTA. Mr. Speaker, the July 31, 1977, edition of the Toledo Blade carried the Associated Press story by James W. Mangan giving us—at long last—the details—from a participant—surrounding the mysterious addition of some 200 votes to Mr. Johnson's vote total in box 13 to give him a Senate seat in 1948. The most incredible part of this story is the fact that it took 29 years for our free—but liberal dominated—press to get Luis Salas' own story into print. I know that many will try to explain away the delay by saying that Luis Salas just decided to "talk" to which I say, "Hogwash." If he talked today, he would have "talked" yesterday. The article follows:

29-YEAR-OLD CASE REVIVED—HELPED JOHNSON STEAL '48 ELECTION, TEXAN SAYS

(By James W. Mangan)

ALICE, Tex.—A former Texas voting official seeking "peace of mind" says he certified enough fictitious ballots to steal an election 29 years ago and launch Lyndon Johnson on a path that led to the presidency.

The statement comes from Luis Salas, who was the election judge for Jim Wells County's notorious Box 13, a precinct in Alice, which produced just enough votes in the 1948 Texas Democratic primary runoff to give Mr. Johnson the nomination, then tantamount to election, to the U.S. Senate.

"Johnson did not win that election; it was stolen for him. And I know exactly how it was done," Mr. Salas said. Now a lean, white-haired 76, he was then a swarthy 210-pound political henchman with absolute say over vote counts in his Hispanic south Texas precinct.

The controversy over that runoff election has endured for nearly three decades, ever since U.S. Supreme Court Justice Hugo Black abruptly halted an investigation, but the principals have been silent. George B. Parr, the South Texas political boss whom Mr. Salas served for a decade, shot himself to death in April, 1975. Mr. Johnson is dead, and so is his opponent. Mr. Salas, retired from his railroad telegrapher's job, is among the few living persons with direct knowledge of the election.

LADY BIRD INFORMED

Mr. Johnson's widow, Lady Bird, was informed of Mr. Salas' statements and said through a spokesman that she "knows no more about the details of the 1948 election other than that charges were made at the time, carried through several courts, and finally to a justice at the Supreme Court."

Only now has Mr. Salas agreed to tell his full version of what happened. In his soft, Spanish accent, he said he decided to break his silence in quest of "peace of mind and to reveal to the people the corruption of politics."

Mr. Salas says now that he lied during an aborted investigation of the election in 1948, when he testified that the vote count was

proper and aboveboard. "I was just going along with my party," he says.

He told the Associated Press that Mr. Parr ordered some 200-odd votes added to Mr. Johnson's total from Box 13. Mr. Salas said he saw the added fraudulent votes, and then certified them as authentic on orders from Mr. Parr.

The final statewide count, including Box 13 votes, gave Mr. Johnson an 87-vote margin in a total tally approaching one million and earned him the tongue-in-cheek nickname, "Landslide Lyndon."

REPRESENTED "NEW" DEMOCRATS

Texas Democrats were split in 1948. Mr. Johnson, then 39, a congressman, represented "new" Democrats in his bid for the U.S. Senate. His primary opponent was Coke R. Stevenson—60 years old, three times Texas governor, never beaten, and the candidate of the "old" wing of the party. They called him "Calculating Coke."

The vote in the July primary was Mr. Stevenson 477,077, Mr. Johnson 405,617. But a third candidate, George Petty, siphoned off enough votes to deny Mr. Stevenson a majority, forcing a runoff between Mr. Stevenson and Mr. Johnson, set for Aug. 28, 1948.

In the interim, Mr. Johnson intensified his campaign. One of the places he went stumping was the hot, flat, brush country of south Texas, George B. Parr country, where the Hispanic vote seemed always to come, favoring Mr. Parr's candidate, in a bloc.

Mr. Salas said he was Mr. Parr's righthand man in Jim Wells County from 1940 to 1950.

"HAD LAW TO OURSELVES"
